request billions of dollars to abate the localized effects of an inherently global phenomenon—undoubtedly implicate the interests of countless governments, both foreign and domestic. The challenged conduct is, as far as the complaints allege, lawful in every nation. And, as the United States aptly notes, many foreign governments actively support the very activities targeted by plaintiffs' claims. Nevertheless, plaintiffs would have a single judge or jury in California impose an abatement fund as a result of such overseas behavior. Because this relief would effectively allow plaintiffs to govern conduct and control energy policy on foreign soil, we must exercise great caution. . . .

This order fully accepts the vast scientific consensus that the combustion of fossil fuels has materially increased atmospheric carbon dioxide levels, which in turn has increased the median temperature of the planet and accelerated sea level rise. But questions of how to appropriately balance these worldwide negatives against the worldwide positives of the energy itself, and of how to allocate the pluses and minuses among the nations of the world, demand the expertise of our environmental agencies, our diplomats, our Executive, and at least the Senate. Nuisance suits in various United States judicial districts regarding conduct worldwide are far less likely to solve the problem and, indeed, could interfere with reaching a worldwide consensus. . . .

NOTES

1. The City of New York reprise. Shortly after *City of Oakland*, the City of New York was rebuffed when it brought a similar claim. In *City of New York v. BP P.L.C.*, 325 F. Supp. 3d 466, 471-472 (S.D.N.Y. 2018),

the City sought monetary relief to help New York City “to take proactive steps to protect itself and its residents from the dangers and impacts of global warming,” including major infrastructure to ward off the anticipated effects of global warming. The City sought to avoid preemption by insisting that “the City bases liability on defendants’ production and sale of fossil fuels—not defendants’ direct emissions of greenhouse gases.” Keenan, J., was unimpressed with the distinction: “[R]egardless of the manner in which the City frames its claims in its opposition brief, the amended complaint makes clear that the City is seeking damages for global-warming related injuries resulting from greenhouse gas emissions, and not only the production of Defendants’ fossil fuels.” The City also framed its case as a state law nuisance claim—a nuance that eluded Keenan, J. The case is on appeal before the Court of Appeals for the Second Circuit.

2. Evaluating the torts claims. As noted in *City of Oakland*, there are two classes of potential defendants—the actual emitters and the more remote suppliers of fossil fuels, including crude oil, which has a wide range of alternative uses. Which is the better class of defendants? Which are the cheapest cost avoiders? If it is downstream producers, just how much of the harm can be attributed to five oil companies. How does one measure the losses attributable to global warming, including potential sea rise? The background rate of sea-level rise has been about five inches per century for about 10,000 years. How can one predict its levels in 2050? Should one take

p. 647

those potentials into account now? Note too that the City of Oakland makes extensive use of fossil fuels in its own activities. Does that count as a form of contributory negligence that reduces recovery?

3. Federal displacement of federal common law public nuisance claims. To date, the use of public nuisance suits has been frustrated by Supreme Court determinations that federal common law public nuisance claims are displaced by the comprehensive systems of direct federal regulation. Thus, in *City of Milwaukee v. Illinois*, 451 U.S. 304, 317 (1981), the Supreme Court held that public nuisance suits brought by Illinois were blocked by the explicit effluent limitations set out in the 1972 amendments to the Federal Water Pollution Control Act. Justice Rehnquist wrote: “Congress has not left the formulation of appropriate federal standards to the courts through application of often vague and indeterminate nuisance concepts and maxims of equity jurisprudence, but rather has occupied the field through the establishment of a comprehensive regulatory program supervised by an expert administrative agency.”

More recently, in *American Electric Power Co. v. Connecticut*, 564 U.S. 410 (2011), the Supreme Court asked “whether the plaintiffs (several States, the city of New York, and three private land trusts) can maintain federal common law public nuisance claims against carbon-dioxide emitters (four private power companies and the federal Tennessee Valley Authority),” with an eye to setting emissions levels for each outfit. A unanimous Supreme Court, speaking through Justice Ginsburg, held that to the extent that these claims rested on federal common law they were blocked. Citing *Milwaukee*, Ginsburg, J., held that “the Clean Air Act and the EPA actions it authorizes displace any federal common law right to seek abatement of carbon-dioxide emissions from fossil-fuel fired power plants.”

For criticism of *AEP*, see Ewing & Kysar, Prods and Pleas: Limited Government in an Era of Unlimited Harm, 121 Yale L.J. 350 (2011). For a response, see Epstein, Beware of Prods and Pleas: A Defense of the Conventional Views on Tort and Administrative Law in the Context of Global Warming, 121 Yale L.J.

4. State law public nuisance claims? AEP left open the question whether *state* common law causes of action were similarly preempted. In *San Mateo County v. Chevron*, 294 F. Supp. 3d 934 (N.D. Cal. 2018); *Rhode Island v. Chevron Corp.*, C.A. No. 18-395 WES, 2019 WL 3282007 (D.R.I. July 22, 2019); and *Mayor & City Council of Baltimore v. BP P.L.C.*, 388 F. Supp. 3d 538 (D. Md. 2019), the courts rebuffed defendants' attempts to remove public nuisance claims to federal court—where they would be displaced. Is there any meaningful difference between the state and federal public nuisance claims?

5. Regulatory solutions. If private law suits fail, what system of regulation should be put in their place? Should there be a tax on carbon dioxide emissions, tied to the level of anticipated harm? How would that program work for goods that are made outside the United States with carbon dioxide intensive processes? How should the tax be adjusted with changes, up or down, in the perception of the relationship of carbon dioxide levels to global warming? Alternatively should there be emissions quotas for carbon dioxide? If so should they be

p. 648

transferrable between parties? For discussions of these themes, see Rossetti et al., Comparing Effectiveness of Climate Regulations and a Carbon Tax, American Action Forum, July 2, 2018, <https://www.americanactionforum.org/research/comparing-effectiveness-climate-regulations-carbon-tax-123>, concluding that “carbon taxes are significantly more cost-effective at reducing greenhouse gases than regulations. . . .” For a skeptical evaluation, see Zycher, The Deeply Flawed Conservative Case for a Carbon Tax, American Enterprise Institute, <http://www.aei.org/publication/the-deeply-flawed-conservative-case-for-a-carbon-taxconservatives-endorse-the-broken-windows-fallacy-reject-evidence-and-rigor>, which concludes: “Because the proposal would increase energy costs with no environmental benefits, the economy in the aggregate would be smaller.”

6. Guns and public nuisances. At one time local governments sought to bring public nuisance suits for the public costs needed to combat local criminal use of hand guns. In *Cincinnati v. Berretta USA Corp.*, 768 N.E.2d 1136 (Ohio 2002), the city alleged that the gun manufacturers created a nuisance “through their ongoing conduct of marketing, distributing, and selling firearms in a manner that facilitated their flow into the illegal market.” Although the manufacturers did not control the actual use of firearms that cause injury, Sweeney, J., held: “Just as the individuals who fire the guns are held accountable for the injuries sustained, appellees can be held liable for creating the alleged nuisance.”

By contrast, in *Camden County Board of Chosen Freeholders v. Beretta, U.S.A. Corp.*, 273 F.3d 536 (3d Cir. 2001), the court rejected the claim that selling guns was a public nuisance simply because some fraction of them ended up in the hands of criminals. The court noted that gun distribution takes place through several channels from manufacture, to sale to distributors, and to the diversion of guns into the hands of potential criminals, and concluded that “[t]his causal chain is simply too attenuated to attribute sufficient control to the manufacturers to make out a public nuisance claim.” In *City of Philadelphia v. Beretta U.S.A. Corp.*, 277 F.3d 415, 424 (3d Cir. 2002), the plaintiffs tried to shorten the causal chain by arguing that the “thriving illegal market . . . injures [them], even before any guns acquired in the illegal market are actually used in the commission of a crime.” But Greenberg, J., held that even an efficient resale

market acquired guns through the same pattern of distribution as in *Camden County Board*.

Academic views on treating gun sales as a public nuisance are divided. In *The Economics of Public Nuisance Law and the New Enforcement Actions*, 18 Sup. Ct. Econ. Rev. 43, 73-76 (2010), Professor Hylton supports treating initial gun sales as public nuisance, given their inherent dangers. In sharp contrast, Professor Merrill claims that the public nuisance doctrine has “gone off the rails,” and that these issues are better dealt with by the criminal law. See Merrill, *Is Public Nuisance a Tort?*, 4 J. Tort L. (Iss. 2, Art. 4) (2011).

7. *Opioids and public nuisance.* In a notable expansion of public nuisance law in *State of Oklahoma v. Purdue Pharma*, 2019 WL 4059721 (Okla. Dist. Aug. 26, 2019), *supra* at 604, Balkman, J., determined that the opioid manufacturers’ “false and misleading marketing . . . qualifies as the kind of act or omission capable of sustaining liability under Oklahoma’s [statutory] nuisance law.” Some

p. 649

two dozen opioid manufacturers, drug distributors, and retailers are being sued for their roles in the opioid public health crisis by states, counties, cities, and tribes across the United States. Balkman, J., ordered Johnson & Johnson (whose drugs accounted for roughly 1 percent of opioid sales in the states) to pay \$572 million for a year’s worth of abatement programs for addiction treatment, drug courts, and other services. Oklahoma had sought \$17 billion for 20 years’ worth of abatement necessary to repair the damage done by the opioid epidemic, but the judge ruled that the state had only provided evidence showing the necessary costs for one year. To what extent do abatement costs constitute damages? What are the implications in the global warming context?

SECTION F. VICARIOUS LIABILITY

IRA S. BUSHEY & SONS, INC. v. UNITED STATES

398 F.2d 167 (2d Cir. 1968)

FRIENDLY, J. While the United States Coast Guard vessel *Tamara* was being overhauled in a floating drydock located in Brooklyn’s Gowanus Canal, a seaman [named Lane] returning from shore leave late at night, in the condition for which seamen are famed, turned some wheels on the drydock wall. He thus opened valves that controlled the flooding of the tanks on one side of the drydock. Soon the ship listed, slid off the blocks and fell against the wall. Parts of the drydock sank, and the ship partially did—fortunately without loss of life or personal injury.

p. 650

The drydock owner [Bushey] sought and was granted compensation by the District Court for the Eastern District of New York in an amount to be determined, 276 F. Supp. 518; the United States appeals. . . .

Exhibit 7.3 Henry J. Friendly

Bachrach

Henry J. Friendly (1903-1986) was a universally respected judge who served on the Second Circuit Court of Appeals for 27 years. During his time on the appellate bench, every Supreme Court Justice who served five years or more cited from his opinions at least once. His influence extended through disparate areas of the law, including securities and trademark, privacy, and federal jurisdiction. While never receiving the nod for the high court himself, Friendly left an indelible mark on the federal judiciary, penning more than 1,000 opinions, most of them by himself, and most in less than a day. Before his judicial career, he attended Harvard College and Harvard Law School, clerked for Supreme Court Justice Louis Brandeis, and served for many years in private practice at law firms and as corporate counsel for Pan American World Airways. For an exhaustive account of Friendly's legacy and jurisprudence, see Dorsen, *Henry Friendly: Greatest Judge of His Era* (2012).

The Government attacks imposition of liability on the ground that Lane's acts were not within the scope of his employment. It relies heavily on section 228(1) of the Restatement of Agency 2d which says that "conduct of a servant is within the scope of employment if, but only if: . . . (c) it is actuated, at least in part by a purpose to serve the master." Courts have gone to considerable lengths to find such a purpose, as witness a well-known opinion in which Judge Learned Hand concluded that a drunken boatswain who routed the plaintiff out of his bunk with a blow, saying "Get up, you big son of a bitch, and turn to," and then continued to fight, might have thought he was acting in the interest of the ship. *Nelson v. American-*

West African Line, 86 F.2d 730 (2d Cir. 1936). It would be going too far to find such a purpose here; while Lane's return to the *Tamara* was to serve his employer, no one has suggested how he could have thought turning the wheels to be, even if—which is by no means clear—he was unaware of the consequences.

United States Coast Guard cutter *Tamara* in 1990. The ship was commissioned by the United States Navy in 1943 and sailed for the Coast Guard from 1946 until 1994, when she was decommissioned.

In light of the highly artificial way in which the motive test has been applied, the district judge believed himself obliged to test the doctrine's continuing vitality by referring to the larger purposes respondeat superior is supposed to serve. He concluded that the old formulation failed this test. We do not find his analysis so compelling, however, as to constitute a sufficient basis in itself for discarding the old doctrine. It is not at all clear, as the court below suggested, that expansion of liability in the manner here suggested will lead to a more efficient allocation of resources. As the most astute exponent of this theory has emphasized, a more efficient allocation can only be expected if there is some reason to believe that imposing a particular cost on the enterprise will lead it to consider whether steps should be taken to prevent a recurrence of the accident. Calabresi, The Decision for Accidents: An Approach to Non-Fault Allocation of Costs, 78 Harv. L. Rev. 713, 725-34 (1965). And the suggestion that imposition of liability here will lead to more intensive screening of employees rests on highly questionable premises.⁵

p. 651

The unsatisfactory quality of the allocation of resource rationale is especially striking on the facts of this case. It could well be that application of the traditional rule might induce drydock owners, prodded by their insurance companies, to install locks on their valves to avoid similar incidents in the future, while placing the burden on shipowners is much less likely to lead to accident prevention.⁷ It is true, of course, that in many cases the plaintiff will not be in a position to insure, and so expansion of liability will, at the very

least, serve respondeat superior's loss spreading function. But the fact that the defendant is better able to afford damages is not alone sufficient to justify legal responsibility, see Blum & Kalven, *Public Law Perspectives on a Private Law Problem* (1965), and this overarching principle must be taken into account in deciding whether to expand the reach of respondeat superior.

A policy analysis thus is not sufficient to justify this proposed expansion of vicarious liability. This is not surprising since respondeat superior, even within its traditional limits, rests not so much on policy grounds consistent with the governing principles of tort law as in a deeply rooted sentiment that a business enterprise cannot justly disclaim responsibility for accidents which may fairly be said to be characteristic of its activities. It is in this light that the inadequacy of the motive test becomes apparent. Whatever may have been the case in the past, a doctrine that would create such drastically different consequences for the actions of the drunken boatswain in *Nelson* and those of the drunken seaman here reflects a wholly unrealistic attitude toward the risks characteristically attendant upon the operation of a ship. We concur in the statement of Mr. Justice Rutledge in a case involving violence injuring a fellow-worker, in this instance in the context of workmen's compensation:

"Men do not discard their personal qualities when they go to work. Into the job they carry their intelligence, skill, habits of care and rectitude. Just as inevitably they take along also their tendencies to carelessness and camaraderie, as well as emotional make-up. In bringing men together, work brings these qualities together, causes frictions between them, creates occasions for lapses into carelessness, and for fun-making and emotional flare-up. . . . These expressions of human nature are incidents inseparable from working together. They involve risks of injury and these risks are inherent in the working environment." Hartford Accident & Indemnity Co. v. Cardillo, 112 F.2d 11, 15 (D.C. Cir. 1940). . . .

Put another way, Lane's conduct was not so "unforeseeable" as to make it unfair to charge the Government with responsibility. . . . Here it was foreseeable that crew members crossing the drydock might do damage, negligently or even intentionally, such as pushing a Bushey employee or kicking property into the water. Moreover, the proclivity of seamen to find solace for solitude by copious resort to the bottle while ashore has been noted in opinions too numerous to warrant citation. Once all this is granted, it is immaterial that Lane's precise action

p. 652

was not to be foreseen. . . . Consequently, we can no longer accept our past decisions that have refused to move beyond the *Nelson* rule, since they do not accord with modern understanding as to when it is fair for an enterprise to disclaim the actions of its employees.

One can readily think of cases that fall on the other side of the line. If Lane had set fire to the bar where he had been imbibing or had caused an accident on the street while returning to the drydock, the Government would not be liable; the activities of the "enterprise" do not reach into areas where the servant does not create risks different from those attendant on the activities of the community in general. We agree with the district judge that if the seaman "upon returning to the drydock, recognized the Bushey security guard as his wife's lover and shot him," 276 F. Supp. at 530, vicarious liability would not follow; the incident would have related to the seaman's domestic life, not to his seafaring activity, and it would have been the most unlikely happenstance that the confrontation with the paramour occurred on a drydock rather than at the

traditional spot. Here Lane had come within the closed-off area where his ship lay, to occupy a berth to which the Government insisted he have access, and while his act is not readily explicable, at least it was not shown to be due entirely to facets of his personal life. The risk that seamen going and coming from the *Tamaroa* might cause damage to the drydock is enough to make it fair that the enterprise bear the loss. It is not a fatal objection that the rule we lay down lacks sharp contours in the end, as Judge Andrews said in a related context, “it is all a question [of expediency,] . . . of fair judgment, always keeping in mind the fact that we endeavor to make a rule in each case that will be practical and in keeping with the general understanding of mankind.” *Palsgraf v. Long Island R.R. Co.*, 162 N.E. 99, 104 (N.Y. 1928) (dissenting opinion). . . .

[Affirmed.]

NOTES

1. Respondeat superior: History. Vicarious liability refers to cases in which one person is held responsible for the wrongful acts of another by virtue of some status connection between them. This principle, which often goes under the Latin label *respondeat superior* (“let the superior answer”), enjoys an unquestioned acceptance in all common law jurisdictions. Nonetheless, there remains an undercurrent of academic dissatisfaction with the rule, stemming perhaps from an inability to identify its precise rationale. Thus Holmes, in his famous articles on agency (4 Harv. L. Rev. 345 (1891); 5 Harv. L. Rev. 1 (1891)), treated *respondeat superior* as an anomaly that “must be explained by some cause not manifest to common sense alone. . . . I assume that common-sense is opposed to making one man pay for another man’s wrong, unless he has actually brought the wrong to pass. . . . I therefore assume that common-sense is opposed to the fundamental theory of agency. . . .” For a sustained attack on vicarious liability as a doctrine that “has attained its luxuriant growth through carelessness and false analogy,” see Baty, *Vicarious Liability* (1916).

p. 653

What made *respondeat superior* so remarkable was that its strict liability foundations withstood the late-nineteenth-century onslaught of negligence liability. While typically *respondeat superior* only applied when the servant negligently discharged his duties, the defendant employer did not have to be similarly negligent in selecting or supervising the employee. To the contrary, an unbroken line of cases invoked vicarious liability against employers who had expressly forbidden the very conduct that constituted employee negligence. See *Limpus v. London Gen. Omnibus Co.*, 158 Eng. Rep. 993 (Ex. 1862). Thus from 1700 on, vicarious liability turned on whether the tort arose out of the servant’s employment, not on whether the employer was negligent in selection or supervision, or whether he had authorized, expressly or impliedly, the commission of the tort for which he was vicariously charged. *Hern v. Nichols*, 91 Eng. Rep. 256 (Ex. 1708). Blackstone explained in 1 Bl. Comm. 418-419 (1765):

If a servant, lastly, by his negligence does any damage to a stranger, the master shall answer for his neglect; if a smith’s servant lames a horse while shoeing him, an action lies against the master, and not against the servant. But in these cases, the damage must be done, while his

actually employed in the master's service; otherwise the servant shall answer for his own misbehaviour.

The law today holds *both* master and servant liable for torts that arise out of and in the course of employment. One explanation for that dual system of liability involves the deep pocket of the master. In *River Wear Commissioners v. Adamson*, 2 A.C. 743 (H.L.(E.) 1876), Lord Blackburn was explicit:

In the great majority of cases the servant actually guilty of the negligence is poor, and unable to make good the damage, especially if it is considerable, and the master is at least comparatively rich, and consequently it is generally better to fix the master with liability; but there is also concurrent liability in the servant, who is not discharged from liability because his master also is liable.

A similar conclusion is reached in *Smith, Frolic and Detour*, 23 Colum. L. Rev. 444, 455-456 (1923). There, Young B. Smith, following Baty's work on vicarious liability, listed the nine traditional rationales for vicarious liability: control, profit, revenge, carefulness and choice, identification, evidence, indulgence, danger, and satisfaction. Having concluded that none of these could fully account for the doctrine, he offered his own explanation:

A reason which occurs to the writer is that which has been offered in justification of workmen's compensation statutes. In substance it is the belief that it is socially more expedient to spread or distribute among a large group of the community the losses which experience has taught are inevitable in the carrying on of industry, than to cast the loss upon a few.

Why isn't loss spreading more cheaply accomplished through first-party insurance?

p. 654

2. *Efficiency arguments.* Modern scholarship defends vicarious liability on efficiency grounds by placing greater stress on loss prevention. See Sykes, *The Economics of Vicarious Liability*, 93 Yale L.J. 1231 (1984). Sykes explicitly compares two possible legal regimes. Under pure personal liability, the injured third party has recourse only against the employee, who in turn can seek an indemnity against the employer. Under vicarious liability, the employer (along with the employee) is directly liable, and in turn enjoys possible rights of indemnity against the erring employee. As between the employer and the employee, Sykes observes that the employer is usually the superior risk bearer because of its greater access to insurance markets, especially when the employer is a public corporation whose shareholders are able to diversify their individual portfolios by investing in many different firms. Vicarious liability also reduces the risk that the insolvency of a particular employee will impose an uncompensated risk on a third party. In addition, the doctrine reduces the need to create an extensive network of voluntary contracts between employees and employers to make the employer the ultimate risk bearer when the employee is actually solvent. Finally, vicarious liability protects third parties who know that some firm employee is responsible for the loss, but cannot determine which employee is responsible.

3. *Frolic and detour: Traditional applications.* Vicarious liability requires a legal determination of which

acts fall within the scope of employment. Employees do not always act as employees when they are supposed to be on the job. Difficulties on this score frequently arise when the employee deviates from the driving route set by his employer for personal reasons. The general rule today, roughly, is that respondeat superior covers small deviations but not large ones. See, for example, *Riley v. Standard Oil Co.*, 132 N.E. 97 (N.Y. 1921), in which the court recognized that “[n]o hard and fast rule on the subject either in space or time can be applied,” and then held that driving four blocks out of the way on a personal errand did not take the employee out of his master’s employment. In *Coe v. Carroll & Carroll, Inc.*, 709 S.E.2d 324 (Ga. Ct. App. 2011), a truck driver hauling loads of debris was involved in an accident when he detoured to a church to pick up his lunch. The court held that “the question of whether [the truck driver’s] deviation from [his employer’s] business was so slight and so closely connected with [his employer’s] affairs . . . must be resolved by a jury. . . .”

In principle, it is unclear whether the frolic and detour rule tends to increase or reduce the number of accidents. Imposing vicarious liability creates a strong incentive for the employer to monitor the behavior of the employee. If the deviation is effectively curtailed, the employee might undertake the same mission outside of work, having to travel a greater distance and probably creating a higher accident rate. Alternatively the errand may become so burdensome that the employee will not undertake it at all. In the first case, using an expansive vicarious liability rule will tend to increase the number of accidents. In the second case, the expansive rule will reduce the accident level. Often it is not clear which effect will dominate. It is, therefore, not surprising that no hard and fast rule covers these cases. See generally Sykes, *The Boundaries of Vicarious Liability: An Economic Analysis of the Scope of Employment Rule and Related Legal Doctrines*, 101 Harv. L. Rev. 563 (1988).

p. 655

4. Intentional torts. The limits of vicarious liability are also tested in the area of intentional torts. As is evident from *Bushey*, the intentional tort of an employee may be within the course of employment if intended to serve the employer’s interest. However, many cases clearly reject that test. In *Doe v. Fulton-DeKalb Hospital Authority*, 628 F.3d 1325, 1333 (11th Cir. 2010), a substance abuse counselor employed by the defendant-hospital sexually harassed three patients during the course of their drug rehabilitation treatment. Tjoflat, J., explained Georgia’s rejection of vicarious liability for employee sexual misconduct: “These types of torts, being purely personal in nature, are unrelated to the employee’s duties and, therefore, are outside the scope of employment because they are not in furtherance of the master’s business.”

The bar on vicarious liability for intentional torts extends beyond sexual assaults committed by employees. For example, vicarious liability did not attach in *Kephart v. Genuity, Inc.*, 38 Cal. Rptr. 3d 845, 855 (Ct. App. 2006), when the defendant’s employee, Graham, in a prolonged fit of road rage, forced the plaintiff’s car off the highway. The plaintiff’s car overturned, leaving her a quadriplegic. Scotland, P.J., held “the jury reasonably could find that Graham left his home at least five hours earlier than was required by his business trip and that, as he testified, he did so entirely for personal reasons.”

5. Punitive damages against an employer. In *Lake Shore & Michigan Southern Railway v. Prentice*, 147 U.S. 101, 107 (1893), the sole question before the Court was “whether a railroad corporation can be charged with punitive or exemplary damages for the illegal, wanton and oppressive conduct of a conductor

of one of its trains towards a passenger.” Gray, J., answered that question in the negative:

Exemplary or punitive damages, being awarded, not by way of compensation to the sufferer, but by way of punishment of the offender, and as a warning to others, can only be awarded against one who has participated in the offence. A principal, therefore, though of course liable to make compensation for injuries done by his agent within the scope of his employment, cannot be held liable for exemplary or punitive damages, merely by reason of wanton, oppressive or malicious intent on the part of the agent.

What result if the railroad suspected but did not know of any improper conduct by its conductor?

6. *Negligent hiring.* Sometimes employers may be held responsible for negligent hiring or supervision, even for intentional wrongs that fall outside the employee’s scope of employment. In *Schechter v. Merchants Home Delivery, Inc.*, 892 A.2d 415, 432 (D.C. 2006), two workers hired by defendant MHD robbed Ms. Schechter, an 80-year-old widow, while installing a new washing machine in her house. Schwelb, J., allowed the plaintiff to reach a jury solely on the theory of negligent hiring, on the question whether “[MHD] utterly failed in its duty to supervise, train and maintain . . . its delivery personnel.” In *Schechter*, one of the employees had a criminal record for burglary. Is that sufficient to grant plaintiff a summary judgment on the negligent hiring issue?

p. 656

7. *Vicarious liability in the modern regulatory state.* In recent years, the Supreme Court has grappled with the extent to which the common law principles of vicarious liability survive in the modern regulatory state. In *Vance v. Ball State University*, 570 U.S. 421 (2013), the Court examined the bipartite standard for employer liability that has emerged in sexual harassment cases under Title VII of the Civil Rights Act. For harassment by coworkers, the employer must be negligent in the supervision of the workplace. But for harassment by supervisors a strict regime of vicarious liability applies. Alito, J., held that an employee counts as a supervisor “only when the employer has empowered that employee to take tangible employment actions against the victim, *i.e.*, to effect a significant change in employment status, such as hiring, firing, failing to promote, reassignment with significantly different responsibilities, or a decision causing a significant change in benefits.” The four dissenters, led by Ginsburg, J., adopted the broader definition propounded by the Equal Opportunity Employment Commission: “(1) an individual authorized ‘to undertake or recommend tangible employment decisions affecting the employee,’ including ‘hiring, firing, promoting, demoting, and reassigning the employee’; *or* (2) an individual authorized ‘to direct the employee’s daily work activities.’”

8. *The “borrowed servant.”* When a given person works for two employers, which should be held vicariously liable for his tort? The problem of divided authority arises in the construction industry, for example, when a general contractor hires a crane operator from a crane company for specialized work. The crane company retains the general power to hire, fire, and impose safety regulations, work rules, and the like; the construction company designates the operator’s particular tasks on the job. Which firm is ultimately responsible for the wrongful acts of the servant? Cardozo, J., gave this answer in *Charles v. Barrett*, 135 N.E. 199, 200 (N.Y. 1922):

The rule now is that, as long as the employee is furthering the business of his general employer by the service rendered to another, there will be no inference of a new relation unless command has been surrendered, and no inference of its surrender from the mere fact of its division.

More recent cases, however, tend to hold both employers responsible for the torts of the borrowed servant. In *Morgan v. ABC Manufacturer*, 710 So. 2d 1077, 1081 (La. 1998), the court rejected any effort to partition responsibility between the general and special employer, holding both jointly liable for the employee's tort: "Since liability is based on the *right* of control, rather than actual control of the employee at the time of the accident, it is unreasonable to choose between the two employers when each shares the *right* to control the employee's actions." See generally Note, *Borrowed Servants and the Theory of Enterprise Liability*, 76 Yale L.J. 807 (1967).

9. *Employer's indemnification.* May an employer, as the passive and innocent party, recoup his losses against the individual employee whose active negligence caused the original accident and, therefore, the employer's loss? That right of

p. 657

indemnification has been nearly universally adopted in all American courts. See, e.g., *Fireman's Fund Am. Ins. Co. v. Turner*, 488 P.2d 429 (Or. 1971); and in England, see *Lister v. Romford Ice & Cold Storage*, [1957] A.C. 555. However, often the employee is financially unable to answer for the loss, and, commonly, the employer takes out insurance to cover both parties, making actions for indemnification rare and unpopular. See, e.g., James, *Indemnity, Subrogation, and Contribution and the Efficient Distribution of Accident Losses*, 21 NACCA L.J. 360 (1958).

SALEEM v. CORPORATE TRANSPORTATION GROUP, LTD.

854 F.3d 131 (2d Cir. 2017)

DEBRA ANN LIVINGSTON, CIRCUIT JUDGE:

Plaintiffs-Appellants ("Plaintiffs"), black-car drivers in the greater New York City area, brought this action in the United States District Court for the Southern District of New York, asserting claims against Defendants-Appellees ("Defendants"), owners of black-car "base licenses" and affiliated entities, pursuant to the Fair Labor Standards Act ("FLSA"), 29 U.S.C. § 201 *et seq.*, and the New York State Labor Law ("NYLL"), N.Y. Lab. Law §650 *et seq.*, for, *inter alia*, unpaid overtime. The district court (Furman, Judge) . . . granted Defendants' motion for summary judgment on both the FLSA and NYLL claims as to both the named and opt-in Plaintiffs, concluding that "as a matter of law, Plaintiffs are properly classified as independent contractors rather than employees" for purposes of both statutes. [Affirmed.]

Background

I. FACTS

Plaintiffs are black-car drivers in the tri-state area who owned or operated black-car franchises and were affiliated with Defendants. . . . There were roughly 700 black cars affiliated with the Franchisor

Defendants' dispatch bases and operating under the CTG [Corporate Transport Group] umbrella. CTG's clients were primarily corporate entities, such as Deutsche Bank and Bank of America.

The named Plaintiffs rented or purchased their franchises directly from the Franchisor Defendants or, in some cases, from other franchisees. Plaintiffs who rented franchises paid \$130 to \$150 per week, while Plaintiffs who purchased their franchises directly from a Franchisor Defendant did so pursuant to franchise agreements, which required them to pay franchise fees ranging from a nominal amount (or even nothing) to as much as \$60,000. The franchise agreements also required franchisees to pay additional fees, some upfront and some recurring, which varied from agreement to agreement. . . . Franchisees also had to obtain a New York City Taxi & Limousine Commission ("TLC") license, insurance, and a vehicle which they were responsible for maintaining.

p. 658

Plaintiffs' franchise agreements describe the nature of the relationship between franchisor and franchisee as follows:

Franchisee is not an employee or agent of Franchisor, but merely a subscriber to the services offered by Franchisor. Franchisee shall at all times be free from the control or direction of Franchisor in the operation of Franchisee's business, and Franchisor shall not control, supervise or direct the services to be performed by Franchisee.

Each franchise agreement also contains a "non-compete" provision which prohibited CTG-affiliated drivers from driving CTG customers "without processing payment for such services through CTG." Failure to comply with this and other terms was grounds for termination of the franchise. Significantly, however, the franchise agreements did not prohibit drivers from transporting non-CTG customers for a competitor black-car company, or independently, during their affiliation with CTG.

The franchise agreements also required that drivers comply with "Rulebooks"—manuals setting out certain standards of conduct—specific to each Franchisor Defendant. The Rulebooks forbid, for instance, harassing customers or other drivers and submitting fraudulent vouchers. The Rulebooks also include a dress code, which required drivers to dress neatly in specified business attire, as well as guidelines for keeping vehicles clean. Drivers were not required to wear a uniform, however, or to mark their cars with insignia denoting an affiliation with the Defendants. . . .

During their affiliation with the Defendants, Plaintiffs, like other drivers in the CTG network, possessed considerable autonomy in their day-to-day affairs. Drivers could, for example, choose among three principal ways of securing fares for driving CTG customers. First, they could wait in a physical queue of cars outside certain high-volume CTG clients' businesses. Second, they could elect to drive under a CTG contract with the New York City Metropolitan Transport Authority ("MTA"), transporting by prearrangement clients who were unable to travel via public transportation. Third, drivers could access CTG's proprietary black-car dispatch system, through which CTG transmitted requests for service from servers in a dispatch room to an application ("app") on drivers' smart phones. In all three cases, clients provided vouchers to the driver transporting them in lieu of cash payment, and these vouchers were

thereafter processed by CTG.

Drivers also determined when and how often to drive, and the record reflects that they worked vastly different amounts of time, without providing any notice to Defendants. Plaintiffs likewise chose which area in which to work, and they were at liberty to—and did—accept or decline jobs that were offered. Significantly, Plaintiffs also could—and did—drive for dispatch bases other than the one with which they were affiliated, and they were thus free to shift as they chose during the workday from one dispatch service to another. Most of the named Plaintiffs drove for other black-car companies regularly, and some earned substantial sums as a result. Some drivers also transported—and were paid directly

p. 659

by—customers with whom they had made individual arrangements, and others, though it was contrary to TLC regulations, *see* 35 R.C.N.Y. §59B-25(a), picked up street hails.

Although CTG negotiated rates with its clients, supplied the proprietary dispatch technology, and operated the dispatch system, the record suggests that Plaintiffs took home the majority—in some cases up to 85%—of each CTG fare, less some small additional fees. On this basis, Plaintiffs classified themselves as independent contractors on their tax returns and took substantial business deductions.

Discussion

I.

The FLSA defines an “employee” as “any individual employed by an employer.” 29 U.S.C. §203(e)(1). “An entity ‘employs’ an individual under the FLSA” if it “‘suffer[s] or permit[s] that individual to work.’”

Our case law has identified certain factors . . . as relevant to separating employees from independent contractors in the context of the FLSA. . . . [W]hether an employer-employee relationship exists for purposes of the FLSA should be grounded in ‘economic reality rather than technical concepts,’ . . . determined by reference not to ‘isolated factors but rather upon the circumstances of the whole activity’” it trains on the “ultimate question”: the economic reality of Plaintiffs’ relationship with CTG.

II.

Upon *de novo* review, “even when the historical facts and the relevant factors are viewed in the light most favorable” to Plaintiffs, and despite the broad sweep of the FLSA’s definition Plaintiffs independently determined (1) the manner and extent of their affiliation with CTG; (2) whether to work exclusively for CTG accounts or provide rides for CTG’s rivals’ clients and/or develop business of their own; (3) the degree to which they would invest in their driving businesses; and (4) when, where, and how regularly to provide rides for CTG clients. While none of these facts is determinative on its own, considered as a whole with the goal of discerning the underlying economic reality of the relationship here, the district court correctly determined that Plaintiffs are, as a matter of law, “properly classified as independent contractors rather than employees for purposes of the FLSA.” As a result, Defendants were properly granted summary judgment.

A. Affiliation with CTG

...

The franchise agreements' termination provisions also are indicative of Plaintiffs' independence. While Plaintiffs could reassess their choice to affiliate with CTG (not to mention the nature of that affiliation) and "terminate the [franchise] agreements" as they pleased, the terms of the agreements committed the

p. 660

Franchisor Defendants to maintaining them for substantial durations, or even indefinitely, absent Plaintiffs' breach of those terms. Because Plaintiffs were free to drive for competitors, for personal clients, or not at all without violating their franchise agreements, the termination provisions constituted a significant restriction on the ability of Franchisor Defendants to exercise control.

...

B. Entrepreneurial Opportunities

The fact that Plaintiffs could (and did) work for CTG's business rivals and transport personal clients while simultaneously maintaining their franchises without consequence suggests, in two respects, that CTG exercised minimal control over Plaintiffs. First, on its face, a company relinquishes control over its workers when it permits them to work for its competitors. Second, when an individual is able to draw income through work for others, he is less economically dependent on his putative employer. This lack of control, while not dispositive, weighs in favor of independent contractor status. . . .

Second, it is undisputed that some Plaintiffs regularly drove personal clients. . . .

Third, for the sake of completeness, many Plaintiffs also picked up passengers via street hail, despite TLC's (apparently under-enforced) prohibition of this practice. . . .

C. Investment and Return

Regardless whether they actually purchased a franchise, the record also shows that Plaintiffs invested heavily in their driving businesses—another indication that they were "in business for themselves." . . .

Because Plaintiffs were free under their franchise agreements to branch out on their own, or to drive for other, competing black-car companies, the degree to which these expenditures yielded returns was a function not only of CTG's network, but also of the business acumen of each Plaintiff, who thus had significant control over "essential determinants of profits in [the] business. . . ."

D. Schedule Flexibility

The ability to choose how much to work also weighs in favor of independent contractor status. . . .

After purchasing or leasing a franchise and securing a suitable vehicle, Plaintiffs set their own schedules,

selecting when, where, and how often to work (if at all). Defendants provided no incentive structure for Plaintiffs to drive at certain times, on particular days, or in specific locations, leaving the decision to work “to the whims [and] choices” of its drivers. Dole [v. Snell, 875 F.2d 802, 806 (10th Cir. 1989).] Likewise, Defendants required no notice on the part of drivers as to when they intended to work, nor did they make any effort to coordinate drivers’ schedules.

p. 661

Here, as always with the “economic reality” inquiry, it is not merely that Plaintiffs nominally could set their own schedules, but also that they actually did so. . . . Some Plaintiffs took vacations for weeks at a time without ever notifying Defendants. . . .

On the days when Plaintiffs did work, their hours varied—again, based on their own preferences, and without Defendants making any attempt to coordinate schedules or set lower or upper limits on working hours. . . .

Plaintiffs also exercised considerable discretion in choosing when and where to drive. . . .

Plaintiffs’ flexible work schedules and considerable control over when, where, and in what circumstances to accept a CTG fare not surprisingly resulted in wide disparities in gross earnings for rides provided through Defendants. . . .

These circumstances are readily distinguishable from those in which courts have identified an employer-employee relation. . . . In Dole v. Snell, the plaintiff cake-decorators’ schedules were “totally controlled” by their employer: they were expected to arrive at the premises at a particular hour, prevented from leaving until they had decorated all the cakes to their bosses’ satisfaction, and required to seek their employer’s approval for vacation. In short, “[t]he demands of the business controlled the [workers’ schedule],” which was indisputably *not* the case for Plaintiffs here. . . .

In sum, Plaintiff black-car drivers exercised their business acumen in choosing the manner and extent of their affiliation with CTG; were able to work for rival black-car services, cultivate their own clients, and pick up street hails; made substantial investments in their businesses; and determined when, where, and how regularly to work. They owned or operated enterprises which were flexible and adaptable to market conditions. In short, based on the record here, “[t]hese driver-owners [were] small businessmen.”

III.

. . .

Plaintiffs marshal evidence principally in support of two propositions. First, they argue that the record shows that Defendants exercised control over “all significant aspects of its black car business.” Plaintiffs point, *inter alia*, to CTG’s roll of organizational clients, its development and operation of the dispatch system, and the fact that CTG negotiated rates with clients and charged a per-ride fee to drivers. Second, in Plaintiffs’ telling, Defendants exerted influence over drivers by enforcing the Rulebooks indirectly through

the Security Committees and, at times, directly through Eduard Slinin, CTG's president.

Neither proposition, even viewing the evidence in the light most favorable to Plaintiffs, changes the analysis. While Defendants did exercise direct control over certain aspects of the CTG enterprise, they wielded virtually no influence over other essential components of the business, including when, where, in what capacity, and with what frequency Plaintiffs would drive. . . .

. . . To be clear, we note in conclusion the narrow compass of our decision. Specifically, we do not here determine that it is irrelevant to the FLSA inquiry

p. 662

that the Defendants provided Plaintiffs with a client base, [or] that Defendants charged fees when Plaintiffs utilized Defendants' referral system In a different case, and with a different record, an entity that exercised similar control over clients, fees, and rules enforcement in ways analogous to the Defendants here might well constitute an employer within the meaning of the FLSA. Plaintiffs here, however, have raised no material issue to this effect. The district court therefore properly found them to be independent contractors as a matter of law.

[Affirmed.]

NOTES

1. Independent contractors in the gig economy. *Saleem* is one of many cases that have addressed the status of drivers. This question received a dramatically different response in *Dynamex Operations West v. Superior Court*, 416 P.3d 1, 5, 7 (Cal. 2018), where Dynamex was a firm that hired drivers as part of its nationwide network of couriers and delivery services for its clients. Cantil-Sakauye, C.J., noted first that the stakes on the classification question were enormous in that

if a worker should properly be classified as an employee, the hiring business bears the responsibility of paying federal Social Security and payroll taxes, unemployment insurance taxes and state employment taxes, providing worker's compensation insurance, and, most relevant for the present case, complying with numerous state and federal statutes and regulations governing the wages, hours, and working conditions of employees.

She then noted "the potentially substantial economic incentives that a business may have in mischaracterizing some workers as independent contractors," in order to gain an unfair competitive advantage over their competitors. Finally, she adopted the so-called "ABC test" to classify members of the plaintiff class as employees. That test reads:

- a. The person is free from the control and direction of the hiring entity in connection with the performance of the work, both under the contract for the performance of the work and in fact.

- b. The person performs work that is outside the usual course of the hiring entity's business.
- c. The person is customarily engaged in an independently established trade, occupation, or business of the same nature as that involved in the work performed.

In 2019, California passed Assembly Bill 5, https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=201920200AB5, which incorporated the ABC test and which was then followed with an exhaustive list of professions, including physicians, attorneys, and accountants, that fell outside the classification. At the time of passage, it has been generally assumed that the test applies to drivers for Uber and Lyft, even though these workers have under the current law the right to take or turn down rides as they saw fit. However, Uber has claimed the law doesn't apply to it because its "[d]rivers' work is outside the

p. 663

usual course of Uber's business. . . ." Rosenblatt, Uber's Future May Depend on Convincing the World Drivers Aren't Part of Its "Core Business," Time, Sept. 12, 2019, <https://time.com/5675637/uber-business-future>. Does Uber's argument seem convincing? Who benefits if Lyft and Uber actually required their drivers to pick a single firm for which they must work explicit shifts? Note that it is also unclear how ABC would apply to tech workers, translators, and cleaners, among other occupations.

Note that the question of independent contractor status also arises in connection with potential vicarious liability of employers to strangers injured by their employees/independent contractors in, say, highway accidents. In the early case of *Sanford v. Goodridge*, 13 N.W.2d 40, 43 (Iowa 1944), the court articulated the distinction as follows:

An independent contractor is one who, by virtue of his contract, possesses independence in the manner and method of performing the work he has contracted to perform for the other party to the contract. This other party to the contract must relinquish the right of control ordinarily enjoyed by an employer of labor and reserve only control as to the results of the contract before the independent-contractor relationship is created. Whether the party for whom the work was to be performed had the right to dictate and control the manner, means, and details of performing the service is the test to be applied.

That rule is also followed in RTT: LPEH §57. How do various jobs in the gig economy come out under that test?

2. *Liability of independent contractors in medical malpractice cases.* It is uniformly accepted that physician practice groups are vicariously liable for the torts of their members. But much controversy arises as to how much further that liability should extend. In *Gilbert v. Sycamore Municipal Hospital*, 622 N.E.2d. 788 (Ill. 1993), a patient suffered a heart attack after being treated and released by a physician at a hospital emergency room. Unbeknownst to the patient, the ER was owned by a corporation that operated independently of the hospital. The court nonetheless held that the principles of respondeat superior applied because the hospital "held out" the ER as though it were its own.

A much more controversial application of vicarious liability arose in *Petrovich v. Share Health Plan of*

Illinois, Inc., 719 N.E.2d 756 (Ill. 1999), where a patient sued her health maintenance organization (HMO), claiming that “the plaintiff’s HMO may be held vicariously liable for the negligence of its independent-contractor physicians under agency law,” when her physician failed to make a timely diagnosis of her oral cancer. Bilandic, J., held that she could proceed on both theories of apparent and implied authority.

To establish apparent authority against an HMO for physician malpractice, the patient must prove (1) that the HMO held itself out as the provider of health care, without informing the patient that the care is given by independent contractors, and (2) that the patient justifiably relied upon the conduct of the HMO by looking to the HMO to provide health care services, rather than to a specific physician. Apparent agency is a question of fact.

p. 664

On implied authority, he held that

[t]he cardinal consideration for determining the existence of implied authority is whether the alleged agent retains the right to control the manner of doing the work. Where a person’s status as an independent contractor is negated, liability may result under the doctrine of *respondeat superior*. Plaintiff contends that the facts and circumstances of this case show that Share exerted sufficient control over [plaintiff’s physicians] because it used a capitation system for compensation.

The treating physicians testified that their professional judgment was not influenced by Share in this particular case.

The Restatement of the Law Third, Agency, §7.03(2), codifies the apparent and implied authority invoked in *Share*. To what extent could Share have avoided liability by clearly disclosing in its individual subscriber contracts its full business arrangements with its physicians, and then disclaiming all liability for their wrongs? Would a theory of vicarious liability be necessary if Share had actually limited the tests that the physician could have ordered for the plaintiff? Why would a patient want to sue the HMO if the physician is insured, given that the practice group is also liable? For an argument against the extension of liability, see Epstein & Sykes, *The Assault of Managed Care: Vicarious Liability, ERISA Preemption, and Class Actions*, 30 J. Legal Stud. 625, 638 (2001):

When physicians establish independent practices and carry substantial malpractice insurance on their own, . . . the case for vicarious liability [of Managed Care Organizations] is much weaker. The physicians’ personal assets, including malpractice coverage, become considerable, and the problem of potential insolvency greatly diminishes. Further, the ability of hospitals or MCOs to monitor these independent physicians is extremely limited, as there is no one with greater medical expertise in the hierarchy regularly overseeing their work. We thus doubt that vicarious liability for independent physicians with their own malpractice coverage will accomplish much beyond adding a party to litigation, which is of course costly in itself and opens the prospect of side deals between plaintiffs and physician defendants.

The principles laid out in *Share* apply in all employment contexts, but its particular application to health care is limited by the enormous role played by the Employment Retirement and Income Security Act of 1974, 29 U.S.C. §§1001-1461, commonly known as ERISA. Section 1144(a) of ERISA contains a broad preemption provision, which, subject to exceptions, “shall supersede any and all State laws insofar as they may now or hereafter relate to any employee benefit plan described in section 1003(a).” The “relate to” language received a broad construction insofar as it relates to ordinary tort actions against parties involved in the administration of employee benefit plans. See *Pegram v. Herdrich*, 530 U.S. 211, 221 (2000), where a patient was required by her husband’s HMO to wait eight days for an ultrasound test, only to suffer a ruptured appendix in the

p. 665

interim. Is this a case of vicarious liability or actual negligence? Souter, J., rejected the view that this rationing overrode the preemption noting that “the inducement to ration care goes to the very point of any HMO scheme,” and should therefore not be second-guessed in the courts. The Court therefore declined to “federalize malpractice litigation in the name of fiduciary duty.” Similarly in *Aetna Health Inc. v. Davila*, 542 U.S. 200, 218-219 (2004), Thomas, J., writing for a unanimous Supreme Court, invoked ERISA preemption to override a Texas statute that purported to impose a standard of “ordinary care” on HMOs: “These [ERISA] regulations, on their face, apply equally to health benefit plans and other plans, and do not draw distinctions between medical and nonmedical benefits determinations.” After that defeat, the ERISA issue has not returned to the Supreme Court.

3. *Employer liability for independent contractors in premise liability cases.* One hugely important exception to the no-vicarious-liability rule for independent contractors arises when the independent contractor does work on the employer’s premises, such as excavation, blasting, or the repair of electrical conduits or water pipes. See *Law v. Phillips*, 68 S.E.2d 452, 459 (W. Va. 1952). See RTT: LPEH §§58-59.

Restatement of the Law (Third) of Torts: Liability for Physical and Emotional Harm

§58. WORK INVOLVING ABNORMALLY DANGEROUS ACTIVITIES

An actor who hires an independent contractor to do work that the actor knows or should know involves an abnormally dangerous activity is subject to vicarious liability for physical harm when the abnormally dangerous activity is a factual cause of any such harm within the scope of liability.

§59. ACTIVITY POSING A PECULIAR RISK

An actor who hires an independent contractor for an activity that the actor knows or should know poses a peculiar risk is subject to vicarious liability for physical harm when the independent contractor is negligent as to the peculiar risk and the negligence is a factual cause of any such harm within the scope of liability.

That general rule does not apply, however, to the ordinary activities of independent contractors when not on their employer’s premises. This widely accepted limitation on an employer’s liability for independent contractors was criticized

p. 666

in Arlen & McLeod, *Beyond Master-Servant: A Critique of Vicarious Liability*, in *Exploring Tort Law* 111, 114-115 (Madden ed., 2005), on the ground that “it distorts independent contractor relations by providing organizations which hire independent contractors with excessive incentives to employ thinly capitalized independent contractors.” Are these risks better handled by requiring explicit liability insurance for the associated risks?

Notes

20 In his complaint, Moore does not seek possession of his cells or claim the right to possess them. This is consistent with Health and Safety Code section 7054.4, which provides that “human tissues . . . following conclusion of scientific use shall be disposed of by interment, incineration, or any other method determined by the state department [of health services] to protect the public health and safety.”

1 There is no requirement that the attack cause injury to the victim to establish dangerous propensities. The common law “one free bite rule” was expressly rejected in *Ross v. Hanson*, 200 N.W.2d 255, 256 (S.D. 1972).

3 The court of appeals and GLEC cite the following cases to support the propositions that the invasion must be unilateral and not be requested by the plaintiffs: *Fortier v. Flambeau Plastics Co.*, 476 N.W.2d 593 (Wis. App. 1991) (toxic chemicals deposited in a landfill which seeped or leached onto the plaintiffs’ property and contaminated their well water was the type of “invasion” that would subject the defendants to nuisance liability); *Crest Chevrolet-Oldsmobile-Cadillac, Inc. v. Willemsen*, 384 N.W.2d 692 (Wis. 1986) (diversion of surface water onto the plaintiff’s property); *Krueger v. Mitchell*, 332 N.W.2d 733 (Wis. 1983) (excessive noise from an airport interfering with the operation of a neighboring business); . . . *Jost v. Dairyland Power Coop.*, 172 N.W.2d 647 (Wis. 1969) (discharge of sulphur dioxide gases from an electrical generating plant onto adjoining cropland).

***1** Respondent’s investment in the plant is in excess of \$45,000,000. There are over 300 people employed there.

***2** [Fitzherbert’s decision was in fact the majority decision, even though the Chief Justice spoke first.—Eds.]

5 We are not here speaking of cases in which the enterprise has negligently hired an employee whose undesirable propensities are known or should have been. See *Koehler v. Presque-Isle Transp. Co.*, 141 F.2d 490 (2d Cir. 1943).

7 Although it is theoretically possible that shipowners would demand that drydock owners take appropriate action, see Coase, *The Problem of Social Cost*, 3 J.L. & Economics 1 (1960), this would seem unlikely to occur in real life.

SECTION A. INTRODUCTION

Products liability law has become so important that it is virtually a legal field unto itself. This field is conveniently defined in contrast to the abnormally dangerous activities examined in Chapter 7, which explored the liability of defendants who exercised direct control over dangerous instrumentalities at the time they caused injury. Products liability law, on the other hand, governs the activities of the full panoply of manufacturers, distributors, and sellers who have placed a product in the stream of commerce, such that they are *no longer* in possession of it at the time that it causes damage.

As befits its complexity, products liability law has a rich and dense history, which can be roughly divided into four periods. The first period ran from approximately the mid-nineteenth century to the early twentieth century, when the major debate was whether to allow an injured party to sue either product manufacturers or sellers. Courts often held that the “privity” limitation prevented the injured party—whether consumer, user, or bystander—from suing the “remote” supplier of the product in question, that is, one who has no direct contractual relationship with the injured party. Instead an injured consumer or user could sue only the immediate vendor of the product; an injured bystander could sue only the party in possession of the product just before the injury occurred.

The last half of the nineteenth century witnessed a gradual erosion of this privity limitation, as exceptions were created for products known to hold hidden dangers that manifested themselves when either the plaintiff or some third party put them to ordinary use. The second period began when *MacPherson v. Buick Motor Co.*, 111 N.E. 1050 (N.Y. 1916), rejected the privity limitation outright by imposing liability for negligence on a remote seller.

p. 668

The third stage of products liability law was inaugurated by the famous concurring opinion of Justice Traynor in *Escola v. Coca Cola Bottling Co.*, 150 P.2d 436, 440 (Cal. 1944), which argued that strict liability, not negligence principles, should govern the manufacturer’s liability. Initially idiosyncratic, Traynor’s view steadily gained adherents and became the dominant view by 1965, when the American Law Institute incorporated a general principle of strict liability into section 402A of the Second Restatement. For a discussion of the early development of strict liability through the Second Restatement, see Epstein, *Modern Products Liability Law* (1980); Prosser, *The Assault Upon the Citadel (Strict Liability to the Consumer)*, 69 Yale L.J. 1099 (1960).

Soon after the Second Restatement was adopted, products liability law entered a period of rapid expansion. The three dominant themes in debates leading up to the Second Restatement focused on the role of manufacturers: their market power, their capacity to obtain insurance, and their ability to internalize the costs of accidents associated with their products. Taken together, these three issues pointed to placing nearly “absolute liability” on the manufacturer, and perhaps others in the chain of distribution. As Priest, *The Invention of Enterprise Liability: A Critical History of the Intellectual Foundations of Modern Tort Law*, 14 J. Legal Stud. 461, 527 (1985), lamented, “[t]he presuppositions themselves do not incorporate any conceptual limit to manufacturer’s liability.”

The fourth and present stage of products liability law began in the decade following the 1965 Restatement with a series of important decisions in “defective design” and “failure to warn” cases, as they are now commonly known. These cases, which somewhat ironically have expanded liability within the traditional negligence framework, form the centerpiece of modern products liability law.

In 1998, in response to these major developments, the American Law Institute issued a separate volume of the Third Restatement devoted exclusively to products liability law. “This [Third] Restatement is . . . an almost total overhaul of Restatement Second as it concerns the liability of commercial sellers of products.” RTT: PL at 3. The Third Restatement has received a rather chilly reception in the courts and mixed reviews

in the academy. Courts are still reacting unevenly to various provisions of the Third Restatement, and it remains unclear whether the longer Third Restatement will displace or supplement the earlier, but more concise, Second Restatement. It is therefore necessary to study both Restatements throughout this chapter. In any event, it is now evident that the fourth period has been a period of doctrinal consolidation, if not some modest retrenchment. The steady string of plaintiffs' breakthroughs that were par for the course between 1965 and 1980—the rise of crashworthiness theories, the decline of the open and obvious defense, and the expansive definitions of product defect—has slowed markedly. See Henderson & Eisenberg, *The Quiet Revolution in Products Liability: An Empirical Study of Legal Change*, 37 UCLA L. Rev. 479, 481 (1990); Schwartz, *The Beginning and the Possible End of the Rise of Modern American Tort Law*, 26 Ga. L. Rev. 601, 604 (1992).

The newest developments in this field go beyond the traditional contours of the tort law. Consider, for example, the emergence of autonomous vehicles that

p. 669

is on the horizon. Autonomous vehicles hold out the promise of dramatically reducing automobile accident rates, roughly 98 percent of which are caused by human error. But what about crashes due to software glitches? Should these be handled under strict products liability? Also of immediate relevance is the question of whether online suppliers of goods (like Amazon) should be subject to the products liability law regime when they act as an aggregator and conduit between other product sellers and their customers. The implications for safety of products as well as business model organization of entities selling or distributing goods are momentous.

Another fast-developing area in tort law comes from government regulatory oversight. Today it is common for government agencies to launch extensive investigations of product defects, which can lead to major fines or criminal prosecutions. Recent major recalls include that of the Samsung Galaxy Note 7 phone, which occurred after a battery defect ignited the phones (often while in flight). See Consumer Product Safety Commission [CPSC]: Samsung Recalls Galaxy Note 7 Smartphones due to Serious Fire and Burn Hazards, <https://www.cpsc.gov/Recalls/2016/Samsung-Recalls-Galaxy-Note7-Smartphones>. In 2019, the CPSC also recalled over 4.7 million of Fisher-Price's infant inclined sleeping products, leading to an additional investigation by the House Oversight Committee. See Todd C. Frankel, House Committee Launches Investigation into Inclined Sleepers Tied to Infant Deaths, Wash. Post, Aug. 14, 2019, <https://www.washingtonpost.com/business/2019/08/14/house-committee-launches-investigation-into-inclined-sleepers-tied-infant-deaths>.

These activities are largely beyond the scope of this chapter, which does, however, consider the related question of the extent to which direct forms of federal regulation—which are common with motor vehicles, pharmaceuticals, medical devices, and toxic chemicals—can supersede or preempt private rights of action under state law. The stakes here are enormous. Without question, the major developments in the products liability area since 2000 have concerned the preemption question, which forces tort lawyers to negotiate the treacherous shoals of federalism and administrative law. See Sharkey, *Products Liability Preemption: An Institutional Approach*, 76 Geo. Wash. L. Rev. 449 (2008).

Products liability law is also inevitably bound up with mass tort litigation, including, but not limited to,

class actions. Major class action suits dominate the headlines, and capture the attention of political, corporate, and consumer actors. One of the most salient of these issues involves the sale of opiates in the United States. State and local governments,

p. 670

as well as private parties, have begun to file suits against the largest manufacturers, distributors, and physicians of opioids including, AmerisourceBergen, Johnson & Johnson, and Purdue Pharma, in an attempt to hold them liable for the increased costs opioid fatalities have inflicted on communities and health care providers. In 2017, the U.S. Judicial Panel on Multidistrict Litigation consolidated and transferred over 200 of these federal opioid cases to Judge Dan A. Polster in the Northern District of Ohio. See *In re Nat'l Prescription Opiate Litig.*, 290 F. Supp. 3d 1375 (J.P.M.L. 2017).

Large damage awards also demonstrate the potency of mass tort litigation. Johnson & Johnson faces over 10,000 lawsuits alleging its talcum baby powder causes cancer. In March 2018, a Missouri jury issued a \$4.69 billion verdict to 22 plaintiffs who alleged that Johnson & Johnson failed to warn them of the talcum powder's risk of causing cancer. Though currently on appeal, the magnitude of this judgment demonstrates the massive financial impact mass tort litigation can have on corporations. The Monsanto Roundup multidistrict litigation provides another high-profile example. Numerous federal cases alleging Monsanto's Roundup products cause cancer are consolidated in a multidistrict litigation in Northern California under Judge Vince Chhabria. See *In re Roundup Products Liability Litigation*, Case No. 3:16-md-02741. In a 2018 state trial, a California jury awarded a groundskeeper \$289 million (later reduced to \$78 million) in damages after concluding Monsanto was liable for failing to warn plaintiff of the risk of cancer associated with the product.

These multifaceted legal developments demonstrate that products liability law is big business. In 2018, some 48,420 products liability tort suits were filed in U.S. federal district courts, 25 percent fewer than when products liability filings peaked in 2010 at 64,367. See Admin. Office of the U.S. Courts, 2018 Annual Report of the Director: Judicial Business of the United States Courts tbl. C-11 (Sept. 30, 2018), https://www.uscourts.gov/sites/default/files/data_tables/jb_c11_0930.2018.pdf. One area in which litigation has been especially active has been suits for asbestos-related injuries. Both asbestosis and silicosis represent “cumulative trauma” cases that should be closely correlated with levels of exposure, at least in theory. No asbestos suits were reported as filed in federal court in 1980; yet by 1997, over 7,000 new suits were filed, amounting to 22 percent of new personal injury products liability cases. By 2009, the number of asbestos cases filed in federal courts skyrocketed to 41,785. Thereafter, asbestos related filings have declined sharply. In 2018, only 224 asbestos related personal injury products liability suits were initiated. See Admin. Office of the U.S. Courts, 2018 Annual Report of the Director: Judicial Business of the United States Courts tbl. C-11 (Sept. 30, 2018), https://www.uscourts.gov/sites/default/files/data_tables/jb_c11_0930.2018.pdf.

From these numbers, it should come as no surprise that personal injury products liability actions now constitute over 15 percent of the docket of new civil filings in federal district courts, up from under 5 percent in 1980.

Interestingly, the rapid increase in the overall level of products litigation has been matched by a long and steady decline in accident levels. From 1945 to

p. 671

2017, fatal workplace accidents have declined from 33 per 100,000 to 3.5 per 100,000, with home and vehicular accident rates falling dramatically as well. On this issue, the relationship between the improved accident picture and the changes in the tort liability arena is unclear. The decline in accident rates started before the expansion in tort liability and has continued uniformly even as the doctrinal expansion in the field halted around 1990. See generally Priest, Products Liability Law and the Accident Rate, *in Liability: Perspectives and Policy* (Litan & Winston eds., 1988). In this regard, there is an instructive contrast between design defect and failure to warn cases. The former are less important today than some generations ago because automobiles and machine tools are far safer today than they have ever been. Drug cases, by contrast, often involve individuals who are already quite ill, and it is an open question whether the drugs administered increase or reduce the baseline rate of accidents, so that the number of adverse events has not declined. Yet there are no clear benchmarks for adequate warnings.

Today, intensive battles rage on about whether tort claims exert a positive influence in promoting safety and deterring accidents. Some scholars argue that the headline-grabbing pharmaceutical and medical-device cases of the past 15 years have highlighted the insufficiency of federal regulation; others claim that tort suits undermine the careful balancing done by the federal regulators, thereby exposing manufacturers to excessive risk. To understand the contemporary state of products liability, it is helpful to trace its origins back to the mid-nineteenth century.

SECTION B. EXPOSITION

WINTERBOTTOM v. WRIGHT

152 Eng. Rep. 402 (Ex. 1842)

[The plaintiff brought an action on the case, i.e., in tort, based on the following undisputed facts. The defendant contracted with the Postmaster-General to supply coaches to carry mail and to see that the coaches would "be kept in a fit, proper, safe, and secure state and condition for said purpose." Under this contract the defendant assumed "the sole and exclusive duty, charge, care, and burden of the repairs, state, and condition" thereof. Atkinson, knowing of this contract, personally contracted with the Postmaster-General to supply horses and drivers for the defendant's coaches. The plaintiff, one of Atkinson's drivers, was driving a coach serviced by the defendant, and was hurt when a latent defect caused the coach to break down, throwing him to the ground and injuring him. The defendant demurred to the plaintiff's action.]

ABINGER, C.B. I am clearly of opinion that the defendant is entitled to our judgment. We ought not to permit a doubt to rest upon this subject, for our doing so might be the means of letting in upon us an infinity of actions. This

p. 672

is an action of the first impression, and it has been brought in spite of the precautions which were taken, in the judgment of this Court in the case of Levy v. Langridge, [150 Eng. Rep. 863 (Ex. 1836)], a case of fraudulent representation by the seller to the purchaser, to obviate any notion that such an action could be maintained. We ought not to attempt to extend the principle of that decision, which, although it has been cited in support of this action, wholly fails as an authority in its favour; for there the gun was bought for the use of the son, the plaintiff in that action, who could not make the bargain himself, but was really and substantially the party contracting. Here the action is brought simply because the defendant was a contractor with a third person; and it is contended that thereupon he became liable to everybody who might use the carriage. If there had been any ground for such an action, there certainly would have been some precedent of it; but with the exception of actions against innkeepers, and some few other persons, no case of a similar nature has occurred in practice. That is a strong circumstance, and is of itself a great authority against its maintenance. It is however contended, that this contract being made on the behalf of the public by the Postmaster-General, no action could be maintained against him, and therefore the plaintiff must have a remedy against the defendant. But that is by no means a necessary consequence—he may be remediless altogether. There is no privity of contract between these parties; and if the plaintiff can sue, every passenger, or even any person passing along the road, who was injured by the upsetting of the coach, might bring a similar action. Unless we confine the operation of such contracts as this to the parties who entered into them, the most absurd and outrageous consequences, to which I can see no limit, would ensue. Where a party becomes responsible to the public, by undertaking a public duty, he is liable, though the injury may have arisen from the negligence of his servant or agent. So, in cases of public nuisances, whether the act was done by the party as a servant, or in any other capacity, you are liable to an action at the suit of any person who suffers. Those, however, are cases where the real ground of the liability is the public duty, or the commission of the public nuisance. There is also a class of cases in which the law permits a contract to be turned into a tort; but unless there has been some public duty undertaken, or public nuisance committed, they are all cases in which an action might have been maintained upon the contract. Thus, a carrier may be sued either in assumpsit [contract] or case [tort]; but there is no instance in which a party, who was not privy to the contract entered into with him, can maintain any such action. The plaintiff in this case could not

have brought an action on the contract; if he could have done so, what would have been his situation, supposing the Postmaster-General had released the defendant? That would, at all events, have defeated his claim altogether. By permitting this action, we should be working this injustice, that after the defendant had done everything to the satisfaction of his employer, and after all matters between them had been adjusted, and all accounts settled on the footing of their contract, we should subject them to be ripped open by this action of tort being brought against him.

NOTE

The American reception of Winterbottom v. Wright. During the nineteenth century, *Winterbottom v. Wright* was a leading—albeit controversial—case both in England and in the United States. As negotiating the line between contracts and torts, *Winterbottom*'s requirement of privity between the parties provided a clear rule that limited the scope of tort duties owed to third persons who were not parties to the underlying contract, in this instance to repair the coach. According to one explanation, the result in *Winterbottom* had as much to do with procedure as with substance:

The dominant focus of the pre-negligence era [before 1850 at the earliest] was fixed upon the different and difficult problem of concurrence [between tort and contract remedies]. The early common law was traditionally hostile to double remedies, and this attitude, though less intense in the 19th century, was still alive.

Palmer, Why Privity Entered Tort—An Historical Reexamination of *Winterbottom v. Wright*, 27 Am. J. Legal Hist. 85, 89 (1983).

Would this problem be so severe if the court in *Winterbottom* had limited tort remedies to defective products? That concept came to the fore in several late nineteenth-century cases, which carved out significant exceptions to *Winterbottom*'s categorical prohibition. The overall position in the United States was summarized by Sanborn, J., in *Huset v. J.I. Case Threshing Machine Co.*, 120 F. 865, 866-871 (8th Cir. 1903):

[T]he natural and probable effect of the negligence of the contractor or manufacturer will generally be limited to the party for whom the article is constructed, or to whom it is first sold, and, perhaps more than all this, for the reason that a wise and conservative public policy has impressed the courts with the view that there must be a fixed and definite limitation to the liability of manufacturers and vendors for negligence in the construction and sale of complicated machines and structures which are to be operated or used by the intelligent and the ignorant, the skillful and the incompetent, the watchful and the careless, parties that cannot be known to the manufacturers or vendors, and who use the articles all over the country hundreds of miles distant from the place of their manufacture or original sale, a general rule has been adopted and has become established by repeated decisions of the courts of England and of this

country that in these cases the liability of the contractor or manufacturer for negligence in the construction or sale of the articles which he makes or vends is limited to the persons to whom he is liable under his contracts of construction or sale. The limits of the liability for negligence and for breaches of contract in cases of this character are held to be identical. The general rule is that a contractor, manufacturer, or vendor is not liable to third parties who have no contractual relations with him for negligence in the construction, manufacture, or sale of the articles he handles. But while this general rule is both established and settled, there are, as is usually the case, exceptions to it as well defined and settled as the rule itself. There are three exceptions to this rule.

p. 674

The first is that an act of negligence of a manufacturer or vendor which is imminently dangerous to the life or health of mankind, and which is committed in the preparation or sale of an article intended to preserve, destroy, or affect human life, is actionable by third parties who suffer from the negligence. . . .

The second exception is that an owner's act of negligence which causes injury to one who is invited by him to use his defective appliance upon the owner's premises may form the basis of an action against the owner. . . .

The third exception to the rule is that one who sells or delivers an article which he knows to be imminently dangerous to life or limb to another without notice of its qualities is liable to any person who suffers an injury therefrom which might have been reasonably anticipated, whether there were any contractual relations between the parties or not.

The court then held that the plaintiff's complaint alleged a cause of action under the third exception: that the defendant's threshing machine was constructed so that the cylinder covering upon which its operator had to walk could not support his weight, that the defect was latent in that it could not be discovered by ordinary inspection, and that this defective condition was known by the defendant. The court remanded the case for trial, noting that it was "perhaps improbable" that the defendant had knowledge of the imminently dangerous character of the machine at the time of delivery.

Some cases did succeed under this third exception. In *Kuelling v. Roderick Lean Manufacturing Co.*, 75 N.E. 1098, 1101 (N.Y. 1905), the defendants sold a roller to a dealer who then resold it to the plaintiff. The roller was made out of weak wood and contained a knot that prevented a safe hook-up of the roller to the team of horses that pulled it. The defect was deliberately concealed by putty and paint. Bartlett, J., allowed the action:

In the case at bar we have, not only fraudulent deceit and concealment, but what amounts to an affirmative representation that the tongue of the roller was sound, as the manufacturer by filling the defect with putty and painting the entire surface so that the eye could not detect any weakness by reason of the knot, knothole filled up, the kind of wood employed and the fact that it was cross-grained, must be held to have represented that the roller as offered for sale was in a

perfectly marketable condition.

MACPHERSON v. BUICK MOTOR CO.

111 N.E. 1050 (N.Y. 1916)

CARDOZO, J. The defendant is a manufacturer of automobiles. It sold an automobile to a retail dealer. The retail dealer resold to the plaintiff. While the plaintiff was in the car, it suddenly collapsed. He was thrown out and injured. One of the wheels was made of defective wood, and its spokes crumbled into fragments. The wheel was not made by the defendant; it was bought from another manufacturer. There is evidence, however, that its defects could have been discovered by reasonable inspection, and that inspection was omitted. There is no claim that

p. 675

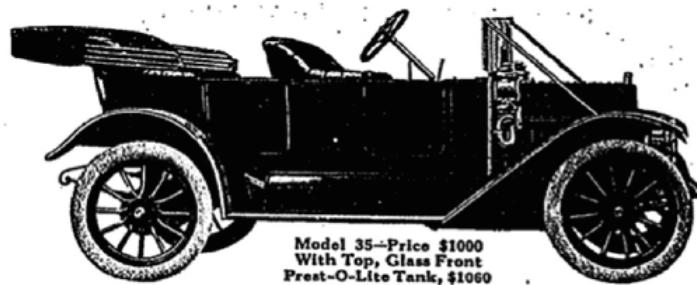

the defendant knew of the defect and willfully concealed it. The case, in other words, is not brought within the rule of *Kuelling v. Lean Mfg. Co.* The charge is one, not of fraud, but of negligence. The question to be determined is whether the defendant owed a duty of care and vigilance to any one but the immediate purchaser.

Exhibit 8.1 1910 Buick Model 10

"The Buick Model 10 was introduced in 1908. The Gentlemen's Light Four-cylinder Roadster body-style soon became the company's best seller. Over 4,000 examples were created during its first year and that figure doubled the following year to 8,100. The last year was in 1910, with production approaching 11,000 units." 1910 Buick Model 10, Conceptcarz, <http://www.conceptcarz.com/vehicle/z7409/Buick-Model-10.aspx>.

Five models, priced according to power and size—\$850, \$1000, \$1075, \$1250, \$1800. One-ton Buick Truck, \$1000. Catalogue showing the various models sent on request, also the name of nearest dealer.

The foundations of this branch of the law, at least in this state, were laid in *Thomas v. Winchester* (6 N.Y. 397 (1852)). A poison was falsely labeled. The sale was made to a druggist, who in turn sold to a customer. The customer recovered damages from the seller who affixed the label. "The defendant's negligence," it was said, "put human life in imminent danger." A poison falsely labeled is likely to injure anyone who gets it. Because the danger is to be foreseen, there is a duty to avoid the injury. . . .

Thomas v. Winchester became quickly a landmark of the law. In the application of its principle there may at times have been uncertainty or even error. There has never in this state been doubt or disavowal of the principle itself. The chief cases are well known, yet to recall some of them will be helpful. Loop v. Litchfield (42 N.Y. 351 (1870)) is the earliest. It was the case of a defect in a small balance wheel used on a circular saw. The manufacturer pointed out the defect to the buyer, who wished a cheap article and was ready to assume the risk. The risk can hardly have been an imminent one, for the wheel lasted five years before it broke. In the meanwhile the buyer had made a lease of the machinery. It was held that the manufacturer was not answerable to the lessee. Loop v. Litchfield was followed in Losee v. Clute (51 N.Y. 494 (1873)), the case of the explosion of a steam boiler. That decision has been criticised but it must be confined to its special facts. It was put upon the ground that the risk of injury was too remote. The buyer in that case had not only accepted the boiler, but had tested it. The manufacturer knew that his own test was not the final one. The finality of the test has a bearing on the measure of diligence owing to persons other than the purchaser.

p. 676

These early cases suggest a narrow construction of the rule. Later cases, however, evince a more liberal spirit. First in importance is Devlin v. Smith (89 N.Y. 470 (1882)). The defendant, a contractor, built a scaffold for a painter. The painter's servants were injured. The contractor was held liable. He knew that the scaffold, if improperly constructed, was a most dangerous trap. He knew that it was to be used by the workmen. He was building it for that very purpose. Building it for their use, he owed them a duty, irrespective of his contract with their master, to build it with care.

From Devlin v. Smith we pass over intermediate cases and turn to the latest case in this court in which Thomas v. Winchester was followed. That case is Statler v. Ray Mfg. Co. (195 N.Y. 478, 480 (1909)). The defendant manufactured a large coffee urn. It was installed in a restaurant. When heated, the urn exploded and injured the plaintiff. We held that the manufacturer was liable. We said that the urn "was of such a character inherently that, when applied to the purposes for which it was designed, it was liable to become a source of great danger to many people if not carefully and properly constructed."

It may be that Devlin v. Smith and Statler v. Ray Mfg. Co. have extended the rule of Thomas v. Winchester. If so, this court is committed to the extension. The defendant argues that things imminently dangerous to life are poisons, explosives, deadly weapons—things whose normal function it is to injure or destroy. But whatever the rule in Thomas v. Winchester may once have been, it has no longer that restricted meaning. A scaffold (Devlin v. Smith, *supra*) is not inherently a destructive instrument. It becomes destructive only if imperfectly constructed. A large coffee urn . . . may have within itself, if negligently made, the potency of danger, yet no one thinks of it as an implement whose normal function is destruction. What is true of the coffee urn is equally true of bottles of aerated water (Torgeson v. Schultz, 192 N.Y. 156 (1908)). We have mentioned only cases in this court. But the rule has received a like extension in our courts of intermediate appeal. . . .

[Cardozo, J., then reviewed the parallel English decisions.]

We hold, then, that the principle of Thomas v. Winchester is not limited to poisons, explosives, and things

of like nature, to things which in their normal operation are implements of destruction. If the nature of a thing is such that it is reasonably certain to place life and limb in peril when negligently made, it is then a thing of danger. Its nature gives warning of the consequences to be expected. If to the element of danger there is added knowledge that the thing will be used by persons other than the purchaser, and used without new tests, then, irrespective of contract, the manufacturer of this thing of danger is under a duty to make it carefully. That is as far as we are required to go for the decision of this case. There must be knowledge of a danger, not merely possible, but probable. It is *possible* to use almost anything in a way that will make it dangerous if defective. That is not enough to charge the manufacturer with a duty independent of his contract. Whether a given thing is dangerous may be sometimes a question for the court and sometimes a question for the jury. There must also be knowledge that in the usual course of events the danger will be shared by others than the buyer.

p. 677

Such knowledge may often be inferred from the nature of the transaction. But it is possible that even knowledge of the danger and of the use will not always be enough. The proximity or remoteness of the relation is a factor to be considered. We are dealing now with the liability of the manufacturer of the finished product, who puts it on the market to be used without inspection by his customers. If he is negligent, where danger is to be foreseen, a liability will follow. We are not required at this time to say that it is legitimate to go back of the manufacturer of the finished product and hold the manufacturers of the component parts. To make their negligence a cause of imminent danger, an independent cause must often intervene; the manufacturer of the finished product must also fail in *his* duty of inspection. It may be that in those circumstances the negligence of the earlier members of the series is too remote to constitute, as to the ultimate user, an actionable wrong. . . . We leave that question open. We shall have to deal with it when it arises. The difficulty which it suggests is not present in this case. There is here no break in the chain of cause and effect. In such circumstances, the presence of a known danger, attendant upon a known use, makes vigilance a duty. We have put aside the notion that the duty to safeguard life and limb, when the consequences of negligence may be foreseen, grows out of contract and nothing else. We have put the source of the obligation where it ought to be. We have put its source in the law.

From this survey of the decisions, there thus emerges a definition of the duty of a manufacturer which enables us to measure this defendant's liability. Beyond all question, the nature of an automobile gives warning of probable danger if its construction is defective. This automobile was designed to go fifty miles an hour. Unless its wheels were sound and strong, injury was almost certain. It was as much a thing of danger as a defective engine for a railroad. The defendant knew the danger. It knew also that the car would be used by persons other than the buyer. This was apparent from its size; there were seats for three persons. It was apparent also from the fact that the buyer was a dealer in cars, who bought to resell. The maker of this car supplied it for the use of purchasers from the dealer just as plainly as the contractor in *Devlin v. Smith* supplied the scaffold for use by the servants of the owner. The dealer was indeed the one person of whom it might be said with some approach to certainty that by him the car would not be used. Yet the defendant would have us say that he was the one person whom it was under a legal duty to protect. The law does not lead us to so inconsequent a conclusion. Precedents drawn from the days of travel by stage coach do not fit the conditions of travel today. The principle that the danger must be imminent does not change, but the things subject to the principle do change. They are whatever the needs of life in a developing civilization require them to be.

In reaching this conclusion, we do not ignore the decisions to the contrary in other jurisdictions. . . . The earlier cases are summarized by Judge Sanborn in *Huset v. J. I. Case Threshing Machine Co.* (120 Fed. Rep. 865). . . . Judge Sanborn says . . . that the contractor who builds a bridge, or the manufacturer who builds a car, cannot ordinarily foresee injury to other persons than the owner as the probable result. We take a different view. We think that injury to others is to

p. 678

be foreseen not merely as a possible, but as an almost inevitable result. Indeed, Judge Sanborn concedes that his view is not to be reconciled with our decision in *Devlin v. Smith*. The doctrine of that decision has now become the settled law of this state, and we have no desire to depart from it.

[Cardozo, J., then reviewed the English cases from *Winterbottom* onward and continued:] From these cases a consistent principle is with difficulty extracted. The English courts, however, agree with ours in holding that one who invites another to make use of an appliance is bound to the exercise of reasonable care. That at bottom is the underlying principle of *Devlin v. Smith*. The contractor who builds the scaffold invites the owner's workmen to use it. The manufacturer who sells the automobile to the retail dealer invites the dealer's customers to use it. The invitation is addressed in the one case to determinate persons and in the other to an indeterminate class, but in each case it is equally plain, and in each its consequences must be the same. . . .

. . . Subtle distinctions are drawn by the defendant between things inherently dangerous and things imminently dangerous, but the case does not turn upon these verbal niceties. If danger was to be expected as reasonably certain, there was a duty of vigilance, and this whether you call the danger inherent or imminent. In varying forms that thought was put before the jury. We do not say that the court would not have been justified in ruling as a matter of law that the car was a dangerous thing. If there was any error, it was none of which the defendant can complain.

We think the defendant was not absolved from a duty of inspection because it bought the wheels from a reputable manufacturer. It was not merely a dealer in automobiles. It was a manufacturer of automobiles. It was responsible for the finished product. It was not at liberty to put the finished product on the market without subjecting the component parts to ordinary and simple tests. Under the charge of the trial judge nothing more was required of it. The obligation to inspect must vary with the nature of the thing to be inspected. The more probable the danger, the greater the need of caution. . . .

The judgment should be affirmed with costs.

BARTLETT, C.J., dissenting. . . . [In *Thomas v. Winchester*,] Chief Judge Ruggles, who delivered the opinion of the court, distinguished between an act of negligence imminently dangerous to the lives of others and one that is not so, saying: "If A. build a wagon and sell it to B., who sells it to C. and C. hires it to D., who in consequence of the gross negligence of A. in building the wagon is overturned and injured, D. cannot recover damages against A., the builder. A.'s obligation to build the wagon faithfully, arises solely out of his contract with B. The public have nothing to do with it. . . . So, for the same reason, if a horse be defectively shod by a smith, and a person hiring the horse from the owner is thrown and injured in consequence of the smith's negligence in shoeing the smith is not liable for the injury." . . .

I do not see how we can uphold the judgment in the present case without overruling what has been so often said by this court and other courts of like authority in reference to the absence of any liability for negligence on the part of the

p. 679

original vendor of an ordinary carriage to any one except his immediate vendee. The absence of such liability was the very point actually decided in the English case of *Winterbottom v. Wright*, and the illustration quoted from the opinion of Chief Judge Ruggles in *Thomas v. Winchester* assumes that the law on the subject was so plain that the statement would be accepted almost as a matter of course. In the case at bar the defective wheel on an automobile moving only eight miles an hour was not any more dangerous to the occupants of the car than a similarly defective wheel would be to the occupants of a carriage drawn by a horse at the same speed; and yet unless the courts have been all wrong on this question up to the present time there would be no liability to strangers to the original sale in the case of the horse-drawn carriage.

NOTES

1. A *landmark case*. The *MacPherson* trial record yields a somewhat different view of the facts of this case. The eyewitnesses all testified that MacPherson was traveling (in 1911) at over 30 miles per hour when the accident took place, not the leisurely eight miles per hour stated in the dissent. As James Henderson notes,

[t]he problem with MacPherson's story was that it was premised on a physical impossibility. Uncontradicted expert testimony from defendant's experts showed that, at such a low speed in high gear, the Buick would have stalled in its tracks—the engine could not possibly have continued to operate in four inches of gravel—and the car would have come to a stop almost immediately.

Henderson, *MacPherson v. Buick Motor Company: Simplifying the Facts While Reshaping the Law*, in *Tort Stories* 45-46 (Rabin & Sugarman eds., 2003).

The nature of the collision offers a compelling explanation as to why the wheel broke as it did. If the defect had been built in from the beginning, the wheel surely would have collapsed sooner under the pressure of driving on back country roads. None of these details came out in the appellate litigation, as Buick preferred to concentrate on the privity defense on the appeal in the hopes of securing a categorical defense that did not turn on the condition of the wheel at the time of the accident. If the facts had come out, would the case for the privity limitation have been stronger or weaker? On its actual facts, could MacPherson get to the jury today?

Exhibit 8.2 *MacPherson's Facts: Not as Simple as Cardozo Suggests*

The few facts recited in Cardozo's *MacPherson* decision are "starkly simple" and "give[] no hint of the inherently controversial nature of the conclusions reached at trial." Henderson, *MacPherson v. Buick Motor Company: Simplifying the Facts While Reshaping the Law*, in *Torts Stories* 41, 51

(Rabin & Sugarman eds., 2003). By the time the case reached the Court of Appeals, the underlying facts of *MacPherson* had already been manipulated; Cardozo then altogether elided them in the course of reshaping the law of products liability. For instance:

-

- Car Not New.* MacPherson's Buick Model 10 runabout "was not new, or even nearly new; the MacPhersons had owned it for over a year and had put it to hard use. . . . [They] had driven the car all over . . . upstate New York . . . on all kinds of surfaces, including rough country roads." Henderson, *supra*, at 41-42. They had used it, moreover, "with a lot of weight aboard," to carry grave stones and markers, in connection with the family's gravestone and marker business. *Id.*
- *MacPherson No Novice.* By the time of the accident, MacPherson had "owned and operated several other automobiles . . . and was an experienced driver." *Id.*
- *Travel at High Gear.* The accident occurred on a "paved state road," on which MacPherson, according to "several disinterested eyewitnesses," "shifted the Buick into high gear and pushed the speed up to over 30 miles an hour." *Id.* at 42, 45. MacPherson testified that he was only going eight miles per hour—a speed at which the accident would have been, according to uncontradicted expert testimony, a "physical impossibility." *Id.* at 45.
- *When Did That Wheel Break?* The Buick ran into a "stretch of loose gravel" on the paved road, at which time MacPherson "lost control" of the car, which slid off the road to the right, and "struck a telephone pole with the front right bumper, spun around 180 degrees from its own momentum, and fell . . . into a three-foot ditch. When the automobile landed in the ditch, the left rear wheel broke under the sudden force of the impact. . . ." *Id.* at 43. MacPherson however testified that "the left rear wheel suddenly collapsed while the car was being driven," *id.* at 47—a rendition ostensibly endorsed in full by Cardozo. ("While the plaintiff was in the car, it suddenly collapsed. He was thrown out and injured. One of the wheels was made of defective wood, and its spokes crumbled into fragments." *MacPherson*, 111 N.E. at 1051.)

p. 680

As argued on appeal, *MacPherson* counts as a landmark decision in the history of our law. Before *MacPherson*, Sanborn, J., in *Huset v. J.I. Case* stated the law as it stood in virtually all jurisdictions, including New York. After *MacPherson*, one jurisdiction after another abandoned the privity rule in cases involving physical injuries caused by defective products. Subsequent cases incrementally extended the scope of *MacPherson*. Thus in *Smith v. Peerless Glass Co.*, 181 N.E. 576 (N.Y. 1932), the court allowed a direct action for negligence to be brought against the manufacturer of a component part, such as the wheel maker in *MacPherson*. Today, every jurisdiction in the United States follows the *MacPherson* rule. Great Britain eventually abandoned *Winterbottom* as well in *Donoghue v. Stevenson*, [1932] A.C. 562, 580, 599 (Scot.), in which the plaintiff was allowed to sue, even without privity, the maker of a ginger beer bottle for the physical harm sustained when she drank the remains of a decomposed snail left in an opaque bottle of its brew. While the House of Lords went out of its way to avoid explicitly overruling *Winterbottom v. Wright*, it took exception to its view of privity:

[A] manufacturer of products which he sells in such a form as to show that he intends them to

reach the ultimate consumer in the form in which they left him, with no reasonable possibility of intermediate examination, and with the knowledge that the absence of reasonable care in the preparation or putting up of the products is likely to result in injury to the consumer's life or property, owes a duty to the consumer to take that reasonable care.

Could MacPherson have recovered under this formulation of the rule in light of his ability to inspect the wheel?

p. 681

2. *Privity in contract law: The warranty side of the line.* In *Huset*, Sanborn, J., noted that products liability claims frequently sounded in contract as well as in negligence. Often the plaintiff's strategy is to claim that the defendant made an express or implied warranty that the product sold was fit for its intended purpose. These contract theories must surmount two obstacles: privity and warranty law.

First, could the plaintiff rely on a warranty theory if she did not purchase the product directly from the defendant? In *Chysky v. Drake Brothers Co.*, 139 N.E. 576, 577 (N.Y. 1923), the plaintiff, a waitress, was given a piece of the defendant's cake for lunch. She bit on a concealed nail that had been baked into the cake and suffered injuries to her mouth. Section 96 of the New York Personal Property Code provided that

there is no implied warranty or condition as to the quality or fitness for any particular purpose of goods supplied under a contract to sell or a sale, except as follows: 1. Where the buyer, expressly or by implication, makes known to the seller the particular purpose for which the goods are required, and it appears that the buyer relies on the seller's skill or judgment (whether he be the grower or manufacturer or not), there is an implied warranty that the goods shall be reasonably fit for such purpose.

Even after *MacPherson*, the New York Court of Appeals held that the plaintiff's cause of action failed under this section, stating that

[t]he general rule is that a manufacturer or seller of food, or other articles of personal property, is not liable to third persons, under an implied warranty, who have no contractual relations with him. The reason for this rule is that privity of contract does not exist between the seller and such third persons, and unless there be privity of contract, there can be no implied warranty.

Chysky, 139 N.E. at 578.

The privity barrier was overcome in *Baxter v. Ford Motor Co.*, 12 P.2d 409, 412 (Wash. 1932). The plaintiff was injured in the eye when a small rock shattered the front windshield of his car, which was manufactured by Ford and sold to the plaintiff by the defendant dealer, St. John Motors. The Washington Supreme Court allowed the dealer to escape liability under a provision in the contract of sale that excluded all warranties. But relying on *Thomas v. Winchester*, the court held that Ford could be responsible for its representations in catalogues and printed materials that St. John distributed to customers about the car's "Tri-plex shatter-proof glass windshield."

The rule in such cases does not rest upon contractual obligations, but rather on the principle that the original act of delivering an article is wrong, when, because of the lack of those qualities which the manufacturer represented it as having, the absence of which could not be readily detected by the consumer, the article is not safe for the purposes for which the consumer would ordinarily use it.

p. 682

Since the rule of *caveat emptor* was first formulated, vast changes have taken place in the economic structures of the English speaking peoples. Methods of doing business have undergone a great transition. Radio, bill boards and the products of the printing press have become the means of creating a large part of the demand that causes goods to depart from factories to the ultimate consumer. It would be unjust to recognize a rule that would permit manufacturers of goods to create a demand for their products by representing that they possess qualities which they, in fact, do not possess; and then, because there is no privity of contract existing between the consumer and the manufacturer, deny the consumer the right to recover if damages result from the absence of those qualities, when such absence is not readily noticeable.

Note that in *Baxter*, the direct contract limited the liability of the dealer. Dealer liability on an implied warranty theory was also at issue in *McCabe v. L.K. Liggett Drug Co.*, 112 N.E.2d 254, 256-257 (Mass. 1953), where the plaintiff was injured by a metal coffee maker, the "Lucifer Lifetime," sold (but not manufactured) by the defendant in a sealed cardboard box and assembled by the plaintiff in accordance with the instructions. The plaintiff's expert testified that the "notches" in the coffee maker's filtration system were "inadequate to provide for the release of the pressure which developed from the boiling water," especially if they became clogged by the "congealing" of the coffee grounds. As a result, the coffee maker blew up and injured the plaintiff. Williams, J., brushed aside other defenses as follows:

The sale carried an implied warranty by the seller that the appliance was a coffee maker of merchantable quality. G. L. (Ter. Ed.) c. 106, §17 (2). Merchantable quality means that goods are reasonably suitable for the ordinary uses for which goods of that description are sold. . . .

The fact that the apparatus violently burst apart in the manner described showed that the accumulating pressure was not being released and in the absence of explanation was itself evidence of a defective condition. The jury could find that the explosion was caused by the failure of the water to rise into the upper bowl and from an examination of the notches in the filter that this failure was due to an inadequate outlet and the clogging effect of coffee grounds which would collect around the notches.

If the coffee maker was so imperfect in design that it could not be used without the likelihood of an explosion it could be found that the appliance was not reasonably fit for making coffee and therefore not merchantable. The plaintiff was not deprived of her right to rely upon the implied warranty either by a failure to inspect or by an inspection before use, as it could have been found that the defect in design would not be obvious to an ordinary person on inspection.

The judge was not justified in entering the verdict for the defendant on the ground that, as contended by the defendant, the notice required by G. L. (Ter. Ed.) c.106, §38, was insufficient, in not stating the exact date of the purchase or the name of the purchaser. Information as to the exact date of the sale was here of little if of any importance to the seller. The defendant had been selling these coffee makers over a period of a week. Presumably all were constructed alike. No claim was made that there was a defect in the particular appliance which was not

p. 683

common to all. The notice indicated a date of purchase within the period when they were being sold and was sufficient to enable the defendant to examine into any fault in their common design. The name of the person who actually made the purchase did not enter into the transaction with the defendant and the failure to state it did not invalidate the notice.

After *MacPherson*, how would a defense lawyer attack a plaintiff's story? Is there any difference between a defective and an unmerchantable appliance? Why shouldn't this action be brought against the manufacturer? How do the parallel lines of warranty and tort evolve?

ESCOLA v. COCA COLA BOTTLING CO. OF FRESNO

150 P.2d 436 (Cal. 1944)

[The plaintiff was a waitress. As part of her job, she was placing into the restaurant's refrigerator bottles of Coca-Cola that had been delivered to the restaurant at least 36 hours earlier. As she put the fourth bottle into the refrigerator, it exploded in her hand, causing severe injuries. The plaintiff alleged that the defendant had been negligent in selling "bottles containing said beverage which on account of excessive pressure of gas or by reason of some defect in the bottle was dangerous . . . and likely to explode."]

The jury entered a verdict for the plaintiff that was affirmed on appeal. Gibson, J., wrote as follows: "The bottle was admittedly charged with gas under pressure, and the charging of the bottle was within the exclusive control of the defendant. As it is a matter of common knowledge that an overcharge would not ordinarily result without negligence, it follows under the doctrine of res ipsa loquitur that if the bottle was in fact excessively charged an inference of defendant's negligence would arise."]

TRAYNOR, J. I concur in the judgment, but I believe the manufacturer's negligence should no longer be singled out as the basis of a plaintiff's right to recover in cases like the present one. In my opinion it should now be recognized that a manufacturer incurs an absolute liability when an article that he has placed on the market, knowing that it is to be used without inspection, proves to have a defect that causes injury to human beings. *MacPherson v. Buick Motor Co.* established the principle, recognized by this court, that irrespective of privity of contract, the manufacturer is responsible for an injury caused by such an article to any person who comes in lawful contact with it. In these cases the source of the manufacturer's liability was his negligence in the manufacturing process or in the inspection of component parts supplied by others. Even if there is no negligence, however, public policy demands that responsibility be fixed wherever it will most effectively reduce the hazards to life and health inherent in defective products that reach the market. It is evident that the manufacturer can anticipate some hazards and guard against the recurrence of others, as the

public cannot. Those who suffer injury from defective products are unprepared to meet its consequences. The cost of an injury and the loss of time or health may be an

p. 684

overwhelming misfortune to the person injured, and a needless one, for the risk of injury can be insured by the manufacturer and distributed among the public as a cost of doing business. It is to the public interest to discourage the marketing of products having defects that are a menace to the public. If such products nevertheless find their way into the market it is to the public interest to place the responsibility for whatever injury they may cause upon the manufacturer, who, even if he is not negligent in the manufacture of the product, is responsible for its reaching the market. However intermittently such injuries may occur and however haphazardly they may strike, the risk of their occurrence is a constant risk and a general one. Against such a risk there should be general and constant protection and the manufacturer is best situated to afford such protection.

The injury from a defective product does not become a matter of indifference because the defect arises from causes other than the negligence of the manufacturer, such as negligence of a submanufacturer of a component part whose defects could not be revealed by inspection, or unknown causes that even by the device of *res ipsa loquitur* cannot be classified as negligence of the manufacturer. The inference of negligence may be dispelled by an affirmative showing of proper care. If the evidence against the fact inferred is "clear, positive, uncontradicted, and of such a nature that it cannot rationally be disbelieved, the court must instruct the jury that the nonexistence of the fact has been established as a matter of law." An injured person, however, is not ordinarily in a position to refute such evidence or identify the cause of the defect, for he can hardly be

p. 685

familiar with the manufacturing process as the manufacturer himself is. In leaving it to the jury to decide whether the inference has been dispelled, regardless of the evidence against it, the negligence rule approaches the rule of strict liability. It is needlessly circuitous to make negligence the basis of recovery and impose what is in reality liability without negligence. If public policy demands that a manufacturer of goods be responsible for their quality regardless of negligence there is no reason not to fix that responsibility openly.

Exhibit 8.3 Roger Traynor

Source: Law School Archives,
University of California, Berkeley

Justice Roger Traynor (1900-1983), whose 30-year tenure on the California Supreme Court encompassed 24 years as an associate justice (1940-1964) and six as chief justice (1964-1970), is the subject of a chapter in White, *Tort Law in America: An Intellectual History* ch. 6 (2003). According to White, the Traynor years were marked by “a strong interest in academic literature as source material; an effort to preserve, where possible, the lawmaking power of course [in the face of “an increasingly detailed legislative apparatus”], and a search for a harmony of result and doctrine in his opinions. . . .” White, *supra*, at 182.

White further explains: “The basis for Traynor’s faith in the judiciary as a lawmaking force . . . was his conviction that rationality could be achieved through enlightened judging.” *Id.* at 188. Traynor, who “never departed from his belief that rationality was an achievable judicial goal . . . was not disturbed by the ‘activist judge’ label often attached to him.” *Id.*

Indeed, and as shown by his concurrence in *Escola* and decision in *Greenman v. Yuba Power Products, Inc.*, Traynor, “[i]n his activist conception of judging . . . was one of the pioneers of his time and one of the precursors of a ‘policymaking’ role for judges in tort cases. . . . Traynor was committed to using his powers as fully as possible to promote social policies in which he believed and to reorient the common law of California in directions he thought rational and desirable.” *Id.* at 208.

In the case of foodstuffs, the public policy of the state is formulated in a criminal statute. . . . Statutes of this kind result in a strict liability of the manufacturer in tort to the member of the public injured.

The statute may well be applicable to a bottle whose defects cause it to explode. In any event it is significant that the statute imposes criminal liability without fault, reflecting the public policy of protecting the public from dangerous products placed on the market, irrespective of negligence in their manufacture. While the Legislature imposes criminal liability only with regard to food products and their containers, there are many other sources of danger. It is to the public interest to prevent injury to the public from any defective goods by the imposition of civil liability generally.

The retailer, even though not equipped to test a product, is under an absolute liability to his customer, for the implied warranties of fitness for proposed use and merchantable quality include a warranty of safety of the product. This warranty is not necessarily a contractual one; see 1 Williston on Sales, 2d ed., §§197-201, for public policy requires that the buyer be insured at the seller's expense against injury. The courts recognize, however, that the retailer cannot bear the burden of this warranty, and allow him to recoup any losses by means of the warranty of safety attending the wholesaler's or manufacturer's sale to him. . . . Such a procedure, however, is needlessly circuitous and engenders wasteful litigation. Much would be gained if the injured person could base his action directly on the manufacturer's warranty.

The liability of the manufacturer to an immediate buyer injured by a defective product follows without proof of negligence from the implied warranty of safety attending the sale. Ordinarily, however, the immediate buyer is a dealer who does not intend to use the product himself, and if the warranty of safety is to serve the purpose of protecting health and safety it must give rights to others than the dealer. In the words of Judge Cardozo in the *MacPherson* case: "The dealer was indeed the one person of whom it might be said with some approach to certainty that by him the car would not be used. Yet, the defendant would have us say that he was the one person whom it was under a legal duty to protect. The law does not lead us to so inconsequent a solution." While the defendant's negligence in the *MacPherson* case made it unnecessary for the court to base liability on warranty, Judge Cardozo's reasoning recognized the injured person as the real party in interest and effectively disposed on the theory that the liability of the manufacturer incurred by his warranty should apply only to the immediate purchaser. It thus paves the way for a standard of liability that would make the manufacturer guarantee the safety of his product even when there is no negligence.

p. 686

This court and many others have extended protection according to such a standard to consumers of food products, taking the view that the right of a consumer injured by unwholesome food does not depend "upon the intricacies of the law of sales" and that the warranty of the manufacturer to the consumer in absence of privity of contract rests on public policy. Dangers to life and health inhere in other consumers' goods that are defective and there is no reason to differentiate them from the dangers of defective food products.

In the food products cases the courts have resorted to various fictions to rationalize the extension of the manufacturer's warranty to the consumer: that a warranty runs with the chattel; that the cause of action of the dealer is assigned to the consumer; that the consumer is a third party beneficiary of the manufacturer's contract with the dealer. They have also held the manufacturer liable on a mere fiction of negligence: "Practically he must know it [the product] is fit, or bear the consequences if it proves destructive." Such fictions are not necessary to fix the manufacturer's liability under a warranty if the warranty is severed from the contract of sale between the dealer and the consumer and based on the law of torts as a strict liability.

Warranties are not necessarily rights arising under a contract. An action on a warranty “was, in its origin, a pure action of tort,” and only late in the historical development of warranties was an action in assumpsit allowed. (Ames, *The History of Assumpsit*, 2 Harv. L. Rev. 1, 8; 4 Williston on Contracts (1936) §970.) . . .

As handicrafts have been replaced by mass production with its great markets and transportation facilities, the close relationship between the producer and consumer of a product has been altered. Manufacturing processes, frequently valuable secrets, are ordinarily either inaccessible to or beyond the ken of the general public. The consumer no longer has means or skill enough to investigate for himself the soundness of a product, even when it is not contained in a sealed package, and his erstwhile vigilance has been lulled by the steady efforts of manufacturers to build up confidence by advertising and marketing devices such as trademarks. (See *Thomas v. Winchester*, 6 N.Y. 697; *Baxter v. Ford Motor Co.*[, 12 P.2d 409 (Wash. 1932)].) Consumers no longer approach products warily but accept them on faith, relying on the reputation of the manufacturer or the trademark. Manufacturers have sought to justify that faith by increasingly high standards of inspection and a readiness to make good on defective products by way of replacements and refunds. (See Bogert and Fink, *Business Practices Regarding Warranties in the Sale of Goods*, 25 Ill. L. Rev. 400.) The manufacturer’s obligation to the consumer must keep pace with the changing relationship between them; it cannot be escaped because the marketing of a product has become so complicated as to require one or more intermediaries. Certainly, there is greater reason to impose liability on the manufacturer than on the retailer who is but a conduit of a product that he is not himself able to test.

The manufacturer’s liability should, of course, be defined in terms of the safety of the product in normal and proper use, and should not extend to injuries that cannot be traced to the product as it reached the market.

NOTES

1. Rationales. At a factual level, does the switch to a theory of strict liability resolve the question of whether the Coca-Cola bottles were excessively charged in the factory or were mishandled by subsequent parties? As a theoretical matter, how sound are the various rationales for strict liability that Traynor, J., offers?

a. Loss minimization. One rationale offered is that the manufacturer, rather than the unwitting consumer, is most knowledgeable and is therefore in the best position to minimize the losses that arise out of the general use of its product. If correct, should we also require strict liability for defective premises owned by commercial enterprises, or for that matter, strict liability for automobile accidents, at least when business enterprises are defendants? Recall *Hammontree v. Jenner*, *supra* at 137. On this rationale, what adjustments should be made if the plaintiff or some downstream third party is in a better position to take the desired precautions? What if the plaintiff shook the bottle in use, or stored it in a hot place? Is it consistent with the loss minimization rationale to allow the manufacturer to contract out of liability with the consumer? Does a negligence rule fail to create the necessary incentives for the manufacturer to take appropriate cost-justified

precautions?

b. Loss spreading. A second defense of the strict liability rule in *Escola* rests upon the ability of the defendant producer to spread the damages among many consumers, thus cushioning the “overwhelming misfortune” of the injured person or her family. This risk-spreading rationale for strict liability was challenged in *Wights v. Staff Jennings, Inc.*, 405 P.2d 624, 628 (Or. 1965), where the court observed:

The rationale of risk spreading and compensating the victim has no special relevancy to cases involving injuries resulting from the use of defective goods. The reasoning would seem to apply not only in cases involving personal injuries arising from the *sale* of defective goods, but equally to any case where an injury results from the risk creating conduct of the seller in any stage of the production and distribution of goods. Thus a manufacturer would be strictly liable even in the absence of fault for any injury to a person struck by one of the manufacturer’s trucks being used in transporting his goods to market. It seems to us that the enterprise liability rationale employed in the *Escola* case proves too much and that if adopted would compel us to apply the principle of strict liability in all future cases where the loss could be distributed.

c. Elimination of proof complications. Traynor, J., also defends strict liability in *Escola* because it simplifies the law by eliminating the need to resort to *res ipsa loquitur*—the same reason used to defend strict liability in *Rylands v. Fletcher*. See Chapter 2, *supra* at 101. In all contexts, a strict liability rule switches the residual risk of unavoidable accidents from the plaintiff to the defendant. With exploding soda bottles, that risk is generally quite small given the stringent quality control and inspection devices incorporated into the manufacturing process. How does *res ipsa loquitur* apply when misconduct by

p. 688

the plaintiff or a third party is also at issue? Should it make any difference that the plaintiff in *Escola* could not produce the pieces of the broken bottle for inspection and examination?

d. The foodstuffs analogy. A fourth defense of strict liability rests on the analogy between adulterated foodstuffs and product defects. In this regard, the law after *MacPherson* and before *Escola* drew a distinction between foodstuffs that were sold in sealed containers and those that were not. For goods sold in sealed containers, the law exempted the retailer from liability, but allowed a direct suit against the manufacturer, albeit on a negligence theory. See, e.g., *Richenbacher v. California Packing Corp.*, 145 N.E. 281 (Mass. 1924), sustaining the use of *res ipsa loquitur* when the plaintiff’s mouth was cut by glass found in a container of spinach. In contrast, when goods were not packaged, the general rule imposed negligence liability, if at all, on the retailer, but not on the original food supplier. Is *Richenbacher* an easier case for *res ipsa loquitur* than *Escola*? Why?

e. Corrective justice. Another argument for strict liability in products cases—one not pressed by Traynor—is that the loss should be placed upon the party who created the dangerous condition, not the party who suffered from it. This reasoning is similar to the argument for strict liability in ordinary trespass cases, or even under the rule in *Rylands v. Fletcher*: Once plaintiff establishes the causal connection to the defendant’s act (in *Escola*, the defective bottling under pressure that caused harm), then, *prima facie*, the defendant should be held liable. Note, however, one structural difference between the two types of cases.

With abnormally dangerous activities, the defendant is virtually always in possession of the dangerous instrumentality just before it causes the accident, so the class of defenses based upon plaintiff's conduct remains quite small. See *supra* Chapter 2, Note 2, at 80, and Chapter 7, Note 3, at 601. With products liability, the defendant is never in possession of the dangerous product when it causes injury, so that the older privity limitation might be a sensible way for liability to track possession (and hence control), except in those few cases in which a party out of possession is in a better position to avoid the loss. See Epstein, The Historical Origins and Economic Structure of Workers' Compensation Law, 16 Ga. L. Rev. 775, 806-808 (1982), defending privity for workplace injuries on the ground that employer's liability is both cheaper and more efficient than manufacturer's liability.

2. *Criticisms.* For an early criticism of strict liability in products cases, see Plant, Strict Liability of Manufacturers for Injuries Caused by Defects in Products—An Opposing View, 24 Tenn. L. Rev. 938, 945 (1957), in which it is noted that “[t]he element which is most disturbing to manufacturers is not the potential judgment of legal liability but the injury which is done to the reputation of the product and its producers.” Note that modern “event studies” establish that the decline in the value of the shares of a publicly traded company after a major product incident go down more than the anticipated amount of the liability. For evidence of the impact of these studies, see Prince & Rubin, The Effects of Product Liability Litigation on the Value of Firms, 45 Am. L. & Econ. Rev. 44 (2002):

p. 689

[F]irms facing lawsuits for their products suffer capital market losses approximately equal to a worst-case scenario associated with the litigation. Thus, it appears that individual firms may suffer reputation costs as a consequence of product liability lawsuits but that these reputation losses are smaller than losses from government actions such as recall.

For a more recent study on the same issue, see Dranove, Delivering Bad News: Market Responses to Negligence, 55 J.L. & Econ. 1, 2 (2012), which notes some “anecdotal evidence” that points to some reputational effect:

For example, sales of Johnson & Johnson's Tylenol plummeted in 1982 after the product was tainted by tampering, and ValuJet lost customers and even changed its name after the 1996 crash of flight 592. More recently, the spate of vehicle recalls faced by Toyota over allegedly defective acceleration put the automaker under intense public scrutiny and caused its U.S. market share to plummet. . . .

To what extent should the negative effect depend on the perceived fault of the defendant in bringing about the incident? Is the perception of fault likely to be greater for airline crashes and brake failures than for contaminations known to be caused downstream by malicious third parties?

3. *Implied warranty: Elimination of privity in contract law.* The early privity limitation in Chysky v. Drake, *supra* at 681, was overruled 38 years later in Greenberg v. Lorenz, 173 N.E.2d 773 (N.Y. 1961). There the plaintiff was injured when she ate canned salmon that contained sharp metal slivers, sold by the defendant retail food dealer to her father. The court below dismissed the plaintiff's complaint because the plaintiff had

not purchased the salmon herself. The Court of Appeals reversed. Just about that time, the warranty provisions of the law of sales were reworked under a new Uniform Commercial Code, which offers three possible approaches to the scope of the warranty.

Uniform Commercial Code

§2-318. THIRD PARTY BENEFICIARIES OF WARRANTIES EXPRESS OR IMPLIED . . .

Alternative A

A seller's warranty whether express or implied extends to any natural person who is in the family or household of his buyer or who is a guest in his home if it is reasonable to expect that such person may use, consume or be affected by the goods and who is injured in person by breach of the warranty. A seller may not exclude or limit the operation of this section.

p. 690

Alternative B

A seller's warranty whether express or implied extends to any natural person who may reasonably be expected to use, consume or be affected by the goods and who is injured in person by breach of the warranty. A seller may not exclude or limit the operation of this section.

Alternative C

A seller's warranty whether express or implied extends to any person who may reasonably be expected to use, consume or be affected by the goods and who is injured by breach of the warranty. A seller may not exclude or limit the operation of this section with respect to injury to the person of an individual to whom the warranty extends.

New York originally adopted alternative A. In 1975, however, it adopted alternative B (N.Y. U.C.C. Law §2-318 (2019)). If *X* steals a roll from *Y*, who had purchased it from *Z*, should *X* recover from *Z* under the variations of section 2-318 when injured by a piece of sharp metal baked into the roll? Why should the parties, unlike the dealer in *Baxter*, be unable to contract out of this provision?

4. *Henningsen: Implied warranty with a vengeance.* In *Henningsen v. Bloomfield Motors, Inc.*, 161 A.2d 69 (N.J. 1960), Henningsen purchased a new Plymouth automobile, manufactured by the defendant Chrysler Corporation, from defendant Bloomfield Motors, Inc. Henningsen gave the car to his wife, after indicating to the dealer his intention to make it a gift. The contract of sale between Mr. Henningsen and the two defendants expressly disclaimed all warranties by the dealer or manufacturer, except one that limited the liability of the defendants to the original purchaser and only then for replacement of defective parts within 90 days or 4,000 miles, whichever occurred first. Shortly after the car was purchased, the plaintiff, Mrs. Henningsen, was driving along a clear road when the steering mechanism suddenly went awry. The car went out of control and veered off the road and into a wall, injuring her. She sued on theories of

negligence and warranty. After the trial court dismissed the negligence claim, the jury found for the plaintiff against both defendants on the warranty claim and the defendants appealed. In his very lengthy opinion, Francis, J., examined how the courts had extended the implied warranty of merchantability to individuals who were not party to the original sales agreement, a development he found absolutely necessary as manufacturers increasingly distanced themselves from sales act liability to consumers by a complex web of contracts. He insisted that the limited protection to the plaintiff under this express warranty was a “sad commentary” on the marketing practices of automobile manufacturers.

p. 691

Although he thought the ordinary warranty of merchantability might technically survive this disclaimer clause, Francis, J., did not rely on any interpretative techniques. Instead he voided the disclaimer clause on the ground that it “was not fairly obtained.” It followed that the benefit of the implied warranty ran to the plaintiff, even in the absence of privity, so long as the defendant “puts a new automobile in the stream of trade and promotes its purchase by the public.”

A breakthrough for its time, *Henningsen*’s importance appears to have waned somewhat, not because courts have rejected its outcome, but because, ironically, its implied warranty theory tied products liability actions too closely to the law of sales. Modern cases, however, still occasionally allow a jury to find liability under a warranty theory while denying recovery under a tort theory. In *Denny v. Ford Motor Co.*, 662 N.E.2d 730, 736 (N.Y. 1995), the plaintiff was injured when her Ford Bronco, owing to its high center of gravity, rolled over after she slammed on the brakes. The jury found that the vehicle was not “defective” but awarded her \$1,200,000 in damages on an implied warranty theory. The court rejected Ford’s contention that tort had “completely subsumed” warranty theory, noting that the “negligence-like risk/benefit component of the defect element differentiates strict products liability claims from U.C.C.-based breach of implied warranty claims in cases involving design defects.”

Can a product without a defect flunk the merchantability test? In *Castro v. QVC Network*, 139 F.3d 114, 118 (2d Cir. 1998), the plaintiff was badly burned when her 25-pound Thanksgiving turkey fell on her legs and ankles, causing second- and third-degree burns, after it slipped out of a roaster manufactured by defendant U.S.A. T-Fal Corp., and sold by defendant QVC over its home-shopping network. The trial judge refused to offer separate instructions on both strict liability and warranty counts, but after the jury found for the defendants, Calabresi, J., relied on *Denny* to grant a new trial: “The imposition of strict liability for an alleged design ‘defect’ is determined by a risk-utility standard. The notion of ‘defect’ in a U.C.C.-based breach of warranty claim focuses, instead, on consumer expectations.” Here, according to Calabresi, J., the purpose for which the product was marketed (cooking a large turkey) was different from its designed-for use (cooking low-volume baked goods). Will all “dual-purpose” goods henceforth require separate jury instructions?

The court in *Scotto v. HSN, Inc.*, No. 13CV2471ENVRLM, 2016 WL 6195692 (E.D.N.Y. Oct. 21, 2016), held that the jury should receive separate instructions on design defect and implied warranty where the plaintiff was burned by an electric pressure cooker. Citing *Castro*, the court reasoned:

While similar to claims sounding in strict liability, “it is not true as a matter of law that all

breach of implied warranty claims are mere doppelgängers of their more modern strict products liability cousins.” Indeed, it might be said that a “breach of implied warranty claim is the ‘stricter’ form of liability, since recovery hinges only upon a showing that the product is not minimally safe for its intended purpose. . . .”

p. 692

5. Strict liability in torts: The Greenman reformulation. Shortly after *Henningsen*, the tort side of products liability also gravitated toward strict liability. In *Greenman v. Yuba Power Products, Inc.*, 377 P.2d 897, 900-901 (Cal. 1963), the plaintiff’s wife gave him a Shopsmith combination power tool, manufactured by the defendant, that could be used as a saw, a drill, and a wood lathe. The plaintiff read the manufacturer’s brochure, which contained the following statements: “(1) WHEN SHOPSMITH IS IN HORIZONTAL POSITION—Rugged construction of frame provides rigid support from end to end. Heavy centerless-ground steel tubing insures perfect alignment of components. (2) SHOPSMITH maintains its accuracy because every component has positive locks that hold adjustments through rough or precision work.” In the course of working the lathe, a piece of wood “suddenly flew out of the machine and struck him on the forehead, inflicting serious injury.” There was substantial evidence that the plaintiff’s injuries were caused by the defective construction of the Shopsmith, whose set screws were of insufficient strength to hold the wood in place while the lathe was being operated. The plaintiff recovered damages from the manufacturer for negligence and breach of both express and implied warranties.

One of defendant’s contentions on appeal was that the plaintiff’s cause of action was barred because he failed to give notice of his injury within a “reasonable time” as required by section 1769 of the California Civil Code. Justice Traynor, speaking for the entire court, sidestepped the “intricacies” of the warranty provisions by opting for strict liability in tort:

A manufacturer is strictly liable in tort when an article he places on the market, knowing that it is to be used without inspection for defects, proves to have a defect that causes injury to a human being. Recognized first in the case of unwholesome food products, such liability has now been extended to a variety of other products that create as great or greater hazards if defective.

Although in these cases strict liability has usually been based on the theory of an express or implied warranty running from the manufacturer to the plaintiff, the abandonment of the requirement of a contract between them, the recognition that the liability is not assumed by agreement but imposed by law, and the refusal to permit the manufacturer to define the scope of its own responsibility for defective products make clear that the liability is not one governed by the law of contract warranties but by the law of strict liability in tort. Accordingly, rules defining and governing warranties that were developed to meet the needs of commercial transactions cannot properly be invoked to govern the manufacturer’s liability to those injured by their defective products unless those rules also serve the purposes for which such liability is imposed.

We need not recanvass the reasons for imposing strict liability on the manufacturer. The purpose

of such liability is to insure that the costs of injuries resulting from defective products are borne by the manufacturers that put such products on the market rather than by the injured persons who are powerless to protect themselves. Sales warranties serve this purpose fitfully at best. In the present case, for example, plaintiff was able to plead and prove an express warranty only because he read and relied on the representations of the Shopsmith's ruggedness contained in the manufacturer's brochure. Implicit in the machine's

p. 693

presence on the market, however, was a representation that it would safely do the jobs for which it was built. Under these circumstances, it should not be controlling whether plaintiff selected the machine because of the statements in the brochure, or because of the machine's own appearance of excellence that belied the defect lurking beneath the surface, or because he merely assumed that it would safely do the jobs it was built to do. It should not be controlling whether the details of the sales from manufacturer to retailer and from retailer to plaintiff's wife were such that one or more of the implied warranties of the sales act arose. (Civ. Code, §1735.) "The remedies of injured consumers ought not to be made to depend upon the intricacies of the law of sales." To establish the manufacturer's liability it was sufficient that plaintiff proved that he was injured while using the Shopsmith in a way it was intended to be used as a result of a defect in design and manufacture of which plaintiff was not aware that made the Shopsmith unsafe for its intended use.

SECTION C. THE RESTATEMENTS

1. A Tale of Two Texts

Restatement (Second) of Torts

§402A. SPECIAL LIABILITY OF SELLER OF PRODUCT FOR PHYSICAL HARM TO USER OR CONSUMER

(1) One who sells any product in a defective condition unreasonably dangerous to the user or consumer or to his property is subject to liability for physical harm thereby caused to the ultimate user or consumer, or to his property, if

- (a) the seller is engaged in the business of selling such a product, and
- (b) it is expected to and does reach the user or consumer without substantial change in the condition in which it is sold.

(2) The rule stated in Subsection (1) applies although

- (a) the seller has exercised all possible care in the preparation and sale of his product, and
- (b) the user or consumer has not bought the product from or entered into any contractual relation with the seller.

Caveat: The Institute expresses no opinion as to whether the rules stated in this Section may not apply

- (1) to harm to persons other than users or consumers
- (2) to the seller of a product expected to be processed or otherwise substantially changed before it reaches the user or consumer or
- (3) to the seller of a component part of a product to be assembled.

Comment f. Business of selling: The rule stated in this Section applies to any person engaged in the business of selling products for use or consumption. It therefore applies to any manufacturer of such a product, to any wholesale or retail dealer or distributor, and to the operator of a restaurant. . . .

p. 694

The rule does not, however, apply to the occasional seller of food or other such products who is not engaged in that activity as a part of his business. Thus it does not apply to the housewife who, on one occasion, sells to her neighbor a jar of jam or a pound of sugar. Nor does it apply to the owner of an automobile who, on one occasion, sells it to his neighbor, or even sells it to a dealer in used cars, and this even though he is fully aware that the dealer plans to resell it. The basis for the rule is the ancient one of the special responsibility for the safety of the public undertaken by one who enters into the business of supplying human beings with products which may endanger the safety of their persons and property, and the forced reliance upon that undertaking on the part of those who purchase such goods. This basis is lacking in the case of the ordinary individual who makes the isolated sale, and he is not liable to a third person, or even to his buyer, in the absence of his negligence. . . .

Comment g. Defective condition: The rule stated in this Section applies only where the product is, at the time it leaves the seller's hands, in a condition not contemplated by the ultimate consumer, which will be unreasonably dangerous to him. The seller is not liable when he delivers the product in a safe condition, and subsequent mishandling or other causes make it harmful by the time it is consumed. The burden of proof that the product was in a defective condition at the time that it left the hands of the particular seller is upon the injured plaintiff; and unless evidence can be produced which will support the conclusion that it was then defective, the burden is not sustained.

Safe condition at the time of delivery by the seller will, however, include proper packaging, necessary sterilization, and other precautions required to permit the product to remain safe for a normal length of time when handled in a normal manner.

Comment h: A product is not in defective condition when it is safe for normal handling and consumption. If the injury results from abnormal handling, as where a bottled beverage is knocked against a radiator to remove the cap, or from abnormal preparation for use, as where too much salt is added to food, or from abnormal consumption, as where a child eats too much candy and is made ill, the seller is not liable. . . .

The defective condition may arise not only from harmful ingredients, not characteristic of the product itself either as to presence or quantity, but also from foreign objects contained in the product, from decay or

deterioration before sale, or from the way in which the product is prepared or packed. No reason is apparent for distinguishing between the product itself and the container in which it is supplied; and the two are purchased by the user or consumer as an integrated whole. Where the container is itself dangerous, the product is sold in a defective condition. Thus a carbonated beverage in a bottle which is so weak, or cracked, or jagged at the edges, or bottled under such excessive pressure that it may explode or otherwise cause harm to the person who handles it, is in a defective and dangerous condition. . . .

Comment i. Unreasonably dangerous: The rule stated in this Section applies only where the defective condition of the product makes it unreasonably dangerous to the user or consumer. Many products cannot possibly be made entirely safe for

p. 695

all consumption, and any food or drug necessarily involves some risk of harm, if only from over-consumption. Ordinary sugar is a deadly poison to diabetics, and castor oil found use under Mussolini as an instrument of torture. That is not what is meant by "unreasonably dangerous" in this Section. The article sold must be dangerous to an extent beyond that which would be contemplated by the ordinary consumer who purchases it, with the ordinary knowledge common to the community as to its characteristics. Good whiskey is not unreasonably dangerous merely because it will make some people drunk, and is especially dangerous to alcoholics; but bad whiskey, containing a dangerous amount of fusel oil, is unreasonably dangerous. Good tobacco is not unreasonably dangerous merely because the effects of smoking may be harmful; but tobacco containing something like marijuana may be unreasonably dangerous. Good butter is not unreasonably dangerous merely because, if such be the case, it deposits cholesterol in the arteries and leads to heart attacks; but bad butter, contaminated with poisonous fish oil, is unreasonably dangerous.

Comment j. Directions or warning: In order to prevent the product from being unreasonably dangerous, the seller may be required to give directions or warning, on the container, as to its use. The seller may reasonably assume that those with common allergies, as for example to eggs or strawberries, will be aware of them, and he is not required to warn against them. Where, however, the product contains an ingredient to which a substantial number of the population are allergic, and the ingredient is one whose danger is not generally known, or if known is one which the consumer would reasonably not expect to find in the product, the seller is required to give warning against it, if he has knowledge, or by the application of reasonable, developed human skill and foresight should have knowledge, of the presence of the ingredient and the danger. Likewise in the case of poisonous drugs, or those unduly dangerous for other reasons, warning as to use may be required.

But a seller is not required to warn with respect to products, or ingredients in them, which are only dangerous or potentially so, when consumed in excessive quantity, or over a long period of time, when the danger, or potentiality of danger, is generally known and recognized. Again the dangers of alcoholic beverages are an example, as are also those of foods containing such substances as saturated fats, which may over a period of time have a deleterious effect upon the human heart.

Where warning is given, the seller may reasonably assume that it will be read and heeded; and a product bearing such a warning, which is safe for use if it is followed, is not in defective condition, nor is it unreasonably dangerous.

Comment k. Unavoidably unsafe products: There are some products which, in the present state of human knowledge, are quite incapable of being made safe for their intended and ordinary use. These are especially common in the field of drugs. An outstanding example is the vaccine for the Pasteur treatment of rabies, which not uncommonly leads to very serious and damaging consequences when it is injected. Since the disease itself invariably leads to a dreadful death, both

p. 696

the marketing and the use of the vaccine are fully justified, notwithstanding the unavoidable high degree of risk which they involve. Such a product, properly prepared, and accompanied by proper directions and warning, is not defective, nor is it *unreasonably* dangerous. The same is true of many other drugs, vaccines, and the like, many of which for this very reason cannot legally be sold except to physicians, or under the prescription of a physician. It is also true in particular of many new or experimental drugs as to which, because of lack of time and opportunity for sufficient medical experience, there can be no assurance of safety, or perhaps even of purity of ingredients, but such experience as there is justifies the marketing and use of the drug notwithstanding a medically recognizable risk. The seller of such products, again with the qualification that they are properly prepared and marketed, and proper warning is given, where the situation calls for it, is not to be held to strict liability for unfortunate consequences attending their use, merely because he has undertaken to supply the public with an apparently useful and desirable product, attended with a known but apparently reasonable risk.

Comment m. “Warranty”: The rule stated in this Section does not require any reliance on the part of the consumer upon the reputation, skill, or judgment of the seller who is to be held liable, nor any representation or undertaking on the part of that seller. The seller is strictly liable although, as is frequently the case, the consumer does not even know who he is at the time of consumption. The rule stated in this Section is not governed by the provisions of the Uniform Sales Act, or those of the Uniform Commercial Code, as to warranties; and it is not affected by limitations on the scope and content of warranties, or by limitation to “buyer” and “seller” in those statutes. Nor is the consumer required to give notice to the seller of his injury within a reasonable time after it occurs, as is provided by the Uniform Act. . . .

Comment n. Contributory negligence: Since the liability with which this Section deals is not based upon negligence of the seller, but is strict liability, the rule applied to strict liability cases (see §524) applies. Contributory negligence of the plaintiff is not a defense when such negligence consists merely in a failure to discover the defect in the product, or to guard against the possibility of its existence. On the other hand the form of contributory negligence which consists in voluntarily and unreasonably proceeding to encounter a known danger, and commonly passes under the name of assumption of risk, is a defense under this Section as in other cases of strict liability. If the user or consumer discovers the defect and is aware of the danger, and nevertheless proceeds unreasonably to make use of the product and is injured by it, he is barred from recovery.

NOTES

1. *Second Restatement §402A.* Until the adoption of the Third Restatement of Products Liability, section 402A and its comments formed the basic text of modern products liability law. At its inception, section 402A was noted for its adoption of a broad strict liability rule for product defects. Its early drafts were

originally confined to foodstuffs and products intended for intimate bodily use, but by 1965 the strict liability rule was extended to all products. This broad application made it more difficult to devise a single rule to cover an endless diversity of products, for example, the unique issues raised by pharmaceuticals. Accordingly, Prosser and other drafters of the Restatement addressed many difficult questions in the comments to the basic text, which, over time, have become as important as the basic provision itself. Even today, the Third Restatement has not displaced the Second across the board, so it is critical to gain mastery over both. On the adoption of section 402A, see Epstein, *Modern Products Liability Law* ch. 6 (1980); Priest, *The Invention of Enterprise Liability: A Critical History of the Intellectual Foundations of Modern Tort Law*, 14 J. Legal Stud. 461, 505-519 (1985).

The Second Restatement also contains section 402B, “Misrepresentation by Seller of Chattels to Consumer,” which adopts a strict liability standard for a product seller “who, by advertising, labels, or otherwise, makes to the public a misrepresentation of a material fact concerning the character or quality of a chattel sold by him is subject to liability for physical harm to a consumer of the chattel caused by justifiable reliance upon the misrepresentation.” Section 402B has been swallowed up in litigation by section 402A. Does it provide a superior basis for liability in *Henningsen? Greenman?*

2. *Bystander’s recovery.* Current case law has gone beyond the Second Restatement by allowing injured bystanders to sue the original manufacturer. The initial hesitation regarding bystander cases rested in part on the uncertainty of whether any implied warranty or misrepresentation theory could hold the defendant accountable to anyone outside the chain of contracts. The bystander is not lured into using the product by the defendant’s representations. Neither is she an immediate or ultimate beneficiary of any seller or manufacturer warranty. The bystander’s case for strict liability in tort is far stronger: As with abnormally dangerous activities, the bystander has been hurt by a process that was in no sense her making because she never used the product at all. Though in practice bystander injuries are relatively infrequent compared to the numerous injuries to product consumers or users, today the liability of the manufacturer or seller to the bystander is universally allowed. See, e.g., *Elmore v. Am. Motors Corp.*, 451 P.2d 84 (Cal. 1969); *Codling v. Paglia*, 298 N.E.2d 622 (N.Y. 1973); Noel, *Defective Products: Extension of Strict Liability to Bystanders*, 38 Tenn. L. Rev. 1 1970.

Restatement (Third) of Torts: Products Liability

§1. LIABILITY OF COMMERCIAL SELLER OR DISTRIBUTOR FOR HARM CAUSED BY DEFECTIVE PRODUCTS

One engaged in the business of selling or otherwise distributing products who sells or distributes a defective product is subject to liability for harm to persons or property caused by the defect.

§2. CATEGORIES OF PRODUCT DEFECTS

[For purposes of determining liability under section 1:]

A product is defective when, at the time of sale or distribution, it contains a manufacturing defect, is defective in design, or is defective because of inadequate instructions or warnings. A product:

- (a) contains a manufacturing defect when the product departs from its intended design even though all possible care was exercised in the preparation and marketing of the product;
- (b) is defective in design when the foreseeable risks of harm posed by the product could have been reduced or avoided by the adoption of a reasonable alternative design by the seller or other distributor, or a predecessor in the commercial chain of distribution, and the omission of the alternative design renders the product not reasonably safe;
- (c) is defective because of inadequate instructions or warnings when the foreseeable risks of harm posed by the product could have been reduced or avoided by the provision of reasonable instructions or warnings by the seller or other distributor, or a predecessor in the commercial chain of distribution, and the omission of the instructions or warnings renders the product not reasonably safe.

NOTES

1. *Into the next generation.* The Third Restatement reflects the transformation of products liability law after 1965. Most significantly, it adopts the now dominant tripartite classification of manufacturing, design, and warning defects, and establishes a distinct liability rule for each class. It keeps the original strict liability rule for products with manufacturing defects but imposes only the more limited obligation to make product designs, warnings, and instructions “reasonably safe.” Although the Third Restatement rejects RST §402A’s caveat on bystander liability, many of the old rules still carry over, such as the exclusion of “casual sellers.” See RTT: PL §1, comment c. Subsequent provisions of the Third Restatement examine each class of defects, and contain additional provisions to deal with prescription drugs, issues of causation, and affirmative defenses. For an early discussion of the revisions of the Second Restatement, see Henderson & Twerski, A Proposed Revision of Section 402A of the Restatement (Second) of Torts, 77 Cornell L. Rev. 1512 (1992), who served as the joint reporters for the ALI revision. For an acceptance of the Third Restatement over the Second, see Branham v. Ford Motor Co., 701 S.E.2d 5 (S.C. 2010); for a continued preference for the Second Restatement over the Third, see Tincher v. Omega Flex, Inc., 104 A.3d 328, 335 (Pa. 2014), *infra* at 732.

2. *Who chooses to adopt the Third Restatement?* The court in *Tincher* wrestled with whether the courts, rather than the legislature, should play an active role in deciding whether to adopt the Third Restatement. While the court in *Tincher* believed

p. 699

this decision should be left to the democratically elected General Assembly, is it ever justified to leave this decision to the courts?

2. The Theory of Products Liability: Tort or Contract

The early history of products liability law reveals a consistent tension between the contract-based theory of implied warranty and the tort theory sounding either in negligence or strict liability. The adoption of the

Second Restatement in 1965 largely endorsed the tort theory for personal injuries, while the treatment of damage to property remained less clear, as the Second Restatement intimated that matters of “economic loss” were best left to voluntary agreement between the parties. But how are those losses defined? Everyone agrees that disappointed expectations about product performance are outside section 402A, as when a truck constantly stalls out on the highway, causing its owner to make late deliveries. But do these losses also cover economic losses that flow from physical damage to the product sold? The following materials explore the difficulties that arise in policing the line between products liability and contract law respectively.

CASA CLARA CONDOMINIUM ASS’N, INC. v. CHARLEY TOPPINO & SONS, INC.

620 So. 2d 1244 (Fla. 1993)

MCDONALD, J. . . . The issue is whether a homeowner can recover for purely economic losses from a concrete supplier under a negligence theory. We agree with the district court that such a recovery cannot be had. . . .

Charley Toppino & Sons, Inc., a dissolved corporation, supplied concrete for numerous construction projects in Monroe County. Apparently, some of the concrete supplied by Toppino contained a high content of salt that caused the reinforcing steel inserted in the concrete to rust, which, in turn, caused the concrete to crack and break off. The petitioners own condominium units and single-family homes built with, and now allegedly damaged by, Toppino’s concrete. In separate actions the homeowners sued numerous defendants and included claims against Toppino for breach of common law implied warranty, products liability, negligence, and violation of the building code. The circuit court dismissed all counts against Toppino in each case. On appeal the district court applied the economic loss rule and held that, because no person was injured and no other property damaged, the homeowners had no cause of action against Toppino in tort. The district court also held that Toppino, a supplier, had no duty to comply with the building code.

Plaintiffs find a tort remedy attractive because it often permits the recovery of greater damages than an action on a contract and may avoid the conditions of a contract. The distinction between “tort recovery for physical injuries and warranty recovery for economic loss” rests

p. 700

on an understanding of the nature of the responsibility a manufacturer must undertake in distributing his products. He can appropriately be held liable for physical injuries caused by defects by requiring his goods to match a standard of safety defined in terms of conditions that create unreasonable risks of harm. *He cannot be held for the level of performance of his products in the consumer’s business unless he agrees that the product was designed to meet the consumer’s demands.*

Casa Clara Condominiums in Key Colony Beach, Florida

Source: Google Maps

Seely v. White Motor Co., 403 P.2d 145, 151 (Cal. 1965) (emphasis supplied). An individual consumer, on the other hand,

should not be charged at the will of the manufacturer with bearing the risk of physical injury when he buys a product on the market. He can, however, be fairly charged with the risk that the product will not match his economic expectations unless the manufacturer agrees that it will.

Id. *Seely* sets out the economic loss rule, which prohibits tort recovery when a product damages itself, causing economic loss, but does not cause personal injury or damage to any property other than itself. E.g., East River Steamship Corp. v. Transamerica Delaval, Inc., 476 U.S. 858 (1986). . . .

Economic loss has been defined as “damages for inadequate value, costs of repair and replacement of the defective product, or consequent loss of profits—without any claim of personal injury or damage to other property.” Note, Economic Loss in Products Liability Jurisprudence, 66 Colum. L. Rev. 917, 918 (1966). It includes “the diminution in the value of the product because it is inferior in quality and does not work for the general purposes for which it was manufactured and sold.” Comment, Manufacturers’ Liability to Remote Purchasers for “Economic Loss” Damages—Tort or Contract?, 114 U. Pa. L. Rev. 539, 541 (1966). In other words, economic losses are “disappointed economic expectations,” which are protected by contract law, rather than tort law. This is the basic difference between contract law, which protects expectations, and tort law, which is determined by the duty owed to an injured party. For recovery in tort “there must be a showing of harm above and beyond disappointed expectations. A buyer’s desire to enjoy the benefit of his bargain is not an interest that tort law traditionally protects.” Redarowicz v. Ohlendorf, 441 N.E.2d 324, 327 (Ill. 1982).

The homeowners are seeking purely economic damages—no one has sustained any physical injuries and no property, other than the structures built with Toppino’s concrete, has sustained any damage. They argue that

holding them to

p. 701

contract remedies is unfair and that homeowners in general should be excepted from the operation of the economic loss rule. We disagree.

In tort a manufacturer or producer of goods “is liable whether or not it is negligent because ‘public policy demands that responsibility be fixed wherever it will most effectively reduce the hazards to life and health inherent in defective products that reach the market.’” *East River*, 476 U.S. at 866 (quoting *Escola v. Coca Cola Bottling Co.* (Traynor, J., concurring)). . . . The purpose of a duty in tort is to protect society’s interest in being free from harm, and the cost of protecting society from harm is borne by society in general. Contractual duties, on the other hand, come from society’s interest in the performance of promises. When only economic harm is involved, the question becomes “whether the consuming public as a whole should bear the cost of economic losses sustained by those who failed to bargain for adequate contract remedies.”

We are urged to make an exception to the economic loss doctrine for homeowners. Buying a house is the largest investment many consumers ever make, and homeowners are an appealing, sympathetic class. If a house causes economic disappointment by not meeting a purchaser’s expectations, the resulting failure to receive the benefit of the bargain is a core concern of contract, not tort, law. There are protections for homebuyers, however, such as statutory warranties, the general warranty of habitability, and the duty of sellers to disclose defects, as well as the ability of purchasers to inspect houses for defects. Coupled with homebuyers’ power to bargain over price, these protections must be viewed as sufficient when compared with the mischief that could be caused by allowing tort recovery for purely economic losses. Therefore, we again “hold contract principles more appropriate than tort principles for recovering economic loss without an accompanying physical injury or property damage.” *Florida Power & Light*, 510 So. 2d at 902. If we held otherwise, “contract law would drown in a sea of tort.” *East River*. We refuse to hold that homeowners are not subject to the economic loss rule.

The homeowners also argue that Toppino’s concrete damaged “other” property because the individual components and items of building material, not the homes themselves, are the products they purchased. We disagree. The character of a loss determines the appropriate remedies, and, to determine the character of a loss, one must look to the product purchased by the plaintiff, not the product sold by the defendant. Generally, house buyers have little or no interest in how or where the individual components of a house are obtained. They are content to let the builder produce the finished product, i.e., a house. These homeowners bought finished products—dwellings—not the individual components of those dwellings. They bargained for the finished products, not their various components. The concrete became an integral part of the finished product and, thus, did not injure “other” property.

We also disagree with the homeowners that the mere possibility that the exploding concrete will cause physical injury is sufficient reason to abrogate the economic loss rule. This argument goes completely against the principle that injury must occur before a negligence action exists. Because an injury has not occurred, its extent and

p. 702

the identity of injured persons is completely speculative. Thus, the degree of risk is indeterminate, with no

guarantee that damages will be reasonably related to the risk of injury, and with no possibility for the producer of a product to structure its business behavior to cover that risk. Agreeing with the homeowners' argument would make it difficult "to maintain a realistic limitation on damages." *East River*.

[Affirmed.]

BARKETT, C.J. , concurring in part, dissenting in part.

If the allegations of the homeowners in this case are true, their homes are literally crumbling around them because the concrete supplied by Toppino was negligently manufactured. The homeowners assert that the concrete is now cracking and breaking apart and poses a danger of serious injury. The courts, including this one, have said "too bad."

I find that answer unacceptable in light of the principle underlying Florida's access to courts provision: that absent compelling, countervailing public policies, wrongs must have remedies. Art. I, §21, Fla. Const. I understand and accept that sometimes the remedies provided cannot be in the full measure that pure justice unfettered by pragmatism can provide. Thus, some applications of the economic loss doctrine may have acceptable viability. But surely it stretches reason to apply the doctrine in this context to deny these homeowners any remedy.

Their claim for breach of implied warranty has been denied (they lack privity with Toppino); their claim that Toppino violated the Florida Building Codes Act has been denied (Toppino, as a material supplier, is not governed by the Standard Building Code); and now their claim in tort has been denied because, notwithstanding their alleged ability to prove that their houses are falling down around them, they have not suffered any damage to their property on the basis that homes are "products."

A key premise underlying the economic loss rule is that parties in a business context have the ability to allocate economic risks and remedies as part of their contractual negotiations. That premise does not exist here. Moreover, I cannot subscribe to the majority's view that the defective concrete has not damaged "other property" in the form of the houses' individual components. . . .

SHAW, J. , concurring and dissenting . . .

While I agree with the majority opinion that parties who have freely bargained and entered a contract relative to a particular subject matter should be bound by the terms of that contract including the distribution of loss, I feel that the theory is stretched when it is used to deny a cause of action to an innocent third party who the defendant knew or should have known would be injured by the tortious conduct. Toppino knew that the concrete that was the subject matter of the bargain between Toppino and the general contractor would be incorporated into homes that would be bought and occupied by innocent third parties.

When the concrete proved to be contaminated, damages were not limited to simply the loss of concrete; innocent third parties suffered various degrees of damage to structures using the concrete. In my mind, the economic loss theory was never intended to defeat a tort cause of action that would otherwise lie for

damages caused to a third party by a defective product.

NOTES

1. Tort or contract: The minority view and intermediate approaches. The economic loss rule in *Casa Clara* represents the majority position in the United States, and controls in admiralty cases as well. Thus in *East River Steamship Corp. v. Transamerica Delaval, Inc.*, 476 U.S. 858 (1986), the Court refused to allow a tort action against the manufacturer of turbine engines that malfunctioned once installed into oil-transporting supertankers.

Casa Clara poses a provocative question: Why should the logic of contract apply only to economic losses but not personal injury or property damage? If contractual solutions bind parties for economic losses of \$1,000,000, why do they break down for physical damage worth \$1,000? Does it make a difference if the transactions are between merchants? With consumers? Conversely, if the bargaining impediments for physical damage justify overriding disclaimers for liability for physical injury, then why not for economic loss? Peters, J., dissenting in *Seely*, 403 P.2d at 153-154, so argued:

Given the rationale of *Greenman v. Yuba Power Products, Inc.*, it cannot properly be held that plaintiff may not recover the value of his truck and his lost profits on the basis of strict liability. The nature of the damage sustained by the plaintiff is immaterial, so long as it proximately flowed from the defect. What *is* important is not the nature of the damage but the relative roles played by the parties to the purchase contract and the nature of their transaction. . . .

In *Greenman* we allowed recovery for “personal injury” damages. It is well established that such an award may include compensation for past loss of time and earnings due to the injury, for loss of future earning capacity, and for increased living expenses caused by the injury. There is no logical distinction between these losses and the losses suffered by plaintiff here. All involve economic loss, and all proximately arise out of the purchase of a defective product. I find it hard to understand how one might, for example, award a traveling salesman lost earnings if a defect in his car causes his *leg* to break in an accident but deny that salesman his lost earnings if the defect instead disables only his *car* before any accident occurs. The losses are exactly the same; the chains of causation are slightly different, but both are “proximate.” Yet the majority would allow recovery under strict liability in the first situation but not in the second. This, I submit, is arbitrary.

The Third Restatement follows *Casa Clara*. Section 1 limits the scope of the Restatement to “harms to persons or property,” which are defined in section 21 to include only “the plaintiff’s property other than the defective product itself.” See RTT: PL §21(a). In *Saratoga Fishing Co. v. J.M. Martinac & Co.*, 520 U.S. 875 (1997), the Supreme Court treated the loss of “extra equipment (a skiff, a fishing net, spare parts) added by the initial user after the first sale and then resold as part of the ship” as “other property” for which

a tort action was appropriate. Justice Breyer argued that the contractual remedy was ineffective in the context of resale after initial use “because, as other courts have suggested, the Subsequent User does not contract directly with the Manufacturer (or distributor).”

Restatement of the Law (Third) of Torts: Products Liability

p. 704

§21. DEFINITION OF “HARM TO PERSONS OR PROPERTY”: RECOVERY FOR ECONOMIC LOSS

For purposes of this Restatement, harm to persons or property includes economic loss if caused by harm to:

...

- (c) the plaintiff’s property other than the defective product itself.

Comment a. Rationale: . . . Some categories of loss, including those often referred to as “pure economic loss,” are more appropriately assigned to contract law and the remedies set forth in Articles 2 and 2A of the Uniform Commercial Code. When the Code governs a claim, its provisions regarding such issues as statutes of limitation, privity, notice of claim, and disclaimer ordinarily govern the litigation.

Casa Clara represents the high-water mark of the economic loss rule. Subsequent cases have widened the exceptions to the economic loss rule, thereby extending the role of tort law. In Florida, the scope of the rule was explicitly limited to products liability cases in *Tiara Condominium Association v. Marsh & McLennan Co.*, 110 So. 3d 399 (Fla. 2013), in which the court held that Tiara could maintain a suit for negligence seeking purely economic losses against its insurance broker, Marsh, which had procured for it a windstorm coverage contract of \$50 million. Marsh had assured Tiara that the \$50 million limit was per occurrence, but the insurer, Citizens Property, had claimed that the policy contained a single aggregate limit that covered the damages suffered from both Hurricanes Frances and Jeanne in 2004. Is there any reason why freedom of contract should not apply when the two parties are in privity? Why it should be disregarded when, as in *Casa Clara*, the injured party has an explicit contract with the condominium developer?

2. *Tort or warranty: The statute of limitations.* Claims for breach of warranty are subject to the statute of limitations of U.C.C. §2-725, which runs four years from the date of sale. In contrast, the tort statute of limitations may run much longer, starting at the earliest from the date of the injury and in most jurisdictions only from the date at which the plaintiff has discovered, or through the exercise of reasonable diligence could have discovered, that injury. Today, the tort rule trumps the U.C.C. In *Victorson v. Bock Laundry Machine Co.*, 335 N.E.2d 275, 279 (N.Y. 1975), the court opted for the tort approach on the ground that “it is all but unthinkable that a person should be time-barred from prosecuting a cause of action before he ever had one.”

One can observe that while passage of time may work a deterioration of the manufacturer’s capability to defend, by similar token it can be expected to complicate

p. 705

the plaintiff's problem of proving, as he must, that the alleged defect existed at the time the product left the manufacturer's plant. In any event this consideration, of varying weight from case to case, cannot be accorded such significance as to dictate the outcome.

The concern with long-lived products that cause damage years after their initial sale has led many states to adopt so-called statutes of repose. Ohio Rev. Code §2305.10 bars all products liability suits for injuries sustained more than ten years after the seller delivers it to its first purchaser. In *Groch v. General Motors Co.*, 883 N.E.2d 377 (Ohio 2008), the court sustained this provision against various constitutional challenges by holding that “[i]t is not this court's role to establish legislative policies or to second-guess the General Assembly's policy choices.” A majority of the courts with statutes of repose follow the Ohio approach.

3. Limitations on damages in express warranties. In *Collins v. Uniroyal, Inc.*, 315 A.2d 16 (N.J. 1974), the defendant tire company sold its Royal Master Tire with a guarantee against “blowouts, cuts, bruises, and similar injury rendering the tire unserviceable,” covering the tires as long as they were not “punctured or abused.” The guarantee went on to exclude, in italics, all liability for “consequential damage,” obligating the tire company only to repair or replace the tire. The decedent was killed in an unexplained tire blowout, and the plaintiff's tort recovery was blocked by the inability to identify any tire defect. The court, however, allowed the plaintiff to sue for full damages on the broad warranty coverage and denied defendant the benefit of the limitation of liability contained in the italicized clause.

The court relied in part upon U.C.C. §2-719, which provides: “Consequential damages may be limited or excluded unless the limitation or exclusion is unconscionable. Limitation of consequential damages for injury to the person in the case of consumer goods is *prima facie* unconscionable, but limitation of damages where the loss is commercial is not.” What is the force of the words “*prima facie* unconscionable”? Should the presumption be overridden here given that Uniroyal had no obligation to provide any comprehensive guarantee for its product at all? For criticism of *Collins* and of the general unconscionability doctrine, see Epstein, *Unconscionability: A Critical Reappraisal*, 18 J.L. & Econ. 293 (1975).

3. Proper Defendants Under Section 402A

Second Restatement §402A only applies to sellers who are “engaged in the business of selling . . . a product.”

OBERDORF v. AMAZON.COM INC.

930 F.3d 136, 141 (3d Cir. 2019), *reh'g en banc granted, opinion vacated*, 2019 WL 3979586 (3d Cir. Aug. 23, 2019)

ROTH, CIRCUIT JUDGE:

On January 12, 2015, Heather Oberdorf returned home from work, put a retractable leash on her dog, and took the dog for a walk. Unexpectedly, the dog

lunged, causing the D-ring on the collar to break and the leash to recoil back and hit Oberdorf's face and eyeglasses. As a result, Oberdorf is permanently blind in her left eye.

Oberdorf bought the collar on Amazon.com. As a result of the accident, she sued Amazon.com, including claims for strict products liability and negligence.

[The lower court held that Amazon was not subject to strict products liability claims because it was not a "seller" under Pennsylvania law. The court emphasized that a third-party vendor, not Amazon, listed the collar on Amazon's online marketplace and shipped the collar to Oberdorf.]

* * *

III.

We begin our analysis by addressing Amazon's contention that it is not subject to Oberdorf's strict products liability claims. . . .

Section 402A specifically limits strict products liability to "sellers" of products. Amazon relies on this limitation as its defense, claiming that it is not a "seller" because it merely provides an online marketplace for products sold by third-party vendors. We disagree.

A.

Amazon relies heavily on the Pennsylvania Supreme Court's decision in *Musser v. Vilsmeier Auction Co., Inc.*, 562 A.2d 279 (Pa. 1989), to support its contention that it is not a "seller." Although *Musser* is a significant case to which we look for guidance, it does not command the result that Amazon seeks.

The plaintiff in *Musser* was injured by a tractor that his father had bought at an auction house. Following his injury, he sought to hold the auction house strictly liable as a "seller" of the allegedly defective tractor. The Pennsylvania Supreme Court held that the auction house could not be considered a "seller," and thus that the plaintiff must prove that the auction house acted unreasonably (i.e., bring a negligence claim) in order to hold it liable. In making this ruling, the court relied on the policy rationale articulated in comment *f* of §402A of the Second Restatement of Torts [*supra* at 693]

The court noted that, when the [comment *f*] policy rationale "will not be served, persons whose implication in supplying products is tangential to that undertaking will not be subjected to strict liability for the harms caused by defects in the products." Therefore, because "[t]he auction company merely provided a market as the agent of the seller," the court concluded that applying strict liability doctrine to the auction house would not further the doctrine's underlying policy justification.

In its opinion, the Pennsylvania Supreme Court made clear that courts later tasked with determining whether an actor is a "seller" should consider whether the following four factors apply:

1. Whether the actor is the “only member of the marketing chain available to the injured plaintiff for redress”;
2. Whether “imposition of strict liability upon the [actor] serves as an incentive to safety”;
3. Whether the actor is “in a better position than the consumer to prevent the circulation of defective products”; and
4. Whether “[t]he [actor] can distribute the cost of compensating for injuries resulting from defects by charging for it in his business, i.e., by adjustment of the rental terms.”

p. 707

We consider below each of the four factors articulated in *Musser*.

The first factor is whether Amazon “may be the only member of the marketing chain available to the injured plaintiff for redress.” . . .

Amazon contends that, just as every item offered at an auction house can be traced to a seller who may be amenable to suit, every item on Amazon’s website can be traced to a third-party vendor. However, Amazon fails to account for the fact that under the Agreement, third-party vendors can communicate with the customer only through Amazon. This enables third-party vendors to conceal themselves from the customer, leaving customers injured by defective products with no direct recourse to the third-party vendor. There are numerous cases in which neither Amazon nor the party injured by a defective product, sold by Amazon.com, were able to locate the product’s third-party vendor or manufacturer.

In this case, Amazon’s Vice President of Marketing Business admitted that Amazon generally takes no precautions to ensure that third-party vendors are in good standing under the laws of the country in which their business is registered. In addition, Amazon had no vetting process in place to ensure, for example, that third-party vendors were amenable to legal process. After Oberdorf was injured by the defective collar, neither she nor Amazon was able to locate The Furry Gang. As a result, Amazon now stands as the only member of the marketing chain available to the injured plaintiff for redress.

The first factor weighs in favor of imposing strict liability on Amazon.

The second factor we consider is whether “imposition of strict liability upon the [actor would] serve[] as an incentive to safety.” . . .

Amazon asserts that it does not have a relationship with the designers or manufacturers of products offered by third-party vendors. Therefore, it contends that imposing strict liability would not be an incentive for safer products. Again, we disagree with Amazon.

Although Amazon does not have direct influence over the design and manufacture of third-party products, Amazon exerts substantial control over third-party vendors. Third- party vendors have signed on to Amazon’s Agreement, which grants Amazon “the right in [its] sole discretion to . . . suspend[], prohibit[], or remov[e] any [product] listing,” “withhold any payments” to third-party vendors, “impose transaction

limits,” and “terminate or suspend . . . any Service [to a third-party-vendor] for any reason at any time.” Therefore, Amazon is fully capable, in its sole discretion, of removing unsafe products from its website. Imposing strict liability upon Amazon would be an incentive to do so.

p. 708

The second factor favors imposing strict liability on Amazon.

The third factor we consider is whether Amazon is “in a better position than the consumer to prevent the circulation of defective products.”

Here, while Amazon may at times lack continuous relationships with a third-party vendor, the potential for continuing sales encourages an on-going relationship between Amazon and the third-party vendors.

Moreover, Amazon is uniquely positioned to receive reports of defective products, which in turn can lead to such products being removed from circulation. Amazon’s website, which Amazon in its sole discretion has the right to manage, serves as the public-facing forum for products listed by third-party vendors. In its contract with third-party vendors, Amazon already retains the ability to collect customer feedback: “We may use mechanisms that rate, or allow shoppers to rate, Your Products and your performance as a seller and Amazon may make these ratings and feedback publicly available.” Third-party vendors, on the other hand, are ill-equipped to fulfill this function, because Amazon specifically curtails the channels that third-party vendors may use to communicate with customers: “[Y]ou may only use tools and methods that we designate to communicate with Amazon site users regarding Your Transactions” The third factor also weighs in favor of imposing strict liability on Amazon.

The fourth factor we consider is whether Amazon can distribute the cost of compensating for injuries resulting from defects. . . .

Amazon’s customers are particularly vulnerable in situations like the present case. Neither the Oberdorfs nor Amazon has been able to locate the third-party vendor, The Furry Gang. Conversely, had there been an incentive for Amazon to keep track of its third-party vendors, it might have done so.

The fourth factor also weighs in favor of imposing strict liability on Amazon. Thus, although the four-factor test yielded a different result when applied by the *Musser* court to an auction house, all four factors in this case weigh in favor of imposing strict liability on Amazon. . . .

V

For the above reasons, we hold that . . . Amazon is a “seller” for purposes of §402A of the Second Restatement of Torts and thus subject to the Pennsylvania strict products liability law. . . .

SCIRICA, CIRCUIT JUDGE, concurring in part and dissenting in part.

* * *

Even if Amazon Marketplace could be considered a supplier, [it should still not be held liable]. Indeed, the policy outcomes produced by liability for Amazon Marketplace closely resemble those produced by liability for an auctioneer, as in *Musser*. . . .

The first factor, availability of other members of the distribution chain, weighs in Amazon's favor, just as in *Musser*. The *Musser* court found the first factor did not support liability for the auctioneer because, "in an auction there is a seller, who is served by the auctioneer." . . . [A]ll Amazon Marketplace products are sold by

p. 709

third-party sellers who are available to be sued. That seller may be defunct, insolvent, or impossible to locate by the time of suit, just as the seller of an auctioned product may be. But as the Pennsylvania Supreme Court noted in applying this factor, "[t]o assign liability for no reason other than the ability to pay damages is inconsistent with our jurisprudence." *Cafazzo*, 668 A.2d at 526.

The second two factors, the potential incentive to safety and the defendant's relative ability to prevent circulation of the products, weigh in favor of Amazon, as they did in *Musser*. In *Musser*, the court considered the auctioneer's current business model, finding the auctioneer was "not in the business of designing and/or manufacturing any particular product," nor did the auctioneer attempt to create the kind of "ongoing relationship" with any of its large catalogue of sellers "which might equip the auctioneer to influence the manufacturing process." 562 A.2d at 282. The auctioneer was not the kind of seller who makes it "his business to know the product he sells." *Id.* at 283. Similarly, Amazon Marketplace is "not in the business" of choosing, monitoring, or influencing third-party sellers' products or their manufacturing processes. *Id.* Rather, the current model of Amazon Marketplace is an open one. All sellers meeting Amazon's terms may offer their products, and the same general terms apply to all. Although Amazon reserves the right to eject sellers, the company does not undertake to curate its selection of products, nor generally to police them for dangerousness. As it operates now, Amazon Marketplace does not exercise, relative to the consumer, any greater "influence in the manufacture of safer products." *Id.* Though it is possible to envision, as plaintiffs do, a new model for Amazon Marketplace in which the company researches products for potential defects and polices sellers to ensure they do not offer them, such a model would be fundamentally different from the Amazon Marketplace that exists now. . . . Under *Musser*, Pennsylvania products liability law does not demand a sales facilitator enter a fundamentally new business model simply because it could.

[T]he final factor, Amazon's ability to pass on the costs of product liability suits by charging all sellers more, is the only one weighing in favor of imposing liability. But because a variety of market participants could take on this insurer role if they chose, even if only peripherally involved in the sale, the fourth factor is not determinative. As the *Musser* court explained, where the other three policy factors are not present, imposing strict liability "would be related to the purpose of the policy considerations underlying the [Second Restatement of Torts §402A] only marginally." *Id.*

NOTES

1. Liability of retailers and distributors. Products liability law applies uniformly to all ordinary product retailers and distributors in the initial chain of distribution. Traynor, J., made this case in *Vandermark v. Ford Motor Co.*, 391 P.2d 168, 171-172 (Cal. 1964), holding an automobile dealer strictly liable for product defects:

Retailers like manufacturers are engaged in the business of distributing goods to the public. They are an integral part of the overall producing and marketing

p. 710

enterprise that should bear the cost of injuries resulting from defective products. In some cases the retailer may be the only member of that enterprise reasonably available to the injured plaintiff. In other cases the retailer himself may play a substantial part in insuring that the product is safe or may be in a position to exert pressure on the manufacturer to that end; the retailer's strict liability thus serves as an added incentive to safety. Strict liability on the manufacturer and retailer alike affords maximum protection to the injured plaintiff and works no injustice to the defendants, for they can adjust the costs of such protection between them in the course of their continuing business relationship.

Does *Vandermark* require liability in *Oberdorf*?

The Third Restatement again follows the Second, as product sellers include “nonmanufacturing sellers and distributors such as wholesalers and retailers,” RTT: PL §1 comment *e*, even when they act as mere conduits that do nothing to make the products dangerous. In addition, section 20, comment *f*, treats commercial lessors and bailors as product sellers, such that a dealer will be held to the same rules when he allows a test drive as when he sells a car. Section 2, comment *o*, acknowledges that nonmanufacturing sellers “often are not in a good position feasibly to adopt safer product designs or better instructions or warnings.” But it reiterates that nonmanufacturing sellers are nonetheless subject to the same standards applicable to manufacturers: “As long as the plaintiff establishes that the product was defective when it left the hands of a given seller in the distributive chain, liability will attach to that seller.” §2, comment *c*.

Thus, strict liability is imposed on a wholesale or retail seller who neither knew nor should have known of the relevant risks, nor was in a position to have taken action to avoid them, so long as a predecessor in the chain of distribution could have acted reasonably to avoid the risks.

§2, comment *o*.

Should there be *any* liability if the retailer has no control over the manufacture, design, or warnings associated with a given product? What might the safety implications be? See Berzon et al., *Amazon Has Ceded Control of Its Site. The Result: Thousands of Banned, Unsafe or Mislabeled Products*, Wall St. J., Aug. 23, 2019, <https://www.wsj.com/articles/amazon-has-ceeded-control-of-its-site-the-result-thousands-of-banned-unsafe-or-mislabeled-products-11566564990>.

What if the retailer remains in business after the manufacturer has become insolvent? Some courts and state legislatures have required that the retailer be more than just a middleman or that the defect must be

manifest. See, e.g., *Townsend v. General Motors Corp.*, 642 So. 2d 411 (Ala. 1994). See also, e.g., Ga. Code Ann. §51-1-11.1 (2019). In addition, some cases have imposed liability on parties involved in only a fraction of the production cycle. In *Sprung v. MTR Ravensburg, Inc.*, 788 N.E.2d 620, 623 (N.Y. 2003), Kaye, J., applied a strict liability regime to a custom fabricator for General Motors:

p. 711

True, when a custom fabricator builds a product to suit a customer's specific needs, there may well be less informational disparity between the producer and the user than in the mass production setting. Such disparity is, however, only one of the several policy reasons underpinning strict liability. Like other manufacturers, custom fabricators engaged in the regular course of their business hold themselves out as having expertise in manufacturing their custom products, have the opportunity and incentive to ensure safety in the process of making those products, and are better able to shoulder the costs of injuries caused by defective products than injured consumers or users.

2. *Sales versus services.* Inevitably questions arise about whether a particular seller is providing a product or a service. One concern is that the broad definition of a seller in products liability cases could allow its strict liability rules to spill over into areas that have traditionally been governed under negligence law. In *Cafazzo v. Central Medical Health Services, Inc.*, 668 A.2d 521 (Pa. 1995) (cited *supra* by Judge Scirica in dissent in *Oberdorf*), that concern led Montemuro, J., to reject an attempt to hold a hospital and physician strictly liable for the defects in a mandibular prosthesis used during an operation. Montemuro, J., held that supplying the product was “ancillary” to the provision of medical services, even if there happened to be a surcharge on the medical product:

[I]t must be noted that the “seller” need not be engaged solely in the business of selling products such as the defective one to be held strictly liable. An example supporting this proposition appears in comment *f* of the Restatement (Second) of Torts, §402A and concerns the owner of a motion picture theater who offers edibles such as popcorn and candy for sale to movie patrons. The analogue to the instant case is valid in one respect only: both the candy and the . . . implant are ancillary to the primary activity, viewing a film or undergoing surgery respectively. However, beyond that any comparison is specious. A movie audience is free to purchase or not any food items on offer, and regardless of which option is exercised the primary activity is unaffected. On the other hand, while the implant was incidental to the surgical procedure here, it was a necessary adjunct to the treatment administered, as were the scalpel used to make the incision, and any other material objects involved in performing the operation, all of which fulfill a particular role in provision of medical service, the primary activity.

Montemuro, J., reasoned that strict liability would not provide an incentive for hospitals and doctors to choose different services, because they rely on the FDA’s stamp of approval. He warned against allowing the “selection of the wrong product [to] become[] a matter of professional negligence for which recovery is available.” Nor did he think strict liability was needed to compensate the injured party, finding that the “net effect of this cost spreading would further endanger the already beleaguered health care system.”

The Third Restatement follows the Second by holding that “[s]ervices, even when provided commercially, are not products,” RTT: PL §19(b), including those services to inspect, repair, and maintain machinery of the original product seller. A replacement part therefore is subject to products liability, but its installation is not.

3. *Information as a product.* Does products liability law apply to information? The Third Restatement defines products as “tangible personal property distributed commercially for use or consumption.” RTT: PL §19. The Restatement generally excludes intangible property like information contained in books or media due to free speech concerns: “Most courts, expressing concern that imposing strict liability for the dissemination of false and defective information would significantly impinge on free speech have, appropriately, refused to impose strict products liability in these cases.”

This reluctance to extend liability to intangible products presents new complications in our increasingly digital world. Consumers engage with intangible products like computer programs and smartphone apps constantly, which raises questions as to whether the owners of these platforms can be held liable for the information disseminated through them. In *Cohen v. Facebook, Inc.*, 252 F. Supp. 3d 140 (E.D.N.Y. 2017), plaintiffs brought a *prima facie* tort claim against Facebook after they were subject to threats from terrorist organizations on the platform. Garaufis, J., dismissed the claims, holding defendant immune under section 230 of the Communications Decency Act (see *infra* Chapter 11, at 934) which “shields defendants who operate certain internet services from liability based on content created by a third party.” *Id.* at 155. If these providers can’t be held liable for the content on their platforms, can they be held liable under a products liability theory for the algorithms that bring content to consumers’ attention?

4. *Used and reconditioned products.* How does products liability law apply to the sale of used or reconditioned products? In *Tillman v. Vance Equipment Co.*, 596 P.2d 1299, 1303-1304 (Or. 1979), the court refused to apply the strict liability rule of section 402A to a defendant who sold a good on an “as is” basis, noting that “it would work a significant change in the very nature of used goods markets”; parties who want warranties typically bargain for them.

Roughly speaking, the Third Restatement (see RTT: PL §8) follows cases like *Tillman* by limiting liability of the seller of used products to those defects that it created, or those created by predecessors in the same commercial chain of distribution. The Third Restatement also requires the reseller of used products to comply with all applicable regulations in force at the time of resale. *Id.* §8(d). In some states, legislation addresses the issue. See, e.g., Kan. Stat. Ann. §60-3306(b)(3) (2019), which explicitly offers sellers of used products protection against liability in a products liability claim when “the product was sold in substantially the same condition as it was when it was acquired for resale” and judgment against the manufacturer is “reasonably certain of being satisfied.”

5. *Successor liability.* Can a corporation that acquires either the assets or shares of an original product seller be sued for its predecessor’s torts after the original corporation liquidates? The leading case in support of successor liability is *Ray v. Alad Corp.*, 560 P.2d 3, 9 (Cal. 1977), where the new defendant corporation simply took over the business of the prior corporation and exploited its good will without any change in

operation or control. The court rested its case for successor liability on three separate grounds:

p. 713

(1) the virtual destruction of the plaintiff's remedies against the original manufacturer caused by the successor's acquisition of the business, (2) the successor's ability to assume the original manufacturer's risk-spreading role, and (3) the fairness of requiring the successor to assume a responsibility for defective products that was a burden necessarily attached to the original manufacturer's good will being enjoyed by the successor in the continued operation of the business.

A majority of courts, however, decline to recognize the product line exception. In *Semenetz v. Sherling & Walden, Inc.*, 851 N.E.2d 1170, 1174 (N.Y. 2006), the New York Court of Appeals expressed a common concern that small businesses with limited assets face "economic annihilation" if burdened with the liabilities of their predecessors in ways that could deter the resale of existing assets, even though the liquidation of that corporation also cuts off tort liability for the user of its products. Accordingly, RTT: PL §12 allows successor liability only when the acquisition

(a) is accompanied by an agreement for the successor to assume such liability; or (b) results from a fraudulent conveyance to escape liability for the debts or liabilities of the predecessor; or (c) constitutes a consolidation or merger with the predecessor; or (d) results in the successor becoming a continuation of the predecessor.

For a proposal that all corporations wishing to go out of business by either sale or liquidation be required to get asset insurance, see Green, Successor Liability: The Superiority of Statutory Reform to Protect Products Liability Claimants, 72 Cornell L. Rev. 17 (1986). For a defense of using successor liability to induce corporate purchasers to exact greater diligence in their asset acquisitions, see Cupp, Redesigning Successor Liability, 1999 Ill. L. Rev. 845.

SECTION D. PRODUCT DEFECTS

1. Manufacturing Defects

Restatement of the Law (Third) of Torts: Products Liability

§3. CIRCUMSTANTIAL EVIDENCE SUPPORTING INFERENCE OF PRODUCT DEFECT

It may be inferred that the harm sustained by the plaintiff was caused by a product defect existing at the time of sale or distribution, without proof of a specific defect, when the incident that harmed the plaintiff:

p. 714

- (a) was of a kind that ordinarily occurs as a result of product defect; and
- (b) was not, in the particular case, solely the result of causes other than product defect existing at the

time of sale or distribution.

SPELLER v. SEARS, ROEBUCK AND CO.

790 N.E.2d 252 (N.Y. 2003)

GRAFFEO, J. In this products liability case, defendants—a product manufacturer and retailer—were granted summary judgment dismissing plaintiffs' complaint. Because we conclude that plaintiffs raised a triable issue of fact concerning whether a defective refrigerator caused the fire that resulted in plaintiffs' injuries, we reverse and reinstate the complaint against these defendants.

Plaintiffs' decedent Sandra Speller died in a house fire that also injured her seven-year-old son. It is undisputed that the fire originated in the kitchen. Plaintiffs commenced this action against Sears, Roebuck & Co., Whirlpool Corporation and the property owner alleging negligence, strict products liability and breach of warranty. Relevant to this appeal, plaintiffs asserted that the fire was caused by defective wiring in the refrigerator, a product manufactured by Whirlpool and sold by Sears.

A party injured as a result of a defective product may seek relief against the product manufacturer or others in the distribution chain if the defect was a substantial factor in causing the injury. . . .

In this case, plaintiffs' theory was that the wiring in the upper right quadrant of the refrigerator was faulty, causing an electrical fire which then spread to other areas of the kitchen and residence. Because that part of the refrigerator had been consumed in the fire, plaintiffs noted that it was impossible to examine or test the wiring to determine the precise nature of the defect. Thus, plaintiffs sought to prove their claim circumstantially by establishing that the refrigerator caused the house fire and therefore did not perform as intended. [The defendant's experts claimed that the fire started on the stove, but they conceded "that a fire would not occur in a refrigerator unless the product was defective."]

Of course, if a plaintiff's proof is insufficient with respect to either prong of this circumstantial inquiry, a jury may not infer that the harm was caused by a defective product unless plaintiff offers competent evidence identifying a specific flaw.

Here, in their motion for summary judgment, defendants focused on the second prong of the circumstantial inquiry, offering evidence that the injuries were not caused by their product but by an entirely different instrumentality—a grease fire that began on top of the stove. This was the conclusion of the Fire Marshall who stated during deposition testimony that his opinion was based on his interpretation of the burn patterns in the kitchen, his observation that one of the burner knobs on the stove was in the "on" position, and his conversation with a resident of the home who apparently advised him that the oven was on when the resident placed some food on the stovetop a few hours before the fire.

In order to withstand summary judgment, plaintiffs were required to come forward with competent evidence excluding the stove as the origin of the fire. To meet that burden, plaintiffs offered three expert

opinions: the depositions of an electrical engineer and a fire investigator, and the affidavit of a former Deputy Chief of the New York City Fire Department. Each concluded that the fire originated in the refrigerator and not on the stove.

In his extensive deposition testimony, the electrical engineer opined that the fire started in the top-right-rear corner of the refrigerator, an area that housed the air balancing unit, thermostat, moisture control and light control. He stated that the wiring in this part of the appliance had been destroyed in the fire, making it impossible to identify the precise mechanical failure and, thus, he could only speculate as to the specific nature of the defect. He testified that the “most logical probability” was that a bad connection or bad splice to one of the components in that portion of the unit caused the wire to become “red hot” and to ignite the adjacent plastic. He tested the combustibility of the plastic and confirmed that the “plastic lights up very easily, with a single match” and continues to burn like candle wax. The engineer observed that the doors of the refrigerator were “slightly bellied out,” indicating they were blown out from the expanding hot gases inside the refrigerator. The wall behind the refrigerator was significantly damaged and the upper right quadrant was burned to such a degree that it was not likely to have been caused by an external fire. Interpreting the burn patterns differently from the Fire Marshall, the electrical engineer found that the cabinets above the stove, although damaged, were not destroyed to the extent he expected to find if there had been a stovetop grease fire.

Plaintiffs’ fire investigator similarly opined that the fire originated in the refrigerator’s upper right corner, in part basing his conclusion on his observations of the scene three days after the fire and his examination of the appliances. He also interviewed a witness to the fire. He testified that he eliminated the stove as the source of the fire after his examination of that appliance and the cabinets above it. Contrary to the testimony of the Fire Marshall, he observed that all of the burner knobs on the stove were in the same position, either all “off” or all “on.” He further examined the burn patterns, noting that if the blaze had been caused by a grease fire on the stove, the cabinets directly above would have been consumed in the fire. Instead, they were merely damaged. He acknowledged that he did not know exactly how the fire started inside the refrigerator but indicated he suspected there had been a poor connection in the wiring that caused the wire to smolder until it ignited the highly combustible foam insulation inside the unit.

The former Deputy Chief of the New York City Fire Department asserted in his affidavit that the “fire damage to the area around the refrigerator when compared to that of the stove clearly shows the longer and heavier burn at the refrigerator,” indicating the fire originated there. He also stated that he had ruled out all other possible origins of the fire.

Upon review of these expert depositions and affidavit, we conclude that plaintiffs raised a triable question of fact by offering competent evidence which, if credited by the jury, was sufficient to rebut defendants’ alternative cause evidence. In

other words, based on plaintiffs’ proof, a reasonable jury could conclude that plaintiffs excluded all other causes of the fire.

We therefore disagree with the Appellate Division’s characterization of plaintiffs’ submissions as

equivocal. Plaintiffs' experts consistently asserted that the fire originated in the upper right quadrant of the refrigerator and each contended the stove was not the source of the blaze. Both parties supported their positions with detailed, non-conclusory expert depositions and other submissions which explained the bases for the opinions.

Defendants contend that after they came forward with evidence suggesting an alternative cause of the fire, plaintiffs were foreclosed from establishing a product defect circumstantially but were then required to produce evidence of a specific defect to survive summary judgment. We reject this approach for two reasons. First, such an analysis would allow a defendant who offered minimally sufficient alternative cause evidence in a products liability case to foreclose a plaintiff from proceeding circumstantially without a jury having determined whether defendant's evidence should be credited. Second, it misinterprets the court's role in adjudicating a motion for summary judgment, which is issue identification, not issue resolution. . . . [P]laintiffs directly rebutted defendants' submissions with competent proof specifically ruling out the stove as the source of the blaze. Because a reasonable jury could credit this proof and find that plaintiff excluded all other causes of the fire not attributable to defendants, this case presents material issues of fact requiring a trial.

[Reversed.]

NOTES

1. Proof of manufacturing defect. What role, if any, did the decedent or her son play in bringing about the fire? Even if the fire started in the refrigerator, did the plaintiffs introduce any evidence of an original defect in the equipment? If so, was it a manufacturing (construction) defect or a design defect? As should be evident, the switch from negligence to strict liability in manufacturing defect cases does not eliminate difficult causal questions that arise when the plaintiff's conduct occupies an uncertain place in the chain of causation, a problem exemplified by long-lived products subject to intensive and protracted use. Indeed many states have adopted statutes of repose that limit the availability of products liability suits to a certain number of years after purchase. In *Jagmin v. Simonds Abrasive Co.*, 211 N.W.2d 810 (Wis. 1973), the plaintiff was struck in the face by a grinding wheel that broke into pieces while he was operating it. The plaintiff established that the wheel was manufactured by the defendant. He further testified that he had used the wheel in the proper manner, that he had not placed undue stress on it, that he had no evidence suggesting that any other person had used the wheel while he was away from his job, and that the wheel had several hours of useful life left at the time the accident took place. The wheel itself was destroyed after it broke. The trial court refused to allow the case to go to the jury, ruling that there was insufficient evidence on the question of "defect." The Wisconsin Supreme Court reversed, allowing an "exceedingly close" case to reach the jury

on a modified version of res ipsa loquitur. The plaintiff's evidence tended to exclude the possibility of any responsible cause of the injury apart from an original product defect even if that defect could not be identified. Does the plaintiff's evidence negate the possibility that the wheel was damaged in shipment or in

installation? Does the plaintiff's evidence explain why the wheel worked as long as it did? Does Henderson's account of the *MacPherson* facts, *supra* at 679, argue in favor of requiring a specific identification of a product defect in manufacturing cases? Does the information-forcing rationale for res ipsa loquitur put forth in *Ybarra* (see *supra* at 273) apply here? Do modern discovery rules mitigate any information disparities between the consumer and the product manufacturer?

In a modern twist on *Speller*, the plaintiff in Red Hed Oil, Inc. v. H.T. Hackney Co., 292 F. Supp. 3d 764 (E.D. Ky. 2017), sued the distributor and manufacturers of e-cigarettes that allegedly caught fire and caused extensive damage to the plaintiff's convenience store. The plaintiff's manufacturing and design defect claims failed on similar causation issues as those originally raised in *Speller*. According to Hood, J.:

Plaintiffs fail to provide factual allegations that these e-cigarettes did, in fact, cause this fire. Plaintiffs blame it on a defect, but they do not specify what defect, which product was defective, or how the defect sparked the fire. . . .

The plaintiffs do not allege an alternative design, how the products deviated from the intended design, how the e-cigarettes were assembled wrong, or how the e-cigarettes fail the risk-utility test. Plaintiffs cannot rely on general assertions that the e-cigarettes were dangerous; they must make at least some factual allegations as to *how*.

Id. at 775, 778.

2. *Manufacturing defects in food cases.* In *Escola*, food cases were one of the original battlegrounds for a theory of strict liability. In particular, the early common law held manufacturers strictly liable for any “foreign object” that was found within the food, be it a sliver of tin or some waste impurities from animals. But by the same token, the earlier cases refused to hold manufacturers liable under any theory for substances “natural” to the product served. Thus the leading case of *Mix v. Ingersoll Candy Co.*, 59 P.2d 144, 148 (Cal. 1936), held that “[b]ones which are natural to the type of meat served cannot legitimately be called a foreign substance, and a consumer who eats meat dishes ought to anticipate and be on his guard against the presence of such bones.”

Modern cases have uniformly rejected this approach in favor of a reasonable expectations test. In *Schafer v. JLC Food Systems*, 695 N.W.2d 570, 575 (Minn. 2005), the plaintiff took a bite from a pumpkin muffin served at the defendant’s restaurant only to experience a sharp pain in her throat, which later turned into a serious infection. Page, J., wrote:

Under the Restatement [Third] approach, consumer expectations are based on culturally defined, widely shared standards allowing a seller’s liability to be resolved by judges and triers of fact based on their assessment of what consumers have a right to expect from preparation of the food in question. §7 cmt. b. . . .

harm, relying on consumers' reasonable expectations is likely to yield a more equitable result. After all, an unexpected natural object or substance contained in a food product, such as a chicken bone in chicken soup, can cause as much harm as a foreign object or substance, such as a piece of glass in the same soup.

Page, J., next allowed the plaintiff to get to the jury even though she could not "present evidence identifying the object that cause the alleged harm," relying again on the strict liability analog to *res ipsa loquitur*, whereby, as in *Jagmin*, the plaintiff's task is to exclude all other causes of harm. Should this test be adopted in cases of food poisoning that manifest themselves a day after eating in the restaurant?

2. Design Defects

CAMPO v. SCOFIELD

95 N.E.2d 802 (N.Y. 1950)

FULD, J. Plaintiff, working on his son's farm, was engaged in feeding onions into an "onion topping" machine, when his hands became caught in its revolving steel rollers and were badly injured. . . .

If a manufacturer does everything necessary to make the machine function properly for the purpose for which it is designed, if the machine is without any latent defect, and if its functioning creates no danger or peril that is not known to the user, then the manufacturer has satisfied the law's demands. We have not yet reached the state where a manufacturer is under the duty of making a machine accident proof or foolproof. Just as the manufacturer is under no obligation, in order to guard against injury resulting from deterioration, to furnish a machine that will not wear out, so he is under no duty to guard against injury from a patent peril or from a source manifestly dangerous.

To illustrate, the manufacturer who makes, properly and free of defects, an axe or a buzz saw or an airplane with an exposed propeller, is not to be held liable if one using the axe or the buzz saw is cut by it, or if some one working around the airplane comes in contact with the propeller. In such cases, the manufacturer has the right to expect that such persons will do everything necessary to avoid such contact, for the very nature of the article gives notice and warning of the consequences to be expected, of the injuries to be suffered.

2 Harper and James, Torts §28.5

(1956)

The bottom does not logically drop out of a negligence case against the maker when it is shown that the purchaser knew of the dangerous condition. Thus if the

product is a carrot-topping machine with exposed moving parts, or an electric clothes wringer dangerous to

the limbs of the operator, and if it would be feasible for the maker of the product to install a guard or safety release, it should be a question for the jury whether reasonable care demanded such a precaution, though its absence is obvious. Surely reasonable men might find here a great danger, even to one who knew the condition and since it was so readily avoidable they might find the maker negligent.

John W. Wade, On the Nature of Strict Tort Liability for Products

44 Miss. L.J. 825, 836-837 (1973)

If there is agreement that the determination of whether a product is unreasonably dangerous, or is not duly safe, involves the necessary application of a standard, it will, like the determination of negligence or of strict liability for an abnormally dangerous activity, require the consideration and weighing of a number of factors. I offer here a revised list of factors which seem to me to be of significance in applying the standard.

1. The usefulness and desirability of the product—its utility to the user and to the public as a whole.
 2. The safety aspects of the product—the likelihood that it will cause injury, and the probable seriousness of the injury.
 3. The availability of a substitute product which would meet the same need and not be as unsafe.
 4. The manufacturer's ability to eliminate the unsafe character of the product without impairing its usefulness or making it too expensive to maintain its utility.
 5. The user's ability to avoid danger by the exercise of care in the use of the product.
 6. The user's anticipated awareness of the dangers inherent in the product and their availability, because of general public knowledge of the obvious condition of the product, or of the existence of suitable warnings or instructions.
 7. The feasibility, on the part of the manufacturer, of spreading the loss by setting the price of the product or carrying liability insurance.
-

NOTE

Two (or is it three?) views of design defect. The passages quoted above set up the possible approaches to design defect litigation. The open and obvious test of *Campo* dominated the law until the adoption of the Second Restatement, in which a design defect was determined by the consumer expectations test. RST §402A, comments *g & i*. Contrary to *Campo*, Professors Harper and James insisted that a negligence cause of action was not necessarily defeated by the obvious nature of the defect. Professor Wade's influential formulation of the risk-utility

standard offers a strict liability version of the relevant cost benefit analysis. The Third Restatement requires a modified risk-utility test, in which the plaintiff is charged with showing that a "reasonable alternative

design” exists that would make the product less dangerous. Judicial embrace of these different versions of design defect liability have ebbed and flowed over the past 40 years. The next case deals with the rise of the negligence standard in design defect cases dealing with the crashworthiness of automobiles.

a. Development of the Negligence Test

VOLKSWAGEN OF AMERICA, INC. v. YOUNG

321 A.2d 737 (Md. 1974)

[The decedent had stopped his 1968 Volkswagen Beetle at a red light when he was hit from behind by a 1967 Ford, negligently driven by William Benson. As a result, decedent’s car was pushed forward. The seat bracketing pieces and seat adjustment mechanisms broke away from the body of the car. In the ensuing “second collision” the decedent was hurled into the rear of the car and was killed by head and torso injuries sustained on impact. The plaintiff sued Volkswagen in federal district court. She alleged that the Beetle was “defectively designed, manufactured, and marketed with defects which rendered it structurally hazardous, not merchantable, and not fit for the purpose intended” in that its entire seat assembly was “unreasonably vulnerable to separation from the floor upon collision.” Pursuant to Maryland’s Certification of Questions of Law Act, the district court certified this question to the Maryland Court of Appeals [the highest state court]:

Whether or not, under Maryland law, the definition of the “intended use” of a motor vehicle includes the vehicle’s involvement in a collision; and thus in turn, whether a cause of action is stated against the manufacturer or importer of said vehicle in breach of warranty or negligence or absolute liability or misrepresentation by allegations that the design and manufacture of the vehicle unreasonably increased the risk of injury to occupants following a collision not caused by any defect of the vehicle.

The Maryland court answered the question in the affirmative, holding that the “intended use” of an automobile was not only to provide transportation but also reasonably safe transportation, and that the plaintiff’s complaint stated a cause of action in negligence under Maryland law.]

ELDRIDGE, J. . . . This is the first case to reach this Court concerning the extent of an automobile manufacturer’s liability for a design defect resulting in enhanced injuries in a motor vehicle accident, where the defect did not cause the initial impact or movement of the injured person. Such cases are often called “second collision” cases or “automobile crashworthiness” cases. They differ from other products liability cases involving defective automobiles by the combination

of two factors. First, the alleged defect is in the design of the automobile rather than a negligent deviation during the construction or assembly process from the manner in which the vehicle was supposed to be made. The latter is usually called a “construction defect.” Second, the defect is not the cause of the initial impact. Typically, the actions of the driver of the car in which the plaintiff is riding, or the actions of the driver of another vehicle, or the actions of some third person, cause an initial disruption or impact which in

turn results in the plaintiff's colliding with the interior (or occasionally the exterior) of the car. The plaintiff's collision with the car is the so-called "second collision." The issue of whether the automobile manufacturer has a duty to take reasonable steps to design its vehicles so as to minimize the injuries caused by "second collisions" has engendered much controversy and comment throughout the nation.

A 1968 Volkswagen Beetle Type 1, the model of the decedent's car in *Young*

Source: Phil Talbot / Alamy

The principal case holding that an automobile manufacturer has no duty to design its cars so as to minimize the injuries suffered in automobile accidents is *Evans v. General Motors Corporation*, 359 F.2d 822 (7th Cir. 1966). The plaintiff [the decedent] in *Evans* was killed when his 1961 Chevrolet station wagon was struck broadside by another car. He claimed that General Motors was negligent in designing the frame of his car, inasmuch as an "X" type frame rather than a box or perimeter type frame was used, contrary to the construction of some other cars. The claim was that an "X" type frame without side rails would not adequately protect occupants during a side impact collision, and that the defendant manufacturer had created an unreasonable risk of serious injury. The trial court, applying Indiana law, dismissed the complaint for failure to state a claim on which relief could be granted, and the dismissal was affirmed by the United States Court of Appeals for the Seventh Circuit. The Court of Appeals held that the critical question was the nature of the manufacturer's duty. It went on to conclude that a manufacturer has a duty only to design a car reasonably fit for its intended purpose, and that "[t]he intended purpose of an automobile does not include its participation in collisions with other objects, despite the manufacturer's ability to foresee the possibility that such collisions may occur. As defendant argues, the defendant also knows that its automobiles may be driven into bodies of water, but it is not suggested that defendant has a duty to equip them with pontoons." (*Id.* at 825.)

The Court of Appeals for the Seventh Circuit also stated as grounds for its decision that a "manufacturer is not under a duty to make his automobile accident-proof or fool-proof" and that requiring "manufacturers to construct automobiles in which it would be safe to collide . . . [is] a legislative function. . . ."

The seminal case on the other side of the issue is *Larsen v. General Motors Corporation*, 391 F.2d 495 (8th Cir. 1968). The plaintiff in *Larsen* suffered severe bodily injuries while driving a 1963 Corvair which collided head-on with another car. The impact caused the steering mechanism to thrust forward into the plaintiff's head. The suit against General Motors charged negligence in the design of the steering assembly and the placement of the component parts of the steering assembly into the structure of the car. It was alleged that General Motors was also negligent in not warning the user of this latent condition. The specific defect relied upon by the plaintiff was that the solid steering shaft was so designed as to extend "without interruption from a point 2.7 inches in front of the leading surface of the front tires to a position directly in front of the driver," exposing him "to an unreasonable risk of injury from the rearward displacement of that shaft in the event of a left-of-center head-on collision. So positioned it receives the initial impact of forces generated by a left-of-center head-on collision. The unabsorbed forces of the collision in this area are transmitted directly toward the driver's head, the shaft acting as a spear aimed at a vital part of the driver's anatomy." *Id.* at 497, n.2. The plaintiff also pointed out that other cars were designed so as to protect against such rearward displacement, in that the steering column did not protrude beyond the forward surface of the front tires. The lower court in *Larsen* granted General Motors' motion for summary judgment on the theory that the manufacturer had no duty to design a vehicle which would protect the plaintiff from injury in a collision. On appeal, the United States Court of Appeals for the Eighth Circuit reversed, holding that the plaintiff had made out a sufficient case for consideration by the jury.

[The court in *Larsen* gave a broad interpretation to "intended use," stating:]

Automobiles are made for use on the roads and highways in transporting persons and cargo to and from various points. This intended use cannot be carried out without encountering in varying degrees the statistically proved hazard of injury-producing impacts of various types. The manufacturer should not be heard to say that it does not intend its product to be involved in any accident when it can easily foresee and when it knows that the probability over the life of its product is high, that it will be involved in some type of injury-producing accident. . . .

The Court of Appeals concluded that an automobile manufacturer "is under a duty to use reasonable care in the design of its vehicle to avoid subjecting the user to an unreasonable risk of injury in the event of a collision." (*Id.* at 502.)

The *Larsen* court then emphasized the limitations of its holding that it was not making automobile manufacturers "insurers"; that it was merely applying common law principles of negligence; that the standard for manufacturers was "reasonable care"; and that an automobile did not have to be absolutely crash-proof but only designed to provide "a reasonably safe vehicle in which to travel." (*Id.* at 503.)^{*1}

In our view, *Larsen v. General Motors Corporation*, *supra*, and the cases following it, are more in accord with traditional negligence principles than *Evans v. General Motors Corporation*, *supra*. . . .

That the design defect does not cause the initial collision should make no difference if it is a cause of the

ultimate injury. Where the injuries to an occupant of a motor vehicle resulted from both the negligence of a driver as well as a negligent condition created by some other entity, this Court has held that both negligent actors may be liable. . . .

In sum, “traditional rules of negligence” lead to the conclusion that an automobile manufacturer is liable for a defect in design which the manufacturer could have reasonably foreseen would cause or enhance injuries on impact, which is not patent or obvious to the user, and which in fact leads to or enhances the injuries in an automobile collision.

The arguments advanced by Volkswagen in the instant case for creating an exception to the application of traditional negligence principles in “second collision” cases are not persuasive. They are essentially the same reasons set forth by the United States Court of Appeals for the Seventh Circuit in *Evans* and the other cases following *Evans*. Volkswagen’s principal arguments are: (1) that the intended purpose of an automobile is transportation and does not include its participation in collisions; (2) that “a manufacturer is not required to produce accident-proof or injury-proof cars”; (3) that manufacturers are not insurers; and (4) that “[d]esign requirements are a legislative, not a judicial function. . . .”

While the intended purpose of an automobile may not be to participate in collisions, the intended purpose includes providing a reasonable measure of safety when, inevitably, collisions do occur. For many years automobiles have been equipped with safety glass, bumpers, windshield wipers, etc. More recently, and largely as a result of governmental action, automobiles are equipped with additional safety devices such as seat belts, shoulder harnesses, padded dashboards, padded visors, non-protruding knobs, etc. Frequent collisions are foreseeable, and the intended purpose of all of these parts of the vehicle is to afford reasonable safety when those collisions occur.

The arguments that there is no duty to design “accident-proof” or “injury-proof” vehicles, and that automobile manufacturers are not insurers, are “straw men.” No case has ever held that an automobile manufacturer must design an “accident-proof” or “injury-proof” vehicle or that the manufacturer is an insurer. Concerning two of the examples most often used by the advocates of non-liability for design defects, no one has suggested that an automobile must be designed to withstand a high speed head-on collision with a truck or to float if it leaves the road and goes into a body of water. . . .

The standard to be applied is the traditional one of reasonableness.

The contention that the design of automobiles involves a legislative function and not a judicial function, similarly furnishes no sound reason for exempting automobile “second collision” cases from the normal principles of tort liability. Legislative or administrative requirements that persons or businesses conduct their operations in a particular manner, and adhere to specified standards, have

never been viewed as supplanting tort liability. On the contrary, such statutory or regulatory requirements are deemed to furnish standards by which courts or juries determine, along with other circumstances, whether or not conduct is negligent. Failure to adhere to those standards is evidence of negligence for the court or jury to consider. Moreover, the most significant legislation dealing with motor vehicle safety

standards makes it clear that Congress did not view the question of safe motor vehicle design as solely a legislative problem. The National Traffic and Motor Vehicle Safety Act of 1966 specifically provided that “Compliance with any Federal motor vehicle safety standard issued under this subchapter does not exempt any person from any liability under common law.” 15 U.S.C. 1397(c). . . .

In addition, there can be no recovery if the danger inherent in the particular design was obvious or patent to the user of the vehicle. . . .

[The court then refuses to apply the strict liability theory of section 402A to design defect cases.] Consequently, the tort liability under Maryland law of a manufacturer or supplier of a motor vehicle, for a defective design which enhances injuries in a collision, depends upon traditional principles of negligence.

NOTES

1. Determining standards for design defects. As *Young* indicates, design defect liability grew up under the aegis of negligence. As such, can the court accept the negligence doctrine and allow a complete defense for any dangers that were “obvious or patent” to the user of the vehicle? Could a jury regard a Volkswagen van, with its engine in the rear, as defective? A convertible? A cigarette lighter? For a negative answer on the first query, see *Dreisonstok v. Volkswagenwerk A.G.*, 489 F.2d 1066 (4th Cir. 1974); for a negative answer on the second, see *Delvaux v. Ford Motor Co.*, 764 F.2d 469 (7th Cir. 1985); and for a negative answer on the third, see *Todd v. Societe Bic, S.A.*, 21 F.3d 1402, 1407 (7th Cir. 1994). When the defects are obvious, how should the cost-benefit analysis be conducted?

Conversely, how would *Young* play out under section 402A of the Second Restatement? Note that traditional strict liability works well to protect strangers against the defendant’s use of force, as with abnormally dangerous activities but it seems inappropriate to require any defendant to protect the plaintiff against any use (or misuse) of force initiated by either the plaintiff, a third party, or an act of God. A motorcycle gasoline tank might be made “totally” safe against impact, but its weight and unwieldiness would make the motorcycle unmovable. Once absolute protection is rejected as unworkable, reasonableness standards take over. In some instances, standards are set by legislation. See, e.g., The National Traffic and Motor Vehicle Safety Act, 49 U.S.C. §§30101-30170, wherein, for example, 49 C.F.R. §571.216 (2019) (“Roof Crush Resistance”) provides that a force equal to one and one-half times a car’s unloaded weight or 22,240 newtons (5,000 pounds), whichever is less, should not move the roof more than 127 millimeters (five inches) when applied to either of its front corners. Because today statutory compliance does not provide an absolute defense in a design defect case, courts typically turn to cost-benefit tests to determine the applicable design standard.

But how? For an early skeptical response, see *Henderson, Judicial Review of Manufacturers’ Conscious Design Choices: The Limits of Adjudication*, 73 Colum. L. Rev. 1531 (1973), stressing the “polycentric nature” of design decisions, which requires a design engineer to find the proper balance of “such factors as market price, functional utility, and aesthetics, as well as safety.” Henderson insisted these matters could

not be adequately reexamined in litigation because “courts are not institutionally suited to establishing safety standards.” For the early impetus on liability for design defects, see Nader & Page, *Automobile Design and Judicial Process*, 55 Calif. L. Rev. 645 (1967).

2. *Enhancement of injury.* The defendant in a crashworthiness case is not responsible for the unavoidable injuries associated with the original impact, but only for those harms that were “enhanced or aggravated” by the defective design. In light of the implicit division on causation, who bears the burden of proof on the issue of enhancement? One view is that the plaintiff must prove that “it is more probable than not that the alleged defect aggravated or enhanced the injuries resulting from the initial collision.” See *Caiazzo v. Volkswagenwerk A.G.*, 647 F.2d 241 (2d Cir. 1981). *Caiazzo* was promptly rejected in *Mitchell v. Volkswagenwerk A.G.*, 669 F.2d 1199, 1204-1205 (8th Cir. 1982):

The primary difficulty we have with this analysis is that it forces not only the parties but the jury as well to try a hypothetical case. Liability and damage questions are difficult enough within orthodox principles of tort law without extending consideration to a case of a hypothetical victim. More realistically, the parties and juries should direct their attentions to what actually happened rather than what might have happened.

By placing the burden of proof on a plaintiff to prove that the designer was the sole cause of not only an enhanced indivisible injury, but, in addition, that he would not otherwise have received injuries absent a defect, the injured victim is relegated to an almost hopeless state of never being able to succeed against a defective designer. The public interest is little served. We write to reaffirm that *Larsen* was not intended to create a rule which requires the plaintiff to assume an impossible burden of proving a negative fact.

Is the defendant ever the sole responsible party in any crashworthiness case? How can a jury avoid trying a “hypothetical case” once the defendant introduces evidence that the alleged defect did not cause all or some of the harms? Does the burden of production ever switch back to the plaintiff? Whatever the force of these objections, the Third Restatement takes the same view. Even though the theory of proximate causation holds the defendant liable only for the “increased harm,” the full loss falls on the defendant “[i]f proof does not support a determination . . . of the harm that would have resulted in the absence of the product defect.” RTT: PL §16(c).

Egbert v. Nissan Motor Co., Ltd., 228 P.3d 737, 746 (Utah 2010), rejected the Restatement view and both *Mitchell* and *Caiazzo* by taking its cue from Utah Code Ann. §78B-5-818(3) (2019), which provides: “No defendant is liable to any person seeking recovery for any amount in excess of the proportion of fault attributed to

p. 726

that defendant. . . .” Durham, C.J., concluded that fault, broadly defined under the statute, should always be apportioned between two parties when the jury has “sufficient” evidence of the culpability of each.

[B]ecause all injuries, as a matter of Utah law, can and must be apportioned, there is no shifting of burden—informal or formal—to a defendant product seller to prove apportionment. The

plaintiff bears the burden of proof in an enhanced-injury case. Finally, because of the nature of an enhanced-injury claim and the abolition of joint and several liability, a defendant product seller cannot become liable for the entire injury merely by virtue of being a codefendant.

3. Crashworthiness cases: Acceptance, disquiet, and reform? The crashworthiness doctrine of *Larsen* and *Young* is today the law in every state and explicitly embraced in the Third Restatement. See RTT: PL §16, comment *a*. But some courts have expressed misgivings about its potential scope. In *Dawson v. Chrysler Corp.*, 630 F.2d 950, 962-963 (3d Cir. 1980), the plaintiff, a police officer, was hurrying to answer a burglar alarm when his Dodge Monaco patrol car slipped off a rain-soaked highway into an “unyielding” steel pole some 15 inches in diameter. The pole ripped through the side of the car, crushed the plaintiff, and left him a quadriplegic. The plaintiff argued the car was defective because it did not have “a full continuous steel frame extending through the door panels,” which would have kept the pole from penetrating the passenger space. The defendant’s expert testified that the plaintiff’s proposed changes would have added between 200 and 250 pounds of weight to the car and cost some \$300. He also noted that “deformation” of a car in a crash is in general desirable because it absorbs the impact that would otherwise be transmitted to the occupant. Adams, J., uneasily affirmed the plaintiff’s jury verdict under New Jersey law:

The result of such arrangement is that while the jury found Chrysler liable for not producing a rigid enough vehicular frame, a factfinder in another case might well hold the manufacturer liable for producing a frame that is too rigid. Yet, as pointed out at trial, in certain types of accidents—head-on collisions—it is desirable to have a car designed to collapse upon impact because the deformation would absorb much of the shock of the collision, and divert the force of deceleration away from the vehicle’s passengers. In effect, this permits individual juries applying varying laws in different jurisdictions to set nationwide automobile safety standards and to impose on automobile manufacturers conflicting requirements. It would be difficult for members of the industry to alter their design and production behavior in response to jury verdicts in such cases, because their response might well be at variance with what some other jury decides is a defective design. Under these circumstances, the law imposes on the industry the responsibility of insuring vast numbers of persons involved in automobile accidents.

The level of cynicism about this “damned-if-you-do-damned-if-you-don’t” problem surfaced in *Blankenship v. General Motors Corp.*, 406 S.E.2d 781, 783-784 (W. Va. 1991). Neely, J., joined the crashworthiness parade for reasons that had little to do with the intrinsic merits of the doctrine:

West Virginia is a small rural state with .66 percent of the population of the United States. Although some members of this court have reservations about the wisdom of many aspects of the tort law, as a court we are utterly powerless to make the *overall* tort system for cases arising in interstate commerce more rational: Nothing that we do will have any impact whatsoever on the set of economic trade-offs that occur in the *national* economy. And, ironically, trying unilaterally to make the American tort system more rational through being uniquely responsible in West Virginia will only punish our residents severely without, in any regard, improving the system for anyone else.

So long as West Virginians have to pay premiums on General Motors cars sold around the world, it would be “foolish and irresponsible,” accordingly to Neely, J., not to allow West Virginians to collect on their implicit insurance policies for accidents to them.

4. The decline of open and obvious. Automobiles were not the only product for which liability expanded dramatically in the 1970s. The design liability for machine tools and other equipment exploded as well. Specifically, *Campo* was explicitly overruled in *Micallef v. Miehle Co.*, 348 N.E.2d 571 (N.Y. 1976). There the plaintiff sought to “chase a hickie” (that is, remove a foreign object) that had made its way onto a high-speed printing press manufactured by the defendant. Without shutting down the press (which would have cost valuable production time), he tried to remove the hickie with an eight-inch piece of plastic, and his finger got caught in the nip-point of the machine. The plaintiff tried to turn off the press, but the shut-off button was beyond his reach. Cooke, J., rejected the open and obvious rule in *Campo*:

Apace with advanced technology, a relaxation of the *Campo* stringency is advisable. A casting of increased responsibility upon the manufacturer, who stands in a superior position to recognize and cure defects, for improper conduct in the placement of finished products into the channels of commerce furthers the public interest. To this end, we hold that a manufacturer is obligated to exercise that degree of care in his plan or design so as to avoid any unreasonable risk of harm to anyone who is likely to be exposed to the danger when the product is used in the manner for which the product was intended as well as an unintended yet reasonably foreseeable use.

What constitutes “reasonable care” will, of course, vary with the surrounding circumstances and will involve “a balancing of the likelihood of harm, and the gravity of harm if it happens, against the burden of the precaution which would be effective to avoid the harm.” Under this approach, “the plaintiff endeavors to show the jury such facts as that competitors used the safety device which was missing here, or that a ‘cotter pin costing a penny’ could have prevented the accident. The defendant points to such matters as cost, function, and competition as narrowing the design choices. He stresses ‘trade-offs.’ If the product would be unworkable when the alleged missing feature was added, or would be so expensive as to be priced out of the market, that would be relevant defensive matter.” (Rheingold, Expanding Liability of the Product Supplier: A Primer, 2 Hofstra L. Rev. 521, 537.)

p. 728

The Third Restatement endorses *Micallef*. See RTT: PL §2, illus. 3. Section 2, comment *d* articulates the now dominant position: “The fact that a danger is open and obvious is relevant to the issue of defectiveness, but does not necessarily preclude a plaintiff from establishing that a reasonable alternative design should have been adopted that would have reduced or prevented injury to the plaintiff.” States have generally followed suit in adopting open and obvious as a factor in determining defectiveness under a risk-utility or reasonable alternative design standard, rather than as a standalone defense. Thus in *Genie Indus., Inc. v. Matak*, 462 S.W.3d 1, 17 (Tex. 2015), Boyd, J., explained:

We have rejected such absolute rules [of open and obvious] in favor of the more fluid risk-

utility analysis because that analysis provides a more effective way to encourage manufacturers to reach an optimum level of safety in designing their products. A design that eliminates a risk is safer than a design that retains the risk, even if the risk is open and obvious or warned against.

But there are nevertheless some limits to liability. The Third Restatement also approved the subsequent case of *Linegar v. Armour of America, Inc.*, 909 F.2d 1150 (8th Cir. 1990). The decedent, a highway trooper, wore a standard-issue Armour bullet-proof vest that, as he well knew, did not wrap around his torso. He was killed in a routine traffic stop. His vest stopped all bullets that hit it but did not prevent a bullet from entering his body near his armpit and penetrating his heart. More extensive vests were available, but these were both uncomfortable to wear and somewhat less maneuverable. After citing RST §402A, comment *i*, Bowman, J., held that “[a]n otherwise completely effective protective vest cannot be regarded as dangerous, much less unreasonably so, simply because it leaves some parts of the body obviously exposed.”

b. Consumer Expectations versus Risk-Utility Tests

BARKER v. LULL ENGINEERING CO.

573 P.2d 443 (Cal. 1978)

TOBRINER, C.J. In August 1970, plaintiff Ray Barker was injured at a construction site at the University of California at Santa Cruz while operating a high-lift loader manufactured by defendant Lull Engineering Co. and leased to plaintiff's employer by defendant George M. Philpott Co., Inc. Claiming that his injuries were proximately caused, *inter alia*, by the alleged defective design of the loader, Barker instituted the present tort action seeking to recover damages for his injuries. The jury returned a verdict in favor of defendants, and plaintiff appeals from the judgment entered upon that verdict, contending primarily that in view of this court's decision in *Cronin v. J. B. E. Olson Corp.* 501 P.2d 1153 (Cal. 1972), the trial court erred in instructing the jury “that strict liability for a defect in design of a product is based on a finding that the product was unreasonably dangerous for its intended use. . . .”

p. 729

As we explain, we agree with plaintiff's objection to the challenged instruction and conclude that the judgment must be reversed. . . .

[W]e have concluded from this review that a product is defective in design either (1) if the product has failed to perform as safely as an ordinary consumer would expect when used in an intended or reasonably foreseeable manner, or (2) if, in light of the relevant factors discussed below, the benefits of the challenged design do not outweigh the risk of danger inherent in such design. In addition, we explain how the burden of proof with respect to the latter “risk-benefit” standard should be allocated.

This dual standard for design defect assures an injured plaintiff protection from products that either fall below ordinary consumer expectations as to safety, or that, on balance, are not as safely designed as they should be. At the same time, the standard permits a manufacturer who has marketed a product which

satisfies ordinary consumer expectations to demonstrate the relative complexity of design decisions and the tradeoffs that are frequently required in the adoption of alternative designs. Finally, this test reflects our continued adherence to the principle that, in a product liability action, the trier of fact must focus on the *product*, not on the *manufacturer's conduct*, and that the plaintiff need not prove that the manufacturer acted unreasonably or negligently in order to prevail in such an action. . . .

1. THE FACTS OF THE PRESENT CASE

[Barker, a substitute driver, was injured while using a Lull High-Lift Loader, which was designed to be kept level on a sloping terrain. He had received only limited instruction in the use of the loader. While attempting to lift a load of lumber 18 or so feet on uneven ground, he tried to maneuver the forks on the base of the load to compensate for sloping ground. As he lost control of the loader, he attempted to jump away from it, and was struck and seriously injured by some falling timber.

Barker claimed that the loader was defective in several respects: first, that it was not equipped with seat belts or a roll-bar; second, that it was not equipped with "outriggers" that might have given it greater lateral stability; third, that it was not equipped with an automatic locking device on its leveling mechanism; and, fourth, that it was not equipped with a separate park gear. In response to this assignment of defects, the defendant argued as follows: first, that seat belts or roll-bars were in fact dangerous because they prevented any quick escape from the loader; second, that the outriggers were not needed if the loader was operated on level terrain as was intended, that none of the defendant's competitors had such outriggers, and that a regular crane should have been called in if work on uneven terrain was required; third, that the leveling device used was the most convenient and safe for the operator; and, fourth, that none of the transmissions manufactured for loaders incorporated a park position. The defendant also argued that the plaintiff's inexperience and panic were the sole source of his injury.

The jury returned a verdict for the defendant by a vote of ten to two.] . . .

3. A TRIAL COURT MAY PROPERLY FORMULATE INSTRUCTIONS TO ELUCIDATE THE "DEFECT" CONCEPT IN VARYING CIRCUMSTANCES. IN PARTICULAR, IN DESIGN DEFECT CASES, A COURT MAY PROPERLY INSTRUCT A JURY THAT A PRODUCT IS DEFECTIVE IN DESIGN IF (1) THE PLAINTIFF PROVES THAT THE PRODUCT FAILED TO PERFORM AS SAFELY AS AN ORDINARY CONSUMER WOULD EXPECT WHEN USED IN AN INTENDED OR REASONABLY FORESEEABLE MANNER, OR (2) THE PLAINTIFF PROVES THAT THE PRODUCT'S DESIGN PROXIMATELY CAUSED INJURY AND THE DEFENDANT FAILS TO PROVE, IN LIGHT OF THE RELEVANT FACTORS, THAT ON BALANCE THE BENEFITS OF THE CHALLENGED DESIGN OUTWEIGH THE RISK OF DANGER INHERENT IN SUCH DESIGN. . . .

As this court has recognized on numerous occasions, the term defect as utilized in the strict liability context is neither self-defining nor susceptible to a single definition applicable in all contexts.⁸ . . . [T]he concept of defect raises considerably more difficulties in the design defect context than it does in the manufacturing or production defect context.

In general, a manufacturing or production defect is readily identifiable because a defective product is one that differs from the manufacturer's intended result or from other ostensibly identical units of the same product line. For example, when a product comes off the assembly line in a substandard condition it has incurred a manufacturing defect. . . . A design defect, by contrast, cannot be identified simply by comparing the injury-producing product with the manufacturer's plans or with other units of the same product line, since by definition the plans and all such units will reflect the same design. Rather than applying any sort of deviation-from-the-norm test in determining whether a product is defective in design for strict liability purposes, our cases have employed two alternative criteria in ascertaining, in Justice Traynor's words, whether there is something "wrong, if not in the manufacturer's manner of production, at least in his product." (Traynor, *The Ways and Meanings of Defective Products and Strict Liability*, 32 Tenn. L. Rev. 363, 366 [1965].)

First, our cases establish that a product may be found defective in design if the plaintiff demonstrates that the product failed to perform as safely as an ordinary consumer would expect when used in an intended or reasonably foreseeable manner. This initial standard, somewhat analogous to the Uniform Commercial Code's warranty of fitness and merchantability (Cal. U. Com. Code, §2314), reflects the warranty heritage upon which California product liability doctrine in part rests. As we noted in *Greenman*, "implicit in [a product's] presence on the market . . . [is] a representation that it [will] safely do the jobs for which it was built." When a product fails to satisfy such ordinary consumer expectations as

p. 731

to safety in its intended or reasonably foreseeable operation, a manufacturer is strictly liable for resulting injuries. . . .

As Professor Wade has pointed out, however, the expectations of the ordinary consumer cannot be viewed as the exclusive yardstick for evaluating design defectiveness because "[i]n many situations . . . the consumer would not know what to expect, because he would have no idea how safe the product could be made." . . . Numerous California decisions have implicitly recognized this fact and have made clear, through varying linguistic formulations, that a product may be found defective in design, even if it satisfies ordinary consumer expectations, if through hindsight the jury determines that the product's design embodies "excessive preventable danger," or, in other words, if the jury finds that the risk of danger inherent in the challenged design outweighs the benefits of such design. . . .

A review of past cases indicates that in evaluating the adequacy of a product's design pursuant to this latter standard, a jury may consider, among other relevant factors, the gravity of the danger posed by the challenged design, the likelihood that such danger would occur, the mechanical feasibility of a safer alternative design, the financial cost of an improved design, and the adverse consequences to the product and to the consumer that would result from an alternative design. . . .

Although our cases have thus recognized a variety of considerations that may be relevant to the determination of the adequacy of a product's design, past authorities have generally not devoted much attention to the appropriate allocation of the burden of proof with respect to these matters. . . . The allocation of such burden is particularly significant in this context in as much as this court's product liability decisions, from *Greenman* to *Cronin*, have repeatedly emphasized that one of the principal

purposes behind the strict product liability doctrine is to relieve an injured plaintiff of many of the onerous evidentiary burdens inherent in a negligence cause of action. Because most of the evidentiary matters which may be relevant to the determination of the adequacy of a product's design under the "risk-benefit" standard—e.g., the feasibility and cost of alternative designs—are similar to issues typically presented in a negligent design case and involve technical matters peculiarly within the knowledge of the manufacturer, we conclude that once the plaintiff makes a *prima facie* showing that the injury was proximately caused by the product's design, the burden should appropriately shift to the defendant to prove, in light of the relevant factors, that the product is not defective. Moreover, inasmuch as this conclusion flows from our determination that the fundamental public policies embraced in *Greenman* dictate that a manufacturer who seeks to escape liability for an injury proximately caused by its product's design on a risk-benefit theory should bear the burden of persuading the trier of fact that its product should not be judged defective, the defendant's burden is one affecting the burden of proof, rather than simply the burden of producing evidence. . . .

Because the jury may have interpreted the erroneous instruction given in the instant case as requiring plaintiff to prove that the high-lift loader was

p. 732

ultrahazardous or more dangerous than the average consumer contemplated, and because the instruction additionally misinformed the jury that the defectiveness of the product must be evaluated in light of the product's "intended use" rather than its "reasonably foreseeable use" . . . , we cannot find that the error was harmless on the facts of this case. In light of this conclusion, we need not address plaintiff's additional claims of error, for such issues may not arise on retrial.

The judgment in favor of defendants is reversed.

NOTES

1. *What is a design defect?* Some jurisdictions today follow *Barker* and allow either the consumer expectations test or the risk-utility test to prove a design defect. Other jurisdictions adopt just one of the two tests. In *Aubin v. Union Carbide Corp.*, 177 So. 3d 489 (Fla. 2015), the plaintiff alleged he developed mesothelioma as a result of exposure to asbestos contained in defendant's construction products. The jury found in favor of the plaintiff, but the intermediate appellate court reversed on the ground that the trial court failed to instruct the jury using the Third Restatement's reasonable alternative design test for design defect claims. Pariente, J., in turn reversed the intermediate court. In so doing he rejected the Third Restatement's view on alternative design while extolling the virtues of the consumer expectations test:

The important aspect of strict products liability that led to our adoption [of the consumer expectations test] remains true today: the burden of compensating victims of unreasonably dangerous products is placed on the manufacturers, who are most able to protect against the risk of harm, and not on the consumer injured by the product. Increasing the burden for injured consumers to prove their strict liability claims for unreasonably dangerous products that were

placed into the stream of commerce is contrary to the policy reasons behind the adoption of strict liability. . . .

Other design defect tests were propounded during the late 1970s but have receded in recent years as most courts have adopted the *Barker* test. For example, *Azzarello v. Black Bros. Co., Inc.*, 391 A.2d 1020, 1027 (Pa. 1978), held that even though the supplier was not “an insurer of all injuries caused by the product,” it nonetheless was cast “in the role of a guarantor of his product’s safety,” under which the words “unreasonably dangerous” had no part. Instead “the jury may find a defect where the product left the supplier’s control lacking any element necessary to make it safe for its intended use or possessing any feature that renders it unsafe for the intended use.” Pennsylvania retreated from the *Azzarello* test in *Tincher v. Omega Flex, Inc.*, 104 A.3d 328, 335 (Pa. 2014), but refused to adopt the Third Restatement test of product defect. In *Tincher*, the plaintiff sought to show that corrugated stainless-steel tubing used to transport natural gas to the Tinchers’ first floor fireplace was defective because it was punctured by a lightning strike. Castille, C.J., reversed a jury verdict and announced this test for product defect:

p. 733

[W]e conclude that a plaintiff pursuing a cause upon a theory of strict liability in tort must prove that the product is in a “defective condition.” The plaintiff may prove defective condition by showing either that (1) the danger is unknowable and unacceptable to the average or ordinary consumer, or that (2) a reasonable person would conclude that the probability and seriousness of harm caused by the product outweigh the burden or costs of taking precautions. The burden of production and persuasion is by a preponderance of the evidence.

For an analysis of the shift in Pennsylvania law, see Bugay, *A New Era in Pennsylvania Products Liability Law—*Tincher v. Omega-Flex, Inc.*: The Death of *Azzarello**, 86 Pa. B.A. Q. 10 (2015).

If a manufacturer makes economy and deluxe models of a chain saw, both intended for the same general uses, is the economy model necessarily defective under *Azzarello*? Presumptively defective? Is the *Azzarello* formulation of product defect narrower than that in *Barker*, owing to its reference to intended, as distinguished from foreseeable, use?

A more restrictive approach to the test for design defect was taken in *Wilson v. Piper Aircraft Corp.*, 577 P.2d 1322, 1327-1328 (Or. 1978), a wrongful death action brought by the representatives of two passengers who died in the crash of a Piper Cherokee airplane manufactured by the defendants. The plaintiffs claimed that the defective design was the engine’s susceptibility to icing, in part because the aircraft was not equipped with a state-of-the-art injection-type fuel system. Holman, J., parted with *Barker* by imposing stringent requirements that the plaintiff present evidence “from which the jury could find the suggested alternatives are not only technically feasible but also practicable in terms of cost and the over-all design and operation of the product.” Further the Federal Aviation Administration (FAA) had awarded the defendant a certificate of airworthiness, which in its own terms set only minimum design standards. The court concluded that

in a field as closely regulated as aircraft design and manufacture, it is proper to take into

consideration, in determining whether plaintiffs have produced sufficient evidence of defect to go to the jury, the fact that the regulatory agency has approved the very design of which they complain after considering the dangers involved.

2. State of the art: Time of sale or time of trial? In setting the appropriate design standard for product safety, many judicial decisions look in part to the state of the art in the product supplier's trade or business. The state of the art refers to something more stringent than the "common practice" in the industry and embraces the scientific, technological, and safety standards that are reasonably feasible at the time of product design. Thus in *Kim v. Toyota Motor Corp.*, 424 P.3d 290 (Cal. 2018), Kruger, J., distinguished industry custom—"the use of the challenged design within the relevant industry," i.e., "what is done"—from state of the art evidence—"what can be done under present technological capacity." See also RTT: PL §2, comment *d*. Most courts today do not allow compliance with the state of the art to resolve the design defect question in the defendant's favor,

p. 734

but nonetheless treat it as a factor to consider, which "is both necessary and probative on the issue of 'unreasonably dangerous.'" *Reed v. Tiffin Motor Homes, Inc.*, 697 F.2d 1192, 1197 (4th Cir. 1982). In *Bruce v. Martin-Marietta Corp.*, 544 F.2d 442 (10th Cir. 1976), the court measured the state of the art at the time the defendant's airplane seats entered the stream of commerce in 1952, not at the time of the crash in 1970. The record showed that the seats met all FAA standards as well as the applicable state of the art for 1952. In the court's view, the crucial test was the "expectation of the ordinary consumer," who "would not expect a Model T to have safety features which are incorporated in automobiles today." See *The T.J. Hooper, supra* at 193. For a defense of the common practice standard, see Epstein, *Modern Products Liability Law* 74-90 (1980); for an analysis of *Barker*, see Schwartz, Foreword: Understanding Products Liability, 67 Calif. L. Rev. 435 (1979).

3. Subsequent improvements. The substantive disputes in state-of-the-art cases frequently raise evidentiary inquiries: Can evidence of subsequent design changes be introduced to show the defectiveness of the defendant's basic design? In *Ault v. International Harvester Co.*, 528 P.2d 1148, 1152 (Cal. 1974), the California Supreme Court allowed such evidence, saying:

The contemporary corporate mass producer of goods, the normal products liability defendant, manufactures tens of thousands of units of goods; it is manifestly unrealistic to suggest that such a producer will forego making improvements in its product, and risk innumerable additional lawsuits and the attendant adverse effect upon its public image, simply because evidence of adoption of such improvement may be admitted in an action founded on strict liability for recovery on an injury that preceded the improvement.

Nonetheless, a strong majority of courts have refused to admit the evidence in both negligence and strict liability cases. See *Cann v. Ford Motor Co.*, 658 F.2d 54, 60 (2d Cir. 1981). Federal Rule of Evidence 407 now provides:

When measures are taken that would have made an earlier injury or harm less likely to occur, evidence of the subsequent measures is not admissible to prove:

- negligence;
- culpable conduct;
- a defect in a product or its design; or
- a need for a warning or instruction.

But the court may admit this evidence for another purpose, such as impeachment or—if disputed—proving ownership, control, or the feasibility of precautionary measures.

NOTE[] of Advisory Committee on Proposed Rule[]

The rule incorporates conventional doctrine which excludes evidence of subsequent remedial measures as proof of an admission of fault. . . . The conduct

p. 735

is not in fact an admission, since the conduct is equally consistent with injury by mere accident or through contributory negligence. Or, as Baron Bramwell put it, the rule rejects the notion that “because the world gets wiser as it gets older, therefore it was foolish before.” Hart v. Lancashire & Yorkshire Ry. Co., 21 L.T.R. N.S. 261, 263 (1869). . . .

4. Product modification. Much litigation has focused on the question whether a product alteration made after a manufacturer has shipped goods constitutes a superseding cause sufficient to relieve the original manufacturer of liability for design defects. *Young v. Aeroil Products Co.*, 248 F.2d 185 (9th Cir. 1957), represents the traditional view of protecting manufacturers from liability based on subsequent alterations. There the decedent had been crushed to death when the portable elevator he had been operating toppled. The decedent’s employer had previously added additional equipment to the elevator, causing its imbalance. Even though the defendant had sold the elevator with the express warranty that it was balanced, the court held that the warranty was unavailing because “[t]he thing being used was not the thing sold.”

In *Hoover v. New Holland North America, Inc.*, 11 N.E.3d 693 (N.Y. 2014), the plaintiff, a 16-year-old girl, was badly injured when “she was caught and dragged into the rotating driveline of a tractor-driven post hole digger distributed by defendant-appellant CNH America LLC (CNH) and sold by defendant-appellant Niagara Frontier Equipment Sales, Inc. (Niagara) (collectively, defendants).” The manufacturer of the device, Alamo/SMC Corporation (SMC), was not joined as a defendant in the suit. “The jury returned a verdict in favor of plaintiff in the amount of \$8,811,587.29 and apportioned liability as follows: 35% to CNH, 30% to SMC, 30% to Smith [the owner of the digger], 3% to Gary Hoover [the plaintiff’s stepfather], and 2% to Niagara.” The defendant’s product had been distributed with extensive warnings, including: “DANGER! SHIELD MISSING DO NOT OPERATE!” and “KEEP ALL SHIELDS IN PLACE AND IN GOOD CONDITION.”

Smith was well aware of these warnings but nonetheless decided not to replace the key shields on the device when they got damaged after several years of use when the digger had been used to install between 1,000 and 2,000 posts per year. Smith testified that he removed the guard and continued to use the machine without replacing the guards, “because it was only going to break again.”

Abdus-Salaam, J., rejected the defendant's motion for summary judgment on the ground that

plaintiff established the existence of material issues of fact sufficient to overcome defendants' substantial modification defense. Smith testified that the shield he removed had been destroyed by years of "wear and tear," would no longer stay attached to the digger, and, essentially, had ceased to provide protection from the rotating components near the gearbox. . . . Smith did not modify the digger in order to "circumvent[]" the utility of the shield or to "adapt" the digger to suit his own needs. Rather, Smith removed the shield because its "functional utility" had already been destroyed, and his testimony raised a question of fact whether

p. 736

removal of the broken shield was to blame for plaintiff's injuries. Plaintiff also proffered Berry's expert affidavit, in which the engineer averred that the shield was "not reasonably safe" because it was not "designed to last the life" of the digger, and that defendants' failure to incorporate a safer yet feasible alternative design, such as an integral guard or metal shield, was "a substantial factor" in causing plaintiff's injuries. While we do not necessarily agree, as plaintiff contends, that no safety device is reasonably safe unless it is designed to last the lifetime of the product on which it is installed, defendants did not adequately refute plaintiff's assertions that the plastic shield failed prematurely under the circumstances presented here.

Smith, J., dissented, arguing that the full liability should rest on Smith because "[h]e chose not to get a replacement shield—which would have cost \$40 and taken no more than half an hour to install—because 'it's only going to get bent up and broke again.'"

In *Singh v. Gemini Auto Lifts, Inc.*, 27 N.Y.S.3d 637 (App. Div. 2016), the court extended *Holland* to reach a situation where the plaintiff caught his hand in a hole on an automotive lift, from which the plastic cover had been removed. The court held that the plaintiff had raised triable issues of fact "as to whether the lift was intended to be used without the cover in place." Does it make sense for courts to resolve liability in the face of post-sale modifications in terms of design defect? What about liability for failure to warn? See *infra* Note 1 at 757.

The Third Restatement recognizes that product alteration and modification may defeat or diminish defendant's responsibility, but develops no specialized rules to deal with them, treating them (along with product misuse) as parts of the broader questions of product defect, causation, and plaintiff's conduct. RTT: PL §2, comment *p*.

c. Third Restatement and the Alternative Design Test

The Third Restatement rejected the consumer expectations test as part of its attempt to rein in what was perceived to be excessive liability arising out of the *Barker* dual-pronged standard.

Restatement of the Law (Third) of Torts: Products Liability

§2. CATEGORIES OF PRODUCT DEFECT

A product: . . .

(b) is defective in design when the foreseeable risks of harm posed by the product could have been reduced or avoided by the adoption of a reasonable alternative design by the seller or other distributor, or a predecessor in the commercial chain of distribution, and the omission of the alternative design renders the product not reasonably safe. . . .

p. 737

Comment a. Rationale: . . . The emphasis is on creating incentives for manufacturers to achieve optimal levels of safety in designing and marketing products. Society does not benefit from products that are excessively safe—for example, automobiles designed with maximum speeds of 20 miles per hour—any more than it benefits from products that are too risky. Society benefits most when the right, or optimal, amount of product safety is achieved.

Illustration 5: ABC Co. manufactures novelty items. One item, an exploding cigar, is made to explode with a loud bang and the emission of smoke. Robert purchased the exploding cigar and presented it to his boss, Jack, at a birthday party arranged for him at the office. Jack lit the cigar. When it exploded, the heat from the explosion lit Jack's beard on fire causing serious burns to his face. . . . [T]he finder of fact might find ABC liable for the defective design of the exploding cigar even if no reasonable alternative design was available that would provide similar prank characteristics. The utility of the exploding cigar is so low and the risk of injury is so high as to warrant a conclusion that the cigar is defective and should not have been marketed at all.

Does an alternative design test ensure optimal product-design safety?

NOTES

1. Alternative designs. The alternative design test in the Third Restatement was developed largely in response to the New Jersey case of *O'Brien v. Muskin Corp.*, 463 A.2d 298, 302-303, 305-306 (N.J. 1983). Muskin sold a pool to Arthur Henry, which, when assembled, had an embossed vinyl bottom and a depth of about three feet. The plaintiff, 23 years old, dove into the pool from either a nearby platform or from the eight-foot-high roof of the Henrys' garage. "As his outstretched hands hit the vinyl-lined pool bottom, they slid apart, and O'Brien struck his head on the bottom of the pool, thereby sustaining injuries." The plaintiff's expert claimed that the pool design was dangerous because wet vinyl was more than twice as slippery as the rubber latex used to line in-ground pools. The trial court excluded that testimony when the expert admitted that he knew of no above ground pool lined with a material other than vinyl. On appeal the court allowed the design defect count to go to the jury on Professor Wade's risk-utility test, noting that for the plaintiff to reach the jury under such a test, "it was not necessary for plaintiff to prove the existence of alternative, safer designs."

In New Jersey, *Muskin* was altered by statute, which provided, among other things, that "the manufacturer or seller shall not be liable if: (1) At the time the product left the control of the manufacturer, there was not a practical and technically feasible alternative design that would have prevented the harm without

substantially impairing the reasonably anticipated or intended function of the product. . . ." N.J. Stat. Ann. §2A:58C-3(a) (2019). The Third Restatement takes much the same line by requiring "that the plaintiff show a reasonable alternative design . . . even though the plaintiff alleges that the category of product sold by

the defendant is so dangerous that it should not have been marketed at all." RTT: PL §2, comment *d*. It explicitly disapproved of *Muskin* because "the vinyl pool liner that [the manufacturer] utilized was the best and safest liner available and that no alternative, less slippery liner was feasible." RTT: PL §2, illus. 4. Is it appropriate for a jury to decide that, absent a reasonably feasible alternative design, above-ground pools should not be marketed at all? In dealing with its alternative design conception, section 2, comment *f* of the Third Restatement observes:

A broad range of factors may be considered in determining whether an alternative design is reasonable and whether its omission renders a product not reasonably safe. The factors include, among others, the magnitude and probability of the foreseeable risks of harm, the instructions and warnings accompanying the product, and the nature and strength of consumer expectations regarding the product, including expectations arising from product portrayal and marketing. The relative advantages and disadvantages of the product as designed and as it alternatively could have been designed may also be considered. Thus, the likely effects of the alternative design on production costs; the effect of alternative design on product longevity, maintenance, repair, and esthetics; and the range of consumer choice among products are factors that may be taken into account.

2. Judicial reception of the Third Restatement. The alternative design requirement has received a mixed reception. In *Potter v. Chicago Pneumatic Tool Co.*, 694 A.2d 1319, 1332, 1334-1335 (Conn. 1997), Katz, J., noted that a majority of states did not impose the Third Restatement's alternative design requirement, and refused to do so, lest the law place an "undue burden" on plaintiffs by requiring them to use expert evidence in every design defect case. In *Tincher*, 104 A.3d at 395 (discussed *supra* at 732), Castille, J., likewise resisted the move to the Third Restatement's "evidence-bound standard of proof," on the ground that "[t]he approach suggests *a priori* categorical exemptions for some products—such as novel products with no alternative design—but not others." He elaborated this rationale:

Neither courts, nor the American Law Institute for that matter, are in the business of articulating general principles tailored to anoint special "winners" and "losers" among those who engage in the same type of conduct. In our view, the question of "special tort-insulated status" for certain suppliers—for example, manufacturers of innovative products with no comparable alternative design—optimally "requires an assessment and balancing of policies best left to the General Assembly."

The necessity for an alternative design was, however, embraced in *Casey v. Toyota Motor Engineering & Manufacturing N. Am., Inc.*, 770 F.3d 322, 332-334 (5th Cir. 2014), in which the plaintiff claimed that the defective design of Toyota's side curtain airbag resulted in his wife's death in a one-car accident in which she had been driving at excessive speed. The plaintiff's expert witness testified that a different material (elastomer) mentioned in an unrelated patent application was safer than the nylon material then used by

Toyota. Higginson, J., first noted that the defendant's "reliance on the patent application's tests was not evidence of

p. 739

the alternative design's superior safety because the testing did not involve similar forces and factors as involved in Mrs. Casey's rollover accident." He continued:

In addition, there is no evidence in the record that the baseline material to which the patent applicants compared their invention was the same as the airbag used in the airbag installed in Mrs. Casey's vehicle. While both used nylon, there is no evidence that the weave, coating, or other construction of the Toyota airbag was the same as the baseline used in the patent's tests. In sum, because the patent application did not test the alternative material under similar accident conditions, Casey has failed to show that using that material would have prevented or reduced the risk of injury in Mrs. Casey's accident.

Higginson, J., then noted that the plaintiff had not shown that the new design would not "inject any new risks into the vehicle or diminish its usefulness or safety in any way," or "that the alternative design could have been implemented in the 2010 Toyota Highlander, has been implemented in any vehicle, or could possibly be implemented." Lastly, he noted that the "economic feasibility" of the alternative design had not been proven.

Should the plaintiff ever be able to invoke a design that has never been put to commercial use as the appropriate alternative design?

3. "*Unavoidably unsafe*" products. The "Comment k" defense derived from RST §402A (see *supra* at 695) precludes certain "unavoidably unsafe products," notably prescription drugs, from being classified as defective merely because they are, at the time of distribution, incapable of being made safe. States differ in terms of whether they apply a "blanket" or "case-by-case" (i.e., product-by-product) approach to comment k. The "blanket" approach exempts from strict liability certain categories of products deemed "unavoidably unsafe." For example, the California Supreme Court deemed all prescription drugs categorically exempt from strict liability for design defect in *Brown v. Superior Court*, 751 P.2d 470 (Cal. 1988):

(1) a drug manufacturer's liability for a defectively designed drug should not be measured by the standards of strict liability; (2) because of the public interest in the development, availability, and reasonable price of drugs, the appropriate test for determining responsibility is the test stated in comment k; and (3) for these same reasons of policy, we disapprove the holding . . . that only those prescription drugs found to be "unavoidably dangerous" should be measured by the comment k standard and that strict liability should apply to drugs that do not meet that description.

A large majority of states, however, reject the blanket approach in favor of a "case-by-case" approach that requires the defendant positively to establish that the product is "unavoidably unsafe." For example, the New Jersey Supreme Court held in *Feldman v. Lederle Laboratories*, 479 A.2d 374, 382-383 (N.J. 1984), that only certain drugs—namely those proven to be "unavoidably unsafe" on a case-by-case basis—qualify

for comment k's protection:

[W]e see no reason to hold as a matter of law and policy that all prescription drugs that are unsafe are unavoidably so. Drugs, like any other products, may contain

p. 740

defects that could have been avoided by better manufacturing or design. Whether a drug is unavoidably unsafe should be decided on a case-by-case basis. . . .

To meet this burden, the defendant must show that no feasible alternative design exists that would accomplish the same purpose with a lesser risk and that the drug's overall benefits outweigh the risks it presents to individual safety.

4. *Modern defective drug design litigation.* In Frazier v. Mylan, Inc., 911 F. Supp. 2d 1285, 1292, 1297-1298 (N.D. Ga. 2012), the plaintiff brought a design defect claim against a generic manufacturer of phenytoin—trade name Dilantin. Shoob, J., first noted that any generic drug must “be a copy of a reference listed drug and it must be identical in active ingredients and efficacy.” See PLIVA, Inc. v. Mensing, 564 U.S. 604 (2011), *infra* at 790. He then noted that the plaintiff based its design defect on allegations that “there are at least four (4) well known safer alternative products that are equally effective anticonvulsants, with a better safety profile, and with a lesser or no risk of [known deadly side effects].” He then continued:

Assuming that the alternatives pled by plaintiff are completely different products from phenytoin, the risk-utility analysis for design defect cases recognizes that when considering whether an alternative safer design existed, the factfinder may consider the feasibility of an alternative design as well as the “availability of an effective substitute for the product which meets the same need but is safer.” . . . Thus, plaintiffs’ allegations of substitute products for phenytoin may be sufficient under a risk-utility analysis. Therefore, the Court finds that plaintiff has sufficiently alleged a strict liability design defect claim against Pfizer.

Restatement of the Law (Third) of Torts: Products Liability

§6. LIABILITY OF COMMERCIAL PRODUCT SELLER OR DISTRIBUTOR FOR HARM CAUSED BY DEFECTIVE PRESCRIPTION DRUGS AND MEDICAL DEVICES

(c) A prescription drug or medical device is not reasonably safe due to defective design if the foreseeable risks of harm posed by the drug or medical device are sufficiently great in relation to its foreseeable therapeutic benefits that reasonable health-care providers, knowing of such foreseeable risks and therapeutic benefits, would not prescribe the drug or medical device for any class of patients.

Comment b. Rationale: . . . The traditional refusal by courts to impose tort liability for defective designs of prescription drugs and medical devices is based on the fact that a prescription drug or medical device entails a unique set of risks and benefits. What may be harmful to one patient may be beneficial to another. Under Subsection (c) a drug is defectively designed only when it provides no net benefit to any class of

patients. . . .

p. 741

Criticism of the Third Restatement's design defect test was voiced in *Bryant v. Hoffman-LaRoche*, 585 S.E.2d 723, 727-728 (Ga. Ct. App. 2003), in which the plaintiff sued the defendant on the ground that his wife died as a result of the heart medication, Posicor, which he alleged was defectively designed and interacted poorly with other drugs she had taken. The defendant manufacturer urged that the case be governed by RTT §6(c). The court rejected this view in favor of comment *k* to the Second Restatement, noting:

[Section] 6(c) has been criticized for its failure to reflect existing case law, its lack of flexibility with regard to drugs involving differing benefits and risks, its unprecedented application of a reasonable physician standard, and the fact that a consumer's claim could easily be defeated by expert opinion that the drug had some use for someone, despite potentially harmful effects on a large class of individuals. [Freeman v. Hoffman-LaRoche, 618 N.W.2d 827 (Neb. 2000).] To date, no court has adopted the Third Restatement's strict liability test for prescription drugs, and one court [*Freeman*] has explicitly refused to adopt the test. . . .

Moreover, we agree with the majority of courts that Comment *k* serves as an affirmative defense and that the defense has no application to claims of manufacturing defect or failure to warn.

Does section 6(c) essentially create an absolute immunity for all FDA-approved drugs?

For further criticism of the "complete overhaul" of the design defect provisions in the Third Restatement, see Conk, Is There a Design Defect in the Restatement (Third) of Torts: Products Liability?, 109 Yale L.J. 1087 (2000). But Professors Henderson and Twerski insist:

A claim that seeks to find a given drug design defective because the manufacturer should have developed a safer alternative drug is inappropriate because courts are incapable of sensibly deciding whether the alternative proposed by the plaintiff would have met with FDA approval. Since any drug marketed in the United States must be approved by the FDA, a court must be able to determine that the FDA would have approved the drug. Given the many-year duration of the FDA approval process, which involves testing of thousands of patients, no court could rationally determine that an alternative drug would have been approved.

Twerski & Henderson Jr., Drug Design Liability: Farewell to Comment *k*, 67 Baylor L. Rev. 521 (2015). Does this argument preclude the claim in *Bryant*? A malpractice action against the treating physician? Require federal preemption of state law?

3. The Duty to Warn

Implicit in many design defect decisions is the view that it is cheaper to design out certain dangerous conditions than it is to warn consumers and users of their dangers. Although that rule works well for many

forms of equipment, it poses significant challenges for pharmaceutical and chemical products for which small changes in molecular composition can negate the effectiveness of the product for

p. 742

its intended purpose, or require a new round of approvals from, for example, the Food and Drug Administration or the Environmental Protection Agency. In these cases, the use of product warnings instead of design alterations may offer a sensible compromise, especially when the potential harms are not apparent to a product user from the appearance of the product or from common knowledge about its lurking dangers. What legal standards should apply in these warning cases?

MACDONALD v. ORTHO PHARMACEUTICAL CORP.

475 N.E.2d 65 (Mass. 1985)

ABRAMS, J. This products liability action raises the question of the extent of a drug manufacturer's duty to warn consumers of dangers inherent in the use of oral contraceptives. The plaintiffs brought suit against the defendant, Ortho Pharmaceutical Corporation (Ortho), for injuries allegedly caused by Ortho's birth control pills, and obtained a jury verdict in their favor. The defendant moved for a judgment notwithstanding the verdict. The judge concluded that the defendant did not owe a duty to warn the plaintiffs, and entered judgment for Ortho. The plaintiffs appealed. We transferred the case to this court on our own motion and reinstate the jury verdict.

We summarize the facts. In September, 1973, the plaintiff Carole D. MacDonald (MacDonald), who was twenty-six years old at the time, obtained from her gynecologist a prescription for Ortho-Novum contraceptive pills, manufactured by Ortho. As required by the then effective regulations promulgated by the United States Food and Drug Administration (FDA), the pill dispenser she received was labeled with a warning that "oral contraceptives are powerful and effective drugs which can cause side effects in some users and should not be used at all by some women," and that "[t]he most serious known side effect is abnormal blood clotting which can be fatal." The warning also referred MacDonald to a booklet which she obtained from her gynecologist, and which was distributed by Ortho pursuant to FDA requirements. The booklet contained detailed information about the contraceptive pill, including the increased risk to pill users that vital organs such as the brain may be damaged by abnormal blood clotting. [The warning supplied listed the death and injury rates to women of various ages from taking the pill and noted "that women who have had blood clots in the legs, lungs, or brain [should] not use oral contraceptives."] The word "stroke" did not appear on the dispenser warning or in the booklet.

MacDonald's prescription for Ortho-Novum pills was renewed at subsequent annual visits to her gynecologist. The prescription was filled annually. On July 24, 1976, after approximately three years of using the pills, MacDonald suffered an occlusion of a cerebral artery by a blood clot, an injury commonly referred to as a stroke [or a "cerebral vascular accident"]. The injury caused the death of approximately twenty per cent of MacDonald's brain tissue, and left her permanently disabled. She and her husband initiated an action in the Superior Court against Ortho, seeking recovery for her personal injuries and his consequential damages and loss of consortium.

MacDonald testified that, during the time she used the pills, she was unaware that the risk of abnormal blood clotting encompassed the risk of stroke, and that she would not have used the pills had she been warned that stroke is an associated risk. [The court noted that the amended FDA regulations listed “the serious side effects of oral contraceptives, such as thrombophlebitis, pulmonary embolism, myocardial infarction, retinal artery thrombosis, *stroke*, benign hepatic adenomas, induction of fetal abnormalities, and gallbladder disease” (emphasis added). See 21 C.F.R. §310.501(a)(2)(iv) (1984).] The case was submitted to a jury on the plaintiffs’ theories that Ortho was negligent in failing to warn adequately of the dangers associated with the pills and that Ortho breached its warranty of merchantability. These two theories were treated, in effect, as a single claim of failure to warn. The jury returned a special verdict, finding no negligence or breach of warranty in the manufacture of the pills. The jury also found that Ortho adequately advised the gynecologist of the risks inherent in the pills;⁷ the jury found, however, that Ortho was negligent and in breach of warranty because it failed to give MacDonald sufficient warning of such dangers. The jury further found that MacDonald’s injury was caused by Ortho’s pills, that the inadequacy of the warnings to MacDonald was the proximate cause of her injury, and that Ortho was liable to MacDonald and her husband.

Ortho-Novum Dialpak dispenser

After the jury verdict, the judge granted Ortho's motion for judgment notwithstanding the verdict, concluding that, because oral contraceptives are prescription drugs, a manufacturer's duty to warn the consumer is satisfied if the manufacturer gives adequate warnings to the prescribing physician, and that the manufacturer has no duty to warn the consumer directly.

The narrow issue, on appeal, is whether, as the plaintiffs contend, a manufacturer of birth control pills owes a direct duty to the consumer to warn her of the dangers inherent in the use of the pill. We conclude that such a duty exists under the law of this Commonwealth.

p. 744

1. EXTENT OF DUTY TO WARN ...

[The court first noted that the general rule was that the defendant must warn all "persons who it is foreseeable will come in contact with, and consequently be endangered by, that product." It then recognized a "narrow" exception, as set out in Restatement (Second) of Torts §388, comment *n*, when warnings have been given to a responsible intermediary "so that the manufacturer has no duty directly to warn the consumer." It continued:]

The rule in jurisdictions that have addressed the question of the extent of a manufacturer's duty to warn in cases involving prescription drugs is that the prescribing physician acts as a "learned intermediary" between the manufacturer and the patient, and "the duty of the ethical drug manufacturer is to warn the doctor, rather than the patient, [although] the manufacturer is directly liable to the patient for a breach of such duty." *McEwen v. Ortho Pharmaceutical Corp.*, 528 P.2d 522 (Or. 1974). Oral contraceptives, however, bear peculiar characteristics which warrant the imposition of a common law duty on the manufacturer to warn users directly of associated risks. Whereas a patient's involvement in decision-making concerning use of a prescription drug necessary to treat a malady is typically minimal or nonexistent, the healthy, young consumer of oral contraceptives is usually actively involved in the decision to use "the pill," as opposed to other available birth control products, and the prescribing physician is relegated to a relatively passive role.

Furthermore, the physician prescribing "the pill," as a matter of course, examines the patient once before prescribing an oral contraceptive and only annually thereafter. At her annual checkup, the patient receives a renewal prescription for a full year's supply of the pill. Thus, the patient may only seldom have the opportunity to explore her questions and concerns about the medication with the prescribing physician. Even if the physician, on those occasions, were scrupulously to remind the patient of the risks attendant on continuation of the oral contraceptive, "the patient cannot be expected to remember all of the details for a protracted period of time." 35 Fed. Reg. 9002 (1970).

Last, the birth control pill is specifically subject to extensive Federal regulation [which, *inter alia*, requires that "users of these drugs should, without exception, be furnished with written information telling them of the drug's benefits and risks."]

The oral contraceptive thus stands apart from other prescription drugs in light of the heightened participation of patients in decisions relating to use of “the pill”; the substantial risks affiliated with the product’s use; the feasibility of direct warnings by the manufacturer to the user; the limited participation of the physician (annual prescriptions); and the possibility that oral communications between physicians and consumers may be insufficient or too scanty standing alone fully to apprise consumers of the product’s dangers at the time the initial selection of a contraceptive method is made as well as at subsequent points when alternative methods may be considered. We conclude that the manufacturer of oral contraceptives is not justified in relying on warnings to the medical profession to satisfy its common law duty to warn, and that the manufacturer’s obligation

p. 745

encompasses a duty to warn the ultimate user. Thus, the manufacturer’s duty is to provide to the consumer written warnings conveying reasonable notice of the nature, gravity, and likelihood of known or knowable side effects, and advising the consumer to seek fuller explanation from the prescribing physician or other doctor of any such information of concern to the consumer.¹³

2. ADEQUACY OF THE WARNING

Because we reject the judge’s conclusion that Ortho had no duty to warn MacDonald, we turn to Ortho’s separate argument, not reached by the judge, that the evidence was insufficient to warrant the jury’s finding that Ortho’s warnings to MacDonald were inadequate. Ortho contends initially that its warnings complied with FDA labeling requirements, and that those requirements preempt or define the bounds of the common law duty to warn. We disagree. The regulatory history of the FDA requirements belies any objective to cloak them with preemptive effect. In response to concerns raised by drug manufacturers that warnings required and drafted by the FDA might be deemed inadequate by juries, the FDA commissioner specifically noted that the boundaries of civil tort liability for failure to warn are controlled by applicable State law. 43 Fed. Reg. 4214 (1978). Although the common law duty we today recognize is to a large degree coextensive with the regulatory duties imposed by the FDA, we are persuaded that, in instances where a trier of fact could reasonably conclude that a manufacturer’s compliance with FDA labeling requirements or guidelines did not adequately apprise oral contraceptive users of inherent risks, the manufacturer should not be shielded from liability by such compliance. Thus, compliance with FDA requirements, though admissible to demonstrate lack of negligence, is not conclusive on this issue, just as violation of FDA requirements is evidence, but not conclusive evidence, of negligence. We therefore concur with the plaintiffs’ argument that even if the conclusion that Ortho complied with FDA requirements were inescapable, an issue we need not decide, the jury nonetheless could have found that the lack of a reference to “stroke” breached Ortho’s common law duty to warn.

The common law duty to warn, like the analogous FDA “lay language” requirement, necessitates a warning “comprehensible to the average user and . . . convey[ing] a fair indication of the nature and extent of the danger to the mind of a reasonably prudent person.”

Whether a particular warning measures up to this standard is almost always an issue to be resolved by a jury; few questions are “more appropriately left to a common sense lay judgment than that of whether a written warning gets its message across to an average person.” *Ferebee v. Chevron Chem. Co.*, 552 F. Supp. 1293, 1304 (D.D.C. 1982). A court may, as a matter of law, determine “whether the defendant has

conformed to that standard, in any case in which the jury may not reasonably come to a different conclusion," Restatement (Second) of Torts

p. 746

§328B(d) and Comment *g* (1965), but judicial intrusion into jury decision-making in negligence cases is exceedingly rare. Further, we must view the evidence in the light most favorable to the plaintiffs. The test is whether "anywhere in the evidence, from whatever source derived, any combination of circumstances could be found from which a reasonable inference could be drawn in favor of the plaintiff."

Ortho argues that reasonable minds could not differ as to whether MacDonald was adequately informed of the risk of the injury she sustained by Ortho's warning that the oral contraceptives could cause "abnormal blood clotting which can be fatal" and further warning of the incremental likelihood of hospitalization or death due to blood clotting in "vital organs, such as the brain." We disagree. . . . We cannot say that this jury's decision that the warning was inadequate is so unreasonable as to require the opposite conclusion as a matter of law. The jury may well have concluded, in light of their common experience and MacDonald's testimony, that the absence of a reference to "stroke" in the warning unduly minimized the warning's impact or failed to make the nature of the risk reasonably comprehensible to the average consumer. Similarly, the jury may have concluded that there are fates worse than death, such as the permanent disablement suffered by MacDonald, and that the mention of the risk of death did not, therefore, suffice to apprise an average consumer of the material risks of oral contraceptive use.

We reverse the judgment, which the judge ordered notwithstanding the verdict, and remand the case to the Superior Court for the entry of judgment for the plaintiffs.

So ordered.

O'CONNOR, J., dissenting. . . . I would hold that, as a matter of law, by adequately informing physicians of the risks associated with its product and by complying with applicable FDA regulations, a contraceptive pill manufacturer fulfills the duty to warn that it owes consumers. . . .

I believe that the "prescription drug" rule, combined with the *Harnish* rule most fairly and efficiently allocates among drug manufacturers, physicians, and drug users, the risks and responsibilities involved with the use of prescription drugs. Furthermore, I believe that those rules best ensure that a prescription drug user will receive in the most effective manner the information that she needs to make an informed decision as to whether to use the drug. The rules place on drug manufacturers the duty to gather, compile, and provide to doctors data regarding the use of their drugs, tasks for which the manufacturers are best suited, and the rules place on doctors the burden of conveying those data to their patients in a useful and understandable manner, a task for which doctors are best suited. Doctors, unlike printed warnings, can tailor to the needs and abilities of an individual patient the information that that patient needs in order to make an informed decision whether to use a particular drug. Manufacturers are not in position to give adequate advice directly to those consumers whose medical histories and physical conditions, perhaps unknown to the consumers, make them peculiarly susceptible to risk. Prescription drugs—including oral contraceptives—differ from other products because their dangers vary widely

p. 747

depending on characteristics of individual consumers. Exposing a prescription drug manufacturer to liability based on a jury's determination that, despite adequately informing physicians of the drug's risks and complying with FDA regulations, the manufacturer failed reasonably to warn a particular plaintiff-consumer of individualized risks is not essential to reasonable consumer protection and places an unfair burden on prescription drug manufacturers.

NOTES

1. *Physicians as learned intermediaries.* In 2016, Arizona joined "the majority of jurisdictions that have considered the matter" in adopting the Third Restatement's version of the learned intermediary doctrine. *Watts v. Medicis Pharm. Corp.*, 365 P.3d 944, 949 (Ariz. 2016).

To what extent is the decision in *MacDonald* strengthened or weakened by the wide availability of all forms of product warnings on the Internet? The learned intermediary rule held firm in *Harrison v. American Home Products Corp.* (AHP), 165 F.3d 374 (5th Cir. 1999), when the plaintiffs complained of adverse side effects from the contraceptive Norplant, a long-term birth control method. Jolly, J., stressed the "significant role" that physicians played "in prescribing Norplant and in educating their patients about the benefits and disadvantages to using it." He also rejected the view that AHP's aggressive direct-to-consumer marketing campaign undercut the physicians' duty to warn in the absence of any evidence that the plaintiffs "actually saw, let alone relied, on" any AHP marketing materials. What result if they had so relied?

In contrast, the court in *Perez v. Wyeth Laboratories*, 734 A.2d 1245 (N.J. 1999), imposed a direct duty to warn on Wyeth, the drug manufacturer, because of its "massive advertising campaign for Norplant in 1991, which it directed at women rather than at their doctors" through such women's magazines as *Glamour*, *Mademoiselle*, and *Cosmopolitan*. In so doing, the court relied on the Third Restatement §6(d). The *Perez* rule, however, has not caught on. In 2012, Green, J., surveyed the landscape and noted that "[i]n the more than twelve years since *Perez*, many courts have declined to follow the New Jersey Supreme Court's sweeping departure from the learned intermediary doctrine." Nor has any state since adopted the direct-to-consumer advertising exception to the learned intermediary doctrine.

Restatement of the Law (Third) of Torts: Products Liability

§6. LIABILITY OF COMMERCIAL SELLER OR DISTRIBUTOR FOR HARM CAUSED BY DEFECTIVE PRESCRIPTION DRUGS AND MEDICAL DEVICES

...

(d) A prescription drug or medical device is not reasonably safe due to inadequate instructions or warnings if reasonable instructions or warnings regarding foreseeable risks of harm are not provided to:

- (1) prescribing and other health-care providers who are in a position to reduce the risks of harm in accordance with the instructions or warnings; or
- (2) the patient when the manufacturer knows or has reason to know that health-care providers will not be in a position to reduce the risks of harm in accordance with the instructions or warnings.

On the status of the learned intermediary defense in birth control and mass vaccination cases, the Third Restatement takes a studious pass: “The Institute leaves to developing case law whether exceptions to the learned intermediary rule in these or other situations should be recognized.” RTT: PL §6, comment *e*. How does *MacDonald* come out under the Third Restatement test? Should drug manufacturers’ direct promotional activities for other drugs be factored into the mix under section 6(d)(2)? For a sharp criticism of drug marketing practices, see Vukadin, *Failure-to-Warn: Facing Up to the Real Impact of Pharmaceutical Marketing on the Physician’s Decision to Prescribe*, 50 Tulsa L. Rev. 75, 75, 104 (2014), insisting that “[f]ailure-to-warn jurisprudence should stop relying on empty paper compliance and recognize present-day pharmaceutical marketing as a compelling and driving force in the decision to prescribe.” Nonetheless, successful overpromotion cases are difficult to win, given that “such overpromotion caused the physician to initiate or maintain the prescription at issue. General claims of overpromotion are not sufficient.” See generally *In re Zyprexa Prods. Liab. Litig.*, 489 F. Supp. 2d 230, 268 (E.D.N.Y. 2007); *DiBartolo v. Abbott Labs.*, 914 F. Supp. 2d 601 (S.D.N.Y. 2012).

2. Pharmacists’ duty to warn. A pharmacist’s education and training create a number of standard duties that are imposed: (1) a duty to fill a prescription correctly, (2) a duty to remedy inadequacies on the face of the prescription, (3) and a duty to take reasonable care in preparing or dispensing the medicine.

The vast majority of states retain the general common law rule that pharmacists do not have a duty to warn patients of the risks of medication. Under the learned intermediary doctrine, a court “could not place a greater burden on pharmacists” than on drug manufacturers because it is within the discretion of the physician, as the party who prescribes the drug, to warn the patient. *Fakhouri v. Taylor*, 618 N.E.2d 518, 519 (Ill. App. Ct. 1993). The Third Restatement §6(e) also restricts the liability of retail sellers of drugs and medical devices to cases of manufacturing defects (why?) or for failing “to exercise reasonable care and such failure causes harm to persons.” Nonetheless some courts have required pharmacists to (1) inform a doctor of a contraindication or of an abnormally high dosage, (2) provide a detailed warning where, through advertising, the pharmacy claims to have an enhanced warning or safety system in place, and (3) provide a warning where the pharmacist knows or has reason to know a customer’s allergies.

p. 749

Thus in *Happel v. Wal-Mart Stores, Inc.*, 766 N.E.2d 1118, 1124 (Ill. 2002), the defendant maintained a registry that warned of possible adverse drug interactions or allergic reactions for all of its customers. A duty to warn was imposed because “[t]he burden on defendant of imposing this duty is minimal. All that is required is that the pharmacist telephone the physician and inform him or her of the contraindication. Alternatively, the pharmacist could provide the same information to the patient.”

3. Mass vaccination cases. The dissemination and adequacy of warnings has proved critically important to mass immunization programs. *Davis v. Wyeth Laboratories, Inc.*, 399 F.2d 121, 129-131 (9th Cir. 1968), and *Reyes v. Wyeth Laboratories, Inc.*, 498 F.2d 1264 (5th Cir. 1974), are the watershed cases involving

liability for the Sabin live virus polio vaccine. In *Davis*, the plaintiff contracted polio after being vaccinated as part of a mass immunization program administered by the local pharmacist, when no physician was available to do the job. The program for immunization was promoted by one of the defendant's representatives whose expenses were reimbursed by the local medical organization. The court held that the defendant did not meet its duty to warn when it failed to inform the plaintiff of the one-in-a-million chance that the vaccine could cause polio, even when properly prepared and administered.

Dr. Albert Sabin

Source: Bettmann / Corbis

Ordinarily in the case of prescription drugs warning to the prescribing physician is sufficient. . .

Here, however, although the drug was denominated a prescription drug it was not dispensed as such. It was dispensed to all comers at mass clinics without an individualized balancing by a physician of the risks involved. In such cases (as in the case of over-the-counter sales of nonprescription drugs) warning by the manufacturer to its immediate purchaser will not suffice. . . In such cases, then, it is the responsibility of the manufacturer to see that warnings reach the consumer, either by giving warning itself or by obligating the purchaser to give warning. Here appellee knew that warnings were not reaching the consumer. Appellee had taken an active part

in setting up the mass immunization clinic program for the society and well knew that the program did not make any such provision, either in advertising prior to the clinics or at the clinics themselves. On the contrary, it attempted to assure all members of the community that they should take the vaccine. . . .

This duty does not impose an unreasonable burden on the manufacturer. When drugs are sold over the counter to all comers warnings normally can be given by proper labeling. Such method of giving warning was not available here,

p. 750

since the vaccine came in bottles never seen by the consumer. But other means of communication such as advertisements, posters, releases to be read and signed by recipients of the vaccine, or oral warnings were clearly available and could easily have been undertaken or prescribed by appellee.

In *Reyes*, the court then let the jury decide whether the vaccine was the physical cause of the injury and whether an adequate warning would have led the plaintiff to change his behavior. Is this a higher or lower standard than in *MacDonald*? Note that the standard used is akin to the informed consent test. Is that an appropriate duty for the manufacturer? Does that duty change if a learned intermediary is involved?

The *Reyes* court continued: "In the absence of evidence rebutting the presumption, a jury finding that the defendant's product was the producing cause of the plaintiff's injury would be sufficient to hold him liable." Does this presumption make sense if the background rate of infection from the "wild-strain" is known on average to be 10 or 100 times as great as that from vaccines?

Reyes and *Davis* were first-generation cases in which no warnings had been provided. Subsequent litigation focused on the adequacy of the warnings. In *Givens v. Lederle*, 556 F.2d 1341, 1343 (5th Cir. 1977), another Sabin vaccine case, the defendant Lederle's warning to physicians stated in full:

Paralytic disease following the ingestion of live polio virus vaccines has been reported in individuals receiving the vaccine, and in some instances, in persons who were in close contact with subjects who had been given live oral polio virus vaccine. Fortunately, such occurrences are rare, and it could not be definitely established that any such case was due to the vaccine strain and was not coincidental with infection due to naturally occurring poliomyelitis, or other enteroviruses.

The package insert also noted that the risk, if any, was one in three million. The physician who had inoculated the plaintiff's daughter gave the plaintiff no warning of the risk because he thought that the insert was too "nebulous" to require it. On appeal, the court held that his testimony, together with evidence showing that such infections had occurred, supported the jury's verdict that the warning was inadequate, especially because the warning denied any definite connection between the vaccine and the disease. Dr. Sabin had testified for the defendant that his vaccine could not possibly cause polio.

The number of large damage awards in the late 1970s and 1980s substantially increased the costs of

vaccines. See Manning, *Changing Rules of Tort Law and the Market for Childhood Vaccines*, 37 J.L. & Econ. 247, 248 (1994), whose econometric analysis shows that the price of the DPT vaccine between 1975 and 1990 increased by over 2,000 percent, and of that increase over 96 percent went to litigation costs. Numbers like these have led to much scholarly criticism of the law. See Huber, *Safety and the Second Best: The Hazards of Public Risk Management in the Courts*, 85 Colum. L. Rev. 277 (1985), who gives this example of the relevant tradeoffs: use of the “whooping cough vaccine prevents an estimated 322,000 cases of whooping cough per year. An estimated 457 persons per year

p. 751

would die of the disease without the vaccination program; use of the vaccine reduces annual mortality to 44, for a net annual savings of 413 lives.”

One possible reform would allow the parties to contractually limit the damages payable for adverse events on the ground that high damages are misguided given that some compensation is paid for all injuries, whether or not caused by the vaccine. The cap on damages would reduce the sale price and thus induce consumers to use vaccines that promise some net advantage. For the proposal, see Rubin, *Tort Reform by Contract* 62-63 (1993).

In response to the crisis, Congress passed the National Childhood Vaccine Injury Act of 1986 (NCVIA), which provides for a complex system of no-fault compensation of up to \$250,000 for persons who suffer particular side effects from certain vaccine programs within specified time limits. 42 U.S.C. §300aa (2019); see *infra* Chapter 10 at 912. The statute raises many of the hard issues of proof of causation found in other products liability settings. For example, in *Pafford v. Secretary of Health and Human Services*, 451 F.3d 1352 (Fed. Cir. 2006) (en banc), the plaintiff claimed that her use of the diphtheria, tetanus, and pertussis (DTaP), measles, mumps, and rubella (MMR), and oral poliovirus (OPV) vaccinations resulted in the onset of her juvenile rheumatoid arthritis. Working within the NCVIA framework, the plaintiff had to prove first that the vaccines in question were of the type that could cause this adverse consequence, and second that the vaccines, or some of them, did contribute to the condition. The court held that the plaintiff’s case foundered on the second requirement. The plaintiff’s expert could not demonstrate any tight temporal connection between the administration of the vaccine, and the appearance of symptoms. Moreover, the plaintiff’s expert did not discuss in detail any of the contemporaneous events unrelated to the vaccinations that might have accounted for the condition.

4. *Standardized warnings.* The decisions in both *MacDonald* and *Givens* that allow juries to treat FDA warnings as statutory minimums have prompted some legislative reform. Consider the Michigan Revised Judicature Act of 1961, Mich. Stat. Ann. §600.2946(5) (2019), which allows for FDA warnings to be an absolute defense in duty to warn cases for drugs lawfully on the market unless the drug manufacturer during the drug approval process “intentionally withholds from or misrepresents” to the FDA information about the drug that results in it obtaining an approval that would have been denied if accurate information had been supplied. When the Michigan statute applies, a defendant can typically obtain summary judgment in a duty to warn case. The defenders of the statute point to the excessive risk aversion that the FDA has on the question of new drug approval. The attackers of the statute point to the serious gaps in the FDA approval process. For a recent re-affirmation of Michigan’s drug immunity provision, see *Trees v. Pfizer, Inc.*, No. 338297, 2018 WL 6710594 (Mich. Ct. App. Dec. 20, 2018). For a review of the huge literature on

this topic, see Struve, The FDA and the Tort System: Postmarketing Surveillance, Compensation, and the Role of Litigation, 5 Yale J. Health Pol'y L. & Ethics 587 (2005) (critical of the statute); Noah, Rewarding Regulatory Compliance: The Pursuit of Symmetry in Products

p. 752

Liability, 88 Geo. L.J. 2147 (2000) (supportive of the statute). For a fuller discussion of the preemption issue in products liability cases, see *infra* at 773.

VASSALLO v. BAXTER HEALTHCARE CORP.

696 N.E.2d 909 (Mass. 1998)

GREANEY, J. In this products liability case, the plaintiff Florence Vassallo claimed that the defendants, Baxter Healthcare Corporation and Baxter International, Inc., were liable to her for damages because silicone breast implants, manufactured by a predecessor company to the defendants (Heyer-Schulte Corporation), that had been implanted in her were negligently designed, accompanied by negligent product warnings, and breached the implied warranty of merchantability, with the consequence that she was injured. [The plaintiff underwent breast implant surgery in 1977, and her implants ruptured in 1992, and were replaced with saline implants in 1993. In 1976, the defendant's Dear Doctor letter did not address all possible adverse consequences that leakage could have on an implant user, including "risks of chronic inflammation, permanent tissue scarring, or possible effects on the immune system." The court reviewed plaintiff's expert evidence on the harm caused by the slow release of silicone gel. It also examined extensive testimony that Heyer-Schulte knew of the risk of rupture and of its adverse consequences. The plaintiff alleged that had she known of the true state of affairs, she would never have consented to the implants.] The plaintiff Vincent Vassallo claimed a loss of consortium. The plaintiffs also asserted a claim for violation of G.L. c. 93A, §§2(a) and 9. [The court affirmed the judgment for the plaintiff below on the negligence and statutory claims.]

We conclude, however, that we should change our products liability law to conform to the clear majority rule regarding what has to be shown to recover in a breach of warranty claim for failure to warn of risks associated with a product, and we do so in Part 3 of this opinion. . . .

We take this opportunity . . . to consider the defendants' argument that we should change our products liability law concerning the implied warranty of merchantability from what is stated in Hayes v. Ariens Co., 462 N.E.2d 273 (Mass. 1984), and that the law should be reformulated to adopt a "state of the art" standard that conditions a manufacturer's liability on actual or constructive knowledge of the risks.

Our current law, regarding the duty to warn under the implied warranty of merchantability, presumes that a manufacturer was fully informed of all risks associated with the product at issue, regardless of the state of the art at the time of the sale, and amounts to strict liability for failure to warn of these risks. This rule has been justified by the public policy that a defective product, "unreasonably dangerous due to lack of adequate warning[s], [is] not fit for the ordinary purposes for which [it is] used regardless of the absence of fault on [a defendant's] part."

At trial, [the judge followed *Hayes* by refusing to issue a “jury instruction that a manufacturer need only warn of risks ‘known or reasonably knowable in light of

p. 753

the generally accepted scientific knowledge available at the time of the manufacture and distribution of the device.””] While the judge’s instruction was a correct statement of our law, we recognize that we are among a distinct minority of States that applies a hindsight analysis to the duty to warn.¹⁷ . . .

The thin judicial support for a hindsight approach to the duty to warn is easily explained. The goal of the law is to induce conduct that is capable of being performed. This goal is not advanced by imposing liability for failure to warn of risks that were not capable of being known.

The Restatement (Third) of Torts: Products Liability §2(c) (1998), approved by the American Law Institute, reaffirms the principle expressed in Restatement (Second) of Torts, *supra* at §402A comment *j*, by stating that a product “is defective because of inadequate instructions or warnings when the foreseeable risks of harm posed by the product could have been reduced or avoided by the provision of reasonable instructions or warnings . . . and the omission of the instructions or warnings renders the product not reasonably safe.” The rationale behind the principle is explained by stating that “[u]nforeseeable risks arising from foreseeable product use . . . by definition cannot specifically be warned against.” Restatement (Third) of Torts: Products Liability, *supra* at §2 comment *m*, at 34. However, comment *m* also clarifies the manufacturer’s duty “to perform reasonable testing prior to marketing a product and to discover risks and risk-avoidance measures that such testing would reveal. A seller is charged with knowledge of what reasonable testing would reveal.” *Id.* . . .

In recognition of the clear judicial trend regarding the duty to warn in products liability cases, and the principles stated in Restatement (Third) of Torts: Products Liability, *supra* at §2 and comment *m*, we hereby revise our law to state that a defendant will not be held liable under an implied warranty of merchantability for failure to warn or provide instructions about risks that were not reasonably foreseeable at the time of sale or could not have been discovered by way of reasonable testing prior to marketing the product. A manufacturer will be held to the standard of knowledge of an expert in the appropriate field, and will remain subject to a continuing duty to warn (at least purchasers) of risks discovered following the sale of the product at issue. In accordance with the usual rule governing retroactivity in this type of action, the standard just expressed will apply to all claims on which a final judgment has not been entered, or as to which an appeal is pending or the appeal period has not expired, and to all claims on which an action is commenced after the release of this opinion. [The court noted that the defendant could not take advantage of this change in law because of the adverse jury verdict on the negligence count, and the jury’s apparent conclusion that defendant did have actual or constructive notice of the risks associated with their silicone implants.]

[Affirmed.]

p. 754

NOTES

1. *Post-sale duty to warn.* *Vassallo* recognizes a continuing duty to warn, even as it rejects a hindsight duty to warn. Assuming a company learns of a latent risk that had gone undiscovered despite reasonable pre-market testing, should it now have a duty to notify past buyers of the product of the newly discovered risk? See RTT: PL §10.

Restatement of the Law (Third) of Torts: Products Liability

§10. LIABILITY OF COMMERCIAL PRODUCT SELLER OR DISTRIBUTOR FOR HARM CAUSED BY POST-SALE FAILURE TO WARN

(a) One engaged in the business of selling or otherwise distributing products is subject to liability for harm to persons or property caused by the seller's failure to provide a warning after the time of sale or distribution of a product if a reasonable person in the seller's position would provide such a warning.

(b) A reasonable person in the seller's position would provide a warning after the time of sale if:

(1) the seller knows or reasonably should know that the product poses a substantial risk of harm to persons or property; and

(2) those to whom a warning might be provided can be identified and can reasonably be assumed to be unaware of the risk of harm; and

(3) a warning can be effectively communicated to and acted on by those to whom a warning might be provided; and

(4) the risk of harm is sufficiently great to justify the burden of providing a warning.

Comment j. Distinguishing post-sale failures to warn from defects existing at the time of sale: When a product is defective at the time of sale, liability can be established without reference to a post-sale duty to warn. A seller who discovers after sale that its product was defective at the time of sale within the meaning of this Restatement cannot generally absolve itself of liability by issuing a post-sale warning.

RTT: PL §11 details the circumstances under which a manufacturer can be liable for a failure to recall. The Reporters delimited these sections as additional duties—not as a way for manufacturers to immunize themselves against liability for time-of-sale defects by issuing post-sale warnings. RTT: PL §10, comment j.

2. *Unavoidably dangerous products.* Closely related to RST §402A, comment *j*, is comment *k*, which deals with products known to be unavoidably dangerous, typically

drugs. See *supra* at 695. In these cases, it is impractical to remove the product from the market or to alter its design or composition because mitigating the adverse side effects would undermine the effectiveness of the product. Consequently, a warning that allows informed consumer choice is the only workable alternative. This use of warnings has arisen, for example with blood transfusions where, after some hesitation, the New

Jersey courts rejected the strict liability position. See *Brody v. Overlook Hospital*, 317 A.2d 392, 395 (N.J. Super. Ct. App. Div. 1974). More than 40 states have enacted legislation adopting the negligence standard in blood transfusion cases, including Illinois, 745 Ill. Comp. Stat. 40/3 (2019).

HOOD v. RYOBI AMERICA CORP.

181 F.3d 608 (4th Cir. 1999)

WILKINSON, C.J. Wilson M. Hood lost part of his thumb and lacerated his leg when he removed the blade guards from his new Ryobi miter saw and then used the unguarded saw for home carpentry. Hood sued Ryobi, alleging that the company failed adequately to warn of the saw's dangers and that the saw was defective. Applying Maryland products liability law, the district court granted summary judgment to Ryobi on all claims.

The saw and owner's manual bore at least seven clear, simple warnings not to operate the tool with the blade guards removed. The warnings were not required to spell out all the consequences of improper use. Nor was the saw defective—Hood altered and used the tool in violation of Ryobi's clear warnings. Thus we affirm the judgment.

I

Hood purchased a Ryobi TS-254 miter saw in Westminster, Maryland on February 25, 1995, for the purpose of performing home repairs. The saw was fully assembled at the time of purchase. It had a ten-inch diameter blade mounted on a rotating spindle controlled by a finger trigger on a handle near the top of the blade. To operate the saw, the consumer would use that handle to lower the blade through the material being cut.

Two blade guards shielded nearly the entire saw blade. A large metal guard, fixed to the frame of the saw, surrounded the upper half of the blade. A transparent plastic lower guard covered the rest of the blade and retracted into the upper guard as the saw came into contact with the work piece.

A number of warnings in the operator's manual and affixed to the saw itself stated that the user should operate the saw only with the blade guards in place. For example, the owner's manual declared that the user should "KEEP GUARDS IN PLACE" and warned: "ALWAYS USE THE SAW BLADE GUARD. Never operate the machine with the guard removed"; "NEVER operate this saw without all guards in place and in good operating condition"; and "WARNING: TO PREVENT POSSIBLE SERIOUS PERSONAL INJURY, NEVER PERFORM ANY CUTTING OPERATION WITH THE UPPER OR LOWER BLADE GUARD REMOVED."

The saw itself carried several decals stating "DANGER: DO NOT REMOVE ANY GUARD. USE OF SAW WITHOUT THIS GUARD WILL RESULT IN SERIOUS INJURY"; "OPERATE ONLY WITH GUARDS IN PLACE"; and "WARNING . . . DO NOT operate saw without the upper and lower guards in place."

The day after his purchase, Hood began working with the saw in his driveway. While attempting to cut a piece of wood approximately four inches in height Hood found that the blade guards prevented the saw blade from passing completely through the piece. Disregarding the manufacturer's warnings, Hood decided to remove the blade guards from the saw. Hood first detached the saw blade from its spindle. He then unscrewed the four screws that held the blade guard assembly to the frame of the saw. Finally, he replaced the blade onto the bare spindle and completed his cut.

Rather than replacing the blade guards, Hood continued to work with the saw blade exposed. He worked in this fashion for about twenty minutes longer when, in the middle of another cut, the spinning saw blade flew off the saw and back toward Hood. The blade partially amputated his left thumb and lacerated his right leg.

Hood admits that he read the owner's manual and most of the warning labels on the saw before he began his work. He claims, however, that he believed the blade guards were intended solely to prevent a user's clothing or fingers from coming into contact with the saw blade. He contends that he was unaware that removing the blade guards would permit the spinning blade to detach from the saw. But Ryobi, he claims, was aware of that possibility. In fact, another customer had sued Ryobi after suffering a similar accident in the mid-1980s. . . .

II

A manufacturer may be liable for placing a product on the market that bears inadequate instructions and warnings or that is defective in design. Hood asserts that Ryobi failed adequately to warn of the dangers of using the saw without the blade guards in place. Hood also contends that the design of the saw was defective. We disagree on both counts.

A

Hood first complains that the warnings he received were insufficiently specific. Hood admits that Ryobi provided several clear and conspicuous warnings not to operate the saw without the blade guards. He contends, however, that the warnings affixed to the product and displayed in the operator's manual were inadequate to alert him to the dangers of doing so. In addition to Ryobi's directive "never" to operate a guardless saw, Hood would require the company to inform of the actual consequences of such conduct. Specifically, Hood contends that an adequate warning would have explained that removing the guards would lead to blade detachment.

We disagree. Maryland does not require an encyclopedic warning. Instead, "a warning need only be one that is reasonable under the circumstances." *Levin v. Walter Kidde & Co.*, 248 A.2d 151, 153 (Md. 1968). A clear and specific warning

p. 757

will normally be sufficient—"the manufacturer need not warn of every mishap or source of injury that the mind can imagine flowing from the product." *Liesener v. Weslo, Inc.*, 775 F. Supp. 857, 861 (D. Md. 1991); see *Levin*, 248 A.2d at 154 (declining to require warning of the danger that a cracked siphon bottle might explode and holding "never use cracked bottle" to be adequate as a matter of law). In deciding whether a

warning is adequate, Maryland law asks whether the benefits of a more detailed warning outweigh the costs of requiring the change.

Hood assumes that the cost of a more detailed warning label is minimal in this case, and he claims that such a warning would have prevented his injury. But the price of more detailed warnings is greater than their additional printing fees alone. Some commentators have observed that the proliferation of label detail threatens to undermine the effectiveness of warnings altogether. As manufacturers append line after line onto product labels in the quest for the best possible warning, it is easy to lose sight of the label's communicative value as a whole. Well-meaning attempts to warn of every possible accident lead over time to voluminous yet impenetrable labels—too prolix to read and too technical to understand.

By contrast, Ryobi's warnings are clear and unequivocal. Three labels on the saw itself and at least four warnings in the owner's manual direct the user not to operate the saw with the blade guards removed. Two declare that "serious injury" could result from doing so. This is not a case where the manufacturer has failed to include any warnings at all with its product. Ryobi provided warnings sufficient to apprise the ordinary consumer that it is unsafe to operate a guardless saw—warnings which, if followed, would have prevented the injury in this case.

It is apparent, moreover, that the vast majority of consumers do not detach this critical safety feature before using this type of saw. Indeed, although Ryobi claims to have sold thousands of these saws, Hood has identified only one fifteen-year-old incident similar to his. Hood has thus not shown that these clear, unmistakable, and prominent warnings are insufficient to accomplish their purpose. Nor can he prove that increased label clutter would bring any net societal benefit. We hold that the warnings Ryobi provided are adequate as a matter of law.

B

Hood's defective design claim is likewise unpersuasive [on the ground that the product alterations defeat liability].

Affirmed.

NOTES

1. Warnings, design modification, and the heeding presumption. In *Liriano v. Hobart Corp.*, 700 N.E.2d 303, 308 (N.Y. 1998), the 17-year-old plaintiff caught his right hand and lower arm in a commercial meat grinding machine from which the employer had removed the safety guard. Unlike *Hood*, no warnings stated that it was dangerous to remove the guard. On an advisory opinion to the Second Circuit, Ciparick, J., held that a duty to warn cause of action could survive

even in cases where a product modification blocked liability under a design defect theory. The court noted

that if the injured person is

fully aware of the hazard through general knowledge, observation or common sense, or participated in the removal of the safety device whose purpose is obvious, lack of a warning about that danger may well obviate the failure to warn as a legal cause of an injury resulting from that danger. . . . Similarly, a limited class of hazards need not be warned of as a matter of law because they are patently dangerous or pose open and obvious risks.

Nonetheless the court then returned the failure to warn cause of action for a “fact-specific” inquiry in the Second Circuit.

Next, in Liriano v. Hobart Corp., 170 F.3d 264 (2d Cir. 1999), Calabresi, J., upheld a jury verdict for the plaintiff (subject to a one-third reduction for comparative negligence) because the youthful plaintiff had only recently migrated to the United States; had worked for his employer, Super grocery store, for only a week; and had never been given instructions on how to operate the grinder, which he had used only two or three times. In light of the variation in product users, some users might not discover dangers that others find obvious. Accordingly he held that the

jury could reasonably find that there exist people who are employed as meat grinders and who do not know (a) that it is feasible to reduce the risk with safety guards, (b) that such guards are made available with grinders, and (c) that the grinders should be used only with the guards.

Calabresi, J., further held that on the question of causation, the burden of proof shifted to the defendant:

When a defendant’s negligent act is deemed wrongful precisely because it has a strong propensity to cause the type of injury that ensued, that very causal tendency is evidence enough to establish a *prima facie* case of cause-in-fact. The burden then shifts to the *defendant* to come forward with evidence that its negligence was *not* such a but-for cause.

The heeding presumption was overcome, however, in D’Agnese v. Novartis Pharmaceuticals Corp., 952 F. Supp. 2d 880, 892 n.9 (D. Ariz. 2013), where the plaintiff brought claims for osteonecrosis, or bone death, of the jaw resulting from use of Novartis drugs Aredia® and Zometa®, which had been prescribed by his physician during treatment of metastatic bone cancer. Teilborg, J., held that the plaintiff could not rely on the heeding presumption: “Because Arizona follows the learned intermediary doctrine, Plaintiffs must show that ‘a prescribing physician given an adequate warning would have heeded the warning by incorporating that warning into his risk-benefit analysis in deciding whether to prescribe a given drug.’” The defendant was awarded summary judgment because the treating physician continued to use the drug in spite of his full knowledge of its risks. Malpractice?

2. *When must a warning be given? Latent defects.* In Ayers v. Johnson & Johnson Co., 818 P.2d 1337, 1341 (Wash. 1991) (en banc), David Ayers, then aged 15 months, had taken an unmarked bottle of Johnson’s baby oil out of the purse of his 13-year-old sister. Just as he began to drink the oil, his mother yelled at him,

causing him to gasp and inhale the oil in his lungs. Once there, the baby oil coated his air sacs and quickly led to oxygen deprivation that resulted in serious injuries: His leg motions became spastic; he had limited control over his head movements; and he suffered retardation, seizures, and lost any ability to speak.

Both sides agreed that once David inhaled the baby oil, no medical attention could have prevented these injuries. The plaintiff contended that a warning on the bottle was needed to alert users of this risk in order to keep baby oil out of the reach of infants in the first place. The plaintiff's mother testified that she read warnings, and kept dangerous products away from her young children, and instructed her teenage daughters to do the same. Both mother and daughters testified that they thought baby oil could cause diarrhea or stomach upset, but not more serious injuries. Johnson & Johnson argued that it was rank speculation to claim that the additional knowledge would have led to different conduct since all members of the Ayers family knew that the baby oil was only for external use and was dangerous if taken internally. The jury found for the plaintiff, and its verdict was sustained on appeal:

On the basis of this evidence, the jury was entitled to infer that if the Ayerses had known of the dangers of aspiration, they would have treated the baby oil with greater care; that they would have treated it with the caution they used in relation to items they recognized as highly dangerous, like cleaning products; and that had they done so, the accident would have never occurred. We conclude that the evidence of causation presented to the jury was sufficient to sustain the jury's verdict.

Should Johnson & Johnson change the warnings on its bottles? On its package inserts? If a warning should be included, what should it say?

3. Duty to warn: Patent defects. The risks in Ayers were both latent and remote. What ought to be done with respect to generic properties of common substances known to cause harm, such as alcohol? In Garrison v. Heublein, Inc., 673 F.2d 189, 189 (7th Cir. 1982), the court rejected the plaintiff's claim for "physical and mental injuries as a result of consuming the defendant's product [Smirnoff vodka] over a twenty year period," holding that the defendant had no duty to warn of risks that were common knowledge.

Common knowledge, however, did not allow the defendant to obtain a summary judgment in Hon v. Stroh Brewery Co., 835 F.2d 510, 511 (3d Cir. 1987). The plaintiff's husband had died of pancreatitis that the plaintiff alleged had resulted mainly from his consumption of about 8 to 12 cans of the defendant's beer each week over a period of several years. The court accepted the plaintiff's claim that a warning was required because it was not common knowledge that "*either* excessive *or* prolonged, even though moderate, use of alcohol may result in diseases of many kinds, including pancreatic disease." The court rejected the defendant's

comment *j* defense in part because the jury could find that Stroh's advertising campaign linked the consumption of large quantities of beer to the "good life." It found that "comment *j* does not say that whenever alcohol is consumed over a long period of time the dangers are necessarily generally known. Rather it says that *when* the danger is generally known, no warning is required." Note that federal regulations, 27 C.F.R. §16.21 (2015), now require the following warning label to be attached conspicuously

to containers of alcoholic beverages sold:

GOVERNMENT WARNING: (1) According to the Surgeon General, women should not drink alcoholic beverages during pregnancy because of the risk of birth defects. (2) Consumption of alcoholic beverages impairs your ability to drive a car or operate machinery, and may cause health problems.

"Screens out harmful ultraviolet rays, conditions skin, repels insects, won't wash off while swimming, will not stain most fabrics. Warning: Contact with eyes, ears, nose, or mouth may be fatal."

AIR & LIQUID SYSTEMS CORP. v. DEVRIES

139 S. Ct. 986 (2019)

KAVANAUGH, J.

In maritime tort cases, we act as a common-law court, subject to any controlling statutes enacted by Congress. This maritime tort case raises a question about the scope of a manufacturer's duty to warn. The manufacturers here produced equipment such as pumps, blowers, and turbines for three Navy ships. The equipment required asbestos insulation or asbestos parts in order to function as intended. When used on the ships, the equipment released asbestos fibers into the air. Two Navy veterans who were exposed to asbestos on the ships developed cancer and later died. The veterans' families sued the equipment manufacturers, claiming that the manufacturers were negligent in failing to warn of the dangers of asbestos.

II

. . . Maritime law has likewise recognized common-law principles of products liability for decades. See East River S. S. Corp., 476 U.S. at 865 [*supra* at 700].

p. 761

In this negligence case, we must decide whether a manufacturer has a duty to warn when the manufacturer's product requires later incorporation of a dangerous part—here, asbestos—in order for the integrated product to function as intended.

We start with basic tort-law principles. Tort law imposes “a duty to exercise reasonable care” on those whose conduct presents a risk of harm to others. Restatement (Third) of Torts: Liability for Physical and Emotional Harm §7, p. 77 (2005). For the manufacturer of a product, the general duty of care includes a duty to warn when the manufacturer “knows or has reason to know” that its product “is or is likely to be dangerous for the use for which it is supplied” and the manufacturer “has no reason to believe” that the product’s users will realize that danger. Restatement (Second) of Torts §388, p. 301 (1963-1964).

In tort cases, the federal and state courts have not reached consensus on how to apply that general tort-law “duty to warn” principle when the manufacturer’s product requires later incorporation of a dangerous part in order for the integrated product to function as intended. Three approaches have emerged.

The first approach is the more plaintiff-friendly foreseeability rule that the Third Circuit adopted in this case: A manufacturer may be liable when it was foreseeable that the manufacturer’s product would be used with another product or part, even if the manufacturer’s product did not require use or incorporation of that other product or part.

The second approach is the more defendant-friendly bare-metal defense that the manufacturers urge here: If a manufacturer did not itself make, sell, or distribute the part or incorporate the part into the product, the manufacturer is not liable for harm caused by the integrated product—even if the product required incorporation of the part and the manufacturer knew that the integrated product was likely to be dangerous for its intended uses.

The third approach falls between those two approaches. Under the third approach, foreseeability that the product may be used with another product or part that is likely to be dangerous is not enough to trigger a duty to warn. But a manufacturer does have a duty to warn when its product requires incorporation of a part

and the manufacturer knows or has reason to know that the integrated product is likely to be dangerous for its intended uses. Under that approach, the manufacturer may be liable even when the manufacturer does not itself incorporate the required part into the product.

We conclude that the third approach is the most appropriate for this maritime tort context.

To begin, we agree with the manufacturers that a rule of mere foreseeability would sweep too broadly. See generally Restatement (Third) of Torts: Liability for Physical and Emotional Harm §7, Comment j, at 82; Restatement (Second) of Torts §395, Comment j, at 330. Many products can foreseeably be used in numerous ways with numerous other products and parts. Requiring a product manufacturer to imagine and warn about all of those possible uses—with massive liability looming for failure to correctly predict how its product might be used with other products or parts—would impose a difficult and costly burden on manufacturers,

p. 762

while simultaneously overwarning users. In light of that uncertainty and unfairness, we reject the foreseeability approach for this maritime context.

That said, we agree with the plaintiffs that the bare-metal defense ultimately goes too far in the other direction. In urging the bare-metal defense, the manufacturers contend that a business generally has “no duty” to “control the conduct of a third person as to prevent him from causing physical harm to another.” *Id.*, §315, at 122. That is true, but it is also beside the point here. After all, when a manufacturer’s product is dangerous in and of itself, the manufacturer “knows or has reason to know” that the product “is or is likely to be dangerous for the use for which it is supplied.” *Id.*, §388, at 301. The same holds true, we conclude, when the manufacturer’s product requires incorporation of a part that the manufacturer knows or has reason to know is likely to make the integrated product dangerous for its intended uses. As a matter of maritime tort law, we find no persuasive reason to distinguish those two similar situations for purposes of a manufacturer’s duty to warn. See Restatement (Third) of Torts: Products Liability §2, Comment i, p. 30 (1997) (“[W]arnings also may be needed to inform users and consumers of nonobvious and not generally known risks that unavoidably inhere in using or consuming the product”).

Importantly, the product manufacturer will often be in a better position than the parts manufacturer to warn of the danger from the integrated product. See generally G. Calabresi, *The Costs of Accidents* 311-318 (1970). The product manufacturer knows the nature of the ultimate integrated product and is typically more aware of the risks associated with that integrated product. By contrast, a parts manufacturer may be aware only that its part could conceivably be used in any number of ways in any number of products. A parts manufacturer may not always be aware that its part will be used in a way that poses a risk of danger.

To be sure, as the manufacturers correctly point out, issuing a warning costs time and money. But the burden usually is not significant. Manufacturers already have a duty to warn of the dangers of their own products. That duty typically imposes a light burden on manufacturers. Requiring a manufacturer to also warn when the manufacturer knows or has reason to know that a required later-added part is likely to make the integrated product dangerous for its intended uses should not meaningfully add to that burden. . . .

The manufacturers further assert that requiring a warning in these circumstances will lead to excessive warning of consumers. Again, however, we are not aware of substantial overwarning problems in those jurisdictions that have adopted this approach. And because the rule we adopt here applies only in certain narrow circumstances, it will not require a plethora of new warnings. . . .

In the maritime tort context, we hold that a product manufacturer has a duty to warn when (i) its product requires incorporation of a part, (ii) the manufacturer knows or has reason to know that the integrated product is likely to be dangerous for its intended uses, and (iii) the manufacturer has no reason to believe that the product's users will realize that danger.

[Affirmed.]

GORSUCH, J. dissenting:

p. 763

. . . [T]he traditional common law rule still makes the most sense today. The manufacturer of a product is in the best position to understand and warn users about its risks; in the language of law and economics, those who make products are generally the least-cost avoiders of their risks. By placing the duty to warn on a product's manufacturer, we force it to internalize the full cost of any injuries caused by inadequate warnings—and in that way ensure it is fully incentivized to provide adequate warnings. By contrast, we dilute the incentive of a manufacturer to warn about the dangers of its products when we require other people to share the duty to warn and its corresponding costs.

NOTES

1. “*Third wave*” of asbestos litigation? Asbestos fits within the category of “unavoidably dangerous products” (see *supra* at 754) because it is both highly useful as an insulation product and because it undeniably causes many fatal conditions—chief among them asbestosis, mesothelioma, and bronchiogenic carcinoma. Manufacturers have a duty to warn, even though they may be shielded from design defect liability. The watershed case is *Borel v. Fibreboard Paper Products Corp.*, 493 F.2d 1076 (5th Cir. 1973), which affirmed a jury verdict against asbestos manufacturers on behalf of an insulation worker who had extensive contact with asbestos for more than 30 years. Wisdom, J., in an exhaustive opinion, found sufficient evidence of the dangers of asbestos in the medical literature to impose upon manufacturers—here held to the standard of “experts” in the field—a duty to warn all workers coming in contact with the product to allow them to make an informed choice of whether to expose themselves to asbestos.

Prior to *Borel* no plaintiff had ever recovered from an asbestos manufacturer. The decision unleashed an avalanche of suits against asbestos suppliers. Asbestos suits constitute one of the largest bodies of cases in the federal system, and by their sheer numbers have placed major administrative strains on the system. The first generation of asbestos cases was brought against the manufacturers of asbestos products, virtually all of whom were driven into bankruptcy. One early case suggested manufacturers could have been held

responsible for unknowable defects. See *Beshada v. Johns-Manville Prods. Corp.*, 447 A.2d 539 (N.J. 1982). But this push for strict liability for asbestos was rejected, just as it was for medical products in *Vassallo*. See, e.g., *Anderson v. Owens-Corning Fiberglas Corp.*, 810 P.2d 549, 558-559 (Cal. 1991). In both cases, however, plaintiffs consistently won on negligence theories and often obtained hefty punitive damages.

The second wave of litigation, which began in the late 1990s, pushed further. The standard modern lawsuit often pits thousands of plaintiffs against dozens of second-tier defendants, such as firms that operated premises on which asbestos products were used or which incorporated asbestos into their own products, e.g., brake linings. The recent cases do not usually involve asbestosis, but rather evidence of pleural plaque. “Pleural plaques have been described as ‘discrete, elevated, opaque, shiny, rounded lesions, . . . diffuse or nodular,’ of the parietal pleura or diaphragm. They strongly indicate asbestos exposure.” Schuck, The

p. 764

Worst Should Go First: Deferral Registries in Asbestos Litigation, 15 Harv. J.L. & Pub. Pol'y 541, 545 (1992). Although these plaques illustrate exposure, they do not increase the risk of deadly asbestosis or any other deadly disease. See Weiss, Asbestos-Related Pleural Plaques and Lung Cancer, 103 Chest. 1854 (1993).

An effort to forge a class action settlement of these cases was rejected in *Amchem Products, Inc. v. Windsor*, 521 U.S. 591 (1997), partly on the ground that it did not provide adequate safeguards for future injured persons. See also *Ortiz v. Fibreboard Corp.*, 527 U.S. 815 (1999). The matter has now spilled over into the political arena, but Congress thus far has been unable to fashion any solution that satisfies the plaintiffs, the various asbestos defendants, and their insurers. For an exhaustive indictment of a “malignant” enterprise on this system, see Brickman, On the Theory Class’s Theories of Asbestos Litigation: The Disconnect Between Scholarship and Reality, 31 Pepp. L. Rev. 33 (2003). For judicial evidence of sharp practices on medical evidence, see *In re Silica Products Liability Litigation*, 398 F. Supp. 2d 563, 571, 602 (S.D. Tex. 2005).

2. *Warnings and consumer behavior.* Information overload is the target of Paredes, Blinded by the Light: Information Overload and Its Consequences for Securities Regulation, 81 Wash. U. L.Q. 417, 440-443 (2003), which argues that consumers tend to make poorer choices as the amount of available information increases:

[S]tudies show that people shift to simplifying decision strategies that are less accurate as tasks become more complicated. Not only will people make fewer comparisons across choices and attributes, but when faced with a complicated task, a decision maker will tend to become more selective in the information she chooses to analyze. It is possible that as more information becomes available, a person might use less information, on net, as the information search and processing costs increase. Making matters worse, studies show that people do not always focus on the most relevant information but might become distracted by less relevant information.

Posner, J., took Paredes’ message to heart in *Robinson v. McNeil Consumer Healthcare*, 615 F.3d 861, 869 (7th Cir. 2010), which rejected the plaintiff’s claim against the manufacturer of an ibuprofen drug for

failing to warn against SJS/TEN, a very rare but serious skin disease that caused blindness in one eye and the loss of 60 percent of the plaintiff's skin:

But then the label would have had to describe as well every other serious disease that might, however infrequently, be caused, or even just arguably caused (for it is unclear whether ibuprofen can cause SJS/TEN), by ibuprofen. And it would have to recite the symptoms of the disease if it was rare. The resulting information overload would make label warnings worthless to consumers.

The impatience with warnings received a very different spin in Latin, Good Warnings, Bad Products, and Cognitive Limitations, 41 UCLA L. Rev. 1193 (1994). Latin rejects the "Rational Risk Calculator Model" of human behavior, often

p. 765

championed by economists, in favor of the rival "Mistake and Momentary Inattention" model. This model draws more heavily on psychological and sociological literature to support the view that even cautious actors are subject to momentary lapses in judgment or attention. Latin strongly supports this second perspective, which clearly implies that even "good" warnings should not be respected when cheap design alternatives are available to protect the users of products from the disastrous consequences of not heeding a warning. Latin's object of attack is Restatement §402A, comment *j*: "Where warning is given, the seller may reasonably assume that it will be read and heeded." If the Mistake and Momentary Inattention Model is correct, Latin argues the law should require design changes no matter how strong or "good" the warnings are. Latin's prescriptions were followed in *Uniroyal Goodrich Tire Co. v. Martinez*, 977 S.W.2d 328, 337 (Tex. 1998), in which the plaintiff mechanic was injured when a 16-inch tire exploded while he sought to mount it on a 16.5-inch wheel in the face of stern "NEVERS," beginning with "NEVER MOUNT A 16" SIZE DIAMETER TIRE ON A 16.5" RIM. Mounting a 16" tire on a 16.5" rim can cause severe injury or death." Phillips, C.J., rejected the test of section 402A, comment *j*, and, citing Latin, adopted the position of the Third Restatement §2, comment *l*, "that warnings and safer alternative designs are factors, among others, for the jury to consider in determining whether the product as designed is reasonably safe." Who is right? Does Latin's approach work for dangerous drugs, or only consumer products? As a variation on the warnings question, what should be done with Q-Tips or other cotton swabs whose standard warnings instruct people never to insert them into the ear? Is the correct remedy to redesign the Q-Tip, strengthen the warning, take the product off the market, or leave things as they are?

SECTION E. PLAINTIFF's CONDUCT

DALY v. GENERAL MOTORS CORP.

575 P.2d 1162 (Cal. 1978)

RICHARDSON, J. The most important of several problems which we consider is whether the principles of comparative negligence expressed by us in *Li v. Yellow Cab Co.*, apply to actions founded on strict products liability. We will conclude that they do. . . .

[The decedent was driving his Opel southbound on the Harbor Freeway between 50 and 70 miles per hour when it struck the metal divider. The car spun around and the decedent was forcibly thrown from the car, sustaining fatal head injuries. The plaintiffs alleged that the door lock was defectively designed because of its exposed push button, which, it was claimed, was forced open during the original collision.]

Over plaintiffs' objections, defendants were permitted to introduce evidence indicating that: (1) the Opel was equipped with a seat belt-shoulder harness

p. 766

system, and a door lock, either of which if used, it was contended, would have prevented Daly's ejection from the vehicle; (2) Daly used neither the harness system nor the lock; (3) the 1970 Opel owner's manual contained warnings that seat belts should be worn and doors locked when the car was in motion for "accident security"; and (4) Daly was intoxicated at the time of collision, which evidence the jury was advised was admitted for the limited purpose of determining whether decedent had used the vehicle's safety equipment. After relatively brief deliberations the jury returned a verdict favoring all defendants, and plaintiffs appeal from the ensuing adverse judgment.

Strict Products Liability and Comparative Fault . . .

Those counseling against the recognition of comparative fault principles in strict products liability cases vigorously stress, perhaps equally, not only the conceptual, but also the semantic difficulties incident to such a course. The task of merging the two concepts is said to be impossible, that "apples and oranges" cannot be compared, that "oil and water" do not mix, and that strict liability, which is not founded on negligence or fault, is inhospitable to comparative principles. The syllogism runs, contributory negligence was only a defense to negligence, comparative negligence only affects contributory negligence, therefore comparative negligence cannot be a defense to strict liability. . . . While fully recognizing the theoretical and semantic distinctions between the twin principles of strict products liability and traditional negligence, we think they can be blended or accommodated.

The inherent difficulty in the "apples and oranges" argument is its insistence on fixed and precise definitional treatment of legal concepts. In the evolving areas of both products liability and tort defenses, however, there has developed much conceptual overlapping and interweaving in order to attain substantial justice. The concept of strict liability itself, as we have noted, arose from dissatisfaction with the wooden formalisms of traditional tort and contract principles in order to protect the consumer of manufactured goods. Similarly, increasing social awareness of its harsh "all or nothing" consequences led us in *Li* to moderate the impact of traditional contributory negligence in order to accomplish a fairer and more balanced result. We acknowledged an intermixing of defenses of contributory negligence and assumption of risk and formally effected a type of merger. . . .

Furthermore, the "apples and oranges" argument may be conceptually suspect. It has been suggested that the term "contributory negligence," one of the vital building blocks upon which much of the argument is based, may indeed itself be a misnomer since it lacks the first element of the classical negligence formula, namely, a duty of care owing to another. . . .

Given all of the foregoing, we are, in the wake of *Li*, disinclined to resolve the important issue before us by

the simple expedient of matching linguistic labels which have evolved either for convenience or by custom. Rather, we consider it more useful to examine the foundational reasons underlying the creation of

p. 767

strict products liability in California to ascertain whether the purposes of the doctrine would be defeated or diluted by adoption of comparative principles. We imposed strict liability against the manufacturer and in favor of the user or consumer in order to relieve injured consumers "from *problems of proof* inherent in pursuing negligence . . . and warranty . . . remedies . . ." As we have noted, we sought to place the burden of loss on manufacturers rather than ". . . injured persons *who are powerless to protect themselves . . .*" ([*"protection of otherwise defenseless victims* of manufacturing defects and the spreading throughout society of the cost of compensating them"] italics added).

The foregoing goals, we think, will not be frustrated by the adoption of comparative principles. Plaintiffs will continue to be relieved of proving that the manufacturer or distributor was negligent in the production, design, or dissemination of the article in question. Defendant's liability for injuries caused by a defective product remains strict. The principle of protecting the defenseless is likewise preserved, for plaintiff's recovery will be reduced *only* to the extent that his own lack of reasonable care contributed to his injury. The cost of compensating the victim of a defective product, albeit proportionately reduced, remains on defendant manufacturer, and will, through him, be "spread among society." However, we do not permit plaintiff's own conduct relative to the product to escape unexamined, and as to that share of plaintiff's damages which flows from his own fault we discern no reason of policy why it should, following *Li*, be borne by others. Such a result would directly contravene the principle announced in *Li*, that loss should be assessed equitably in proportion to fault.

We conclude, accordingly, that the expressed purposes which persuaded us in the first instance to adopt strict liability in California would not be thwarted were we to apply comparative principles. What would be forfeit is a degree of semantic symmetry. However, in this evolving area of tort law in which new remedies are judicially created, and old defenses judicially merged, impelled by strong considerations of equity and fairness we seek a larger synthesis. If a more just result follows from the expansion of comparative principles, we have no hesitancy in seeking it, mindful always that the fundamental and underlying purpose of *Li* was to promote the equitable allocation of loss among all parties legally responsible in proportion to their fault.

A second objection to the application of comparative principles in strict products liability cases is that a manufacturer's incentive to produce safe products will thereby be reduced or removed. While we fully recognize this concern we think, for several reasons, that the problem is more shadow than substance. First, of course, the manufacturer cannot avoid its continuing liability for a defective product even when the plaintiff's own conduct has contributed to his injury. The manufacturer's liability, and therefore its incentive to avoid and correct product defects, remains; its exposure will be lessened only to the extent that the trier finds that the victim's conduct contributed to his injury. Second, as a practical matter a manufacturer, in a particular case, cannot assume that the user of a defective product upon whom an injury is visited will be blameworthy. Doubtless, many users are free of fault, and a defect is at least as likely as not to be exposed

p. 768

by an entirely innocent plaintiff who will obtain full recovery. In such cases the manufacturer's incentive toward safety both in design and production is wholly unaffected. Finally, we must observe that under the present law, which recognizes assumption of risk as a complete defense to products liability, the curious and cynical message is that it profits the manufacturer to make his product so defective that in the event of injury he can argue that the user had to be aware of its patent defects. To that extent the incentives are inverted. We conclude, accordingly, that no substantial or significant impairment of the safety incentives of defendants will occur by the adoption of comparative principles.

In passing, we note one important and felicitous result if we apply comparative principles to strict products liability. This arises from the fact that under present law when plaintiff sues in negligence his own contributory negligence, however denominated, may diminish but cannot wholly defeat his recovery. When he sues in strict products liability, however, his "assumption of risk" *completely bars* his recovery. Under *Li*, as we have noted, "assumption of risk" is merged into comparative principles. . . . The consequence is that after *Li* in a negligence action, plaintiff's conduct which amounts to "negligent" assumption of risk no longer defeats plaintiff's recovery. Identical conduct, however, in a strict liability case acts as a complete bar under rules heretofore applicable. Thus, strict products liability, which was developed to free injured consumers from the constraints imposed by traditional negligence and warranty theories, places a consumer plaintiff in a worse position than would be the case were his claim founded on simple negligence. This, in turn, rewards adroit pleading and selection of theories. The application of comparative principles to strict liability obviates this bizarre anomaly by treating alike the defenses to both negligence and strict products liability actions. In each instance the defense, if established, will reduce but not bar plaintiff's claim.

A third objection to the merger of strict liability and comparative fault focuses on the claim that, as a practical matter, triers of fact, particularly jurors, cannot assess, measure, or compare plaintiff's negligence with defendant's strict liability. We are unpersuaded by the argument and are convinced that jurors are able to undertake a fair apportionment of liability. . . . [The court then noted that comparative principles had functioned smoothly in the unseaworthiness cases tried in admiralty, even though unseaworthiness is a strict liability concept.]

We find equally unpersuasive a final objection that the merger of the two principles somehow will abolish or adversely affect the liability of such intermediate entities in the chain of distribution as retailers . . . and bailors. . . . We foresee no such consequence. Regardless of the identity of a particular defendant or of his position in the commercial chain the basis for his liability remains that he has marketed or distributed a defective product. If, as we believe, jurors are capable of assessing fully and fairly the legal responsibility of a manufacturer on a strict liability basis, no reason appears why they cannot do likewise with respect to subsequent distributors and vendors of the product.

We note that the majority of our sister states which have addressed the problem, either by statute or judicial decree, have extended comparative principles to strict products liability.

Our research discloses that of the more than 30 states which have adopted some form of comparative negligence, three (including California) have done so judicially. . . . [The court noted that its position enjoys

considerable academic support, and that the proposed Uniform Comparative Fault Act embraces a comparative fault principle in strict liability actions. It concluded that it also covered assumption of risk, to the extent that it is a form of contributory negligence.]

JEFFERSON, J., concurring and dissenting. . . . What the majority envisions as a fair apportionment of liability to be undertaken by the jury will constitute nothing more than an *unfair reduction* in the plaintiff's total damages suffered, resulting from a jury process that necessarily is predicated on speculation, conjecture and guesswork. . . .

MOSK, J., dissenting. I dissent.

This will be remembered as the dark day when this court, which heroically took the lead in originating the doctrine of products liability [in *Greenman*] and steadfastly resisted efforts to inject concepts of negligence into the newly designed tort (*Cronin v. J. B. E. Olson Corp.*), inexplicably turned 180 degrees and beat a hasty retreat almost back to square one. The pure concept of products liability so proudly fashioned and nurtured by this court for the past decade and a half is reduced to a shambles.

The majority inject a foreign object—the tort of negligence—into the tort of products liability by the simple expedient of calling negligence something else: on some pages their opinion speaks of “comparative fault,” on others reference is to “comparative principles,” and elsewhere the term “equitable apportionment” is employed, although this is clearly not a proceeding in equity. But a rose is a rose and negligence is negligence; thus the majority find that despite semantic camouflage they must rely on *Li v. Yellow Cab Co.*, even though *Li* is purely and simply a negligence case which merely rejects contributory negligence and substitutes therefor comparative negligence.

. . . [I]n *Cronin* we stressed that “the very purpose of our pioneering efforts in this field was to relieve the plaintiff from problems of proof inherent in pursuing negligence.” And in *Luque v. McLean*, 501 P.2d 1163 (Cal. 1972), this court unanimously declared that “contributory negligence does not bar recovery in a strict liability action.” . . .

The bench and bar have abided by this elementary rule. They have learned to avoid injecting negligence—whether of the defendant or the plaintiff—into a products liability case. And they have understood the reason behind the distinction between negligence of any party and products liability. It was expressed over three decades ago by Justice Traynor in his concurring opinion in *Escola v. Coca Cola Bottling Co.*[, *supra* at 683]. . . .

Transferring the liability, or part of the liability, from the party responsible for putting the article in the stream of commerce to the consumer is precisely what the majority propose to do. They do this by employing a euphemism: the victim's recovery is to be “proportionately reduced.” The result, however delicately described, is to dilute the defect of the article by elevating the conduct of the wounded consumer to an issue of equal significance. We can be as

certain as tomorrow's daylight that every defendant charged with marketing a defective product will

hereafter assert that the injured plaintiff did something, anything, that conceivably could be deemed contributorily negligent: he drove the vehicle with a defective steering mechanism 56 miles an hour instead of 54; or he should have discovered a latent defect hidden in the machinery; or perhaps he should not have succumbed to the salesman's persuasion and purchased the defective object in the first instance. I need no crystal ball to foresee that the pleading of affirmative defenses alleging contributory negligence—or the currently approved substitute terminology—will now become boilerplate. . . .

The defective product is comparable to a time bomb ready to explode; it maims its victims indiscriminately, the righteous and the evil, the careful and the careless. Thus when a faulty design or otherwise defective product is involved, the litigation should not be diverted to consideration of the negligence of the plaintiff. The liability issues are simple: was the product or its design faulty, did the defendant inject the defective product into the stream of commerce, and did the defect cause the injury? The conduct of the ultimate consumer-victim who used the product in the contemplated or foreseeable manner is wholly irrelevant to those issues. . . .

The majority note one "felicitous result" of adopting comparative negligence to products liability: the merger of assumption of risk—which they term a "bizarre anomaly"—into their innovative defense. I find that result neither felicitous nor tenable. In *Barker v. Lull Engineering Co.*, we defined a defective product as one which failed to perform safely when used in an intended or foreseeable manner. If a consumer elects to use a product patently defective when other alternatives are available, or to use a product in a manner clearly not intended or foreseeable, he assumes the risks inherent in his improper utilization and should not be heard to complain about the condition of the object. One who employs a power saw to trim his fingernails—and thereafter finds the number of his fingers reduced—should not prevail to any extent whatever against the manufacturer even if the saw had a defective blade. I would retain assumption of risk as a total defense to products liability, as it always has been.

I would affirm the judgment.

NOTES

1. *Contributory negligence in products cases.* Is there any reason why contributory negligence should not be a defense in products liability cases if it is allowed in ordinary automobile cases? In *Melia v. Ford Motor Co.*, 534 F.2d 795 (8th Cir. 1976), the decedent was killed in an intersection collision when she was thrown through the unlocked door on the driver's side of the car. The court first held that it was a jury question whether the design of the door assembly was defective. It then refused to admit evidence on any of the three assignments of contributory negligence raised by the defendant in the plaintiff's strict liability action: (1) entering the intersection through a red light, (2) driving with the door unlocked, (3) not

p. 771

using the seat belt. In state court, the plaintiff's contributory negligence had previously barred her cause of action against the other driver. *Melia v. Svoboda*, 214 N.W.2d 476 (Neb. 1974).

2. *Foreseeable misuse.* In most crashworthiness cases, the plaintiff's misconduct goes far beyond the "normal and proper use" contemplated in *Escola*. In *LeBouef v. Goodyear Tire & Rubber Co.*, 623 F.2d 985, 989 (5th Cir. 1980), the decedent purchased "a new, 1976 Mercury Cougar equipped with a 460 cubic-inch, 425 horsepower engine, and with Goodyear HER78-15 Custom Polysteel Radial Tires." The car was capable of going 100 miles per hour, but Goodyear had tested the tires for safety only for speeds of 85 mph. Ford's only warning was "a statement in the Cougar owner's manual that '[c]ontinuous driving over 90 mph requires using high-speed-capability tires'; the manual did not state whether the tires in question were or were not of high-speed-caliber." The decedent was driving while intoxicated at speeds of 100 to 105 mph and was killed when the car veered off the road. The trial court, sitting without a jury, found that the tire, although properly manufactured, was defective because of its insufficient warnings about the risk of tread separation at high speeds. It also found that "while Leleux's [the decedent's] excessive speed was a contributory cause of the accident, his intoxication was not." It also rejected the contributory negligence and assumption of risk defenses. On appeal, the decision was affirmed, and the court had this to say about the misuse defense:

Certainly the operation of the Cougar in excess of 100 miles per hour was not "normal" in the sense of being a routine or intended use. "Normal use," however, is a term of art in the parlance of Louisiana products liability law, delineating the scope of a manufacturer's duty and consequent liability; it encompasses all *reasonably foreseeable* uses of a product. . . . The sports car involved here was marketed with an intended and recognized appeal to youthful drivers. The 425 horsepower engine with which Ford had equipped it provided a capability of speeds over 100 miles per hour, and the car's allure, no doubt exploited in its marketing, lay in no small measure in this power and potential speed. It was not simply foreseeable, but was to be readily expected, that the Cougar would, on occasion, be driven in excess of the 85 miles per hour proven maximum safe operating speed of its Goodyear tires. Consequently, Ford cannot, on the basis of abnormal use, escape its duty either to provide an adequate warning of the specific danger of tread separation at such high speeds or to ameliorate the danger in some other way.

The foreseeable misuse standard has been criticized as creating a "moral hazard" problem by sanctioning reckless behavior and increasing the probability of accidents. In addition, foreseeable misuse creates an implicit transfer of wealth from careful to careless drivers because the manufacturer cannot differentiate in price charged between a retiree and a traveling salesman, or between the careful driver who has never had a ticket and the teenage hot-rodder. See Epstein, Products Liability as an Insurance Market, 14 J. Legal Stud. 645 (1985), who notes that first-party insurers routinely make these risk classifications in selling automobile insurance.

3. *The Restatement position.* The Third Restatement follows *Daly* in what has become the majority position. See RTT: PL §17. In essence, the Third Restatement declines to treat product misuse, alteration, or assumption of risk in its contributory negligence regime as independent defenses. Rather, to the extent that these are traced to the plaintiff's conduct, they are governed by the comparative fault system in effect within the jurisdiction, usually pure comparative negligence or the 50 percent cut-off rule. Prior to the Third Restatement many states followed a rule that provided that the plaintiff was under no duty to discover

latent defects contained in the defendant's product. Under the influence of comparative negligence, this defense may be allowed, at least in some cases: “[W]hen the defendant claims that the plaintiff failed to discover a defect, there must be evidence that the plaintiff's conduct in failing to discover a defect did, in fact, fail to meet a standard of reasonable care.” RTT: PL §17, comment *d*.

Restatement of the Law (Third) of Torts: Products Liability

§17. APPORTIONMENT OF RESPONSIBILITY BETWEEN OR AMONG PLAINTIFF, SELLERS AND DISTRIBUTORS OF DEFECTIVE PRODUCTS, AND OTHERS

- (a) A plaintiff's recovery of damages for harm caused by a product defect may be reduced if the conduct of the plaintiff combines with the product defect to cause the harm and the plaintiff's conduct fails to conform to generally applicable rules establishing appropriate standards of care.
- (b) The manner and extent of the reduction under Subsection (a) and the apportionment of plaintiff's recovery among multiple defendants are governed by generally applicable rules apportioning responsibility.

4. *Contractual defenses to products liability actions.* Express assumption of risk by contract is a complete defense to a tort action in many settings. One vital question is whether product sellers should be able, directly or through intermediaries, to contract out of their liability with potential product users and consumers. The contractual regime could redefine product defect, cap damages, or eliminate liability altogether. Since *Henningsen*, courts have uniformly rejected that approach, which also receives a chilly reception in the Third Restatement. See RTT: PL §18. The rule does not apply to cases of purely economic loss usually covered under the U.C.C., nor does it necessarily apply whenever product users and consumers are “represented by informed and economically powerful consumer groups or intermediaries.” See RTT: PL §18, comment *d*. Does a reduction in price or increase in product or service access count as the necessary quid pro quo? How

p. 773

would the law of products liability have to be rewritten if the contractual waivers were freely accepted in all cases of physical injury or property damage?

Restatement of the Law (Third) of Torts: Products Liability

§18. DISCLAIMERS, LIMITATIONS, WAIVERS, AND OTHER CONTRACTUAL EXCULPATIONS AS DEFENSES TO PRODUCTS LIABILITY CLAIMS FOR HARM TO PERSONS

Disclaimers and limitations of remedies by product sellers or other distributors, waivers by product purchasers, and other similar contractual exculpations, oral or written, do not bar or reduce otherwise valid products-liability claims against sellers or other distributors of new products for harm to persons.

Comment a. Effects of contract defenses on products liability tort claims for harm to persons: . . . It is presumed that the ordinary product user or consumer lacks sufficient information and bargaining power to

execute a fair contractual limitation of rights to recover. . . .

Comment d. Waiver of rights in contractual settings in which product purchasers possess both adequate knowledge and sufficient economic power: . . . This Section does not address whether consumers, especially when represented by informed and economically powerful consumer groups or intermediaries, with full information and sufficient bargaining power, may contract with product sellers to accept curtailment of liability in exchange for concomitant benefits, or whether such consumers might be allowed to agree to substitute alternative dispute resolution mechanisms in place of traditional adjudication. When such contracts are accompanied by alternative nontort remedies that serve as an adequate quid pro quo for reducing or eliminating rights to recover in tort, arguments may support giving effect to such agreements. Such contractual arrangements raise policy questions different from those raised by this Section and require careful consideration by the courts.

§21. Comment f. Harm to other property: disclaimers and limitations of remedies: . . . When a defective product causes harm to property owned by third persons, the contractual arrangements between the contracting parties should not shield the seller from liability to the third party. However, contractual limitations on tort liability for harm to property, when fairly bargained for, may provide an effective way for the contracting parties efficiently to allocate risks of such harm between themselves.

SECTION F. FEDERAL PREEMPTION

A major fraction of tort litigation addresses the interaction between direct forms of federal regulation and the state-based common law of products liability. The

p. 774

debate over federal preemption implicates the policy debate over the relative desirability of ex ante regulation by federal agencies versus ex post litigation by injured parties in ensuring optimal health and safety standards. Rabin, Reassessing Regulatory Compliance, 88 Geo. L.J. 2049, 2068-2070 (2000), argues that even with the presence of federal regulators, tort litigation is beneficial because the process involves the collection of information about post-market use and defects that might not otherwise come to light, particularly in the case of fraud on the part of the manufacturer. Tort liability, on Rabin's account, effectively complements regulation, by providing independent incentives for product safety. In contrast, Epstein has argued that the imposition of tort liability will only make matters worse if the regulatory system already embodies safety standards that are too strict. "Where the FDA incorrectly blocks a drug from entering the market, litigation can do nothing to correct that error. Where the regulatory process lets drugs correctly on the market, litigation remains costly even if it vindicates the defendant." Epstein, The Case for Field Preemption of State Laws in Drug Cases, 103 Nw. U. L. Rev. 463, 470 (2009).

At its core, federal preemption is not just a question of public policy, but also a question of statutory interpretation with constitutional overtones. The Supremacy Clause, Article VI, §2, of the U.S. Constitution, provides that any federal statute or regulation trumps any inconsistent state law:

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof;

and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land: and the Judges in every State shall be bound thereby, any Thing in the Constitution or Law of any State to the contrary notwithstanding.

In some instances, the federal statute explicitly displaces state law. Express preemption by Congress is often the exception, not the rule. More often real or apparent conflicts between federal and state laws give rise to complex matters of statutory construction. Early on, in *Rice v. Santa Fe Elevator Corp.*, 331 U.S. 218, 230-231 (1947), the Supreme Court set out the basic presumption against federal preemption when it wrote:

[W]e start with the assumption that the historic police powers of the States [to regulate safety and health] were not to be superseded by the Federal Act unless that was the clear and manifest purpose of Congress. Such a purpose may be evidenced in several ways. The scheme of federal regulation may be so pervasive as to make reasonable the inference that Congress left no room for the States to supplement it. Or the Act of Congress may touch a field in which the federal interest is so dominant that the federal system will be assumed to preclude enforcement of state laws on the same subject. Likewise, the object sought to be obtained by the federal law and the character of obligations imposed by it may reveal the same purpose. Or the state policy may produce a result inconsistent with the objective of the federal statute.

p. 775

After *Rice*, implied preemption takes on three different guises. So-called field preemption arises when the federal statute is sufficiently comprehensive to “occupy the field,” thereby precluding any state standards in that substantive area. Field preemption is virtually nonexistent in products liability. Most products cases involve “conflict preemption,” which comes in two varieties: (1) the state law is flatly inconsistent with the federal statute (“impossibility preemption”), and (2) the enforcement of the state law frustrates or presents an obstacle to the federal scheme (“obstacle preemption”). Working out the implications of this basic system is challenging given the modern proliferation of design, warning, and liability theories at the state law level. For disagreement on this presumption, contrast Young, *Federal Preemption and State Autonomy*, in *Federal Preemption: States’ Powers, National Interests* 249 (Epstein & Greve eds., 2007), with Nelson, *Preemption*, 86 Va. L. Rev. 225 (2000).

GEIER v. AMERICAN HONDA MOTOR CO.

529 U.S. 861 (2000)

BREYER, J. This case focuses on the 1984 version of a Federal Motor Vehicle Safety Standard promulgated by the Department of Transportation under the authority of the National Traffic and Motor Vehicle Safety Act of 1966, 80 Stat. 718, 15 U.S.C. §1381 et seq. (1988 ed.). The standard, FMVSS 208, required auto manufacturers to equip some but not all of their 1987 vehicles with passive restraints. We ask whether the Act pre-empts a state common-law tort action [for a design defect] in which the plaintiff claims that the defendant auto manufacturer, who was in compliance with the standard, should nonetheless have equipped a 1987 automobile with airbags. We conclude that the Act, taken together with FMVSS 208, pre-

empts the lawsuit.

I

In 1992, petitioner Alexis Geier, driving a 1987 Honda Accord, collided with a tree and was seriously injured. The car was equipped with manual shoulder and lap belts which Geier had buckled up at the time. The car was not equipped with airbags or other passive restraint devices.

1987 Honda Accord

Source: Wikimedia Commons

[Breyer, J., outlines the procedural history of the case and notes the sharp split of opinion in the lower federal and state courts.]

We granted certiorari to resolve these differences. We now hold that this kind of “no airbag” lawsuit

p. 776

conflicts with the objectives of FMVSS 208, a standard authorized by the Act, and is therefore pre-empted by the Act.

In reaching our conclusion, we consider three subsidiary questions. First, does the Act’s express pre-emption provision pre-empt this lawsuit? We think not. Second, do ordinary pre-emption principles nonetheless apply? We hold that they do. Third, does this lawsuit actually conflict with FMVSS 208, hence with the Act itself? We hold that it does.

II

We first ask whether the Safety Act’s express pre-emption provision pre-empts this tort action. The provision reads as follows:

“Whenever a Federal motor vehicle safety standard established under this subchapter is in

effect, no State or political subdivision of a State shall have any authority either to establish, or to continue in effect, with respect to any motor vehicle or item of motor vehicle equipment[,] any safety standard applicable to the same aspect of performance of such vehicle or item of equipment which is not identical to the Federal standard.” 215 U.S.C. §1392(d) (1988 ed.).

American Honda points out that a majority of this Court has said that a somewhat similar statutory provision in a different federal statute—a provision that uses the word “requirements”—may well expressly pre-empt similar tort actions. Petitioners reply that this statute speaks of pre-empting a state-law “safety *standard*,” not a “requirement,” and that a tort action does not involve a safety *standard*. Hence, they conclude, the express pre-emption provision does not apply.

We need not determine the precise significance of the use of the word “standard,” rather than “requirement,” however, for the Act contains another provision, which resolves the disagreement. That provision, a broad “savings” clause, says that “[c]ompliance with” a federal safety standard “does not exempt any person from any liability under common law.” 15 U.S.C. §1397(k) (1988 ed.). The saving clause assumes that there are some significant number of common-law liability cases to save. And a reading of the express pre-emption provision that excludes common-law tort actions gives actual meaning to the saving clause’s literal language, while leaving adequate room for state tort law to operate—for example, where federal law creates only a floor, *i.e.*, a minimum safety standard. See, *e.g.*, Brief for United States as Amicus Curiae 21 (explaining that common-law claim that a vehicle is defectively designed because it lacks antilock brakes would not be pre-empted by 49 CFR §571.105 (1999), a safety standard establishing minimum requirements for brake performance). Without the saving clause, a broad reading of the express pre-emption provision arguably might pre-empt those actions, for, as we have just mentioned, it is possible to read the pre-emption provision, standing alone, as applying to standards imposed in common-law tort actions, as well as standards contained in state legislation or regulations. And if so, it would pre-empt all nonidentical state standards established in tort actions covering the same aspect of performance as an applicable federal standard, even if the federal

p. 777

standard merely established a minimum standard. On that broad reading of the pre-emption clause little, if any, potential “liability at common law” would remain. And few, if any, state tort actions would remain for the saving clause to save. We have found no convincing indication that Congress wanted to pre-empt, not only state statutes and regulations, but also common-law tort actions, in such circumstances. Hence the broad reading cannot be correct. The language of the pre-emption provision permits a narrow reading that excludes common-law actions. Given the presence of the saving clause, we conclude that the pre-emption clause must be so read.

III

We have just said that the saving clause at least removes tort actions from the scope of the express pre-emption clause. Does it do more? In particular, does it foreclose or limit the operation of ordinary pre-emption principles insofar as those principles instruct us to read statutes as pre-empting state laws (including common-law rules) that “actually conflict” with the statute or federal standards promulgated thereunder? . . .

Nothing in the language of the saving clause suggests an intent to save state-law tort actions that conflict with federal regulations. The words “[c]ompliance” and “does not exempt,” sound as if they simply bar a special kind of defense, namely, a defense that compliance with a federal standard automatically exempts a defendant from state law, whether the Federal Government meant that standard to be an absolute requirement or only a minimum one. See Restatement (Third) of Torts: Products Liability §4(b), Comment *e* (1997) (distinguishing between state-law compliance defense and a federal claim of pre-emption). It is difficult to understand why Congress would have insisted on a compliance-with-federal-regulation precondition to the provision’s applicability had it wished the Act to “save” all state-law tort actions, regardless of their potential threat to the objectives of federal safety standards promulgated under that Act. . . .

..

Why, in any event, would Congress not have wanted ordinary pre-emption principles to apply where an actual conflict with a federal objective is at stake? Some such principle is needed. In its absence, state law could impose legal duties that would conflict directly with federal regulatory mandates, say, by premising liability upon the presence of the very windshield retention requirements that federal law requires. . . .

IV

The basic question, then, is whether a common-law “no airbag” action like the one before us actually conflicts with FMVSS 208. We hold that it does.

In petitioners’ and the dissent’s view, FMVSS 208 sets a minimum airbag standard. As far as FMVSS 208 is concerned, the more airbags, and the sooner, the better. But that was not the Secretary’s view. The Department of Transportation’s (DOT’s) comments, which accompanied the promulgation of FMVSS 208, make clear that the standard deliberately provided the manufacturer with a range of

p. 778

choices among different passive restraint devices. Those choices would bring about a mix of different devices introduced gradually over time; and FMVSS 208 would thereby lower costs, overcome technical safety problems, encourage technological development, and win widespread consumer acceptance—all of which would promote FMVSS 208’s safety objectives.

A

[A review of the history of the regulation is omitted.]

B

Read in light of this history, DOT’s own contemporaneous explanation of FMVSS 208 makes clear that the 1984 version of FMVSS 208 reflected the following significant considerations. First, buckled up seatbelts are a vital ingredient of automobile safety. . . . Second, despite the enormous and unnecessary risks that a passenger runs by not buckling up manual lap and shoulder belts, more than 80% of front seat passengers would leave their manual seatbelts unbuckled. Third, airbags could make up for the dangers caused by unbuckled manual belts, but they could not make up for them entirely.

Fourth, passive restraint systems had their own disadvantages, for example, the dangers associated with, intrusiveness of, and corresponding public dislike for, nondetachable automatic belts. Fifth, airbags brought with them their own special risks to safety, such as the risk of danger to out-of-position occupants (usually children) in small cars. . . .

Sixth, airbags were expected to be significantly more expensive than other passive restraint devices, raising the average cost of a vehicle price \$320 for full frontal airbags over the cost of a car with manual lap and shoulder seatbelts (and potentially much more if production volumes were low). And the agency worried that the high replacement cost—estimated to be \$800—could lead car owners to refuse to replace them after deployment. . . .

FMVSS 208 reflected these considerations in several ways. Most importantly, that standard deliberately sought variety—a mix of several different passive restraint systems. It did so by setting a performance requirement for passive restraint devices and allowing manufacturers to choose among different passive restraint mechanisms, such as airbags, automatic belts, or other passive restraint technologies to satisfy that requirement. And DOT explained why FMVSS 208 sought the mix of devices that it expected its performance standard to produce. DOT wrote that it had *rejected* a proposed FMVSS 208 “all airbag” standard because of safety concerns (perceived or real) associated with airbags, which concerns threatened a “backlash” more easily overcome “if airbags” were “not the only way of complying.” It added that a mix of devices would help develop data on comparative effectiveness, would allow the industry time to overcome the safety problems and the high production costs associated with airbags, and would facilitate the development of alternative, cheaper, and safer passive restraint systems. And it would thereby build public confidence, necessary to avoid another interlock-type fiasco.

p. 779

The 1984 FMVSS 208 standard also deliberately sought a *gradual* phase-in of passive restraints. . . .

In effect, petitioners’ tort action depends upon its claim that manufacturers had a duty to install an airbag when they manufactured the 1987 Honda Accord. Such a state law—*i.e.*, a rule of state tort law imposing such a duty—by its terms would have required manufacturers of all similar cars to install airbags rather than other passive restraint systems, such as automatic belts or passive interiors. It thereby would have presented an obstacle to the variety and mix of devices that the federal regulation sought.

[Affirmed.]

STEVENS, J., dissenting.

Airbag technology has been available to automobile manufacturers for over 30 years. There is now general agreement on the proposition “that, to be safe, a car must have an airbag.” Indeed, current federal law imposes that requirement on all automobile manufacturers. The question raised by petitioners’ common-law tort action is whether that proposition was sufficiently obvious when Honda’s 1987 Accord was manufactured to make the failure to install such a safety feature actionable under theories of negligence or defective design. The Court holds that an interim regulation motivated by the Secretary of Transportation’s

desire to foster gradual development of a variety of passive restraint devices deprives state courts of jurisdiction to answer that question. I respectfully dissent from that holding, and especially from the Court's unprecedented extension of the doctrine of pre-emption. . . .

NOTES

1. State law “requirements” and common law duties. *Geier* was one of many cases that struggled to set the boundaries of the preemption doctrine. Nine years earlier, in *Cipollone v. Liggett Group, Inc.*, 505 U.S. 504, 521, 524 (1992), the Supreme Court set the stage for the modern developments when for the first time it interpreted federal preemptive “requirements” to include common law tort actions. More specifically, the Court held that plaintiff’s duty to warn claims against cigarette manufacturers were preempted under the Public Health Cigarette Smoking Act, 15 U.S.C. §§1331-1340, which in section 5(b) provided:

No requirement or prohibition based on smoking and health shall be imposed under State law with respect to the advertising or promotion of any cigarettes the packages of which are labeled in conformity with the provisions of this Act.

The Court rejected plaintiff’s claim that this provision only preempted claims based on state statutes and administrative rules, holding that “those words easily encompass obligations that take the form of common law rules.” Thereafter, the Court concluded that plaintiff’s failure to warn claims insofar as they “require a showing that respondents’ post-1969 advertising or promotions should have included additional, or more clearly stated, warnings . . . are pre-empted.” But this ruling did not preempt, for example, design defect, express warranty, or fraud claims.

p. 780

The Court turned its back on both *Cipollone* and *Geier* by giving a narrow reading to federal preemption in *Bates v. Dow Agrosciences LLC*, 544 U.S. 431, 442, 445, 454 (2005). There the petitioners, Texas peanut farmers, sued Dow claiming that their crops were damaged during the 2000 growing season when treated with Dow’s Strongarm pesticide, which they claimed stunted their crops and did not kill weeds. Strongarm was marketed with a warning that said: “Use of Strongarm is recommended in all areas where peanuts are grown.” The plaintiffs alleged that Strongarm was only appropriate in soils with a pH below 7.0, and not in Texas where the soil had a pH of 7.2. After the initiation of the plaintiffs’ suit, Dow changed its warning to read: “Do not apply Strongarm to soils with a pH of 7.2 or greater.” Stevens, J., held that the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), 7 U.S.C. §136 *et seq.* (2012), did not preempt the plaintiff’s claim. Its preemption provision provided in section 136v(b): “Such State shall not impose or continue in effect any requirements for labeling or packaging in addition to or different from those required under this subchapter.”

Stevens, J., first held that the states have “ample authority” to impose additional sanctions “for violating state rules that merely duplicate federal requirements.” He then denied that petitioners’ claims for defective design, defective manufacture, negligent testing, and breach of express warranty were preempted, but he

remanded the case to see if the plaintiff's duty to warn claims were preempted.

Would any of these claims have survived if Strongarm had been originally marketed with a warning that said the product was not to be used in soil whose pH was over 7.2? If not, then why doesn't the comprehensive federal control over warnings trigger the application of conflict preemption?

2. *Deference to the regulating federal agency.* In *Sprietsma v. Mercury Marine*, 537 U.S. 51, 54, 60 (2002), a unanimous Supreme Court held that the Federal Boat Safety Act of 1971, 46 U.S.C. §§4301-4311 (2012), and the regulations promulgated under it, did not preempt a state tort action brought on behalf of a decedent who was killed when she fell overboard from "an 18-foot ski boat equipped with a 115-horsepower outboard motor manufactured by [defendant]." As in *Geier*, the FBSA contained a preemption clause that forbade the state imposition of requirements that were not "identical" to those contained in the federal regulation. That clause was coupled with a savings clause for common law actions. As in *Geier*, the Secretary of Transportation conducted an exhaustive safety study, but refused to issue any regulations that mandated propeller guards because the data were insufficient to resolve the key tradeoff: "[G]iven current technology, feasible propeller guards might prevent penetrating injuries but increase the potential for blunt trauma caused by collision with the guard, which enlarges the boat's underwater profile." Nonetheless Stevens, J., allowed the action to go forward out of deference to the agency's explanation of its decision not to regulate:

The agency is likely to have a thorough understanding of its own regulation and its objectives and is "uniquely qualified" to comprehend the likely impact of state

p. 781

requirements. In the case before us today, the Solicitor General, joined by counsel for the Coast Guard, has informed us that the agency does not view the 1990 refusal to regulate or any subsequent regulatory actions by the Coast Guard as having any pre-emptive effect.

Should it matter that the Coast Guard waited until after the Supreme Court granted certiorari in *Sprietsma* to elaborate its view? Sharkey, Products Liability Preemption: An Institutional Approach, 76 Geo. Wash. L. Rev. 449 (2008), highlights the influence of the underlying federal regulator in preemption disputes.

3. *Geier revisited.* The continued vitality of *Geier* was tested in *Williamson v. Mazda Motor of America, Inc.*, 562 U.S. 323, 332 (2011). Thanh Williamson was a passenger in the rear aisle seat of a Mazda minivan. While wearing a lap belt, she was killed when the minivan was struck head-on by another car. FMVSS 208 requires auto manufacturers to install lap-and-shoulder belts on those seats located next to the doors or frames of any vehicle. But with respect to the inside rear seats, including Williamson's aisle seat, the regulation gave the manufacturers the choice of installing either lap belts or lap-and-shoulder belts. Williamson's estate claimed that Mazda should have installed lap-and-shoulder belts, not lap belts, on all rear inner seats. The trial court dismissed the tort claim; the California appellate court affirmed, concluding that, as in *Geier*, the choice explicitly reserved to the manufacturer under federal regulation preempted the state tort suit. The Supreme Court unanimously allowed the state tort claim to proceed. Breyer, J., explained: "Like the regulation in *Geier*, the regulation here leaves the manufacturer with a choice. And, like the tort suit in *Geier*, the tort suit here would restrict that choice. But unlike *Geier*, we do not believe

here that choice is a significant regulatory objective,” because the agency’s choice did not involve the timing of the introduction of a new technology, such as air bags, into the market. Continuing the Court’s trend of agency deference, Breyer, J., was swayed by “the promulgating agency’s contemporaneous explanation of its objectives, and the agency’s current views of the regulation’s pre-emptive effect.” Should an agency be required to state in advance whether it attaches preemptive weight to its regulation? Is it ever safe for a manufacturer to take advantage of the low-cost option left to it under federal regulation?

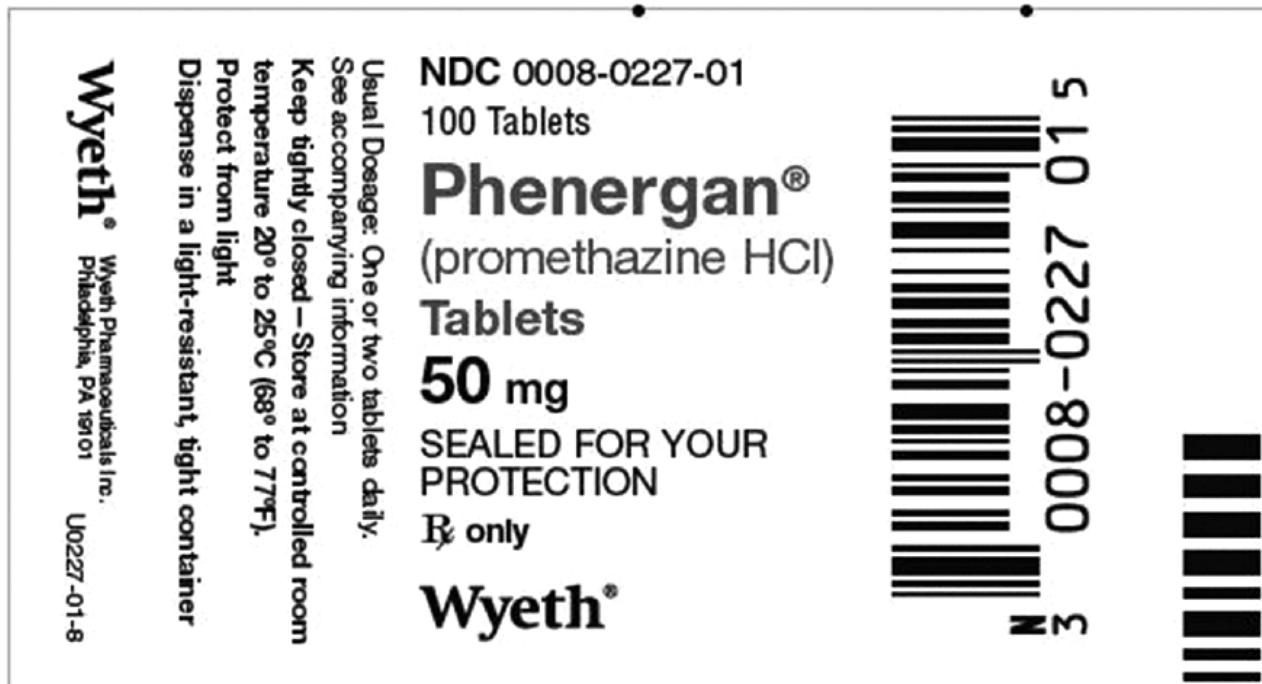

WYETH v. LEVINE

555 U.S. 555 (2009)

STEVENS, J. Directly injecting the drug Phenergan into a patient’s vein creates a significant risk of catastrophic consequences. A Vermont jury found that petitioner Wyeth, the manufacturer of the drug, had failed to provide an adequate warning of that risk and awarded damages to respondent Diana Levine to compensate her for the amputation of her arm. The warnings on Phenergan’s label had been deemed sufficient by the federal Food and Drug Administration (FDA) when it approved Wyeth’s new drug application in 1955 and when it later approved changes in the drug’s labeling. The question we must decide is

p. 782

whether the FDA’s approvals provide Wyeth with a complete defense to Levine’s tort claims. We conclude that they do not.

Phenergan label

Source: National Institutes of Health

Phenergan is Wyeth's brand name for promethazine hydrochloride, an antihistamine used to treat nausea. The injectable form of Phenergan can be administered intramuscularly or intravenously, and it can be administered intravenously through either the "IV-push" method, whereby the drug is injected directly into a patient's vein, or the "IV-drip" method, whereby the drug is introduced into a saline solution in a hanging intravenous bag and slowly descends through a catheter inserted in a patient's vein. The drug is corrosive and causes irreversible gangrene if it enters a patient's artery.

Levine's injury resulted from an IV-push injection of Phenergan. On April 7, 2000, as on previous visits to her local clinic for treatment of a migraine headache, she received an intramuscular injection of Demerol for her headache and Phenergan for her nausea. Because the combination did not provide relief, she returned later that day and received a second injection of both drugs. This time, the physician assistant administered the drugs by the IV-push method, and Phenergan entered Levine's artery, either because the needle penetrated an artery directly or because the drug escaped from the vein into surrounding tissue (a phenomenon called "perivascular extravasation") where it came in contact with arterial blood. As a result, Levine developed gangrene, and doctors amputated

p. 783

first her right hand and then her entire forearm. In addition to her pain and suffering, Levine incurred substantial medical expenses and the loss of her livelihood as a professional musician.

[In part the warning provided:

Due to the close proximity of arteries and veins in the areas most commonly used for intravenous injection, extreme care should be exercised to avoid perivascular extravasation or inadvertent intra-arterial injection. Reports compatible with inadvertent intra-arterial injection of Phenergan Injection, usually in conjunction with other drugs intended for intravenous use, suggest that pain, severe chemical irritation, severe spasm of distal vessels, and resultant gangrene requiring amputation are likely under such circumstances. . . . Phenergan Injection should be given in a concentration no greater than 25 mg per mL and at a rate not to exceed 25 mg per minute. When administering any irritant drug intravenously, it is usually preferable to inject it through the tubing of an intravenous infusion set that is known to be functioning satisfactorily. In the event that a patient complains of pain during intended intravenous injection of Phenergan Injection, the injection should be stopped immediately to provide for evaluation of possible arterial placement or perivascular extravasation.

The physician's assistant injected the Phenergan into an artery at a rate of 100 mg per minute. She did not use any tubing and did not stop when the patient complained of pain.]

After settling claims against the health center and clinician, Levine brought an action for damages against Wyeth, relying on common-law negligence and strict-liability theories. Although Phenergan's labeling warned of the danger of gangrene and amputation following inadvertent intra-arterial injection, Levine alleged that the labeling was defective because it failed to instruct clinicians to use the IV-drip method of intravenous administration instead of the higher risk IV-push method. More broadly, she alleged that Phenergan is not reasonably safe for intravenous administration because the foreseeable risks of gangrene

and loss of limb are great in relation to the drug's therapeutic benefits. . . .

[The jury awarded the plaintiff \$7,400,000, which was reduced by the \$700,000 the plaintiff had obtained in settlement from the health clinic.]

II

. . . Our [analysis] must be guided by two cornerstones of our pre-emption jurisprudence. First, "the purpose of Congress is the ultimate touchstone in every pre-emption case." Second, "[i]n all pre-emption cases, and particularly in those in which Congress has 'legislated . . . in a field which the States have traditionally occupied,' . . . we 'start with the assumption that the historic police powers of the States were not to be superseded by the Federal Act unless that was the clear and manifest purpose of Congress.'"

[A review of the history of federal regulation of drugs and drug labeling is omitted.]

p. 784

III

Wyeth first argues that Levine's state-law claims are pre-empted because it is impossible for it to comply with both the state-law duties underlying those claims and its federal labeling duties. The FDA's premarket approval of a new drug application includes the approval of the exact text in the proposed label. Generally speaking, a manufacturer may only change a drug label after the FDA approves a supplemental application. There is, however, an FDA regulation that permits a manufacturer to make certain changes to its label before receiving the agency's approval. Among other things, this "changes being effected" (CBE) regulation provides that if a manufacturer is changing a label to "add or strengthen a contraindication, warning, precaution, or adverse reaction" or to "add or strengthen an instruction about dosage and administration that is intended to increase the safe use of the drug product," it may make the labeling change upon filing its supplemental application with the FDA; it need not wait for FDA approval.

. . . Levine . . . present[ed] evidence of at least 20 incidents prior to her injury in which a Phenergan injection resulted in gangrene and an amputation. After the first such incident came to Wyeth's attention in 1967, it notified the FDA and worked with the agency to change Phenergan's label. In later years, as amputations continued to occur, Wyeth could have analyzed the accumulating data and added a stronger warning about IV-push administration of the drug.

. . . Wyeth suggests that the FDA, rather than the manufacturer, bears primary responsibility for drug labeling. Yet through many amendments to the FDCA and to FDA regulations, it has remained a central premise of federal drug regulation that the manufacturer bears responsibility for the content of its label at all times. It is charged both with crafting an adequate label and with ensuring that its warnings remain adequate as long as the drug is on the market. . . .

Of course, the FDA retains authority to reject labeling changes made pursuant to the CBE regulation in its review of the manufacturer's supplemental application, just as it retains such authority in reviewing all supplemental applications. But absent clear evidence that the FDA would not have approved a change to

Phenergan's label, we will not conclude that it was impossible for Wyeth to comply with both federal and state requirements. . . .

Impossibility pre-emption is a demanding defense. On the record before us, Wyeth has failed to demonstrate that it was impossible for it to comply with both federal and state requirements. The CBE regulation permitted Wyeth to unilaterally strengthen its warning, and the mere fact that the FDA approved Phenergan's label does not establish that it would have prohibited such a change.

IV

Wyeth also argues that requiring it to comply with a state-law duty to provide a stronger warning about IV-push administration would obstruct the purposes and objectives of federal drug labeling regulation. Levine's tort claims, it maintains, are pre-empted because they interfere with "Congress's purpose to entrust an expert agency to make drug labeling decisions that strike a balance between

p. 785

competing objectives." We find no merit in this argument, which relies on an untenable interpretation of congressional intent and an overbroad view of an agency's power to pre-empt state law.

Wyeth contends that the FDCA establishes both a floor and a ceiling for drug regulation: Once the FDA has approved a drug's label, a state-law verdict may not deem the label inadequate, regardless of whether there is any evidence that the FDA has considered the stronger warning at issue. The most glaring problem with this argument is that all evidence of Congress' purposes is to the contrary. Building on its 1906 Act, Congress enacted the FDCA to bolster consumer protection against harmful products. Congress did not provide a federal remedy for consumers harmed by unsafe or ineffective drugs in the 1938 statute or in any subsequent amendment. Evidently, it determined that widely available state rights of action provided appropriate relief for injured consumers. It may also have recognized that state-law remedies further consumer protection by motivating manufacturers to produce safe and effective drugs and to give adequate warnings.

If Congress thought state-law suits posed an obstacle to its objectives, it surely would have enacted an express pre-emption provision at some point during the FDCA's 70-year history. . . . Its silence on the issue, coupled with its certain awareness of the prevalence of state tort litigation, is powerful evidence that Congress did not intend FDA oversight to be the exclusive means of ensuring drug safety and effectiveness.

. . .

[Justice Stevens then rejects the argument that a 2006 preamble to an FDA regulation is sufficient to interpret the FDCA as setting "both a 'floor' and a 'ceiling,'" so that "FDA approval of labeling . . . preempts conflicting or contrary State law." He then held that the preamble is "at odds with what evidence we have of Congress' purposes, and . . . reverses the FDA's own longstanding position without providing a reasoned explanation, including any discussion of how state law has interfered with the FDA's regulation of drug labeling during decades of coexistence."]

In short, Wyeth has not persuaded us that failure-to-warn claims like Levine's obstruct the federal

regulation of drug labeling. Congress has repeatedly declined to pre-empt state law, and the FDA's recently adopted position that state tort suits interfere with its statutory mandate is entitled to no weight. Although we recognize that some state-law claims might well frustrate the achievement of congressional objectives, this is not such a case.

[Affirmed.]

ALITO, J. , dissenting.

I

The court frames the question presented as a “narro[w]” one—namely, whether Wyeth has a duty to provide “an adequate warning about using the IV-push method” to administer Phenergan. But that ignores the antecedent question of who—the FDA or a jury in Vermont—has the authority and responsibility for determining the “adequacy” of Phenergan’s warnings. Moreover, it is unclear

p. 786

how a “stronger” warning could have helped respondent; after all, the physician’s assistant who treated her disregarded at least six separate warnings that are already on Phenergan’s labeling, so respondent would be hard pressed to prove that a seventh would have made a difference.

More to the point, the question presented by this case is not a “narrow” one, and it does not concern whether Phenergan’s label should bear a “stronger” warning. Rather, the real issue is whether a state tort jury can countermand the FDA’s considered judgment that Phenergan’s FDA-mandated warning label renders its intravenous (IV) use “safe.” Indeed, respondent’s amended complaint alleged that Phenergan is “not reasonably safe for intravenous administration,” respondent’s attorney told the jury that Phenergan’s label should say, ““Do not use this drug intravenously,’””; respondent’s expert told the jury, “I think the drug should be labeled ‘Not for IV use,’” and during his closing argument, respondent’s attorney told the jury, “Thank God we don’t rely on the FDA to . . . make the safe[ty] decision. You will make the decision. . . . The FDA doesn’t make the decision, you do.”

Federal law, however, *does* rely on the FDA to make safety determinations like the one it made here. The FDA has long known about the risks associated with IV push in general and its use to administer Phenergan in particular. Whether wisely or not, the FDA has concluded—over the course of extensive, 54-year-long regulatory proceedings—that the drug is “safe” and “effective” when used in accordance with its FDA-mandated labeling. The unfortunate fact that respondent’s healthcare providers ignored Phenergan’s labeling may make this an ideal medical malpractice case. But turning a common-law tort suit into a “frontal assault” on the FDA’s regulatory regime for drug labeling upsets the well-settled meaning of the Supremacy Clause and our conflict pre-emption jurisprudence.

II

A

To the extent that the purpose of Congress is the ultimate touchstone in every preemption case, Congress

made its “purpose” plain in authorizing the FDA—not state tort juries—to determine when and under what circumstances a drug is “safe.” “[T]he process for approving new drugs is at least as rigorous as the premarket approval process for medical devices,” *Riegel v. Medtronic, Inc.*, 552 U.S. 312, 343 (2008) (Ginsburg, J., dissenting), and we held that the latter pre-empted a state-law tort suit that conflicted with the FDA’s determination that a medical device was “safe.” [Justice Alito sets forth the lengthy FDCA approval process.]

III

[Part A provides a detailed account of the FDA’s regulatory oversight of the Phenergan warning. Alito, J., argues that the FDA did in fact consider the costs and benefits associated with IV push.]

p. 787

B

Given the “balance” that the FDA struck between the costs and benefits of administering Phenergan via IV push, *Geier* compels the pre-emption of tort suits (like this one) that would upset that balance. The contrary conclusion requires turning yesterday’s dissent into today’s majority opinion. . . .

Geier does not countenance the use of state tort suits to second-guess the FDA’s labeling decisions. And the Court’s contrary conclusion has potentially far-reaching consequences.

C

By their very nature, juries are ill-equipped to perform the FDA’s cost-benefit-balancing function. . . . [J]uries tend to focus on the risk of a particular product’s design or warning label that arguably contributed to a particular plaintiff’s injury, not on the overall benefits of that design or label; “the patients who reaped those benefits are not represented in court.” Indeed, patients like respondent are the only ones whom tort juries ever see, and for a patient like respondent—who has already suffered a tragic accident—Phenergan’s risks are no longer a matter of probabilities and potentialities.

In contrast, the FDA has the benefit of the long view. Its drug-approval determinations consider the interests of all potential users of a drug, including “those who would suffer without new medical [products]” if juries in all 50 States were free to contradict the FDA’s expert determinations. And the FDA conveys its warnings with one voice, rather than whipsawing the medical community with 50 (or more) potentially conflicting ones. After today’s ruling, however, parochialism may prevail.

* * *

To be sure, state tort suits can peacefully coexist with the FDA’s labeling regime, and they have done so for decades. But this case is far from peaceful coexistence. The FDA told Wyeth that Phenergan’s label renders its use “safe.” But the State of Vermont, through its tort law, said: “Not so.”

The state-law rule at issue here is squarely pre-empted. Therefore, I would reverse the judgment of the

NOTES

1. Drug and medical device preemption. Levine forms a key part in a succession of high-stakes litigation over the extensive federal regulatory scheme for new drugs and medical devices. The saga starts with *Medtronic, Inc. v. Lohr*, 518 U.S. 470, 489 (1996), in which the plaintiff sued on a variety of failure to warn and design defect theories when her pacemaker failed, requiring emergency surgery. The Medical Device Amendment Act (MDA), 21 U.S.C. §360k(a), reads:

[N]o State or political subdivision of a State may establish or continue in effect with respect to a device intended for human use any requirement (1) which is different from, or in addition to, any requirement applicable under [the MDA] to the

p. 788

device, and (2) which relates to the safety or effectiveness of the device or to any other matter included in a requirement applicable to the device under [the MDA].

The pre-market notification process is an abbreviated review of the product lasting an average of 20 hours, under which the FDA undertakes no tests or systematic review of product safety, but allows for the marketing of the product as long as it is “substantially equivalent” to a pre-1976 product already on the market, at least until the earlier product is required to undergo a pre-market approval (PMA) process. Stevens, J., relied on *Rice*’s presumption against preemption to hold that the pre-market notification process did not preempt either the duty to warn or manufacturing defect claims, but only prohibited those design defect actions that specifically targeted medical devices for special treatment. “Given the ambiguities in the statute and the scope of the preclusion that would occur otherwise, we cannot accept Medtronic’s argument that by using the term ‘requirement,’ Congress clearly signaled its intent to deprive States of any role in protecting consumers from the dangers inherent in many medical devices.”

The preemptive effect of the MDA was back before the Supreme Court in *Riegel v. Medtronic, Inc.*, 552 U.S. 312 (2008). There the plaintiff was injured when a cardiologist used Medtronic’s FDA-approved Evergreen Balloon Catheter to perform an angioplasty—designed to clear clogged arteries—at a pressure of ten atmospheres when it was only rated for use at eight atmospheres. The overinflated balloon ruptured inside the plaintiff, causing serious injuries. The question before the Supreme Court was not the state law tort question whether the overinflation counted as a product misuse that severed causal connection. Rather it was whether, in light of *Lohr*, the Medical Device Act “preempts state-law claims seeking damages for injuries caused by medical devices that received premarket approval from the Food and Drug Administration.” Unlike pre-market notification, the PMA process involves an exhaustive review of product design and data, because the balloon catheter was classified as a potentially dangerous, or Class III, device that required intensive scrutiny because of the serious risk its use posed to human life and health. As in *Lohr*, the Court assumed that the “requirements” under state law included private law actions. Scalia, J., in an eight-to-one decision (with Ginsburg, J., dissenting) found that the “rigorous process” of FDA review,

which required an average of 1,200 hours per submission, dictated preemption. He noted that a jury should not be allowed to second guess the explicit decision of the agency, which included extensive post-market surveillance and regulated product advertisement.

Academic writing has taken varying positions on FDA preemption. Nagareda, *FDA Preemption: When Tort Law Meets the Administrative State*, 1 J. Tort L. Art. 4 (2006), proposes that FDA preemption be conditioned on the willingness of drug companies to supply further information about their products to the public at large. In response, see Epstein, *Why the FDA Must Preempt Tort Litigation: A Critique of Chevron Deference and a Response to Richard Nagareda*, 1 J. Tort L. Art. 5 (2006), urging a return to the field preemption doctrine. Sharkey, *Products Liability Preemption: An Institutional Approach*, *supra* at 669,

p. 789

suggests that the court should scrutinize the agency record and give deference to the agency only to the extent that the agency considered the precise risk at issue in the suit. Schuck, *The FDA Preemption of State Tort Law in Drug Regulation: Finding the Sweet Spot*, 13 Roger Williams U. L. Rev. 73, 93 (2008), echoes these concerns:

Juries have many virtues: lay common sense, institutional independence, knowledge of community standards, an unbiased desire for accuracy and fairness, and others. Unfortunately, however, the ability to process detailed scientific research information and complex risk-risk tradeoffs, and to make or second-guess technocratic decisions about drug design and labeling, is not among them.

For a full-bore attack, see Epstein, *What Tort Theory Tells Us About Federal Preemption: The Tragic Saga of *Wyeth v. Levine**, 65 N.Y.U. Ann. Surv. Am. L. 485 (2010). For an unqualified defense of state tort juries, relied on by Stevens, J., see Kessler & Vladeck, *A Critical Examination of the FDA's Efforts to Preempt Failure-to-Warn Claims*, 96 Geo. L.J. 461, 463 (2008).

2. *Levine's "clear evidence" rule revisited.* In *Merck Sharp & Dohme Corp. v. Albrecht*, 139 S. Ct. 1668 (2019), the Supreme Court clarified the "clear evidence" standard articulated in *Levine*, explaining:

"Clear evidence" . . . is evidence that shows the court that the drug manufacturer fully informed the FDA of the justifications for the warning required by state law and that the FDA, in turn, informed the drug manufacturer that the FDA would not approve a change to the drug's label to include that warning.

The Court also held that judges, rather than juries, should determine what constitutes "clear evidence." Breyer, J., explained:

The complexity of the . . . law helps to illustrate why we answer this question by concluding that the question is a legal one for the judge, not a jury. The question often involves the use of legal skills to determine whether agency disapproval fits facts that are not in dispute. Moreover, judges, rather than lay juries, are better equipped to evaluate the nature and scope of an agency's determination. Judges are experienced in [t]he construction of written instruments,

such as those normally produced by a federal agency to memorialize its considered judgments. And judges are better suited than are juries to understand and to interpret agency decisions in light of the governing statutory and regulatory context. To understand the question as a legal question for judges makes sense given the fact that judges are normally familiar with principles of administrative law. Doing so should produce greater uniformity among courts; and greater uniformity is normally a virtue when a question requires a determination concerning the scope and effect of federal agency action.

3. *Vaccines and preemption.* The case for preemption of tort law claims is stronger for vaccines than for other pharmaceutical drugs. First, the National Childhood Vaccine Injury Act of 1986 includes an express preemption provision:

p. 790

No vaccine manufacturer shall be liable in a civil action for damages arising from a vaccine-related injury or death associated with the administration of a vaccine . . . if the injury or death resulted from side effects that were unavoidable even though the vaccine was properly prepared and was accompanied by proper directions and warnings.

42 U.S.C. §300aa-22(b)(1) (2012).

Second, Congress established a no-fault vaccine injury compensation fund to provide substitute remedies. See Chapter 10, *infra* at 912.

In *Bruesewitz v. Wyeth LLC*, 562 U.S. 223, 239, 251 (2011), Hannah, a seemingly healthy infant, suffered violent seizures following her injection with Tri-Immunol, a “whole cell” diphtheria, tetanus, and pertussis (DTP) vaccine manufactured by Wyeth. The Bruesewitzes claimed that Tri-Immunol was defective and that Wyeth had, at the relevant time, an approved license for Tri-Solgen, an alternative, safer “fractionated” DTP vaccine.

Scalia, J., writing for a five-member majority, engaged in a close textualist reading of the “concessive subordinate clause,” to conclude that the statute categorically preempts liability for design defects, while leaving intact liability for manufacturing defects and failure to warn claims. According to Scalia, J., Congress intended to impose this “quid pro quo”: “The vaccine manufacturers fund from their own sales an informal, efficient compensation program for vaccine injuries; in exchange they avoid costly tort litigation and the occasional disproportionate jury verdict.” And (sounding a theme similar to that of Alito, J., in his *Levine* dissent) Congress expressed a preference, “a sensible choice to leave complex epidemiological judgments about vaccine design to the FDA and the National Vaccine Program rather than juries.” Sotomayor, J., dissented on the ground that “Congress must . . . have intended a vaccine manufacturer to demonstrate in each civil action that the particular side effects of a vaccine’s design were ‘unavoidable[,]’” and the majority’s alternative reading “leaves a regulatory vacuum in which no one ensures that vaccine manufacturers adequately take account of scientific and technological advancements when designing or distributing their products.” How should this preemption provision apply to “avoidable” side effects? Does the provision do any work if the FDA warnings are not deemed proper in all cases?

4. Generic drugs and preemption. Should the fact that generic drugs are subject to a different regulatory framework from brand-name drugs affect the preemption analysis? Instead of a lengthy pre-market approval process used for brand-name drugs, generics go through an abbreviated review process that tests the product only for bioequivalence with its branded counterpart. The packaging for the generic must also be sent to the FDA, 21 U.S.C. §355(j)(2)(A)(v), and the label for the generic must match the label for the branded drug. 21 C.F.R. §314.127(a)(7).

In *PLIVA, Inc. v. Mensing*, 131 S. Ct. 2567, 2581 (2011), Gladys Mensing and Julie Demahy sued the generic drug manufacturers of metoclopramide for failing to adequately warn of the danger that long-term use of the drug could result in

p. 791

tardive dyskinesia, a severe neurological disorder. The manufacturers raised preemption as a defense, arguing that, because the federal statutes and FDA regulations required them to use the same labeling as their brand-name counterparts, it was impossible for them to comply with both federal law and any state tort law duty that required them to use a different label. In a sharply divided five-to-four decision, Thomas, J., upheld the impossibility preemption defense. Thomas, J., recognized that immunizing generic but not brand-name drug manufacturers from state tort liability “makes little sense” insofar as afflicted individuals who took generics drugs are denied the remedies available to persons who receive brand-name drugs. But he insisted that it was not the Court’s role to correct or reinterpret statutory schemes established by Congress that clearly preempted claims against the generic manufacturers. Sotomayor, J., again wrote in dissent, claiming that the majority opinion had cut back on the narrow impossibility defense in *Levine* given that “generic manufacturers of metoclopramide (Manufacturers) have shown only that they *might* have been unable to comply with both federal law and their state-law duties to warn respondents Gladys Mensing and Julie Demahy.”

More recently, in *Mutual Pharmaceutical Co., Inc. v. Bartlett*, 570 U.S. 472 (2013), Alito, J., held (in another sharply divided five-to-four decision) “that [the New Hampshire] state-law design-defect claims that turn on the adequacy of a drug’s warnings are pre-empted by federal law under *PLIVA*.” In so doing, he noted that impossibility preemption was appropriate because it precluded actions that required the generic drug manufacturer either to redesign the drug or to strengthen its warning. Breyer, J., dissented on the ground that the state law litigation could properly “supplement” the FDA’s regulatory activities.

Should it make a difference that generic manufacturers may market their drugs if they meet a statutory requirement that they be “the same” as the branded drug? Is uniformity in warnings important? Can it be preserved if each of ten or more generic manufacturers has an independent duty to update warnings?

Notes

*¹ [The defendant in *Larsen* received a unanimous verdict after a three-week trial, having introduced scientific evidence that the plaintiff had not been hit by the steering column. For a discussion of the expert evidence introduced at trial, see Bowman, Defense of an Auto Design Negligence Case, 10 For the Defense, No. 5, May 1969.—Eds.]

⁸ One commentator has observed that, in addition to the deficiencies in the “unreasonably dangerous” terminology noted in

Cronin, the Restatement's language is potentially misleading because “[i]t may suggest an idea like ultrahazardous, or abnormally dangerous, and thus give rise to the impression that the plaintiff must prove that the product was unusually or extremely dangerous.” (Wade, On the Nature of Strict Tort Liability for Products, 44 Miss. L.J. 825, 832 (1973).) We agree with this criticism and believe it constitutes a further reason for refraining from utilizing the “unreasonably dangerous” terminology in defining a defective product.

⁷ MacDonald stated at trial that her gynecologist had informed her only that oral contraceptives might cause bloating, and had not advised her of the increased risk of stroke associated with consumption of birth control pills. The physician was not joined as a defendant in this action, and no questions relating to any potential liability on his part are before us. MacDonald further testified at trial that she had read both the warning on the Dialpak tablet dispenser as well as the booklet which she received from her gynecologist.

¹³ This opinion does not diminish the prescribing physician's duty to “disclose in a reasonable manner all significant medical information that the physician possesses or reasonably should possess that is material to an intelligent decision by the patient whether to” take “the pill.” Harnish v. Children's Hosp. Medical Center, 439 N.E.2d 240 (Mass. 1982).

¹⁷ The Reporters' Note to the Restatement (Third) of Torts: Products Liability §2(c) comment *m*, at 106 (1998), lists four States taking the position that a manufacturer is charged with a duty to warn of risks without regard to whether the manufacturer knew or reasonably should have known of the risks, including Massachusetts; Hawaii; Pennsylvania; Washington.

CHAPTER 9

Damages

Section A. Introduction

Section B. Recoverable Elements of Damages

McDougald v. Garber

O'Shea v. Riverway Towing Co.

Duncan v. Kansas City Southern Railway

Section C. Wrongful Death and Loss of Consortium

Section D. Punitive Damages

Kemezy v. Peters

State Farm Mutual Automobile Insurance Co. v. Campbell

Section E. Litigation Financing

Section F. Collateral Benefits

Harding v. Town of Townshend

SULLIVAN v. OLD COLONY STREET RY.

83 N.E. 1091, 1092 (Mass. 1908)

RUGG, C.J. The rule of damages is a practical instrumentality for the administration of justice. The principle on which it is founded is compensation. Its object is to afford the equivalent in money for the actual loss caused by the wrong of another. Recurrence to this fundamental conception tests the soundness of claims for the inclusion of new elements of damage.

ZIBBELL v. SOUTHERN PACIFIC CO.

116 P. 513, 520 (Cal. 1911)

HENSHAW, J. No rational being would change places with the injured man for an amount of gold that would fill the room of the court, yet no lawyer would contend that such is the legal measure of damages.

SECTION A. INTRODUCTION

Proof of damages is an essential element of the plaintiff's case in most civil litigation. When liability is clear, both sides will judge their success by the size of the verdict. The plaintiff will suffer a major defeat if she receives a low verdict when a high one was expected. The converse is true for the defendant. In this day of potential million-dollar verdicts, it is routine for both sides to have medical and economic experts testify on three critical elements of damages: pain and suffering, medical expenses, and lost earnings attributable to the harm. For each head of damages, a jury must take into account both past and future losses. Often substantial, concrete evidence

p. 794

is available for past losses, but only estimates, frequently verging on guesswork, are available for future injuries, the duration and severity of which may be unknown.

The difficulties in making damage calculations should not cause us to lose sight of their essential function within the tort system. Within a system of corrective justice, damages are meant, as Rugg, C.J., suggests, to place the plaintiff in the position that she would have enjoyed if the tort had never been committed. Over a wide range of cases, it works fairly well, but in extreme cases (of which death is paramount) no amount of money serves that function, even though some amount must be chosen by a jury and ratified by a court. Damages are also crucial to the deterrence function of tort law because they set the "prices" defendants must pay for engaging in their chosen activities. If damage awards are set too low, such that defendants do not fully internalize the losses they create, they will not be induced to take adequate care, and they may engage in excessively risky activities. Yet if damage awards are set too high, defendants will be overly cautious and may be discouraged from engaging in activities that promise private and social benefits. To be sure, too much can be made of the deterrent and control function of damages, given the host of other sanctions—injunctions, licenses, inspections, and fines—that serve to curb harmful behavior. But even though these sanctions from time to time intrude, the tort damage remedy remains one constant feature in our system of social control. Does the ideal amount of damages in, say, a wrongful death case compute the same way under a compensatory and a deterrence theory? If not, which approach should be followed and why?

The topic of damages also includes some of the most controversial areas of tort law and intersects a number of critical institutional features of the tort system. It is necessary to consider the special rules governing the loss of consortium, wrongful death, and—with ever greater constitutional overtones—punitive damages. From an institutional perspective, in the typical tort action today, the plaintiff's lawyer receives compensation in the form of a contingency fee taken out of the money that plaintiff is awarded, either by settlement or judgment. To what extent should damage awards be adjusted to reflect these legal fees or should alternative methods of litigation financing—such as those available in certain other common law countries—be considered? Finally, many cases also raise questions of mitigation of damages and setoffs for payments from collateral sources, such as first-party health plans, that are important to understand given the pervasive role of insurance in modern tort litigation.

SECTION B. RECOVERABLE ELEMENTS OF DAMAGES

1. Pain and Suffering

MCDOUGALD v. GARBER

536 N.E.2d 372 (N.Y. 1989)

WACHTLER, C.J. This appeal raises fundamental questions about the nature and role of nonpecuniary damages in personal injury litigation. By nonpecuniary

p. 795

damages, we mean those damages awarded to compensate an injured person for the physical and emotional consequences of the injury, such as pain and suffering and the loss of the ability to engage in certain activities. Pecuniary damages, on the other hand, compensate the victim for the economic consequences of the injury, such as medical expenses, lost earnings and the cost of custodial care.

The specific questions raised here deal with assessment of nonpecuniary damages and are (1) whether some degree of cognitive awareness is a prerequisite to recovery for loss of enjoyment of life and (2) whether a jury should be instructed to consider and award damages for loss of enjoyment of life separately from damages for pain and suffering. We answer the first question in the affirmative and the second question in the negative.

I

On September 7, 1978, plaintiff Emma McDougald, then 31 years old, underwent a Caesarean section and tubal ligation at New York Infirmary. Defendant Garber performed the surgery; defendants Armengol and Kulkarni provided anesthesia. During the surgery, Mrs. McDougald suffered oxygen deprivation which resulted in severe brain damage and left her in a permanent comatose condition. This action was brought by Mrs. McDougald and her husband, suing derivatively, alleging that the injuries were caused by the defendants' acts of malpractice.

A jury found all defendants liable and awarded Emma McDougald a total of \$9,650,102 in damages, including \$1,000,000 for conscious pain and suffering and a separate award of \$3,500,000 for loss of the pleasures and pursuits of life. The balance of the damages awarded to her were for pecuniary damages—lost earnings and the cost of custodial and nursing care. Her husband was awarded \$1,500,000 on his derivative claim for the loss of his wife's services. On defendants' posttrial motions, the Trial Judge reduced the total award to Emma McDougald to \$4,796,728 by striking the entire award for future nursing care (\$2,353,374) and by reducing the separate awards for conscious pain and suffering and loss of the pleasures and pursuits of life to a single award of \$2,000,000. Her husband's award was left intact. On cross appeals, the Appellate Division affirmed and later granted defendants leave to appeal to this court.

II

We note at the outset that the defendants' liability for Emma McDougald's injuries is unchallenged here.

Also unchallenged are the awards in the amount of \$770,978 for loss of earnings and \$2,025,750 for future custodial care—that is, the pecuniary damage awards that survived defendants' posttrial motions.

What remains in dispute, primarily, is the award to Emma McDougald for nonpecuniary damages. At trial, defendants sought to show that Mrs. McDougald's injuries were so severe that she was incapable of either experiencing pain or appreciating her condition. Plaintiffs, on the other hand, introduced proof that

p. 796

Mrs. McDougald responded to certain stimuli to a sufficient extent to indicate that she was aware of her circumstances. Thus, the extent of Mrs. McDougald's cognitive abilities, if any, was sharply disputed.

The parties and the trial court agreed that Mrs. McDougald could not recover for pain and suffering unless she were conscious of the pain. Defendants maintained that such consciousness was also required to support an award for loss of enjoyment of life. The court, however, accepted plaintiffs' view that loss of enjoyment of life was compensable without regard to whether the plaintiff was aware of the loss. Accordingly, because the level of Mrs. McDougald's cognitive abilities was in dispute, the court instructed the jury to consider loss of enjoyment of life as an element of nonpecuniary damages separate from pain and suffering. . . .

We conclude that the court erred, both in instructing the jury that Mrs. McDougald's awareness was irrelevant to their consideration of damages for loss of enjoyment of life and in directing the jury to consider that aspect of damages separately from pain and suffering.

III

We begin with the familiar proposition that an award of damages to a person injured by the negligence of another is to compensate the victim, not to punish the wrongdoer. The goal is to restore the injured party, to the extent possible, to the position that would have been occupied had the wrong not occurred. To be sure, placing the burden of compensation on the negligent party also serves as a deterrent, but purely punitive damages—that is, those which have no compensatory purpose—are prohibited unless the harmful conduct is intentional, malicious, outrageous, or otherwise aggravated beyond mere negligence.

Damages for nonpecuniary losses are, of course, among those that can be awarded as compensation to the victim. This aspect of damages, however, stands on less certain ground than does an award for pecuniary damages. An economic loss can be compensated in kind by an economic gain; but recovery for noneconomic losses such as pain and suffering and loss of enjoyment of life rests on “the legal fiction that money damages can compensate for a victim’s injury.” We accept this fiction, knowing that although money will neither ease the pain nor restore the victim’s abilities, this device is as close as the law can come in its effort to right the wrong. We have no hope of evaluating what has been lost, but a monetary award may provide a measure of solace for the condition created.

Our willingness to indulge this fiction comes to an end, however, when it ceases to serve the compensatory goals of tort recovery. When that limit is met, further indulgence can only result in assessing damages that are punitive. The question posed by this case, then, is whether an award of damages for loss of enjoyment of life to a person whose injuries preclude any awareness of the loss serves a compensatory purpose. We conclude that it does not.

Simply put, an award of money damages in such circumstances has no meaning or utility to the injured person. An award for the loss of enjoyment of life “cannot provide [such a victim] with any consolation or ease any burden resting on him. . . . He cannot spend it upon necessities or pleasures. He cannot

p. 797

experience the pleasure of giving it away.” (Flannery v. United States, 4th Cir., 718 F.2d 108, 111 (1983)).

We recognize that, as the trial court noted, requiring some cognitive awareness as a prerequisite to recovery for loss of enjoyment of life will result in some cases “in the paradoxical situation that the greater the degree of brain injury inflicted by a negligent defendant, the smaller the award the plaintiff can recover in general damages.” The force of this argument, however—the temptation to achieve a balance between injury and damages—has nothing to do with meaningful compensation for the victim. Instead, the temptation is rooted in a desire to punish the defendant in proportion to the harm inflicted. However relevant such retributive symmetry may be in the criminal law, it has no place in the law of civil damages, at least in the absence of culpability beyond mere negligence.

Accordingly, we conclude that cognitive awareness is a prerequisite to recovery for loss of enjoyment of life. We do not go so far, however, as to require the fact finder to sort out varying degrees of cognition and determine at what level a particular deprivation can be fully appreciated. With respect to pain and suffering, the trial court charged simply that there must be “some level of awareness” in order for plaintiff to recover. We think that this is an appropriate standard for all aspects of nonpecuniary loss. No doubt the standard ignores analytically relevant levels of cognition, but we resist the desire for analytical purity in favor of simplicity. A more complex instruction might give the appearance of greater precision but, given the limits of our understanding of the human mind, it would in reality lead only to greater speculation.

We turn next to the question whether loss of enjoyment of life should be considered a category of damages separate from pain and suffering.

IV

There is no dispute here that the fact finder may, in assessing nonpecuniary damages, consider the effect of the injuries on the plaintiff’s capacity to lead a normal life. [The court reviewed the movement, within and outside of New York, to treat loss of enjoyment of life as a separate category, in part to facilitate the appellate review of damage awards.]

We do not dispute that distinctions can be found or created between the concepts of pain and suffering and loss of enjoyment of life. If the term “suffering” is limited to the emotional response to the sensation of pain, then the emotional response caused by the limitation of life’s activities may be considered qualitatively different. But suffering need not be so limited—it can easily encompass the frustration and anguish caused by the inability to participate in activities that once brought pleasure. Traditionally, by treating loss of enjoyment of life as a permissible factor in assessing pain and suffering, courts have given the term this broad meaning.

If we are to depart from this traditional approach and approve a separate award for loss of enjoyment of

life, it must be on the basis that such an approach will yield a more accurate evaluation of the compensation due to the plaintiff. We have no doubt that, in general, the total award for nonpecuniary damages would

p. 798

increase if we adopted the rule. That separate awards are advocated by plaintiffs and resisted by defendants is sufficient evidence that larger awards are at stake here. But a larger award does not by itself indicate that the goal of compensation has been better served.

The advocates of separate awards contend that because pain and suffering and loss of enjoyment of life can be distinguished, they must be treated separately if the plaintiff is to be compensated fully for each distinct injury suffered. We disagree. Such an analytical approach may have its place when the subject is pecuniary damages, which can be calculated with some precision. But the estimation of nonpecuniary damages is not amenable to such analytical precision and may, in fact, suffer from its application. Translating human suffering into dollars and cents involves no mathematical formula; it rests, as we have said, on a legal fiction. The figure that emerges is unavoidably distorted by the translation. Application of this murky process to the component parts of nonpecuniary injuries (however analytically distinguishable they may be) cannot make it more accurate. If anything, the distortion will be amplified by repetition.

[The court ordered a] new trial on the issue of nonpecuniary damages to be awarded to plaintiff Emma McDougald. . . .

TITONE, J., dissenting.

The majority's holding represents a compromise position that neither comports with the fundamental principles of tort compensation nor furnishes a satisfactory, logically consistent framework for compensating nonpecuniary loss. Because I conclude that loss of enjoyment of life is an objective damage item, conceptually distinct from conscious pain and suffering, I can find no fault with the trial court's instruction authorizing separate awards and permitting an award for "loss of enjoyment of life" even in the absence of any awareness of that loss on the part of the injured plaintiff. Accordingly, I dissent. . . .

[T]he compensatory nature of a monetary award for loss of enjoyment of life is not altered or rendered punitive by the fact that the unaware injured plaintiff cannot experience the pleasure of having it. The fundamental distinction between punitive and compensatory damages is that the former exceed the amount necessary to replace what the plaintiff lost. . . .

NOTES

1. *Recovery for pain and suffering.* In *McDougald* the majority and dissent agreed that recovery for pain and suffering is generally proper in tort actions. Typically the elements of pain and suffering include worry, anguish, and grief, all notoriously difficult to quantify. Even in the usual case of a conscious plaintiff, there is typically extensive disagreement as to how to present the issue of pain and suffering to the jury. In *Rounds v. Rush Trucking Corp.*, 211 F.3d 185, 190 (2d Cir. 2000), the plaintiff suffered serious and

permanent injuries when her pick-up truck was rammed in the rear by one of defendant's tractor-trailers. The jury awarded the plaintiff \$350,000 for past and future mental suffering and \$350,000 for past and future emotional distress. On appeal, Walker, J., struck the

p. 799

second award on the ground that *McDougald* embraces both forms of loss under a single heading.

Despite our ability to distinguish between loss of enjoyment of life and the emotional distress at issue in this case, we follow the reasoning of the New York Court of Appeals and find that emotional distress is no more amenable to analytical precision than loss of enjoyment of life. There is no plausible basis for limiting *McDougald* to its facts and holding, as Rounds urges, that pain and suffering does not also encompass emotional distress, which is just as difficult to measure.

Accordingly, Walker, J., ordered a new trial unless the plaintiff agreed to a reduction of \$350,000 in damages in light of the duplicative instructions. What about the possibility that the jury already reduced the award for pain and suffering precisely because a separate head was allowed for emotional distress? "If Rounds is convinced that a properly charged jury would award in excess of \$350,000 for pain and suffering, including emotional distress, she is free to reject remittitur and re-present the case to a jury." The original liability determination would remain undisturbed.

McDougald and *Rounds* raise the larger question whether the difficulties in valuation should preclude any recovery for pain and suffering, no matter how packaged. The most famous critique of this sort is Jaffe, Damages for Personal Injury: The Impact of Insurance, 18 Law & Contemp. Probs. 219, 224-225 (1953):

But why we may ask *should* the plaintiff be compensated in money for an experience which involves no financial loss? It cannot be on the principle of returning what is his own. Essentially that principle rests on an economic foundation: on maintaining the integrity of the economic arrangements which provide the normally expectable basis for livelihood in our society. Pain is a harm, an "injury," but neither past pain nor its compensation has any consistent economic significance. The past experience is not a loss except in so far as it produced present deterioration. . . .

I am aware, however, that though the premise may elude detection, some deep intuition may claim to validate this process of evaluating the imponderable. One who has suffered a violation of his bodily integrity may feel a sense of continuing outrage. This is particularly true where there has been disfigurement or loss of a member (even though not giving rise to economic loss). Because our society sets a high value on money it uses money or price as a means of recognizing the worth of non-economic as well as economic goods. If, insists the plaintiff, society really values my personality, my bodily integrity, it will signify its sincerity by paying me a sum of money. Damages thus may somewhat reestablish the plaintiff's self-confidence, wipe out his sense of outrage. Furthermore, though money is not an equivalent it may be a consolation, a solatium. . . .

With the Jaffe excerpt compare *Kwasny v. United States*, 823 F.2d 194, 197 (7th Cir. 1987). *Kwasny* involved the death of a 63-year-old man suffering from severe rheumatoid arthritis from an allegedly negligently performed intubation. Although the government “[came] close to arguing that . . . the hospital did

p. 800

[*Kwasny*] and his wife a favor by shortening his life” in its appeal from the pain and suffering award, Posner, J., noted:

We disagree with those students of tort law who believe that pain and suffering are not real costs and should not be allowable items of damages in a tort suit. No one likes pain and suffering and most people would pay a good deal of money to be free from them. If they were not recoverable in damages, the cost of negligence would be less to the tortfeasors and there would be more negligence, more accidents, more pain and suffering, and hence higher social costs. . . .

Elimination of damages for pain and suffering is common in various first-party insurance schemes, including Social Security Disability Income as well as Medicare and Medicaid. These omissions have been treated as evidence that in first-party markets, injured parties are generally unwilling to purchase insurance against possible future pain and suffering. See Danzon, Tort Reform and the Role of Government in Private Insurance Markets, 13 J. Legal Stud. 517 (1984). Why? Would anyone sell this insurance? Even if Danzon’s point is true, does it follow that damages in tort actions should ignore pain and suffering? Croley & Hanson, The Nonpecuniary Costs of Accidents: Pain-and-Suffering Damages in Tort Law, 108 Harv. L. Rev. 1785 (1995), points to limited examples of insurance that specifically include pain and suffering damages, such as uninsured motorist coverage and airport flight insurance. If the recovery of damages is allowable for torts that involve no physical contact or injury (e.g., assault), is there a reason for treating awards for pain and suffering differently? For a discussion of pain and suffering awards in light of the historical context of awarding damages for intangible losses, and a reminder that pecuniary losses may be nearly as susceptible to inaccuracy as pain and suffering awards, see Rabin, Pain and Suffering and Beyond: Some Thoughts on Recovery for Intangible Loss, 55 DePaul L. Rev. 359 (2006).

2. *Hedonic damages.* An extensive literature casts some doubt on the practice of awarding hedonic damages (termed “loss of enjoyment of life” in *McDougald*) that go beyond pain and suffering. The award of hedonic damages has been challenged on the ground that individual preferences are highly adaptive, such that these awards overestimate the situation on the ground. Even though most people without disabilities think of having a disability as being unbearable, “[a] rich psychological literature demonstrates that disability does not inherently limit enjoyment of life to the degree that these courts suggest. Rather, people who experience disabling injuries tend to adapt to their disabilities.” Bagenstos & Schlanger, Hedonic Damages, Hedonic Adaptation, and Disability, 60 Vand. L. Rev. 745 (2007). Is survey evidence that seriously disabled people report higher levels of happiness than expected enough to clinch this case? What if disabled people spend, when possible, large sums to eliminate their disabilities? For a skeptical response to such adaptation arguments, see DePianto, Tort Damages and the (Misunderstood) Money-Happiness Connection, 44 Ariz. St. L.J. 1385 (2012), who argues that countervailing distortions—such as an inflated view of

how much happiness or satisfaction a dollar award can obtain—further complicate the award of hedonic damages.

3. The “per diem” rule. Even if attention is concentrated on pain and suffering, how is that information translated into dollars? One ingenious suggestion about how to solve these valuation difficulties was first advanced in Belli, *The Use of Demonstrative Evidence in Achieving “The More Adequate Award”* 33-35 (1952):

This is the key: You must break up the 30-year life expectancy into *finite* detailed periods of time. You must take these small periods of time, seconds and minutes, and determine in dollars and cents what each period is worth. You must start with the seconds and minutes rather than at the other end of thirty years. You cannot stand in front of a jury and say, “Here is a man horribly injured, permanently disabled, who will suffer excruciating pain for the rest of his life, he is entitled to a verdict of \$225,000.”

You must start at the beginning and show that pain is a continuous thing, second by second, minute by minute, hour by hour, year after year for thirty years. You must interpret one second, one minute, one hour, one year of pain and suffering into dollars and cents and then multiply to your absolute figure to show how you have achieved your result of an award approaching adequacy at \$225,000. If you throw a novel figure at a jury or an appellate court of \$225,000, without breaking it down, you are going to frighten both your trier of facts and your reviewer of facts. . . .

Although Belli’s numerical examples have been eroded by inflation, his approach to valuation still retains much of its punch. Does it work for hedonic damages? As might be expected, the propriety of Belli’s argument has been much debated in the appellate courts. The use of the per diem argument was initially prohibited in *Botta v. Brunner*, 138 A.2d 713 (N.J. 1958), and several other jurisdictions have followed suit, e.g., *Ramirez v. City of Chicago*, 740 N.E.2d 1190 (Ill. App. Ct. 2000). Today, however, a majority of jurisdictions allow the jury to hear per diem calculations, subject to a cautionary instruction that this approach is argument, not evidence, or leave the decision to the discretion of the trial judge. John Campbell, Bernard Chao & Christopher Robertson, *Time Is Money: An Empirical Assessment of Non-Economic Damages Arguments*, 95 Wash. U. L. Rev. 1, 6 (2017); see, e.g., *Vanskike v. ACF Indus., Inc.*, 665 F.2d 188 (8th Cir. 1981); *Harrington v. City of Council Bluffs*, 902 F. Supp. 2d 1195 (S.D. Iowa 2012). Other courts have condemned per diem instructions to the jury but have permitted the trial judge to allow the plaintiff to use that approach in closing argument. E.g., *Manning v. Lunda Constr. Co.*, 953 F.2d 1090, 1093 (8th Cir. 1992). States that do not allow the per diem argument for pain and suffering do allow it for future medical costs. “[P]recedent establishes that per diem arguments are only improper where they refer to pain and suffering. There was no improper argument, and thus no prejudice to defendants, resulting from counsel’s argument as to future medical costs.” *Lepore v. Chi. Transit Auth.*, 2011 IL App (1st) 092576-U, ¶29.

4. Increased risk of future injury. The proper treatment of probabilistic assessments of future pain and suffering divided the court in *DePass v. United States*, 721 F.2d 203, 210 (7th Cir. 1983). There, the plaintiff suffered a traumatic amputation of his left leg below the knee. In addition to the usual elements of pain and suffering, plaintiff's expert witness testified, largely on the strength of an extensive National Institute of Health study of World War II veterans, that there was "a statistical connection between traumatic limb amputations and future cardiovascular problems and decreased life expectancy." The expert estimated an 11-year reduction in plaintiff's life expectancy. The government did nothing to counter that evidence, but the trial judge rejected these potential losses as speculative damages. Flaum, J., affirmed on the ground that the study was "inconclusive" and that "Illinois law is not settled as to whether increased risk of future injury is compensable." A spirited dissent by Posner, J., argued that it was clearly erroneous to refuse to award damages for this type of loss:

The district judge's rejection of such evidence, if widely followed, would lead to systematically undercompensating the victims of serious accidents and thus to systematically underdeterring such accidents. Accidents that require the amputation of a limb, particularly a leg, are apparently even more catastrophic than one had thought. They do not just cause a lifetime of disfigurement and reduced mobility; they create a high risk of premature death from heart disease. The goal of awarding damages in tort law is to put the tort victim as nearly as possible in the position he would have occupied if the tort had not been committed. This goal cannot be attained or even approached if judges shut their eyes to consequences that scientists have found are likely to follow from particular types of accident, merely because the scientists' evidence is statistical.

Should the decision to award damages for increased risk depend on the certainty of the increased risk? On a particular threshold of increased risk? In *Cudone v. Gehret*, 821 F. Supp. 266, 271 (D. Del. 1993), a physician's alleged failure to timely diagnose a patient's breast cancer increased the probability that she would suffer a recurrence within ten years from less than 25 to 30 percent to 50 to 60 percent. The court distinguished *DePass* as involving "less compelling circumstances," and held that the failure to provide a jury instruction on increased risk would produce "an absurd result." How should damages based on increased risk be calculated?

2. Economic Losses

O'SHEA v. RIVERWAY TOWING CO.

677 F.2d 1194 (7th Cir. 1982)

POSNER, J. This is a tort case under the federal admiralty jurisdiction. We are called upon to decide questions of contributory negligence and damage assessment. . . .

On the day of the accident, Margaret O'Shea was coming off duty as a cook on a towboat plying the Mississippi River. A harbor boat operated by the defendant, Riverway Towing Company, carried Mrs. O'Shea to shore and while getting off the boat she fell and sustained the injury complained of. The district

judge found Riverway negligent and Mrs. O’Shea free from contributory negligence, and assessed damages in excess of \$150,000. Riverway appeals only from the finding that there was no contributory negligence and from the part of the damage award that was intended to compensate Mrs. O’Shea for her lost future wages. [The court held that the plaintiff was free of contributory negligence.]

The more substantial issues in this appeal relate to the computation of lost wages. Mrs. O’Shea’s job as a cook paid her \$40 a day, and since the custom was to work 30 days consecutively and then have the next 30 days off, this comes to \$7200 a year although, as we shall see, she never had earned that much in a single year. She testified that when the accident occurred she had been about to get another cook’s job on a Mississippi towboat that would have paid her \$60 a day (\$10,800 a year). She also testified that she had been intending to work as a boat’s cook until she was 70—longer if she was able. An economist who testified on Mrs. O’Shea’s behalf used the foregoing testimony as the basis for estimating the wages that she lost because of the accident. He first subtracted federal income tax from yearly wage estimates based on alternative assumptions about her wage rate (that it would be either \$40 or \$60 a day); assumed that this wage would have grown by between six and eight percent a year; assumed that she would have worked either to age 65 or to age 70; and then discounted the resulting lost-wage estimates to present value, using a discount rate of 8.5 percent a year. These calculations, being based on alternative assumptions concerning starting wage rate, annual wage increases, and length of employment, yielded a range of values rather than a single value. The bottom of the range was \$50,000. This is the present value, computed at an 8.5 percent discount rate, of Mrs. O’Shea’s lost future wages on the assumption that her starting wage was \$40 a day and that it would have grown by six percent a year until she retired at the age of 65. The top of the range was \$114,000, which is the present value (again discounted at 8.5 percent) of her lost future wages assuming she would have worked till she was 70 at a wage that would have started at \$60 a day and increased by eight percent a year. The judge awarded a figure—\$86,033—near the midpoint of this range. . .

There is no doubt that the accident disabled Mrs. O’Shea from working as a cook on a boat. The break in her leg was very serious: it reduced the stability of the leg and caused her to fall frequently. It is impossible to see how she could have continued working as a cook, a job performed mostly while standing up, and especially on a boat, with its unsteady motion. But Riverway argues that Mrs. O’Shea (who has not worked at all since the accident, which occurred two years before the trial) could have gotten some sort of job and that the wages in that job should be deducted from the admittedly higher wages that she could have earned as a cook on a boat.

The question is not whether Mrs. O’Shea is totally disabled in the sense, relevant to social security disability cases but not tort cases, that there is no job in the

American economy for which she is medically fit. It is whether she can by reasonable diligence find gainful employment, given the physical condition in which the accident left her. Here is a middle-aged woman, very overweight, badly scarred on one arm and one leg, unsteady on her feet, in constant and serious pain from the accident, with no education beyond high school and no work skills other than cooking, a job that happens to require standing for long periods which she is incapable of doing. It seems unlikely that someone in this condition could find gainful work at the minimum wage. True, the probability is not zero;

and a better procedure, therefore, might have been to subtract from Mrs. O’Shea’s lost future wages as a boat’s cook the wages in some other job, discounted (i.e., multiplied) by the probability—very low—that she would in fact be able to get another job. But the district judge cannot be criticized for having failed to use a procedure not suggested by either party. The question put to him was the dichotomous one, would she or would she not get another job if she made reasonable efforts to do so? This required him to decide whether there was a more than 50 percent probability that she would. We cannot say that the negative answer he gave to that question was clearly erroneous.

Riverway argues next that it was wrong for the judge to award damages on the basis of a wage not validated, as it were, by at least a year’s employment at that wage. Mrs. O’Shea had never worked full time, had never in fact earned more than \$3600 in a full year, and in the year preceding the accident had earned only \$900. But previous wages do not put a cap on an award of lost future wages. If a man who had never worked in his life graduated from law school, began working at a law firm at an annual salary of \$35,000, and was killed the second day on the job, his lack of a past wage history would be irrelevant to computing his lost future wages. The present case is similar if less dramatic. Mrs. O’Shea did not work at all until 1974, when her husband died. She then lived on her inheritance and worked at a variety of part-time jobs till January 1979, when she started working as a cook on the towboat. According to her testimony, which the trial judge believed, she was then working full time. It is immaterial that this was her first full-time job and that the accident occurred before she had held it for a full year. Her job history was typical of women who return to the labor force after their children are grown or, as in Mrs. O’Shea’s case, after their husband dies, and these women are, like any tort victims, entitled to damages based on what they would have earned in the future rather than on what they may or may not have earned in the past.

If we are correct so far, Mrs. O’Shea was entitled to have her lost wages determined on the assumption that she would have earned at least \$7200 in the first year after the accident and that the accident caused her to lose that entire amount by disabling her from any gainful employment. And since Riverway neither challenges the district judge’s (apparent) finding that Mrs. O’Shea would have worked till she was 70 nor contends that the lost wages for each year until then should be discounted by the probability that she would in fact have been alive and working as a boat’s cook throughout the damage period, we may also

p. 805

assume that her wages would have been at least \$7200 a year for the 12 years between the date of the accident and her seventieth birthday. . . .

[Posner, J., then discussed the method used to account for inflation in the assessment of the plaintiff’s lost future wages. He upheld the award, notwithstanding some questionable assumptions in the economist’s methodology, and concluded that the calculation of lost earnings “can and should be an analytical rather than an intuitive undertaking,” and, “for the future,” asked “the district judges in this circuit to indicate the steps by which they arrive at damage awards for lost future earnings.”]

Judgment affirmed.

NOTES

1. *Work-life expectancy and potential bias.* In *O'Shea*, Posner, J., discussed the plaintiff's work and wage history, and criticized the economist's failure to discount the suggested damage award based on the probability that the plaintiff would not have remained in the job market for the entire length of her work-life expectancy. Few people die right on schedule, so any award for future earnings should take into account the possibility of the plaintiff's death or disability before retirement in order not to misstate systematically lost earnings. The proper procedure thus asks (1) the expected (discounted) earnings of each future year, and (2) the probability that the plaintiff will actually be in the workforce in that year. While the probability that the plaintiff would have worked the next year may be close to 100 percent, the same cannot be said of employment 10 or 20 years later. The results achieved by this annualized methodology differ from the results achieved by assuming that a person will live exactly to her life expectancy.

Work-life expectancy calculations have come under increasing scrutiny. Professor Chamallas has questioned the use of historical tables that reify race and gender-based differences. In *The Architecture of Bias: Deep Structures in Tort Law*, 146 U. Pa. L. Rev. 463, 481-483 (1998), she argues:

[T]he estimates of work-life expectancy of women of all races and minority men are consistently lower than estimates for white men. This is because work-life expectancy is distinct from life expectancy. Work-life expectancy is a statistical measure derived from the past working experience of all people in a plaintiff's gender and racial group. It incorporates rates of unemployment, both voluntary and involuntary, as well as expected retirement age. Because women in the past stayed out of the workplace to raise children, women have a lower work-life expectancy than men, despite the fact that women generally live longer than men. Because of higher rates of unemployment and of incarceration, minority men also have a lower work-life expectancy than white men. Thus, based on data from the U.S. Bureau of Labor Statistics, the work-life expectancy for a white man injured at the age of thirty was estimated to be 4.7 years more than that of a minority man, 8.7 years more than that of a white woman, and 9.2 years more than that of a minority woman. . . .

p. 806

. . . Being a woman or being an African-American does dampen one's earning prospects. However, what is not often noticed is that many other variables, such as religion, ethnicity, and marital status, also have predictive power, yet are not used to predict earning potential. . . .

Can an individual offer expert evidence to combat embedded historical biases by demonstrating that certain aggregate assumptions do not apply to him or her? For example, a female who has no intention of having children?

In *McMillan v. City of New York*, 253 F.R.D. 247, 256 (E.D.N.Y. 2008), Weinstein, J., relying in part on Chamallas' work, refused to use race-based statistics to calculate the life expectancy of the male African American plaintiff who was rendered a quadriplegic in the crash of a negligently operated ferryboat. He also noted the inconsistency of using race-based statistics to shorten the life expectancy of the plaintiff for

the purposes of assessing future medical expenses when “the damages awarded are designed to extend claimant’s life by providing him with the best medical and other care—more than the equivalent of what the average American quadriplegic could expect.”

The difficulties that arise in the calculation of a plaintiff’s lost future earnings and life expectancy are compounded when a plaintiff is very young. In *G.M.M. v. Kimpson*, 116 F. Supp. 3d 126, 129 (E.D.N.Y. 2015), Weinstein, J., extended *McMillan* and rejected the use of statistics based on ethnicity to project the likelihood that a three-year-old Hispanic child would have obtained higher education had he not suffered from lead poisoning due to his landlord’s negligence in failing to remove lead paint from the apartment. Weinstein, J., explained: “Based upon his specific family background, had the child not been injured, there was a high probability of superior educational attainment and corresponding high earnings. Treated by experts as a ‘Hispanic,’ his potential, based on the education and income of ‘average “Hispanics” in the United States,’ was relatively low.”

In CA 10064/02 *Migdal Ins. Co. Ltd. v. Rim Abu Hanna* [2005] [IsrSC], the Israeli Supreme Court considered the proper manner in which to calculate the lost earning potential of a five-month-old girl injured in a road accident. The Court took a strong stand against consideration of typical factors such as the child’s gender, race, ethnic origin, and socioeconomic status:

In the absence of specific circumstances to prove the contrary, every boy and girl in Israel —whether from a rich or a poor home, and regardless of origin—has an opportunity of finding their way into the various economic circles. . . . Giving less compensation for identical injuries, merely because of the gender, socio-economic status or ethnic origin of the injured person . . . fails to restore the damage caused by the tort[i]ous act . . . [and] perpetuates a historical reality. . .

..

Compensation that relies on data concerning the ethnicity, social status or race of the plaintiff may lead to an absurd result, where the expected damage to injured individuals with a low expected income is less than the expected damage to those with a higher one; consequently, the precautions that a tortfeasor will take—will be different according to the potential victims (a man or a woman; people of different religious affiliations; a resident of a high-class neighborhood or

p. 807

a resident of a poor city). In so far as the tortfeasor has control of the situation, and sometimes he does have such control, the risks he takes will be directed towards the weaker sectors of society. . . .

Is the Israeli approach of using a national average wage statistic to assess damages for the lost earning capacity of children preferable? Note that Kenneth Feinberg, the Special Master of the September 11th Victim Compensation Fund, used the same tables (based on white males) for all victims of the disaster. See Chamallas, *The September 11th Victim Compensation Fund: Rethinking the Damages Element in Injury Law*, 71 Tenn. L. Rev. 51, 69-73 (2003); see also *infra* Chapter 10, Section D. The Israeli court noted that individual evidence of higher than average ability (e.g., in sports or academia) could be used to increase the

damages assessment. What should be done with lower than average ability? How would the various calculations affect potential tortfeasors? Are corrective justice goals served? Deterrence goals?

2. *Imputed income: Additions to market losses.* Imputed income from nonmarket activities is another element that must be included in damages. The benefits are said to be “imputed” because there is no explicit market transaction to give direct evidence of their worth. In the law of damages, the most important aspect of imputed income lies in the value of lost services for persons not engaged in ordinary market activities. For example, serious personal injuries to a spouse not working outside the home may disable him or her from performing services of great value to his or her family and require him or her to hire replacement services. See, e.g., *Shepard v. Capitol Foundry of Virginia, Inc.*, 554 S.E.2d 72, 73-74 (Va. 2001), in which the court reinstated a \$1.7 million award for nonpecuniary damages for a husband whose wife was killed in an automobile accident. Virginia’s wrongful death statute provides recovery for “[s]orrow, mental anguish, and solace which may include society, companionship, comfort, guidance, [and] kindly offices and advice of the decedent. . . .” Va. Code Ann. §8.01-52 (2019). The 67-year-old decedent had been married to her husband for 44 years. She was the “primary caregiver” of their six children. Moreover, during her husband’s 30-year military career when he was frequently away from home, she “handled the family’s business matters and continued to do so after he retired.” Is the proper measure of damages what she could have earned in the marketplace, less the taxes paid thereon? For a development of this theme, see Komesar, *Toward a General Theory of Personal Injury Loss*, 3 J. Legal Stud. 457 (1974).

3. *Mitigation of damages.* In tort law, as in contract law, the plaintiff normally has a duty to mitigate damages; that is, to take steps that minimize the expected losses from an accident. Hence the inquiry in *O’Shea* as to whether the plaintiff could find alternative land-based employment suitable for the plaintiff, but not so onerous that she is worse off than before.

The mitigation issue raises even more serious challenges with medical interventions. In principle, it seems easy to conclude that the plaintiff should spend \$1,000 of her own money on medical treatment to save the defendant \$10,000 of his. The plaintiff is no worse off from mitigation so long as she

p. 808

receives the \$1,000 from the defendant, who is left better off by \$9,000. Thus, mitigation operates as a barrier against waste by making the plaintiff a fiduciary of sorts for the defendant. However, the outcome of a surgical intervention, for example, is often highly uncertain. Thus, if an operation costing \$1,000 turns out to be a success, the defendant could save \$9,000. But if the patient dies or is permanently injured, the plaintiff has lost big even if the defendant must compensate for the inferior outcome. The defendant is thus exposed to large potential gains or losses whenever the patient elects risky treatment. Sensing this conflict of interest, most courts give the plaintiff the benefit of the doubt so long as she acts in good faith in deciding whether to accept or reject treatment. See, e.g., *Flemings v. State*, 19 So. 3d 1220 (La. Ct. App. 2009), in which the court held that the plaintiff did not have to undergo a third surgical procedure to improve the appearance and increase the extension of his thumb after he had undertaken two unsuccessful procedures. What result if the plaintiff accepts the surgery and has a bad outcome? A good one? For a detailed discussion of the requirement to mitigate tort damages, see Shipley, Annotation, *Duty of Injured Person to Submit to Surgery to Minimize Tort Damages*, 62 A.L.R.3d 9 (2019).

4. Taxation of tort damage awards. The Internal Revenue Code does not tax damage awards received in compensation for personal injuries stemming from physical harm, even when they are a substitute for lost taxable income; however, damages received in compensation for personal injuries stemming from emotional harms are taxed. I.R.C. §104(a). Complicated questions arise when physical and emotional harms occur simultaneously. In *Parkinson v. Comm'r*, 99 T.C.M. (CCH) 1583 (2010), the court had to determine the tax status of damages awarded for a heart attack caused by an intentional infliction of emotional distress, as well as the accompanying emotional harm. The court held that the half of the damages award that compensated the petitioner's heart attack that was caused by the tortfeasors' intentional infliction of emotional distress was excludable from gross income, and that the half of the award that compensated petitioner's emotional distress was not excludable from gross income. What justifies different tax treatment of damages stemming from emotional and physical harm? What parallels can be drawn with the treatment of harms stemming from a negligent infliction of emotional distress?

Another recurrent question is whether actual damage awards for lost earnings should be reduced to offset their tax-free status. In *Norfolk & Western Ry. v. Liepelt*, 444 U.S. 490, 494 (1980), Justice Stevens allowed these tax issues into evidence in FELA cases, saying:

Admittedly there are many variables that may affect the amount of a wage earner's future income-tax liability. The law may change, his family may increase or decrease in size, his spouse's earnings may affect his tax bracket, and extra income or unforeseen deductions may become available. But future employment itself, future health, future personal expenditures, future interest rates, and future inflation are also matters of estimate and prediction. Any one of these issues might

p. 809

provide the basis for protracted expert testimony and debate. But the practical wisdom of the trial bar and the trial bench has developed effective methods of presenting the essential elements of an expert calculation in a form that is understandable by juries that are increasingly familiar with the complexities of modern life. We therefore reject the notion that the introduction of evidence describing a decedent's estimated after-tax earnings is too speculative or complex for a jury.

Justice Blackmun's dissent supported the older practice of ignoring taxes in torts cases:

In my view, by mandating adjustment of the award by way of reduction for federal income taxes that would have been paid by the decedent on his earnings, the Court appropriates for the tortfeasor a benefit intended to be conferred on the victim or his survivors. And in requiring that the jury be instructed that a wrongful-death award is not subject to federal income tax, the Court opens the door for a variety of admonitions to the jury not to "misbehave," and unnecessarily interjects what is now to be federal law into the administration of a trial in a state court.

The administrative complexities of taking taxes into account provoked a different response in New York, where by statute it is now provided that, in medical malpractice cases, evidence of the federal, state, and local taxation of lost earnings "shall be admissible for consideration by the court, outside of the presence of

the jury. . . ." N.Y. C.P.L.R. §4546 (2019). What is wrong with an alternative proposal that reduces all damage awards for lost income by a fixed figure, say, 20 percent? Consider whether the loss in precision is offset by the consistency in results and the reduction in administrative costs.

5. Discounting to present value and inflation. In addition to facility with calculations for work-life expectancy, lost future income, and possibly accounting for tax consequences, courts need to discount to present value any future item of recovery, whether lost earnings or medical expenses. The requirement for discounting future income streams can be justified by a single proposition: A dollar today is worth more than a dollar next year. The reason for the difference should be apparent: If a person is in possession of the dollar at the present time, he will be able at the end of the year to enjoy both the dollar and the interest earned on it. If he gets the dollar at the end of the year, the interest on it will benefit the actor (say, the bank) who has had the use of the dollar in the interim. The value of that one year's use of the dollar is, ignoring uncertainty, a function of the going rate of interest for the use of money. As interest rates increase, the demand for immediate cash, relative to future payments, increases as well. Accordingly the discount rate will be steeper. The formula for discounting to present value is:

$$PV\$1.00 = \$1.00 \div (1 + i)n$$

where $PV\$1.00$ equals the present value of the future payment of \$1.00, n equals the number of years until this payment is made, and i equals the interest rate

p. 810

applicable during the period. Inspection of the formula reveals that the discount for a future payment depends both on the interest rate and on the length of time before payment is due. The longer a creditor must wait for payment, the greater its discounted value today. The inflation-free rate of interest is generally estimated at somewhere between 1.5 and 3.0 percent, with 2 percent perhaps the most common value. Should future pain and suffering be discounted to present value? For a negative answer, see *Brant v. Bockholt*, 532 N.W.2d 801 (Iowa 1995), following RST §913A.

In *Kaczkowski v. Bolubasz*, 421 A.2d 1027, 1038-1039 (Pa. 1980), the Pennsylvania Supreme Court held that "future inflation shall be presumed equal to future interest rates with these factors offsetting. Thus the courts of this Commonwealth are instructed to abandon the practice of discounting lost future earnings." Even if discounting is done, is there any reason not to use the same rate in all contexts? For a defense of fixed rates, see *Bowers, Courts, Contracts, and the Appropriate Discount Rate: A Quick Fix for the Legal Lottery*, 63 U. Chi. L. Rev. 1099 (1996). For extensive judicial discussion, see *Ammar v. United States*, 342 F.3d 133, 148-149 (2d Cir. 2003).

DUNCAN v. KANSAS CITY SOUTHERN RY.

773 So. 2d 670 (La. 2000)

JOHNSON, J. This case arises out of a collision between a locomotive and a church van at a railroad crossing in Beauregard Parish. There were three passengers, all sisters, riding in the church van. As a result of the collision, one sister was killed, a second was rendered a quadriplegic, and the third suffered less

serious injuries. Plaintiffs, parents of the three passengers, filed suit to recover damages. A jury found the driver of the van and the railroad liable for the accident, apportioning fault between the two. The decision was affirmed by the court of appeal. We granted certiorari to review the correctness of this decision. . . .

The plaintiffs were awarded damages totaling \$27,876,813.31. Included in the award were future medical expenses in the amount of \$17,000,000.00 and general damages for physical pain and suffering, mental anguish, and loss of enjoyment of life in the amount of \$8,000,000.00 to Rachel Duncan. . . .

Excessive Damages

Finally, we turn our attention to the last assignment of error raised by KCS [defendant Kansas City Southern Railway], whether the jury's award of damages was so excessive as to be set aside. According to KCS, the jury was prejudiced in its award by the plaintiffs' bringing Rachel Duncan in and out of the courtroom during the trial. Sympathy for this quadriplegic child resulted in the general damage award of \$8 million dollars and the \$17 million dollar award for future medical care. KCS contends these awards are unprecedented, grossly excessive, and not supported by the evidence. . . .

p. 811

GENERAL DAMAGES

General damages are those which may not be fixed with pecuniary exactitude; instead, they "involve mental or physical pain or suffering, inconvenience, the loss of intellectual gratification or physical enjoyment, or other losses of life or life-style which cannot be definitely measured in monetary terms." Vast discretion is accorded the trier of fact in fixing general damage awards. This vast discretion is such that an appellate court should rarely disturb an award of general damages. Thus, the role of the appellate court in reviewing general damage awards is not to decide what it considers to be an appropriate award, but rather to review the exercise of discretion by the trier of fact. . . .

The initial inquiry, in reviewing an award of general damages, is whether the trier of fact abused its discretion in assessing the amount of damages. Only after a determination that the trier of fact has abused its "much discretion" is a resort to prior awards appropriate and then only for the purpose of determining the highest or lowest point which is reasonably within that discretion.

RACHEL DUNCAN

In the present case, the trial court awarded \$8 million in general damages to Rachel Duncan for her physical pain and suffering, mental anguish, and loss of enjoyment of life. According to KCS, this award far exceeds the highest reasonable awards in cases involving similar injuries. However, our initial determination is not guided by awards for similar injuries; rather, our initial inquiry is whether the instant award is beyond that which a reasonable trier of fact could assess for the effects of the particular injury to the particular plaintiff under the particular circumstances. KCS contends the jury's award was based on sympathy for Rachel, who was brought in and out of the courtroom during the trial in a special, self-propelled wheelchair. While the sight of Rachel in her self-propelled wheelchair may have elicited some sympathetic feelings from the jury, the evidence presented more than amply demonstrates the effects of this accident on Rachel Duncan.

Prior to the accident, Rachel was an active eleven-year-old girl, she enjoyed outdoor activities, she was excelling academically in her sixth-grade class, she had many friends, and she was planning to attend college someday. As a result of the accident, Rachel's whole life has changed. The injuries she sustained when she was thrown from the church van have left her a quadriplegic who is totally dependent on others for all her care needs. Rachel's medical diagnosis and impairments include C5 ASIA A tetraplegia, traumatic brain injury, scoliosis, a tracheostomy, neurogenic bladder, neurogenic bowel, muscle spasms, contractures of upper and lower extremities, pulmonary insufficiency, a non-functioning left lung, left-sided hearing loss, severe headaches, anorexia, severe malnutrition and depression. She also suffers from recurrent pulmonary infections, recurrent bladder infections, and is in constant danger of developing decubitus ulcers and autonomic dysreflexia.

In addition to having to cope with the injuries she sustained in the accident, Rachel is also coping with the fact that her older sister was killed in the accident

p. 812

and her younger sister was injured in the accident. She is no longer able to attend school with her friends, she spends the majority of her day in either her bed or her wheelchair, she can no longer go on the family fishing and camping trips she enjoyed before the accident, and she is aware of the effect her injuries have had on her family. While Rachel still plans on attending college, she will not be able to go off to college like other college freshmen. Even if she decides to move out of her parents' home when she becomes an adult, she will require a specially designed home and 24-hour care. Even when all these factors are considered, we find that the general damage award of \$8,000,000 is excessive and the trial court abused its discretion in fixing the general damage award to Rachel Duncan. A review of cases involving similar injuries reveals that the highest amount that could reasonably be awarded under the facts of this case is \$6,000,000. Therefore, we reduce the general damage award from \$8,000,000 to \$6,000,000.

[Other assignments of error are omitted.]

Lastly, KCS contends that the \$17 million award for Rachel's future medical care is clearly excessive. According to KCS, if this award is invested conservatively so as to obtain only a five percent return, it would still produce an annual interest income of \$850,000. Future medical expenses must be established with some degree of certainty. Awards will not be made in the absence of medical testimony that they are indicated and setting out their probable cost.

In the matter at hand, the jury was presented with medical testimony by plaintiffs', as well as, defendant's experts. [T]he [plaintiffs' expert's] plan provides for a treatment program with individual counseling, family counseling, occupational therapy, physical therapy, speech therapy, weekly review by a registered nurse ("RN"), and 24-hour attendant care by either a licensed practical nurse ("LPN") or a RN. The LPN or RN would be provided by a home health agency, and their activities would be supervised by a case manager. [The plan was based] on Rachel having the same life expectancy as persons her age without spinal cord injuries, that is 81 years. . . .

[Defendant's expert's] plan . . . recommends evaluations by physicians specializing in physical medicine and rehabilitation, pulmonology, urology, internal medicine, orthopedics, and psychiatry. [This plan] further

recommends educational counseling, physical therapy, and occupational therapy, as well as, 16 to 24 hour attendant care by a home health aide.

[The court reviewed the different mixes of attendant care, either registered nurses or home health aides, on either 16-hour or 24-hour cycles. It further discussed what life expectancy should be used: a 57-year life expectancy, based on statistics for people with spinal cord injuries, or an 81-year life expectancy based on general actuarial tables.]

Rachel Duncan has been diagnosed as a C5 tetraplegic and her age at the time of trial was 14.6 years. [A] 15-year old in the C5 neurologic category has a life expectancy of 42.6 years. The record does include accurate evidence with reference to Rachel's life expectancy. Dr. Zidek's [Rachel's treating physician] predicted 57-year life expectancy for Rachel is more realistic than the 81-year life expectancy predicted by Dr. Voogt [plaintiffs' expert]. Furthermore, the

p. 813

57-year life expectancy is also the more scientifically accurate prediction. [The court reduced the recovery for future medical expenses from \$17 million to \$10,528,722, based on the jury's estimate of the cost of annual care for the 57-year life expectancy instead of the longer life expectancy erroneously introduced.]

NOTES

1. *Excessive damages as an abuse of discretion.* If the standard for the appellate review of damage awards is abuse of discretion, how should the court decide that \$8 million is too much and \$6 million is about right? Cases involving serious injury routinely give rise to the questions raised in *Duncan*. Historically most courts applied some variation of the “shock the conscience” standard, which offered only a limited power to review jury awards in cases, for example, in which there was a clear “miscarriage of justice.” See, e.g., *Johnson v. Parrish*, 827 F.2d 988 (4th Cir. 1987). Under this deferential standard, most courts have sustained large verdicts for gruesome injuries. See, e.g., *Meals v. Ford Motor Co.*, 417 S.W.3d 414 (Tenn. 2013) (reinstating jury verdict of \$43.8 million in compensatory damages to parents of a six-year-old whose spine was fractured in a car accident involving defective seatbelt); *Delacroix v. Doncasters, Inc.*, 407 S.W.3d 13, 21 (Mo. Ct. App. 2013) (affirming \$20 million wrongful death award against manufacturer of defective jet engine turbine blades that caused plane crash).

2. *Remittitur and additur.* One common way that courts have exercised some control over damage awards in personal injury cases in state court is through remittitur or additur. Under remittitur, the court does not simply lower the award below what the jury had provided. Rather it gives the plaintiff the option to avoid the cost and expense of a new trial by accepting a reduction in the size of the jury award. Under additur, the defendant can avoid the cost of a new trial by consenting to a larger verdict equal, perhaps, to the smallest verdict the court would sustain against a charge of inadequacy.

Both powers are limited in federal courts by the Seventh Amendment, which provides that “no fact tried by a jury, shall be otherwise reexamined in any Court of the United States, than according to the rules of the

common law.” Additur is constitutionally prohibited as “a bald addition of something which in no sense can be said to be included in the verdict.” *Dimick v. Schiedt*, 293 U.S. 474, 486 (1935). Remittitur is permitted so long as an appellate court does not reduce the size of an award on its own motion. Instead it must remand the case and allow the plaintiff the option of a new trial if it finds the reduced amount too small. In *Hetzell v. Prince William County*, 523 U.S. 208, 211 (1998), an employment discrimination case, the Supreme Court in a per curiam opinion held that “[t]he Court of Appeals’ writ of mandamus, requiring the District Court to enter judgment for a lesser amount than that determined by the jury without allowing petitioner the option of a new trial, cannot be squared with the Seventh Amendment.”

Different states have experimented with different modes of controlling juries. The Missouri Supreme Court in *Firestone v. Crown Center Redevelopment Corp.*, 693 S.W.2d 99 (Mo. 1985), abolished the practice of remittitur as

p. 814

an invasion of the province of the jury that has “been fraught with confusion and inconsistency.” In contrast, the New York legislature increased the judicial power to trim excessive damage awards, and incidentally, to boost up inadequate ones by displacing a “shock the conscience” standard with N.Y. C.P.L.R. §5501(c) (2019), which reads:

In reviewing a money judgment . . . in which it is contended that the award is excessive or inadequate and that a new trial should have been granted unless a stipulation is entered to a different award, the appellate division shall determine that an award is excessive or inadequate if it deviates materially from what would be reasonable compensation.

In *Consorti v. Armstrong World Industries, Inc.*, 9 F. Supp. 2d 307, 313 (S.D.N.Y. 1998), the plaintiff contracted incurable mesothelioma, from which he eventually died at age 51. The jury awarded him \$12 million for pain and suffering, \$8 million to cover about 23 months of past pain and suffering, and \$4 million to cover the anticipated pain and suffering for the estimated nine remaining months of his life. The trial judge confined his attention to the pool of mesothelioma cases to see if the award was within the “reasonable” range. The verdict reflected a consistent upward push in awards for pain and suffering from \$100,000 per month in 1990, to \$129,000 by the mid-1990s, to \$156,000 per month in 1998, after a remittitur of \$5 million in the above case. For a defense of comparative verdict review in advancing both reasonableness and uniformity, see *Baldus et al., Improving Judicial Oversight of Jury Damages Assessments: A Proposal for the Comparative Additur/Remittitur Review of Awards for Nonpecuniary Harms and Punitive Damages*, 80 Iowa L. Rev. 1109 (1995).

3. Structured settlements. One way to reduce the pressure of large verdicts is through the increased use of structured settlements. These settlements pay the plaintiff’s damages in periodic installments rather than in a single lump sum. The structured settlement reduces the need for the parties to make a joint estimate of future inflation rates since future payments can be geared to inflation if and when it occurs. Structured settlements in big cases help reduce the uncertainty in projecting both lost earnings and future medical expenses, both sizable. Their use in smaller cases is, however, sharply limited because of their high administrative costs.

Structured settlements may be used by mutual agreement of the parties even if the common law rule provides only for lump sum damages. The more controversial question is whether one party may demand them as of right over the opposition of the other. For example, legislation may allow one side to require their use. A California law (Cal. Civ. Proc. Code §667.7 (2019)), states that when future damages awarded against any “provider of health care services” exceed \$50,000, either party may request that it be paid in whole or in part in periodic payments and not in lump sum. In construing this section, the court in *Deocampo v. Ahn*, 125 Cal. Rptr. 2d 79, 89 (Ct. App. 2002) wrote:

p. 815

Section 667.7 is intended to enable courts to provide for the needs of injured plaintiffs and their dependents for the length of time such monetary compensation is necessary. The goal is to prevent early dissipation of an award, and ensure that when the plaintiff incurs losses or expenses in the future, the money awarded to him will be there. While a precise match between future needs and the periodic payments is not necessary, there must be evidence to support the payment schedule developed by the court.

Section 667.7 also addresses plaintiffs who die prematurely after entry of a judgment providing for such periodic payments. Section 667.7 prevents such a plaintiff’s survivors from receiving the periodic payments that the plaintiff would have received for his or her future care if he or she had not died prematurely, thus preventing the survivors from receiving a windfall of such money which would no longer be needed for the plaintiff’s care. Section 667.7 does not place such a blanket restriction, however, on the periodic payments for the future lost *wages* awarded to the plaintiff.

Why the difference between wages and medical expenses? For a defense of the lump-sum common law system of payments, see *Rea, Lump-Sum Versus Periodic Damage Awards*, 10 J. Legal Stud. 131 (1981).

4. Caps on damages. The dramatic increase in the level of damages awarded to successful plaintiffs in tort actions has brought forth a strong legislative response in many states: capping damages, especially in medical malpractice cases. This reform, in its many variations, has met with a mixed fate when subjected to constitutional challenges.

For an early acquiescence to these limits, see *Fein v. Permanente Medical Group*, 695 P.2d 665, 683 (Cal. 1985), in which the California Supreme Court upheld section 3333.2 of the California Civil Code, which limited recovery for pain and suffering to \$250,000. The court adopted the deferential “rational basis” standard of review and noted that the statute placed no restrictions on recovery for economic losses:

The choice between reasonable alternative methods of achieving a given objective is generally for the Legislature, and there are a number of reasons why the Legislature may have made the choice it did. One of the problems identified in the legislative hearing was the unpredictability of the size of large noneconomic damage awards, resulting from the inherent difficulties in valuing such damages and the great disparity in the price tag which different juries placed on such losses. The Legislature could reasonably have determined that an across-the-board limit

would provide a more stable base on which to calculate insurance rates. Furthermore . . . the Legislature may have felt that the fixed \$250,000 limit would promote settlements by eliminating “the unknown possibility of phenomenal awards for pain and suffering that can make litigation worth the gamble.” Finally, the Legislature simply may have felt that it was fairer to malpractice plaintiffs in general to reduce only the very large noneconomic damage awards. . . . Each of these grounds provides a sufficient rationale for the \$250,000 limit.

Unlike California, several courts have struck down caps on damages on constitutional grounds.

p. 816

For example, the Georgia Supreme Court struck down Georgia’s \$350,000 cap on pain and suffering damages in medical malpractice cases in *Atlanta Oculoplastic Surgery, P.C. v. Nestlehutt*, 691 S.E.2d 218, 223 (Ga. 2010), on the theory that it violated litigants’ constitutional right to have a jury fully determine damages, including noneconomic damages, by “clearly nullif[ying] the jury’s findings of fact regarding damages and thereby undermin[ing] the jury’s basic function.” See also *Estate of McCall v. United States*, 134 So. 3d 894, 901 (Fla. 2014), where the Florida Supreme Court struck down a statutory cap on wrongful death noneconomic damages on equal protection grounds because “medical malpractice claimants do not receive the same rights to full compensation because of arbitrarily diminished compensation for legally cognizable claims.”

5. Scheduled damages. Damages schedules are an alternative reform that scholars have proposed in lieu of caps. Bovbjerg, Sloan & Blumstein, Valuing Life and Limb in Tort: Scheduling “Pain and Suffering,” 83 Nw. U. L. Rev. 908, 923-924 (1989), documents the high variation in pain and suffering awards for individuals whose conditions are rated as having approximately the same level of severity:

Within an individual severity level, the highest valuation can be scores of times larger than the lowest. Awards for the most serious permanent injuries [such as those involving quadriplegia] . . . range in value from a low of \$147,000 to a high of \$18,100,000. Even considering only the spread between the top and bottom quartiles, the range is great. All the awards in the top 25% of [permanent significant injury cases, such as deafness, loss of limb, loss of eye, or loss of one kidney or lung], for example, are at least six times larger than any of the bottom 25%; the ranges are even larger for lower severity cases. Very large awards are also disproportionately present; the distributions skew to the high end of values, as mean values always far exceed medians.

Given these jury extremes, the authors urge courts to use “scheduled” damages for pain and suffering and other forms of noneconomic loss, preferably by developing a matrix that classifies injuries by severity and age. A second approach informs the jury of the range of awards in past similar cases as nonbinding benchmarks for recovery. A third approach sets floors and ceilings to constrain awards.

*“Do you have any picture books that could help
a child understand tort reform?”*

Source: Alex Gregory / The New Yorker Collection / The Cartoon Bank

6. *Empirical estimation of the effects of medical malpractice reform.* The effects of tort reform have been extensively studied. Such studies are complex, for reasons including the outcome of interest (e.g., malpractice premiums, number of malpractice claims, payouts per claim, total payouts by insurers, health care spending/defensive medicine, and the

p. 817

number of physicians in the state), limited availability of data (only a few states have closed claims databases, and the National Practitioner Databank does not contain comprehensive information), the heterogeneity of the tort reforms adopted (although roughly 30 states have caps on noneconomic or total damages, there is considerable variation in the caps that are adopted), and the importance of controlling for other factors that influence claiming and payouts (e.g., inflation and population growth). The consensus from the literature is that damages caps can have a very substantial effect on claim frequency, and a more modest but still material impact on severity (payouts per claim), with the precise impact varying based on the strictness of the cap and the distribution of damages. See, e.g., Hyman et al., Estimating the Effect of Damage Caps in Medical Malpractice Cases: Evidence from Texas, 1 J. Legal Analysis 355-409 (2009). A more recent study, DeVito & Jurs, “Doubling-Down” for Defendants: The Pernicious Effects of Tort Reform, 118 Penn St. L. Rev. 543 (2014), concluded in a study of several states that imposing a cap produces on average “a statistically significant drop of 23 percent in medical malpractice filings,” which in turn is matched by an increase in filings of 29 percent once the cap is struck down.

SECTION C. WRONGFUL DEATH AND LOSS OF CONSORTIUM

The close connection between claims for wrongful death and loss of consortium justifies their unified treatment. Both types of suit vindicate the “relational” interest of the plaintiff to the person injured or killed. This relational interest rests on the evident social fact that individuals have obligations of duty and support to other persons: spouses to one another, parent to child, and servant to employer. The protection of relational interests adds another layer of complexity to the law, for now the legal system must coordinate the actions of the injured party with those who bring derivative claims through that party.

The common law protected relational interests in two ways. The first was the action *quod servitium amisit* (“because the service has been lost”), which was given only to a man whenever the defendant injured his wife, child, or servant, thereby preventing them from rendering him valuable services. 3 Bl. Comm. 142; Kendrick v. McCrary, 11 Ga. 603 (1852). The basic action was subject to two limitations. First, the action for loss of services could not be brought by a wife or a child. Second, the action for loss of services did not cover cases of wrongful death. The efforts to overcome these two limitations did not proceed in an orderly fashion. Accordingly, we turn first to the history of actions for wrongful death and related causes. Thereafter, we will turn to the loss of consortium.

1. Wrongful Death

a. History

The orderly development of wrongful death actions at common law was stymied by Lord Ellenborough’s famous, if ill-considered, opinion in Baker v.

p. 818

Bolton, 170 Eng. Rep. 1033 (K.B. 1808), which held that a husband suffered no damage when his wife was not merely injured, but killed, by the defendant’s wrongful conduct. The plaintiff could recover damages for the loss of his wife’s services and consortium only for the month between injury and death but was denied damages for both lost after her death. The situation stood unchanged in England until the passage of Lord Campbell’s Act of 1846 (Fatal Accidents Act, 9 & 10 Vict. c. 93 (1846)). The statutory preamble treated Baker v. Bolton as decisive authority against allowing the action at the common law. Its operative provision then provided that

whenever the death of a person is caused by the wrongful act, neglect or default of another, such as would (if death had not ensued) have entitled the injured person to sue and recover damages in respect thereof, then the person who would have been liable if death had not ensued shall be liable to an action for damages, although the death shall have been caused under circumstances as amount to a felony.

The last clause was inserted to make it clear that the plaintiff in the wrongful death action did not have to first prosecute the defendant for any possible felony. The statute designated the class of dependents (since expanded by the Fatal Accidents Act, 1959 §1(1)) entitled to the action: husband, wife, parent, child, grandparent, or grandchild of the deceased. The action was not transmissible by will and did not follow the usual rules for the distribution of assets in case of intestacy.

After passage of the statute, some plaintiffs sued at common law to recover elements of damages not listed

in the wrongful death statutes, but without luck. Thus in *Osborn v. Gillett*, L.R. 8 Ex. 88 (1873), the plaintiff was denied recovery for burial expenses, then not provided for under the statute. In *Admiralty Commissioners v. S.S. Amerika*, [1917] A.C. 38, the plaintiffs failed to recover the ex gratiae pensions they had paid out to the relatives of crew members lost when the defendant ship sank an admiralty submarine. *Baker v. Bolton* loomed large in both cases, where it effectively foreclosed any common law development in England long after its errors were openly acknowledged. The courts declined to tread where Parliament had intervened, partly out of deference to Parliament and partly out of fear of the complications that a dual scheme for wrongful death actions could create.

The history of wrongful death in the United States exhibits the same complex interaction between common law and legislation. In the early colonial period, particularly in Massachusetts, local tribunals probably made awards for wrongful death that were not sanctioned by statute or at common law. Even after *Baker v. Bolton*, some courts seemed prepared to develop wrongful death actions on their own. See, e.g., *Plummer v. Webb*, 19 Fed. Cas. 894 (No. 11234) (1825); *Ford v. Monroe*, 20 Wend. 210 (N.Y. Sup. Ct. 1838). But the rarity of such actions suggests that they were not well established. Indeed *Baker v. Bolton* was not even cited in an American court until 1848. In that year, the Massachusetts Supreme Judicial Court, in *Carey v. Berkshire R.R.*, 55 Mass. 475 (1848), relied on *Baker v. Bolton* to deny the plaintiff a common law action for wrongful death. The companion

p. 819

case of *Skinner v. Housatonic R.R.*, 55 Mass. 475 (1848), refused to allow a wrongful death action to a father for the loss of services of his deceased son. Eight years before *Carey*, Massachusetts had passed a statute that authorized wrongful death actions for between \$500 and \$5,000 to the families of deceased railway passengers whose death was caused by the negligence of the railroad. The deceased in *Carey* was an employee, not a passenger, and thus not covered by the statute. He lost because the court did not wish to create its own wrongful death action in parallel with the legislature's. State after state followed *Carey*'s logic, with only Georgia willing to face the problems of policing and coordinating two different systems of wrongful death actions. See *Shields v. Yonge*, 15 Ga. 349 (1854).

Beginning in 1847, states all across the United States enacted versions of Lord Campbell's Act. Unlike Lord Campbell's Act, most of the American statutes excluded dependent husbands from the class of eligible statutory beneficiaries. In the twentieth century, workers' compensation statutes and New Deal social insurance legislation reproduced the asymmetry established in the wrongful death statutes. Only in the 1970s and 1980s were the provisions excluding widowers from death benefits in statutory accident claims struck down as unconstitutional. See *Wengler v. Druggists Mutual Insurance Co.*, 446 U.S. 142 (1980); Witt, From Loss of Services to Loss of Support: The Wrongful Death Statutes, the Origins of Modern Tort Law, and the Making of the Nineteenth-Century Family, 25 Law & Soc. Inquiry 717, 734-737 (2000). For an excellent history of the early evolution of wrongful death actions, see Malone, The Genesis of Wrongful Death, 17 Stan. L. Rev. 1043 (1965).

b. Measure of Damages

Each state statute sets its own measure of damages for wrongful death actions. Most early wrongful death statutes placed stringent ceilings on the amount of damages permitted the surviving plaintiff, largely out of fear of the jury's passion and sympathy for the aggrieved plaintiff. Courts held that plaintiffs had to take the

bitter with the sweet. So long as any recovery was by legislative grace, the recipients could not protest any attached conditions. Nonetheless, over time, these limitations became anachronistic. Twenty-two states had ceilings on wrongful death claims in 1893. By 1965 that number dropped to 12, and by 1974 the number had dwindled to four. Today, no state has a hard dollar cap on damages in wrongful death actions, although a few states retain special limitations for certain types of cases.

But what measure of damages is appropriate? No state attempts the impossible, which is to put the decedent in the position that she would have enjoyed if the tort had never happened. And no state is able to overcome the profound irony—and puzzle for the economic theory of tort law—that it is cheaper for a defendant to kill his victim than it is to maim her for life. Medical expenses are not part of a wrongful death action per se. That said, most statutes fall into one of two camps: loss to survivors and loss to estate. Under a loss-to-survivors standard, the defendant must pay damages only if some beneficiary depended upon the decedent for support. Under the loss-to-estate standard, damages will

p. 820

be awarded against the defendant even if the decedent had no dependents at the time of death. Most jurisdictions have adopted a loss-to-survivors test as the measure of damages. See Schap & Thompson, Recoverable Damages for Wrongful Death in the States: A 2015 Review of Statutory Law, 22 J. Legal Econ. 143 (2015), for a survey of the methodology used to calculate wrongful death damages in each state. Which standard is better from the point of view of deterrence?

Calculating damages in wrongful death cases is fraught with many of the same difficulties in administration found in serious personal injury cases. The pure wrongful death action awards nothing for the decedent's pain and suffering or medical expenses. Nonetheless, enormous controversy can arise over both the suffering of the survivors and the estimation of lost earnings, especially for children who had never assumed any definable niche in life. Thus in *Wycko v. Gnodtke*, 105 N.W.2d 118 (Mich. 1960), the court allowed the parents of a reliable and trustworthy boy of 14 to recover \$15,000 in damages, dismissing the objection that the parents were entitled to recover only for their pecuniary loss. The court noted the general progress in the social treatment of children since the passage of Lord Campbell's Act in 1846, but rejected "as prayed by appellant, the child-labor measure of the pecuniary loss suffered through the death of a minor child, namely, his probable wages less the cost of his keep." The court then awarded two types of damages. First, on analogy to the costs of maintenance service and repairs for machinery, it allowed the parents damages for the "expenses of birth, of food, of clothing, of medicines, of instruction, of nurture and of shelter." Second, by treating the family as a functioning social unit, it allowed "the value of mutual society and protection, in a word, companionship." Michigan law now provides:

[T]he court or jury may award damages as the court or jury shall consider fair and equitable, under all the circumstances including reasonable medical, hospital, funeral, and burial expenses for which the estate is liable; reasonable compensation for the pain and suffering, while conscious, undergone by the deceased during the period intervening between the time of the injury and death; and damages for the loss of financial support and the loss of the society and companionship of the deceased.

Cooter, Hand Rule Damages for Incompensable Losses, 40 San Diego L. Rev. 1097, 1120 (2003), proposes using the Hand formula to calculate damages for incompensable losses (i.e., those for which a reasonable person could not assign a monetary value), such as the death of a child; his measure is based on “a reasonable person’s point of indifference between the cost of more precaution and the resulting reduction in risk of an incompensable loss.” For an account of the deviation between the evaluation of a lost life in tort and administrative law, see E. Posner & Sunstein, Dollars and Death, 72 U. Chi. L. Rev. 537 (2005), urging major reforms in the tort law, including granting damages for the welfare loss to the decedent. See also Viscusi, The Devaluation of Life, 3 Reg. & Governance 103

p. 821

(2009), for a proposal that administrative agencies rely on the recommendations of a peer-reviewed scientific advisory panel when setting the statistical value of human life.

2. Survival of Personal Injury Actions

One other feature of the common law treatment of death in tort cases deserves mention. From at least the fifteenth century, the common law maxim *actio personalis moritur cum persona*—a personal action dies with the person—provided that any tort action, including one for personal injuries or property damage (but not to recover property), was extinguished by the death of either the plaintiff or the defendant. The right of action created by the defendant’s wrong was treated as exclusively personal between the two original parties; as death severed that personal relationship, so it destroyed any cause of action predicated upon it.

Abandonment of the early position came slowly. Today, survival of actions is well-nigh universal, except, perhaps, for actions for deceit or defamation, and even these actions pass in a few states. Under the typical survivor statute, compensation is allowed for the pain and suffering of the decedent before her death, as that item of damages is not covered under the wrongful death statutes proper. See Leebron, Final Moments: Damages for Pain and Suffering Prior to Death, 64 N.Y.U. L. Rev. 256 (1989), which concludes that the primary justification for such awards must be deterrence and not compensation. Leebron notes that, empirically, the variation in awards under this head of damages is exceptionally high and recommends more judicial supervision to iron out the anomalies in the area.

3. Actions for Loss of Consortium

a. History

The historical development of the action for loss of consortium has not followed the course of wrongful death actions. After early acceptance of the doctrine, the English courts came to regard all actions for loss of consortium as misconceived. In Best v. Samuel Fox & Co. Ltd, [1952] A.C. 716, the House of Lords, with evident discomfort, refused to grant the action to the wife for her loss of the services and comfort of her husband. In 1982, Parliament finished the job by abolishing the action for loss of consortium for husbands, parents, children, and menial servants. 30 & 31 Eliz. 2 §2 (1982).

The American cases, however, took the opposite course. Today, they universally allow wives as well as husbands to sue for loss of consortium. The new era was ushered in by Hitaffer v. Argonne Co., 183 F.2d 811 (D.C. Cir. 1950), which has been followed everywhere in this country. See RST §693(1), which

provides that liability in these cases covers “the resulting loss of the society and services of the first spouse, including impairment of capacity for sexual intercourse, and for reasonable expense incurred by the second spouse in providing medical treatment.” In a self-conscious break with the past, the court in *Hitaffer* first argued that although the element of lost services was important in a consortium case,

p. 822

elements of “companionship, love, felicity and sexual relations” were of equal if not greater importance. It then rejected arguments that the wife’s action should be barred because her injuries were too “indirect,” too “remote,” or too “consequential.” If these arguments are good against the wife’s claim, they could be lodged with equal force against the husband’s action as well. Should both claims be barred on the grounds that persons deprived of society and services can adapt to their change of circumstances?

b. Parents and Children

The debate over the action for loss of consortium has now shifted from suits by the spouse to suits by children whose parents have been injured or killed. Wrongful death actions are allowed to children in part because of the forcible disruption of their advantageous relationships with their parents. The same type of relational loss, albeit of different extent, also exists when the parent is not killed but injured. If one spouse may sue when the other is killed or injured, and children may sue (for wrongful death) when parents are killed, why shouldn’t children be able to sue when their parents are injured? Note, however, substantial administrative costs are entailed by the recognition of such actions. Although the decedent had only one spouse, he or she could have many children (not to mention grandchildren and more distant relations). It is easy to envision severe difficulties in estimating damages owed to each claimant and in coordinating the recovery of the injured party with that of the dependents. The leading case against the child’s consortium action is *Borer v. American Airlines, Inc.*, 563 P.2d 858, 860-861 (Cal. 1977), in which Tobriner, J., rejected the damage claims of the injured party’s nine children:

Loss of consortium is an intangible injury for which money damages do not afford an accurate measure or suitable recompense; recognition of a right to recover for such losses in the present context, moreover, may substantially increase the number of claims asserted in ordinary accident cases, the expense of settling or resolving such claims, and the ultimate liability of the defendants. Taking these considerations into account, we shall explain why we have concluded that the payment of damages to persons for the lost affection and society of a parent or child neither truly compensates for such loss nor justifies the social cost in attempting to do so.

Subsequent cases have been mixed. A divided Connecticut court initially refused to recognize in children an action for loss of consortium, even though they can recover for emotional distress if they witness the death of a parent. See *Mendillo v. Bd. of Educ. of E. Haddam*, 717 A.2d 1177 (Conn. 1998). However the Supreme Court of Connecticut overruled this decision, stating that, as of 2015, 46 states either recognized in children an action for loss of parental consortium arising from a parent’s wrongful death or recognized in children an action for loss of parental consortium arising from a parent’s injury. *Campos v. Coleman*, 123 A.3d 854, 866-868 (Conn. 2015).

A similar debate has arisen among courts over whether an action in the parents for the loss of filial companionship of their children should be recognized. The

court in *Sizemore v. Smock*, 422 N.W.2d 666 (Mich. 1988), held that Michigan “does not recognize a parent’s action for the loss of a child’s society and companionship, and that any decision to further extend a negligent tortfeasor’s liability for consortium damages should be determined by the Legislature.” A somewhat different pattern emerged in other states, such as Arizona and Montana, which now freely allow both children and parents to bring actions for loss of consortium. See, e.g., *Hern v. Safeco Ins. Co. of Ill.*, 125 P.3d 597 (Mont. 2005); *Villareal v. Arizona*, 774 P.2d 213 (Ariz. 1989). These states, moreover, allow parents to recover for the loss of companionship of their adult children, even though the parents were not dependent upon those adult children for financial support. See, e.g., *Hern*, 125 P.3d 597; *Howard Frank, M.D., P.C. v. Superior Court*, 722 P.2d 955, 960 (Ariz. 1986). In *Frank*, the court brushed aside the defendant’s objections that the new action would “spawn increased litigation,” noting that courts could deal with these administrative complications as they arise without heeding “the fabled cry of wolf.” However some jurisdictions that recognize a parent’s action for the loss of companionship of minor children do not allow action for the loss of companionship of adult children. See, e.g., *Benda v. Roman Catholic Bishop of Salt Lake City*, 384 P.3d 207, 212 (Utah 2016). In *Benda*, the court justifies this by comparing parent-minor relationships to spousal relationships, reasoning that, “[I]ike the relationship between spouses, the relationship between parents and a minor child is a legally recognized relationship involving legal obligations. Like the relationship between spouses, it also tends to be a particularly close relationship highly valued in society.”

c. Nontraditional Families

At a substantive level, many courts have balked at extending actions for loss of consortium to unmarried couples who are living together. In *Elden v. Sheldon*, 758 P.2d 582 (Cal. 1988), the plaintiff’s female partner died as the result of a car accident in which he too was injured. He sought to introduce evidence that their “unmarried cohabitation relationship . . . was both stable and significant and parallel to marriage,” so that he could recover for loss of consortium. The California Supreme Court upheld the trial court’s preclusion of this evidence and summary judgment, stressing “the state’s interest in promoting the responsibilities of marriage and the difficulty of assessing the emotional, sexual and financial relationship of cohabiting parties to determine whether their arrangement was the equivalent of marriage.” Justice Broussard noted in dissent that the decision would create an injustice by precluding any recovery for loss of consortium by same-sex couples unable (at that time) to choose marriage. The Supreme Court’s decision in *Obergefell v. Hodges*, 135 S. Ct. 2584 (2015), puts that issue to rest and likewise ensures that same-sex spouses can recover for loss of consortium.

Courts may nonetheless refuse to recognize actions for loss of consortium even between spouses if the injury that caused the loss occurred before marriage. See, e.g., *Bailey v. Allderdice*, 129 Wash. App. 1035 (2005). An exception was found in *Lozoya v. Sanchez*, 66 P.3d 948, 958 (N.M. 2003). The plaintiff and her husband were unmarried at the time of his first accident but had lived together

for about 15 years in a home they had jointly purchased and had three children together. The first accident disrupted their social and sexual arrangements, but they nonetheless married before their second accident. Minzner, J., held that the couple virtually met the standards for a common law marriage, so that the action for loss of consortium was proper.

They held themselves out as a married couple. Further, they testified as to their mutual dependence on each other in their day to day lives. Every single factor we have enunciated for determining whether they had an intimate familial relationship also appears to cut in their favor. We believe that the evidence presented demonstrates that Sara may be able to present a cognizable claim for loss of consortium. She should therefore be allowed to present this claim to the jury.

d. Damages in Consortium Cases

Once the right to sue for loss of consortium is established, how should the damages be calculated? In principle these should be kept separate and apart from the losses to the primary party. But in the absence of any physical injury, courts have not found any obvious way to measure these damages. One effort to short-circuit this problem is to provide that damages for loss of consortium should be some fixed fraction of the damages awarded to the primary plaintiff. Defending this solution in *Arpin v. United States*, 521 F.3d 769, 777 (7th Cir. 2008), Posner, J., first looked to some mathematical formula, such as treble damages in antitrust actions or the more fluid standards in punitive damage cases, which normally limit these to some single-digit multiple of actual damages. He then continued:

The first step in taking a ratio approach to calculating damages for loss of consortium would be to examine the average ratio in wrongful-death cases in which the award of such damages was upheld on appeal. The next step would be to consider any special factors that might warrant a departure from the average in the case at hand. Suppose the average ratio is 1.5—that in the average case, the damages awarded for loss of consortium are 20 percent of the damages awarded to compensate for the other losses resulting from the victim's death. The amount might then be adjusted upward or downward on the basis of the number of the decedent's children, whether they were minors or adults, and the closeness of the relationship between the decedent and his spouse and children.

SECTION D. PUNITIVE DAMAGES

KEMEZY v. PETERS

79 F.3d 33 (7th Cir. 1996)

POSNER, C.J.

Jeffrey Kemezy sued a Muncie, Indiana policeman named James Peters under 42 U.S.C. §1983, claiming that Peters had wantonly beaten him with the

officer's nightstick in an altercation in a bowling alley where Peters was moonlighting as a security guard. The jury awarded Kemezy \$10,000 in compensatory damages and \$20,000 in punitive damages. Peters' appeal challenges only the award of punitive damages, and that on the narrowest of grounds: that it was the plaintiff's burden to introduce evidence concerning the defendant's net worth for purposes of equipping the

jury with information essential to a just measurement of punitive damages.

[Posner, C.J., notes that a majority of courts have rejected Peters' contention.] [W]e think the majority rule, which places no burden of production on the plaintiff, is sound, and we take this opportunity to make clear that it is indeed the law of this circuit.

The standard judicial formulation of the purpose of punitive damages is that it is to punish the defendant for reprehensible conduct and to deter him and others from engaging in similar conduct. . . . A review of the reasons [for awarding punitive damages] will point us toward a sound choice between the majority and minority views.

1. Compensatory damages do not always compensate fully. Because courts insist that an award of compensatory damages have an objective basis in evidence, such awards are likely to fall short in some cases, especially when the injury is of an elusive or intangible character. If you spit upon another person in anger, you inflict a real injury but one exceedingly difficult to quantify. If the court is confident that the injurious conduct had no redeeming social value, so that "overdeterring" such conduct by an "excessive" award of damages is not a concern, a generous award of punitive damages will assure full compensation without impeding socially valuable conduct.
2. By the same token, punitive damages are necessary in such cases in order to make sure that tortious conduct is not underdeterring, as it might be if compensatory damages fell short of the actual injury inflicted by the tort. . . .
3. Punitive damages are necessary in some cases to make sure that people channel transactions through the market when the costs of voluntary transactions are low. We do not want a person to be able to take his neighbor's car and when the neighbor complains tell him to go sue for its value. We want to make such expropriations valueless to the expropriator and we can do this by adding a punitive exaction to the judgment for the market value of what is taken. . . .
4. When a tortious act is concealable, a judgment equal to the harm done by the act will underdeter. Suppose a person who goes around assaulting other people is caught only half the time. Then in comparing the costs, in the form of anticipated damages, of the assaults with the benefits to him, he will discount the costs (but not the benefits, because they are realized in every assault) by 50 percent, and so in deciding whether to commit the next assault he will not be confronted by the full social cost of his activity.
5. An award of punitive damages expresses the community's abhorrence at the defendant's act. We understand that otherwise upright, decent, law-abiding people are sometimes careless and that their carelessness can result in unintentional injury for which compensation should be required. We react far more strongly

to the deliberate or reckless wrongdoer, and an award of punitive damages commutes our indignation into a kind of civil fine, civil punishment.

Some of these functions are also performed by the criminal justice system. Many legal systems do not permit awards of punitive damages at all, believing that such awards anomalously intrude the principles of criminal justice into civil cases. . . .

6. Punitive damages relieve the pressures on the criminal justice system. They do this not so much by creating an additional sanction, which could be done by increasing the fines imposed in criminal cases, as by giving private individuals—the tort victims themselves—a monetary incentive to shoulder the costs of enforcement.

7. If we assume realistically that the criminal justice system could not or would not take up the slack if punitive damages were abolished, then they have the additional function of heading off breaches of the peace by giving individuals injured by relatively minor outrages a judicial remedy in lieu of the violent self-help to which they might resort if their complaints to the criminal justice authorities were certain to be ignored and they had no other legal remedy.

What is striking about the purposes that are served by the awarding of punitive damages is that none of them depends critically on proof that the defendant's income or wealth *exceeds* some specified level. The more wealth the defendant has, the smaller is the relative bite that an award of punitive damages not actually geared to that wealth will take out of his pocketbook, while if he has very little wealth the award of punitive damages may exceed his ability to pay and perhaps drive him into bankruptcy. To a very rich person, the pain of having to pay a heavy award of damages may be a mere pinprick and so not deter him (or people like him) from continuing to engage in the same type of wrongdoing. What in economics is called the principle of diminishing marginal utility teaches, what is anyway obvious, that losing \$1 is likely to cause less unhappiness (disutility) to a rich person than to a poor one. . . . But rich people are not famous for being indifferent to money, and if they are forced to pay not merely the cost of the harm to the victims of their torts but also some multiple of that cost they are likely to think twice before engaging in such expensive behavior again. Juries, rightly or wrongly, think differently, so plaintiffs who are seeking punitive damages often present evidence of the defendant's wealth. The question is whether they *must* present such evidence—whether it is somehow unjust to allow a jury to award punitive damages without knowing that the defendant really is a wealthy person. The answer, obviously, is no. . . .

It ill becomes *defendants* to argue that plaintiffs *must* introduce evidence of the defendant's wealth. Since most tort defendants against whom punitive damages are sought are enterprises rather than individuals, the effect of such a rule would be to encourage plaintiffs to seek punitive damages whether or not justified, in order to be able to put before the jury evidence that the defendant has a deep pocket and therefore should be made to pay a large judgment regardless of any nice calculation of actual culpability. . . . Individual defendants, as in the present case, are reluctant to disclose their net worth in any circumstances, so that

p. 827

compelling plaintiffs to seek discovery of that information would invite a particularly intrusive and resented form of pretrial discovery and disable the defendant from objecting. Since, moreover, information about net worth is in the possession of the person whose net wealth is in issue, the normal principles of pleading would put the burden of production on the defendant—which, as we have been at pains to stress, is just where defendants as a whole would want it. . . .

Affirmed.

NOTES

1. Punitive damages: Common law origins and theoretical basis. Punitive damages have long been awarded at common law. In *Day v. Woodworth*, 54 U.S. 363, 371 (1852), the plaintiff brought a trespass action against the defendants for tearing down and destroying his mill-dam, more than was necessary to protect the operation of their own mill-dam. Grier, J., affirmed an award of punitive damages, noting:

In actions of trespass, where the injury has been wanton and malicious, or gross and outrageous, courts permit juries to add to the measured compensation of the plaintiff that he would have been entitled to recover, had the injury been inflicted without design or intention, something farther by way of punishment or example, which has sometimes been called “smart money.” This has been always left to the discretion of the jury, as the degree of punishment to be thus inflicted must depend on the peculiar circumstances of each case.

An extensive academic literature has examined the theoretical basis and practical operation of punitive damages in tort cases. Polinsky & Shavell, *Punitive Damages: An Economic Analysis*, 111 Harv. L. Rev. 869 (1998), adopted a strict efficiency model, stressing the need for a damage multiplier to take into account the risk that a wrongdoer will escape punishment. That rationale seems to apply with equal force in cases of negligent infliction of harm when it is hard to identify the wrongdoer, and thus tends not to comport with the standard mental requirements for punitive damages. It received some judicial backing from Calabresi, J., in *Ciraolo v. City of New York*, 216 F.3d 236, 243 (2d Cir. 2000), who noted: “Punitive damages can ensure that a wrongdoer bears all the costs of its actions, and is thus appropriately deterred from causing harm, in those categories of cases in which compensatory damages alone result in systematic underassessment of costs, and hence in systematic underdeterrence.” This theory does not, however, systematically take into account the risk of overdeterrence from the repetitive use of these multipliers. Hylton, *Punitive Damages and the Economic Theory of Penalties*, 87 Geo. L.J. 421 (1998), suggests an alternative economic framework, focusing on using punitive damages awards to eliminate defendants’ wrongful gains to accomplish complete deterrence of offensive conduct.

The efficiency boomlet nonetheless did not carry the day in the Supreme Court, as Stevens, J., wrote in *Cooper Industries, Inc. v. Leatherman Tool Group, Inc.*, 532 U.S. 424, 438 (2001), first, that “[h]owever attractive such an approach

p. 828

to punitive damages might be as an abstract policy matter, it is clear that juries do not normally engage in such a finely tuned exercise of deterrence calibration when awarding punitive damages.” Second, he stated that “[c]itizens and legislators may rightly insist that they are willing to tolerate some loss in economic efficiency in order to deter what they consider morally offensive conduct albeit cost-beneficial morally offensive conduct,” quoting Galanter & Luban, *Poetic Justice: Punitive Damages and Legal Pluralism*, 42 Am. U. L. Rev. 1393, 1449 (1993).

For his initial point, Stevens, J., relied on Sunstein, Schkade & Kahneman, Do People Want Optimal Deterrence?, 29 J. Legal Stud. 237 (2000), disputing the Polinsky and Shavell position that jurors increase punitive damages in hard-to-detect events. The authors instead note a wide consensus across social, geographical, and racial boundaries on the determinants of “shared outrage” in punitive damage cases. They then suggest that the wide variation in punitive damage awards given this apparent consensus stems from a common inability to translate moral judgments into dollar amounts. See Schkade, Sunstein & Kahneman, Deliberating About Dollars: The Severity Shift, 100 Colum. L. Rev. 1139 (2000).

Punitive damages awards often present a catch-22: First, a court demands that a manufacturer make an explicit cost-benefit analysis in designing products. Second, juries then infer that a correct cost-benefit analysis shows the callous quantification of human life that calls for punitive damages. See Viscusi, Pricing Lives for Corporate Risk Decisions, 68 Vand. L. Rev. 1117, 1133-1143 (2015), detailing how corporations have been “vilified” for making required cost-benefit analyses, triggering increases in punitive damage awards. One instance of conscious design choices was *Grimshaw v. Ford Motor Co.*, 174 Cal. Rptr. 348 (Ct. App. 1981), in which the jury awarded the plaintiff \$125,000,000 in punitive damages against Ford. In designing the Pinto, Ford had made a number of cost-benefit calculations that involved estimating the value of a human life. In dealing with that issue, should it make a difference if the changes proposed (such as a bladder inside the gas tank of the Pinto) had never been used commercially in cars sold at any price? If the Pinto had a rate of burn deaths or injuries no greater than that of other comparably priced and sized cars? For an exhaustive analysis of the case, see Schwartz, The Myth of the Ford Pinto Case, 43 Rutgers L. Rev. 1013 (1991).

2. *Evidence of defendant’s wealth.* Should a defendant’s wealth be taken into account on either a retributive- or deterrence-based theory of punitive damages? Professors Abraham and Jeffries in *Punitive Damages and the Rule of Law: The Role of Defendant’s Wealth*, 18 J. Legal Stud. 415, 419-423 (1989), argue that consideration of a defendant’s wealth cannot be justified on either ground:

First, there is no logical, necessary, or even plausible connection between the extent of the defendant’s wealth and the amount of underenforcement. The amount of underenforcement in mass tort cases, for example, is likely to depend on factors completely unrelated to the extent of the defendant’s wealth. . . .

Second, even if the wealth of the defendant were related to the probability of underenforcement of its tort liabilities, no additional liability should be imposed absent specific proof of underenforcement in the case at hand. Otherwise, the defendant would be held liable for punitive damages, in

potentially ruinous amounts, without the opportunity to disprove the facts on which such liability is based.

The only rational deterrence explanation for taking defendant’s wealth into account is . . . the speculation that a wealthy defendant, usually a large corporation, may have engaged in a *pattern* of misconduct, of which any given case is merely illustrative. . . . [However,] [p]unishment

cannot fairly be based on unaided speculation about what the defendant might or might not have done in various unspecified circumstances not then before the court. Yet that is exactly what evidence of the defendant's wealth invites—unaided speculation about the defendant's conduct in other cases.

[B]asing retribution on the defendant's wealth is normatively objectionable. . . . Punishment based on the characteristics of the actor must be viewed with suspicion. . . . [P]unishment based on the characteristics of the actor invites erratic and random responses to concerns that have nothing to do with specific misconduct.

Professor Arlen challenges Abraham and Jeffries' analysis in *Should Defendants' Wealth Matter?*, 21 J. Legal Stud. 413 (1992), which presents an economic model wherein defendants' wealth is a relevant factor in setting standards of care and assessing compensatory and punitive damages if actors are risk averse rather than risk neutral.

Does anything prevent the plaintiff from discovering evidence about the defendant's net wealth to argue for an increase in the level of punitive damages? Most states list wealth of the defendant as a relevant factor in the determination of a punitive damages award. See, e.g., Cal. Jury Instr.—Civ. §14.71 (Comm. on Cal. Civil Jury Instr. 2019), *available at* WL BAJI 14.71; N.Y. Pattern Jury Instr.—Civ. §2:278 (Comm. on Pattern Jury Instr. Ass'n of Sup. Ct. Justices 2019), *available at* WL NY PJI 2:278. Few states, however, instruct the jury on the proper use of wealth evidence in the calculation of punitive damages awards, which creates a risk that wealthy defendants could be punished because of their financial status. The U.S. Supreme Court may take up the issue in the future; for now, it has left the matter with its cryptic statement that "wealth of a defendant cannot justify an otherwise unconstitutional punitive damages award." *State Farm Mut. Auto. Ins. Co. v. Campbell*, 538 U.S. 408, 427 (2003), *infra* at 831.

3. Taxation and insurability of punitive damage awards. Unlike compensatory damages, punitive damages, which are viewed more as a windfall, are taxable. In *O'Gilvie v. United States*, 519 U.S. 79, 83 (1996), the Supreme Court interpreted I.R.C. §104(a)(2), which exempts from taxation damages received "on account of personal injuries. . . ." The Court excluded punitive damages on the ground that they "[are] not 'received . . . on account of' the personal injuries [of a plaintiff], but rather [are] awarded 'on account of' a defendant's reprehensible conduct and the jury's need to punish and deter it." I.R.C. §104(a)(2) (2015) was later amended to explicitly exclude punitive damages from exemption.

Several states, including California and New York, prohibit insurance for directly assessed punitive damages on public policy grounds. See Sharkey, *Revisiting the Noninsurable Costs of Damages*, 64 Md. L. Rev. 409 (2005). Corporate

defendants can, however, deduct punitive damages awards from their taxes under I.R.C. §162 (2006). Does the federal policy of deductibility undermine the public policy choices of states that prohibit insurance coverage for punitive damages?

4. Statutory and common law reform of punitive damages. The extensive common law litigation on punitive

damages has brought forth a wide range of legislative reforms. New Hampshire's law provides simply: "No punitive damages shall be awarded in any action, unless otherwise provided by statute." N.H. Rev. Stat. Ann. §507:16 (2019). Other states have capped punitive damages as a multiple of actual damages, at least in some areas. For example, Conn. Gen. Stat. Ann. §52-240b (2019) caps punitive damages at twice compensatory damages in products liability cases. In addition, some states have ordered bifurcated trials of liability and damages in punitive damages cases. See Cal. Civ. Code §3295(d) (2019), where on the application of the defendant, the court shall not admit evidence of the defendant's "profits or financial condition" until the jury has made an award of actual damages. See also Kan. Stat. Ann. §60-3701(a)-(b) (2019), under which the trier of fact determines the defendant's liability for punitive damages and the court determines its amount.

On a second front, eight states have enacted split-recovery statutes that direct a portion of punitive damages awards away from the plaintiff, either to the state treasury or to a designated fund. For example, Or. Rev. Stat. §31.735 (2019) provides that 60 percent of all punitive damage awards go to a Criminal Injuries Compensation Account and 10 percent to a court facilities fund. It was upheld against takings and other state constitutional challenges in *DeMendoza v. Huffman*, 51 P.3d 1232 (Or. 2002). See also *Dardinger v. Anthem Blue Cross & Blue Shield*, 781 N.E.2d 121, 146 (Ohio 2002), where Pfeifer, J., on his own initiative directed that two-thirds of a \$30 million punitive damages award against a health-plan provider should be paid to the Esther Dardinger Fund at the Cancer Hospital and Research Center at Ohio State University, where she was treated:

The final net amount remaining after the prescribed payments [to Dardinger, and various fees] should go to a place that will achieve a societal good, a good that can rationally offset the harm done by the defendants in this case. Due to the societal stake in the punitive damages award, we find it most appropriate that it go to a state institution. In this case we order that the corpus of the punitive damages award go to a cancer research fund, to be called the Esther Dardinger Fund, at the James Cancer Hospital and Solove Research Institute at the Ohio State University.

Similarly, Klein, J., in *Sundquist v. Bank of Am.*, N.A., 566 B.R. 563, 616-617 (Bankr. E.D. Cal. 2017), also *sua sponte*, directed that \$40 million of a \$45 million punitive damages award against Bank of America should be distributed among seven different California law schools and consumer advocacy organizations, such as the National Consumer Bankruptcy Rights Center:

It follows that the public purpose of the societal component of punitive damages against Bank of America in this case should be focused on consumer law in the form of better education in consumer law and more robust resources for leading public service consumer law organizations. . . . By channeling to . . . public academic and consumer advocacy institutions the societal portion of legitimate

punitive damages . . . this court is able to fashion a punitive damages remedy that addresses the enormity of the situation.

However the parties later settled for an undisclosed amount, with the Sundquists voluntarily donating

\$300,000 to the seven organizations. Sundquist v. Bank of Am., N.A. (In re Sundquist), 580 B.R. 536, 543 (Bankr. E.D. Cal. 2018). Can split-recovery schemes achieve their purpose if parties can settle and cut out the portion designated for the state or alternative recipient? For a discussion of split-recovery schemes and the potentially expansive reach of *Dardinger*, see Sharkey, Punitive Damages as Societal Damages, 113 Yale L.J. 347, 422-428 (2003). Given the presence of some statutory reforms, should constitutional limitations be imposed on punitive damage awards?

STATE FARM MUTUAL AUTOMOBILE INSURANCE CO. v. CAMPBELL

538 U.S. 408 (2003)

KENNEDY, J.:

We address once again the measure of punishment, by means of punitive damages, a State may impose upon a defendant in a civil case. The question is whether, in the circumstances we shall recount, an award of \$145 million in punitive damages, where full compensatory damages are \$1 million, is excessive and in violation of the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States.

I

In 1981, Curtis Campbell (Campbell) was driving with his wife, Inez Preece Campbell, in Cache County, Utah. He decided to pass six vans traveling ahead of them on a two-lane highway. Todd Ospital was driving a small car approaching from the opposite direction. To avoid a head-on collision with Campbell, who by then was driving on the wrong side of the highway and toward oncoming traffic, Ospital swerved onto the shoulder, lost control of his automobile, and collided with a vehicle driven by Robert G. Slusher. Ospital was killed, and Slusher was rendered permanently disabled. The Campbells escaped unscathed.

In the ensuing wrongful death and tort action, Campbell insisted he was not at fault. Early investigations did support differing conclusions as to who caused the accident, but “a consensus was reached early on by the investigators and witnesses that Mr. Campbell’s unsafe pass had indeed caused the crash.” 65 P.3d 1134, 1141 (Utah 2001). Campbell’s insurance company, petitioner State Farm Mutual Automobile Insurance Company (State Farm), nonetheless decided to contest liability and declined offers by Slusher and Ospital’s estate (Ospital) to settle the claims for the policy limit of \$50,000 (\$25,000 per claimant). State Farm also ignored the advice of one of its own investigators and took the case to trial, assuring the Campbells that “their assets were safe, that they had no liability for the accident, that [State Farm] would represent their interests, and that they did not need to procure separate counsel.” To the contrary, a jury determined that Campbell was

100 percent at fault, and a judgment was returned for \$185,849, far more than the amount offered in settlement.

At first State Farm refused to cover the \$135,849 in excess liability. Its counsel made this clear to the Campbells: ““You may want to put for sale signs on your property to get things moving.”” Nor was State Farm willing to post a supersedeas bond to allow Campbell to appeal the judgment against him. Campbell

obtained his own counsel to appeal the verdict. During the pendency of the appeal, in late 1984, Slusher, Ospital, and the Campbells reached an agreement whereby Slusher and Ospital agreed not to seek satisfaction of their claims against the Campbells. In exchange the Campbells agreed to pursue a bad faith action against State Farm and to be represented by Slusher's and Ospital's attorneys. The Campbells also agreed that Slusher and Ospital would have a right to play a part in all major decisions concerning the bad-faith action. No settlement could be concluded without Slusher's and Ospital's approval, and Slusher and Ospital would receive 90 percent of any verdict against State Farm.

In 1989, the Utah Supreme Court denied Campbell's appeal in the wrongful-death and tort actions. State Farm then paid the entire judgment, including the amounts in excess of the policy limits. The Campbells nonetheless filed a complaint against State Farm alleging bad faith, fraud, and intentional infliction of emotional distress. [State Farm defended on the ground that it had made an honest mistake. At trial, the plaintiff received an award of \$2.6 million in compensatory damages and \$145 million in punitive damages. The trial judge reduced those figures to \$1 million and \$25 million respectively. The Utah Supreme Court affirmed the \$1 million award for compensatory damages and reinstated the \$145 million in punitive damages on the ground that "State Farm's decision to take the case to trial was a result of a national scheme to meet corporate fiscal goals by capping payouts on claims company wide. This scheme was referred to as State Farm's 'Performance, Planning and Review,' or PP & R, policy. To prove the existence of this scheme, the trial court allowed the Campbells to introduce extensive expert testimony regarding fraudulent practices by State Farm in its nation-wide operations" over a 20-year period. It pointed to State Farm's "massive wealth," and the low probability of detection—estimated at one case in 50,000—for actions that each carried various criminal and civil penalties, "including \$10,000 for each act of fraud, the suspension of its license to conduct business in Utah, the disgorgement of profits, and imprisonment."] We granted certiorari.

II

We recognized in *Cooper Industries, Inc. v. Leatherman Tool Group, Inc.*, 532 U.S. 424 (2001), that in our judicial system compensatory and punitive damages, although usually awarded at the same time by the same decisionmaker, serve different purposes. Compensatory damages "are intended to redress the concrete loss that the plaintiff has suffered by reason of the defendant's wrongful conduct." By contrast, punitive damages serve a broader function; they are aimed at deterrence and retribution.

p. 833

While States possess discretion over the imposition of punitive damages, it is well established that there are procedural and substantive constitutional limitations on these awards. The Due Process Clause of the Fourteenth Amendment prohibits the imposition of grossly excessive or arbitrary punishments on a tortfeasor. The reason is that "[e]lementary notions of fairness enshrined in our constitutional jurisprudence dictate that a person receive fair notice not only of the conduct that will subject him to punishment, but also of the severity of the penalty that a State may impose." To the extent an award is grossly excessive, it furthers no legitimate purpose and constitutes an arbitrary deprivation of property.

Although these awards serve the same purposes as criminal penalties, defendants subjected to punitive damages in civil cases have not been accorded the protections applicable in a criminal proceeding. This

increases our concerns over the imprecise manner in which punitive damages systems are administered. We have admonished that “[p]unitive damages pose an acute danger of arbitrary deprivation of property. Jury instructions typically leave the jury with wide discretion in choosing amounts, and the presentation of evidence of a defendant’s net worth creates the potential that juries will use their verdicts to express biases against big businesses, particularly those without strong local presences.” Honda Motor [Co. v. Oberg, 512 U.S. 415, 432 (1994)]. Our concerns are heightened when the decisionmaker is presented, as we shall discuss, with evidence that has little bearing as to the amount of punitive damages that should be awarded. Vague instructions, or those that merely inform the jury to avoid “passion or prejudice,” do little to aid the decisionmaker in its task of assigning appropriate weight to evidence that is relevant and evidence that is tangential or only inflammatory.

In light of these concerns, in [BMW of North America v. Gore, 517 U.S. 559 (1996)], we instructed courts reviewing punitive damages to consider three guideposts: (1) the degree of reprehensibility of the defendant’s misconduct; (2) the disparity between the actual or potential harm suffered by the plaintiff and the punitive damages award; and (3) the difference between the punitive damages awarded by the jury and the civil penalties authorized or imposed in comparable cases. We reiterated the importance of these three guideposts in *Cooper Industries* and mandated appellate courts to conduct *de novo* review of a trial court’s application of them to the jury’s award. Exacting appellate review ensures that an award of punitive damages is based upon an ““application of law, rather than a decisionmaker’s caprice.””

III

Under the principles outlined in *BMW of North America, Inc. v. Gore*, this case is neither close nor difficult. It was error to reinstate the jury’s \$145 million punitive damages award. We address each guidepost of *Gore* in some detail.

A

“[T]he most important indicium of the reasonableness of a punitive damages award is the degree of reprehensibility of the defendant’s conduct.” We have instructed courts to determine the reprehensibility of a defendant by considering whether: the harm caused was physical as opposed to economic; the

p. 834

tortious conduct evinced an indifference to or a reckless disregard of the health or safety of others; the target of the conduct had financial vulnerability; the conduct involved repeated actions or was an isolated incident; and the harm was the result of intentional malice, trickery, or deceit, or mere accident. The existence of any one of these factors weighing in favor of a plaintiff may not be sufficient to sustain a punitive damages award; and the absence of all of them renders any award suspect. It should be presumed a plaintiff has been made whole for his injuries by compensatory damages, so punitive damages should only be awarded if the defendant’s culpability, after having paid compensatory damages, is so reprehensible as to warrant the imposition of further sanctions to achieve punishment or deterrence.

Applying these factors in the instant case, we must acknowledge that State Farm’s handling of the claims against the Campbells merits no praise. The trial court found that State Farm’s employees altered the company’s records to make Campbell appear less culpable. State Farm disregarded the overwhelming

likelihood of liability and the near-certain probability that, by taking the case to trial, a judgment in excess of the policy limits would be awarded. State Farm amplified the harm by at first assuring the Campbells their assets would be safe from any verdict and by later telling them, postjudgment, to put a for-sale sign on their house. While we do not suggest there was error in awarding punitive damages based upon State Farm's conduct toward the Campbells, a more modest punishment for this reprehensible conduct could have satisfied the State's legitimate objectives, and the Utah courts should have gone no further.

This case, instead, was used as a platform to expose, and punish, the perceived deficiencies of State Farm's operations throughout the country. The Utah Supreme Court's opinion makes explicit that State Farm was being condemned for its nationwide policies rather than for the conduct directed toward the Campbells. This was, as well, an explicit rationale of the trial court's decision in approving the award, though reduced from \$145 million to \$25 million. . . .

A State cannot punish a defendant for conduct that may have been lawful where it occurred. Nor, as a general rule, does a State have a legitimate concern in imposing punitive damages to punish a defendant for unlawful acts committed outside of the State's jurisdiction. Any proper adjudication of conduct that occurred outside Utah to other persons would require their inclusion, and, to those parties, the Utah courts, in the usual case, would need to apply the laws of their relevant jurisdiction.

Here, the Campbells do not dispute that much of the out-of-state conduct was lawful where it occurred. They argue, however, that such evidence was not the primary basis for the punitive damages award and was relevant to the extent it demonstrated, in a general sense, State Farm's motive against its insured. This argument misses the mark. Lawful out-of-state conduct may be probative when it demonstrates the deliberateness and culpability of the defendant's action in the State where it is tortious, but that conduct must have a nexus to the specific harm suffered by the plaintiff. A jury must be instructed, furthermore, that it may

p. 835

not use evidence of out-of-state conduct to punish a defendant for action that was lawful in the jurisdiction where it occurred. A basic principle of federalism is that each State may make its own reasoned judgment about what conduct is permitted or proscribed within its borders, and each State alone can determine what measure of punishment, if any, to impose on a defendant who acts within its jurisdiction.

For a more fundamental reason, however, the Utah courts erred in relying upon this and other evidence: The courts awarded punitive damages to punish and deter conduct that bore no relation to the Campbells' harm. A defendant's dissimilar acts, independent from the acts upon which liability was premised, may not serve as the basis for punitive damages. A defendant should be punished for the conduct that harmed the plaintiff, not for being an unsavory individual or business. Due process does not permit courts, in the calculation of punitive damages, to adjudicate the merits of other parties' hypothetical claims against a defendant under the guise of the reprehensibility analysis, but we have no doubt the Utah Supreme Court did that here. Punishment on these bases creates the possibility of multiple punitive damages awards for the same conduct; for in the usual case nonparties are not bound by the judgment some other plaintiff obtains.

The same reasons lead us to conclude the Utah Supreme Court's decision cannot be justified on the grounds

that State Farm was a recidivist. . . .

. . . The Campbells attempt to justify the courts' reliance upon this unrelated testimony on the theory that each dollar of profit made by underpaying a third-party claimant is the same as a dollar made by underpaying a first-party one. For the reasons already stated, this argument is unconvincing. The reprehensibility guidepost does not permit courts to expand the scope of the case so that a defendant may be punished for any malfeasance, which in this case extended for a 20-year period. In this case, because the Campbells have shown no conduct by State Farm similar to that which harmed them, the conduct that harmed them is the only conduct relevant to the reprehensibility analysis.

B

Turning to the second *Gore* guidepost, we have been reluctant to identify concrete constitutional limits on the ratio between harm, or potential harm, to the plaintiff and the punitive damages award. We decline again to impose a bright-line ratio which a punitive damages award cannot exceed. Our jurisprudence and the principles it has now established demonstrate, however, that, in practice, few awards exceeding a single-digit ratio between punitive and compensatory damages, to a significant degree, will satisfy due process. In [Pacific Mutual Life Insurance Co. v.] Haslip[, 499 U.S. 1, 23-24 (1991)], in upholding a punitive damages award, we concluded that an award of more than four times the amount of compensatory damages might be close to the line of constitutional impropriety. We cited that 4-to-1 ratio again in *Gore*. The Court further referenced a long legislative history, dating back over 700 years and going forward to today, providing for sanctions of double, treble, or quadruple damages

p. 836

to deter and punish. While these ratios are not binding, they are instructive. They demonstrate what should be obvious: Single-digit multipliers are more likely to comport with due process, while still achieving the State's goals of deterrence and retribution, than awards with ratios in range of 500 to 1, or, in this case, of 145 to 1. . . .

In sum, courts must ensure that the measure of punishment is both reasonable and proportionate to the amount of harm to the plaintiff and to the general damages recovered. In the context of this case, we have no doubt that there is a presumption against an award that has a 145-to-1 ratio. The compensatory award in this case was substantial; the Campbells were awarded \$1 million for a year and a half of emotional distress. This was complete compensation. The harm arose from a transaction in the economic realm, not from some physical assault or trauma; there were no physical injuries; and State Farm paid the excess verdict before the complaint was filed, so the Campbells suffered only minor economic injuries for the 18-month period in which State Farm refused to resolve the claim against them. The compensatory damages for the injury suffered here, moreover, likely were based on a component which was duplicated in the punitive award. Much of the distress was caused by the outrage and humiliation the Campbells suffered at the actions of their insurer; and it is a major role of punitive damages to condemn such conduct. . . .

[Kennedy, J., rejected the specific justifications that the Utah Supreme Court offered to justify the 145 multiple: State Farm's massive wealth and the rate of concealment.]

C

The third guidepost in *Gore* is the disparity between the punitive damages award and the “civil penalties authorized or imposed in comparable cases.” We note that, in the past, we have also looked to criminal penalties that could be imposed. The existence of a criminal penalty does have bearing on the seriousness with which a State views the wrongful action. When used to determine the dollar amount of the award, however, the criminal penalty has less utility. Great care must be taken to avoid use of the civil process to assess criminal penalties that can be imposed only after the heightened protections of a criminal trial have been observed, including, of course, its higher standards of proof. Punitive damages are not a substitute for the criminal process, and the remote possibility of a criminal sanction does not automatically sustain a punitive damages award.

Here, we need not dwell long on this guidepost. The most relevant civil sanction under Utah state law for the wrong done to the Campbells appears to be a \$10,000 fine for an act of fraud, an amount dwarfed by the \$145 million punitive damages award. The Supreme Court of Utah speculated about the loss of State Farm’s business license, the disgorgement of profits, and possible imprisonment, but here again its references were to the broad fraudulent scheme drawn from evidence of out-of-state and dissimilar conduct. This analysis was insufficient to justify the award.

p. 837

IV

[Reversed and remanded for a redetermination of punitive damages by the Utah courts.]

SCALIA, J., dissenting.

I adhere to the view expressed in my dissenting opinion in [*Gore*] that the Due Process Clause provides no substantive protections against “excessive” or “unreasonable” awards of punitive damages. I am also of the view that the punitive damages jurisprudence which has sprung forth from [*Gore*] is insusceptible of principled application; accordingly, I do not feel justified in giving the case *stare decisis* effect. I would affirm the judgment of the Utah Supreme Court.

[In *Gore*, Scalia, J., had written in dissent: “What the Fourteenth Amendment’s procedural guarantee assures is an opportunity to contest the reasonableness of a damages judgment in state court; but there is no federal guarantee a damages award actually *be* reasonable.”]

THOMAS, J., dissenting.

I would affirm the judgment below because “I continue to believe that the Constitution does not constrain the size of punitive damages awards.” Accordingly, I respectfully dissent.

GINSBURG, J., dissenting. . . .

In *Gore*, I stated why I resisted the Court’s foray into punitive damages “territory traditionally within the States’ domain.” I adhere to those views, and note again that, unlike federal habeas corpus review of state-

court convictions under 28 U.S.C. §2254, the Court “work[s] at this business [of checking state courts] alone,” unaided by the participation of federal district courts and courts of appeals. It was once recognized that “the laws of the particular State must suffice [to superintend punitive damages awards] until judges or legislators authorized to do so initiate system-wide change.” I would adhere to that traditional view.

Three tugboats (right) push the oil tanker *Exxon San Francisco* (center) into place beside the crippled tanker *Exxon Valdez* (left) in Prince William Sound on March 30, 1989, to begin off-loading the remainder of crude oil in the *Valdez*.

NOTES

1. *Punitive damages in the Supreme Court.* *State Farm* represents the most authoritative Supreme Court decision on the appropriate constitutional standards for evaluating punitive damages.

The Court waded back into the punitive damages waters in *Exxon Shipping Co. v. Baker*, 554 U.S. 471 (2008). In 1989, the *Exxon Valdez* spilled 11 million gallons of crude oil into Prince William Sound when it ran aground on Bligh Reef while under

the command of Captain Hazelwood, a “relapsed alcoholic.” A jury awarded \$5 billion in punitive damages, which the Ninth Circuit eventually reduced to \$2.5 billion (about five times compensatory damages). The Supreme Court took the case under its admiralty jurisdiction, and then reviewed the award

below under common law excessiveness standards. The Court criticized “the stark unpredictability of punitive awards,” relying on its interpretation of recent statistical analyses of punitive damages awards. It then concluded “that a 1:1 ratio [between the two] . . . is a fair upper limit in such maritime cases.” In a provocative footnote, the Court suggested that “[i]n this case, . . . the constitutional outer limit may well be 1:1.” In dissent, Justice Ginsburg expressed dismay that “the Court [will] rule, definitively [on next opportunity], that 1:1 is the ceiling due process requires in all of the States, and for all federal claims.” For critiques of the empirical and theoretical foundations of the Court’s imposition of a 1:1 ratio, see Eisenberg et al., *Variability in Punitive Damages: An Empirical Assessment of the U.S. Supreme Court’s Decision in Exxon Shipping Co. v. Baker*, 166 J. Institutional & Theoretical Econ. 5 (2010), and Sharkey, *The Exxon Valdez Litigation Marathon: A Window on Punitive Damages*, 7 U. St. Thomas L.J. 25 (2009).

2. *Harm to “nonparties.”* In *Philip Morris USA v. Williams*, 549 U.S. 346, 355 (2007), the Court vacated a jury award of \$79.5 million in punitive damages in a wrongful death action that awarded the plaintiff \$800,000 in noneconomic damages. Breyer, J., wrote:

In our view, the Constitution’s Due Process Clause forbids a State to use a punitive damages award to punish a defendant for injury that it inflicts upon nonparties or those whom they directly represent, i.e., injury that it inflicts upon those who are, essentially, strangers to the litigation. . . . [A] defendant threatened with punishment for injuring a nonparty victim has no opportunity to defend against the charge, by showing, for example in a case such as this, that the other victim was not entitled to damages because he or she knew that smoking was dangerous or did not rely upon the defendant’s statements to the contrary.

For another, to permit punishment for injuring a nonparty victim would add a near standardless dimension to the punitive damages equation. How many such victims are there? How seriously were they injured? Under what circumstances did injury occur? The trial will not likely answer such questions as to nonparty victims. The jury will be left to speculate. And the fundamental due process concerns to which our punitive damages cases refer—risks of arbitrariness, uncertainty and lack of notice—will be magnified.

He refused to pass on the question of whether the 100-to-1 ratio was excessive, preferring to wait to see the outcome on remand. Breyer did allow the use of harm to third parties to assess the level of reprehensibility of the conduct in the case at bar; however, in his dissent, Stevens, J., wrote, “This nuance eludes me. When a jury increases a punitive damages award because injuries to third parties enhanced the reprehensibility of the defendant’s conduct, the jury is by definition punishing the defendant—directly—for third-party harm.” Is there a meaningful difference between punishing someone for their past conduct toward third

parties and punishing someone because their past conduct toward third parties made their conduct more reprehensible in the case at bar?

The case then took a curious turn back in the hands of the Oregon Supreme Court, which reaffirmed the \$79.5 million punitive damages verdict on “an independent and adequate state ground.” *Williams v. Philip Morris Inc.*, 176 P.3d 1255, 1260 (Or. 2008). Under Oregon law, parties may appeal the rejection of a

proposed jury instruction only if it was “clear and correct in all respects,” and the Oregon Supreme Court held that Philip Morris did not meet that standard. In the face of this federal-state court standoff, the U.S. Supreme Court “blinked” by dismissing certiorari as improvidently granted after accepting an appeal from the Oregon court’s state-law-based decision. See Sharkey, *Federal Incursions and State Defiance: Punitive Damages in the Wake of Philip Morris v. Williams*, 46 Willamette L. Rev. 449 (2010). What opportunities remain open to lower state and federal courts for awarding punitive damages in excess of single-digit multipliers?

3. Punitive damages in the lower courts. The recent Supreme Court decisions have had important effects on the behavior of both state and lower federal courts. In *Romo v. Ford Motor Co.*, 122 Cal. Rptr. 2d 139 (Ct. App. 2002), the court dealt with a 1993 rollover accident involving a used 1978 Ford Bronco that killed three passengers and injured three more. Ford paid nearly \$5 million in actual damages for its share of the actual damages and was assessed \$290 million in punitive damages on the ground that its roof, which was steel in the front and weaker fiberboard in the rear, had been designed to look sturdier than it was. Vartabedian, P.J., refused to reduce a punitive award that was 48 times actual damage, holding that the false appearance of sturdiness counted as “‘malicious or despicable’ conduct.” After *State Farm*, the Supreme Court vacated the judgment and remanded the case to the California appellate court “for further consideration in light of [State Farm].” *Ford Motor Co. v. Romo*, 538 U.S. 1028 (2003). Thereafter, an award of about \$23.7 million in punitive damages, about five times total compensatory damages, was upheld on appeal. *Romo v. Ford Motor Co.*, 6 Cal. Rptr. 3d 793 (Ct. App. 2003).

Early applications of *Williams* in some lower courts suggest that its prohibition against punishing for harm to third parties could not only reduce punitive damages awards but may even eliminate them entirely. In *Moody v. Ford Motor Co.*, 506 F. Supp. 2d 823, 849 (N.D. Okla. 2007), although the district court eventually ordered a new trial to eliminate any prejudice against the defendant from the plaintiff’s presentation of information regarding harm to third parties, Eagan, J., first discussed the possibility that *Williams* had invalidated the Oklahoma punitive damages statute, which bases the availability of punitive damages on whether a defendant “has been guilty of reckless disregard for the rights of others.” On a smaller scale, courts after *Williams* have found jury instructions to be deficient if they do not clearly delineate between using the evidence of harm to third parties to impermissibly punish and using the evidence to permissibly determine the conduct’s level of reprehensibility. See *Schwarz v. Philip Morris Inc. (Estate of Schwarz)*, 235 P.3d 668, 675 (Or. 2010). If a jury no longer can consider the impact of the defendant’s behavior on nonparties, will the defendant

p. 840

be underdeterring? See, e.g., Hylton, *Reflections on Remedies and Philip Morris v. Williams*, 27 Rev. Litig. 9, 31 (2007). Some courts have found that the impact of the defendant’s behavior on nonparties can be considered when determining reprehensibility, but only when those nonparties are members of the general public. See *McLawhorn v. Ocwen Loan Servicing, LLC*, No. 4:14-CV-02745-RBH, 2017 WL 624539, at *4 (D.S.C. Feb. 15, 2017).

The effects of *Baker* in the lower courts are even more difficult to predict. Most courts seem content to limit the scope of its 1:1 ratio to maritime cases. See, e.g., *Hardy v. City of Milwaukee*, 88 F. Supp. 3d 852, 856 (E.D. Wis. 2015), setting a punitive damage award nine times actual damages; *Colombo v. BRP US Inc.*,

179 Cal. Rptr. 3d 580, 608 (Ct. App. 2014), upholding a 3:1 punitive-compensatory damages ratio. Other courts have applied its limits beyond the realm of admiralty law. Any reason for different standards? For a fuller assessment, see Sharkey, *The Exxon Valdez Litigation Marathon: A Window on Punitive Damages*, 7 U. St. Thomas L.J. 25 (2009).

4. Deterrence and reputational effects. In *Mathias v. Accor Economy Lodging, Inc.*, 347 F.3d 672 (7th Cir. 2003), Posner, J., affirmed a 37:1 punitive-compensatory damages ratio, where the jury awarded \$5,000 in compensatory damages and \$186,000 in punitive damages to each of two guests at defendant's bedbug-infested hotel.

The award of punitive damages in this case . . . serves the additional purpose of limiting the defendant's ability to profit from its fraud by escaping detection and (private) prosecution. If a tortfeasor is 'caught' only half the time he commits torts, then when he is caught he should be punished twice as heavily in order to make up for the times he gets away.

Posner, J., further observed: "All things considered, we cannot say that the award of punitive damages was excessive, albeit the precise number chosen by the jury was arbitrary. It is probably not a coincidence that $\$5,000 + \$186,000 = \$191,000 / 191 = \$1,000$: i.e., \$1,000 per room in the hotel."

How important is the threat of punitive damages in forcing Accor Economy Lodging and similar actors to prevent harms arising from bedbugs in the future? What about regulatory and/or criminal penalties? Or nonlegal economic incentives? See Shavell, *On the Proper Magnitude of Punitive Damages: Mathias v. Accor Economy Lodging, Inc.*, 120 Harv. L. Rev. 1223 (2007), which argues: "The need for punitive damages—and, for that matter, for compensatory damages—to accomplish deterrence is of a much lower order when victims are the customers of a firm than when they are not."

SECTION E. LITIGATION FINANCING

Bringing and defending a modern tort claim is a costly venture, which few injured individuals can afford to bring with their own resources. A number of devices have been developed to cope with this obvious difficulty: contingent fees, class

p. 841

actions, fee shifting, sales of mature and unmatured tort claims, and litigation insurance.

1. Contingent Fees

Unlike injured individuals, lawyers have a book of business and often therefore agree to a contingent fee arrangement whereby they recover nothing for their work or expenses unless the claim is paid either after judgment or settlement. The contingent fee signals to the client that the lawyer thinks that the case is worth bringing, while relieving her of any obligation of payment. The standard terms of contingent fee arrangements can vary with the difficulty of the case, but in most instances, the agreement specifies that the proceeds of recovery are first used to repay to the lawyer his out-of-pocket expenses of bringing the suit,

most notably the cost of investigation and expert witnesses. The lawyer's fee is a fraction of what remains, typically around one-third to one-half of the fee, unless the amounts in question are limited by local statutes, which use a sliding scale that gives the lawyer a smaller increment of each additional amount paid. See N.J. Rules of Court 1:21-7(c) (2019). Virtually all tort litigation is financed this way on the plaintiff's side. Wilkinson, J., praised the contingency arrangement in *In re Abrams & Abrams, P.A.*, 605 F.3d 238, 246 (4th Cir. 2010):

Access to the courts would be difficult to achieve without compensating attorneys for [the risk of loss assumed by attorneys through contingency fee agreements]. The risks a lawyer assumes are not dissimilar to those undertaken, for example, by a realtor on commission, who accepts the possibility of no sale as well as the potential reward of a quick transaction. . . . [I]t may be necessary to provide a greater return than an hourly fee offers to induce lawyers to take on representation for which they might never be paid, and it makes sense to arrange these fees as a percentage of any recovery. . . . In other words, plaintiffs may find it difficult to obtain representation if attorneys know their reward for accepting a contingency case is merely payment at the same rate they could obtain risk-free for hourly work, while their downside is no payment whatsoever. Conversely, an attorney compensated on a contingency basis has a strong economic motivation to achieve results for his client, precisely because of the risk accepted.

The relative superiority of the contingent fee for the ordinary tort damage action depends critically on its ability to minimize the structural conflict of interests between lawyer and client. A description of the nature of these conflicts and their possible resolution is forcefully set out by Judge Easterbrook in *Kirchoff v. Flynn*, 786 F.2d 320, 324-325 (7th Cir. 1986):

The market for legal services uses three principal plans of compensation: the hourly fee, the fixed fee, and the contingent fee. The contingent fee serves in part as a financing device, allowing people to hire lawyers without paying them in advance (or at all, if they lose). It also serves as a monitoring device. In any agency relation, the agent may pursue his own goals at the expense of the principal's. A fixed fee creates the incentive to shirk; a lawyer paid a lump sum, win or lose,

p. 842

may no longer work hard enough to present his client's case. Fixed fees therefore are used only in cases where the client can monitor the results and the lawyer's work (did the lawyer secure the divorce or not?) or where the client (or the client's general counsel) is sufficiently sophisticated to assess what the lawyer has accomplished.

An hourly fee creates an incentive to run up hours, to do too much work in relation to the stakes of the case. An hourly fee may be appropriate where it is hard to define output (in litigation, for example, the outcome turns on the merits and not simply the lawyer's skill and dedication), so the hourly method measures and prices the inputs, the attorney's hours. . . .

The contingent fee uses private incentives rather than careful monitoring to align the interests of lawyer and client. The lawyer gains only to the extent his client gains. This interest-alignment

device is not perfect. When the lawyer gains 40 cents to the client's dollar, the lawyer tends to expend too little effort; unless concern for his reputation dominates, he would not put in an extra \$600 worth of time to obtain an extra \$1,000 for his client, because he would receive only \$400 for his effort. But imperfect alignment of interests is better than a conflict of interests, which hourly fees may create. The unscrupulous lawyer paid by the hour may be willing to settle for a lower recovery coupled with a payment for more hours. Contingent fees eliminate this incentive and also ensure a reasonable proportion between the recovery and the fees assessed to defendants. Except in grudge litigation, no client, however wealthy, pays a lawyer more than a dollar to pursue a dollar's worth of recovery.

Under the contingent fee system, it is generally regarded as a violation of the standards of professional ethics for a lawyer to reject a settlement offer or to settle an outstanding case without first obtaining the approval of the client. See ABA Model Rules of Professional Conduct, Rule 1.2(a). In addition, the standard contract allows the client to discharge the attorney if the client is dissatisfied with the handling of the case. Wholly apart from legal threats, concerns for professional reputation and the desire to obtain future business through word-of-mouth advertising often keep the plaintiff's lawyer hard at work. By way of offset, a client who improperly dismisses an attorney from the case may be required by court order to pay the initial lawyer, once the claim is resolved, to recover a fee based upon the value of work previously done. In addition, the standard contract allows the lawyer, usually subject to court approval, to withdraw if he thinks that it is unwise to pursue the matter further, which might happen if discovery reveals evidence adverse to the client's case. For accounts of the contractual features of contingent fee arrangements, see Miller, Some Agency Problems in Settlement, 16 J. Legal Stud. 189 (1987). For a defense of the contingent fee system, see Dana & Spier, Expertise and Contingent Fees: The Role of Asymmetric Information in Attorney Compensation, 9 J.L. Econ. & Org. 349 (1993), which extols the virtues of the contingent fee system. For concerns that the contingent fee overcompensates lawyers in mass torts cases, where group settlements can reduce litigation costs, see Brickman, O'Connell & Horowitz, Rethinking Contingency Fees: A Proposal to Align the Contingency Fee System with Its Policy Roots and Ethical

p. 843

Mandates (1994). For a defense of contingent fees, see Kritzer, Seven Dogged Myths Concerning Contingency Fees, 80 Wash. U. L.Q. 739 (2002). For a wholesale assault on the contingent fee system claiming that it distorts the civil justice system, influences the larger political system, and poses a threat to democratic governance, see Brickman, Lawyer Barons: What Their Contingency Fees Really Cost America (2011).

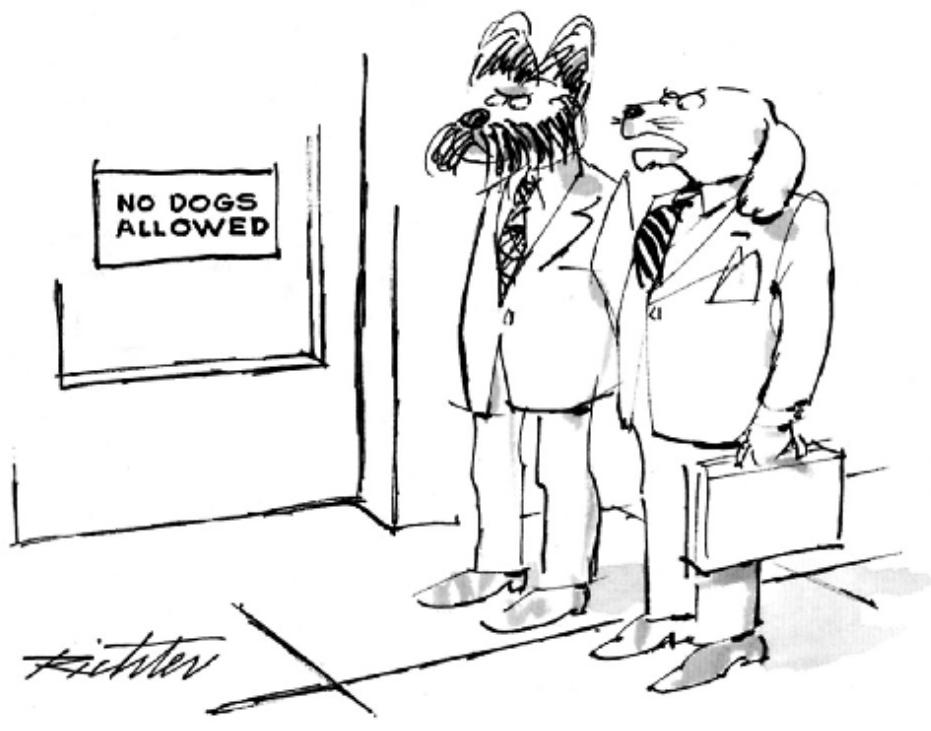

In general, it has been far more difficult to adapt the contingent fee to compensate the defendant's lawyers, who usually receive hourly fees from the insurance companies or institutional defendants that employ them. But in these cases clients have to closely monitor fees, lest the defendant spend large sums of money to lose at trial when a favorable settlement may have been available at a fraction of the time and effort. Some anecdotal evidence suggests that lawyers in large cases often accept payment, either in whole or in part, via contingent fees. To make that system work the parties must agree in advance on the baseline, from which the contingent fee is calculated when the client pays the lawyer a sum equal to some fraction of the amount saved below that amount. If the defendant and the lawyer both knew that the proper value of the claim was \$1,000,000, the lawyer's fee could equal one-third of any judgment or settlement below that level. (Thus, the million-dollar case that settles for \$400,000 would net the lawyer a fee of \$200,000, or one-third of

\$600,000 saved.)

2. Class Actions

Class actions are commonly used to aggregate large numbers of cases with common elements, each of which is too small to bring in its own right. The basic theory is that the lawyer chosen as a class representative has the power to try and settle cases on behalf of the class, after which the judge certifies a fee to be paid proportionate to the amount recovered. There are huge disputes over whether the class action becomes a club by which enterprising lawyers take advantage of defendants who cannot afford to litigate “bet your company” lawsuits, and whether judicial oversight does an effective job in regulating fees in obvious conflict of interest situations. The detailed study of class actions is covered in great detail in both first-year courses in civil procedure and advanced courses in complex litigation.

3. Fee Shifting

Source: Mischa Richter / The New Yorker Collection / The Cartoon Bank

Under the American system each side pays the cost of its own lawyer regardless of the outcome of

p. 844

the case, except in rare cases of malicious prosecution, which can only be brought after the aggrieved party has obtained a final judgment in the underlying litigation. *Berlin v. Nathan*, 381 N.E.2d 1367, 1371 (Ill. App. 1978). In many other systems, most notably the British, the winning party is able to recover its fees from the losing party through an administrative proceeding before a taxing master who determines the reasonableness of the claims. The choice of compensation system influences the way in which parties

choose to bring or defend suits. Usually parties are willing to take larger risks when they know that the high probability of loss will not increase their overall legal bills. See generally, on these dynamics, Shavell, Suit, Settlement and Trial: A Theoretical Analysis Under Alternative Methods for the Allocation of Legal Costs, 11 J. Legal Stud. 35, 58-60 (1982). One consequence of the difference in fee systems is that riskier claims, including those based on novel legal theories, are more likely to be brought in the United States than in England. See Prichard, A Systemic Approach to Comparative Law: The Effect of Cost, Fee, and Financing Rules on the Development of the Substantive Law, 17 J. Legal Stud. 451 (1988).

4. Sale of Tort Claims

Today, the tort law forbids the outright assignment of unliquidated tort claims. Current statutes make maintenance, champerty, and barratry all criminal offenses on the ground that no person is allowed to either raise or assist in a claim in which he does not have a property interest. “Put simply, maintenance is helping another prosecute a suit; champerty is maintaining a suit in return for a financial interest in the outcome; and barratry is a continuing practice of maintenance or champerty.” In re Primus, 436 U.S. 412, 424 n.15 (1978). Contingent fees undercut this prohibition by authorizing, in effect, the partial sale of claims. Academic opinion tends to favor the lifting of all restrictions on sale, one advantage of which is that the injured party can recover the estimated value of her claim without having to bear the delay and uncertainties of litigation, so long as she agrees to cooperate with the claim purchaser on its prosecution. See Shukaitis, A Market in Personal Injury Tort Claims, 16 J. Legal Stud. 329, 329-330, 339-340 (1987).

A more radical proposal allows for sales of *unmatured* tort claims (UTCs) in which firms in a competitive market offer to pay to compensate for any future action in exchange for a promised assignment of those future claims. See Friedman, What Is “Fair Compensation” for Death or Injury?, 2 Int’l Rev. L. & Econ. 81 (1982). Cooter, Towards a Market in Unmatured Tort Claims, 75 Va. L. Rev. 383, 387 (1989), endorsed the proposal:

If a market in UTCs were established . . . potential victims would substitute cheaper first party insurance for the tort system’s current third party insurance scheme. Additionally, competitive pricing of UTCs would result in appropriate deterrence of potential tortfeasors. Because the price of UTCs should vary according

p. 845

to the likelihood and severity of potential torts, the potential tortfeasor faced with purchasing the UTC or risking litigation should take the optimal amount of precaution.

For the case that moral hazard will “destroy the market,” see Marks, The Market in Unmatured Tort Claims: Twenty-Five Years Later, 34 Pace L. Rev. 185, 196 (2014). For a historical analysis of litigation financing as well as a present-day comparison of different third-party litigation funding mechanisms, see Velchik & Zhang, Islands of Litigation Finance, 24 Stan. J.L. Bus. & Fin. 1 (2019).

5. Litigation Insurance

Another way to provide for legal fees is through litigation insurance that covers the ordinary costs of suit. These contracts are legal today but face the serious moral hazard risk that only parties who expect to be

involved in litigation are likely to purchase this coverage. This market has emerged in Germany, where contingent fees are prohibited, and experience to date suggests the increase in litigation is slight, perhaps because litigation requires huge amounts of personal time and emotion, even if others cover the legal fees. For discussion, see Gross, We Could Pass a Law . . . What Might Happen If Contingent Legal Fees Were Banned, 47 DePaul L. Rev. 321, 330-334 (1998).

6. Alternative Litigation Financing

More controversial is the rise of third-party litigation funding, by entities, not law firms, that specialize in handling these claims. Such financing has gained wide acceptance in the United Kingdom and Australia and has begun to establish a foothold in some U.S. jurisdictions. It appears that these systems have escaped punishment under traditional maintenance laws, given that they increase access to the justice system for otherwise excluded parties. See Sebok, The Inauthentic Claim, 64 Vand. L. Rev. 61 (2011), which criticizes the historical and jurisprudential underpinnings of the maintenance prohibition. For a thorough vetting of the pros and cons of alternative litigation financing structures, see Symposium, A Brave New World: The Changing Face of Litigation and Law Firm Finance, 63 DePaul L. Rev. 193 (2014).

SECTION F. COLLATERAL BENEFITS

Plaintiffs may receive additional funds for their injuries from parties other than tortfeasors, such as insurance companies or the government. These payments are called collateral benefits. When plaintiffs receive collateral benefits prior to trial, may the defendant introduce evidence of those benefits to reduce its own damage payments? See RST §920A, stating the general rule in the negative. Although the collateral source rule is in tension with the fair

p. 846

compensation goal of tort law between the victim and the tortfeasor, it is arguably more just to allow the plaintiff to benefit from any windfall. However the modern trend has been toward allowing defendants to introduce evidence of collateral benefits at trial.

HARDING v. TOWN OF TOWNSHEND

43 Vt. 536 (1871)

[The plaintiff sued for injuries caused “by reason of an insufficiency of a highway of the defendant.” The plaintiff had received payment of \$130 from an insurance policy that he purchased for \$7. The court charged the jury that it should reduce the amount of recovery by the net proceeds of the insurance, \$123.]

PECK, J. There is no technical ground which necessarily leads to the conclusion that the money received by the plaintiff of the accident insurance company should operate as a defense, or enure to the benefit of the defendant. The insurer and the defendant are not joint tortfeasors or joint debtors so as to make a payment or satisfaction by the former operate to the benefit of the latter. Nor is there any legal privity between the defendant and the insurer so as to give the former a right to avail itself of a payment by the latter. The policy of insurance is collateral to the remedy against the defendant, and was procured solely by the

plaintiff and at his expense, and to the procurement of which the defendant was in no way contributory. It is in the nature of a wager between the plaintiff and a third person, the insurer, to which the defendant was in no measure privy, either by relation of the parties or by contract or otherwise. It cannot be said that the plaintiff took out the policy in the interest or behalf of the defendant; nor is there any legal principle which seems to require that it be ultimately appropriated to the defendant's use and benefit.

But it is urged, on the part of the defense, that the plaintiff is entitled to but one satisfaction for the injury he has sustained. If we assume this to be a correct proposition, the question arises whether the defendant stands in a condition to make this objection. This depends on the question who, as between the insurer and the defendant, ought to pay the damage—which of the two ought primarily to make compensation to the plaintiff and ultimately to bear the loss? If the insurer ought ultimately to bear the loss, the defendant is entitled in this action to have the benefit of that payment; but if the defendant should ultimately bear the loss, then the payment by the insurer and the collection of the entire damage of the defendant only creates an equity between the plaintiff and the insurer, to be ultimately adjusted between them, in which the defendant has no interest, and with which he has no concern. . . . [A]s between the insurer and the wrong-doer, in reason and justice the burden of making compensation to the injured party ought to be ultimately borne by the party thus in fault. . . . It would seem to be a perversion of justice to subrogate the wrong-doer, who has caused the loss, to the rights of the injured party as to his remedy against the insurer. But it is not uncommon that the insurer, who has paid the loss, is put

p. 847

in place of the insured and subrogated to his rights in respect to his remedies against others for the injury.

Judgment of the county court reversed, and judgment for the plaintiff for the amount of the verdict, and the \$123 to be added thereto.

NOTES

1. *Varieties of collateral benefits.* Collateral source payments include more than insurance payments made directly to the plaintiff, including salary, *Motts v. Michigan Cab Co.*, 264 N.W. 855 (Mich. 1936); payments from the Welfare Fund of the United Mine Workers, *Conley v. Foster*, 335 S.W.2d 904 (Ky. 1960); and sick or vacation pay, *Davidson v. Vogler*, 507 S.W.2d 160 (Ky. 1974).

The principle has been hotly contested in those instances where an injured plaintiff receives a discount from list price from Medicare, Medicaid, or some private insurer, only to claim that the tort recovery should be calibrated by the list and not the discounted price—arguing in effect that under the collateral source rule neither the defendant nor its insurer is entitled to the benefit of plaintiff's market prowess or good fortune. Recent courts have sharply split on this question. The majority of courts take the position that a plaintiff can introduce into evidence the total health care bills charged to her insurer even if these exceeded the amounts actually paid, and the tortfeasor cannot offer evidence that the bill was discounted or written off. Aligning itself with two dozen cases from throughout the country, the Supreme Court of West Virginia reasoned: “The plaintiff may recover the full amount of his or her reasonable and necessary medical expenses. . . .”

Kenney v. Liston, 760 S.E.2d 434, 444-445 (W. Va. 2014). By contrast, in Bozeman v. State, 879 So. 2d 692, 705-706 (La. 2004), the injured plaintiff had about \$613,000 in medical expenses “written off” to about \$345,000. Johnson, J., held that

Medicaid recipients are unable to collect the Medicaid ‘write-off’ amounts as damages because no consideration is provided for the benefit. Thus, plaintiff’s recovery is limited to what was paid by Medicaid. However, in those instances, where plaintiff’s patrimony has been diminished in some way in order to obtain the collateral source benefits, then plaintiff is entitled to the benefit of the bargain, and may recover the full value of his medical services, including the ‘write-off’ amount.

In between these two approaches, at least three states allow evidence of both the discounted price and the list price to be admitted into evidence. In reaffirming their commitment to this approach, the Indiana Supreme Court stated, “We continue to believe this middle ground not only represents the ‘fairest approach,’ but also honors our deep, abiding faith in the jury system.” Patchett v. Lee, 60 N.E.3d 1025, 1032 (Ind. 2016) (internal citation omitted). How should the value be computed if health care providers routinely accept these discounts? If different prices for identical services are charged to government and private insurers?

2. *Government benefits and the collateral source rule.* The collateral source rule gives rise to special complications when the government is both a tortfeasor liable

p. 848

under the Federal Tort Claims Act and the supplier of first-party benefits under, for example, both Social Security and veterans’ benefits programs. With mixed success, the government typically claims that payments under other government programs do not count as collateral payments, and hence should be used to reduce the government’s tort obligation. In *Steckler v. United States*, 549 F.2d 1372, 1379 (10th Cir. 1977), the government sought to set off both veterans’ benefits and Social Security from the tort award. The court deducted veterans’ benefits to prevent the plaintiff from recovering “double payment” for the same injury from the same source. The court refused, however, to allow the government a total setoff for Social Security. “The part contributed by the worker and the employers has the aspects of social insurance and as such is collateral to monies contributed by the government.” The part of Social Security from general government contributions, however, was not collateral, and hence was set off against tort damages, like veterans’ benefits. *Steckler* then placed the burden on the plaintiff to determine what fraction of the Social Security payment counted as a nondeductible collateral source.

Steckler was modified by *Berg v. United States*, 806 F.2d 978, 985 (10th Cir. 1986).

We are now convinced that it is in fact impossible to distinguish accurately which part of a fund that has been produced by millions of contributors is attributable to the government and which part is attributable to a particular injured party. Therefore, we require that the plaintiff bear the burden of showing only that he or she contributed to a special fund that is separate and distinct from general government revenues.

The court held that Medicare benefits, funded under Social Security, so qualified as collateral sources. That approach was followed in *Molzof v. United States*, 6 F.3d 461, 465, 466 (7th Cir. 1993), in which Cudahy, J., applying Wisconsin law, refused to allow the government to set off benefits it paid out through its Veterans Administration program against damages awarded against it under the Federal Tort Claims Act, on the ground that the two funds were different sources even if the defendant was the same. What if the Social Security or veterans' benefits were by statute or by agreement explicitly set off from tort awards?

3. Statutory modification of the collateral source rule. The ongoing expansion of tort liability has ushered in many statutory exceptions to the collateral source rule, especially for health care providers.

California Civil Code (2019)

§3333.1. NEGLIGENCE OF HEALTH CARE PROVIDER; EVIDENCE OF BENEFITS AND PREMIUMS PAID; SUBROGATION

(a) In the event the defendant so elects, in an action for personal injury against a health care provider based upon professional

p. 849

negligence, he may introduce evidence of any amount payable as a benefit to the plaintiff as a result of the personal injury pursuant to the United States Social Security Act, any state or federal income disability or worker's compensation act, any health, sickness or income-disability insurance, accident insurance that provides health benefits or income-disability coverage, and any contract or agreement of any group, organization, partnership, or corporation to provide, pay for, or reimburse the cost of medical, hospital, dental, or other health care services. Where the defendant elects to introduce such evidence, the plaintiff may introduce evidence of any amount which the plaintiff has paid or contributed to secure his right to any insurance benefits concerning which the defendant has introduced evidence.

What should be done with the information once introduced? A New York statute, N.Y. C.P.L.R. §4545(a) (2019), reduces recovery for any present or future payment, subject to reasonable estimation. That amount recoverable is increased by an amount equal to (1) the cost of keeping the benefit in place during the previous two years, plus (2) the projected contractual cost of keeping the benefits in place in the future. The purpose of the New York statute is to return the plaintiff to the same position she would have been in if she had not acquired any collateral coverage at all.

Ann S. Levin, Comment, *The Fate of the Collateral Source Rule After Healthcare Reform*, 60 UCLA L. Rev. 736 (2013), looks at how the Affordable Care Act affects the traditional rationales that undergird the collateral source rule, arguing that because the ACA is both making insurance coverage well-nigh universal through its individual mandate and because it also makes it so that insurance contracts are more standardized, there is less of a need for the collateral source rule. It then advocates for a scheme much like the one in New York state. For a contrasting view that the ACA shouldn't affect the tort system at all, see Andrew F. Popper, *The Affordable Care Act Is Not Tort Reform*, 65 Cath. U. L. Rev. 1 (2015).

Benjet, A Review of State Law Modifying the Collateral Source Rule: Seeking Greater Fairness in

Economic Damages Awards, 76 Def. Couns. J. 210 (2009), provides a summary of state modifications of the collateral source rule. For an attack on the various statutory exceptions to the collateral source rule, see Marshall & Fitzgerald, *The Collateral Source Rule and Its Abolition: An Economic Perspective*, 15 Kan. J.L. & Pub. Pol'y 57, 58 (2005). For an analysis of the corrective justice underpinning of the collateral source rule and a discussion of how the abolition of the rule would challenge the fundamental nature of American tort law, see Krauss & Kidd, *Collateral Source and Tort's Soul*, 48 U. Louisville L. Rev. 1 (2009).

p. 850

4. Subrogation and reimbursement. A second way to avoid the double recovery is to allow the collateral source to receive repayment of its expenses from the successful tort claim, or in some cases take control over that tort litigation. In many instances, third-party insurers base their rates in part on their ability to recover those funds. Knowing this, plaintiffs often seek to enter into collusive settlements with defendants, whereby they claim that all or a disproportionate part of the recovery is allocated to pain and suffering, to which no subrogation rights attach. In *Westendorf v. Stasson*, 330 N.W.2d 699, 702 (Minn. 1983), the tort settlement provided that all “payments to be made hereunder are solely attributable to the pain and suffering and permanent injury” of the plaintiff and the loss of consortium to her spouse. But the court held that this settlement did not bind the insurance company whose rights it sought to cut off. That result is supported in Sykes, *Subrogation and Insolvency*, 30 J. Legal Stud. 383, 386 (2001), on the ground that if the injured party bore, as against the insurer, the risk of pain and suffering when no third-party tortfeasor was present, the “fortuitous presence of an injurer liable for the insured’s losses” should not alter that balance.

5. Subrogation and the independent cause of action. As a matter of contract law, a subrogee’s claim is an assignment, subject to all defenses that the defendant can raise against the injured party. “Where the insured has no right of recovery, the insurer has no enforceable right of subrogation.” *Gibbs v. Hawaiian Eugenia Corp.*, 966 F.2d 101, 106 (2d Cir. 1992). That rule prevents any health plan from recovering its costs in treating a smoker’s lung cancer from a tobacco company if the smoker’s claims were blocked by the defense of assumption of risk. To circumvent these subrogation limitations, many insurers assert “direct” or “independent” claims against the tobacco defendants. These independent claims were allowed to state Medicaid programs by courts that have held that Medicaid’s public duty to provide care to tort victims authorizes direct actions for their own expenses, free of defenses that could be asserted against the tobacco smokers. In contrast, private labor unions and health plans have been generally rebuffed when they have sought to unhinge their reimbursement claims that stem from RICO claims for racketeering and fraudulent misrepresentation from the underlying tort actions. See *Laborers Local 17 Health and Benefit Fund v. Philip Morris, Inc.*, 191 F.3d 229 (2d Cir. 1999), *infra* at 1138.

CHAPTER 10

Tort Extensions: Insurance and No-Fault Systems

Section A. Introduction

Section B. Liability Insurance

Crisci v. Security Insurance Co.

Dimmitt Chevrolet, Inc. v. Southeastern Fidelity Insurance Corp.

Section C. The No-Fault Systems

Clodgo v. Rentavision, Inc.

Wilson v. Workers' Compensation Appeals Board

Rainer v. Union Carbide Corp.

Section D. The 9/11 Victim Compensation Fund

Section E. The New Zealand Plan

SECTION A. INTRODUCTION

The tort system does not operate in a void, but is supported by two distinct systems. The first of these is the system of liability insurance provided to defendants to manage their legal defense by litigating or settling various claims against the insured. The early discussions of modern liability insurance all began with insurance for automobile accidents, which quickly spread to other lines of insurance, such as rental and business insurance. More recently, modern insurance law has had to confront more complex torts, most notably with claims arising out of pollution and product liability claims.

The first part of this chapter traces these developments, looking both at the traditional case law on the topic and also some of the major innovations for this area proposed in the American Law Institute's Restatement of Liability Insurance (RLI), which the insurance companies claim unduly expands the scope of the insurer's obligations beyond the current case law. See, e.g., Debevoise & Plimpton, ALI's Restatement of the Law Liability Insurance: Regulatory Considerations (2017), prepared by Eric Dinallo and Keith Slattery, available at https://www.namic.org/pdf/insbriefs/ali_synopsis.pdf. For a pointed defense of the new regime by the Reporters for RLI, see Baker & Logue, In Defense of the Restatement of Liability Insurance Law, 24 Geo. Mason L. Rev. 767 (2017).

The second part of this chapter looks at the wide range of no-fault systems that have been used to displace the tort system. The most well established is the workers' compensation system that secured widespread

adoption in the United States in the years just before World War I, and which remains a major social system in the market today. This chapter first examines its historical adoption and then looks at some of the major coverage issues under these policies, as they have evolved.

p. 852

The rest of this section looks at those compensation systems that have failed to obtain widespread adoption in the United States. These include academic proposals to develop no-fault insurance for product liability and medical malpractice cases, and New Zealand's comprehensive reform that eliminates the tort system for personal injury and death in the workplace, at home, and on the roads. A generation ago, there were serious prospects that the system would spread to other countries. But a half-century later, New Zealand looks very much like the national outlier.

SECTION B. LIABILITY INSURANCE

1. Automobile and Other Basic Lines of Insurance

The basic principles of liability insurance were closely tied to the mass use of the automobile, but were by no means confined to it. In this section we trace the evolution of these coverage provisions starting with some automobile-specific provisions and then branching out to other forms of insurance.

a. The March to Compulsory Insurance

In the early days of liability insurance, the standard coverage provision was construed as an indemnity contract under which the insurance company had to reimburse the insured for any sums that it paid out to the injured party. It followed therefore that if the insured went bankrupt before paying anything to the tort claimant, that claimant did not have a direct action against the insurer. The point was put as follows in *Bain v. Atkins*, 63 N.E. 414, 415 (Mass. 1902):

Exhibit 10.1 The First Automobile Insurance

On February 1, 1898, Dr. Truman Martin of Buffalo, New York, became the first person to be issued an automobile insurance policy. The car pictured here (an 1898 Star-Benz) is similar to the Columbia electric vehicle Dr. Martin had insured. Unlike today, Dr. Martin's policy protected not against other cars, but primarily against horses and buggies competing for road space.

p. 853

Atkins [the insured] was under no obligation to procure insurance for the benefit of the plaintiff, nor did any relation exist between the plaintiff [the injured party] and Atkins which could give the latter the right to procure insurance for the benefit of the plaintiff. The only correct statement of the situation is simply that the insurance was a matter wholly between the company and Atkins, in which the plaintiff had no legal or equitable interest, any more than in other property belonging absolutely to Atkins.

Could the plaintiff claim to be a third-party beneficiary of Atkins' contract with his insurance company? The counterattack to *Bain* made the obligation to protect third parties statutory and not contractual. Starting in the 1920s, many states passed so-called financial responsibility statutes that required individuals to show that they were financially able, within certain stated limits, to satisfy tort judgments against them. Often so-called security responsibility statutes allowed a driver to renew a driver's license only on a showing that he had available assets above the stated limits to meet these tort claims. The porous nature of this protection fueled in the 1930s the movement to require compulsory insurance, which was promptly challenged on constitutional grounds. In 1925, the Massachusetts Supreme Judicial Court decided *In re Opinion of the Justices*, 147 N.E. 681, 693, 694 (Mass. 1925), which held that the general power to exclude automobiles from the public highways "includes the lesser power to grant the right to use public ways only upon the observance of prescribed conditions precedent." The court sanctioned this "extension of the police power into a new field" because the conditions imposed could not be "pronounced unreasonable" given the need

to assure innocent persons full compensation for their accidents. The policies in question, moreover, could not be canceled after an accident, with respect to the statutory minimums, but could be canceled for any voluntary excess. See *Odum v. Nationwide Mutual Insurance Co.*, 401 S.E.2d 87, 90 (N.C. Ct. App. 1991), construing N.C. Gen. Stat. §20-279.21(f) (2019), which stipulates that “the insurance required by this Article shall become absolute whenever injury or damage covered by said motor vehicle liability policy occurs.” What recourse, if any, does the insurer have against the insured?

Compulsory insurance creates a real bind for high-risk individuals unable to purchase any insurance in the voluntary market. The usual legislative response places risky individuals in an “assigned risk” pool. All of the insurance companies doing business within the state must insure some fraction of the total pool, usually based on their share of automobile insurance market within the state and at rates substantially above those charged to their regular customers. In *California State Automobile Ass’n Inter-Insurance Bureau v. Maloney*, 341 U.S. 105 (1951), the Supreme Court upheld those assigned risk provisions (here in the context of the California financial responsibility statutes), noting that the wisdom of those enactments was for the legislature to determine. What happens if the rates set for the assigned risk pool are below that for the voluntary market for some drivers? For an account of the difficulties of rate regulation, see Epstein, *A Clash of Two Cultures: Will the Tort System Survive Automobile Insurance Reform?*, 25 Val. U. L. Rev. 173 (1991).

p. 854

The strain that automobile insurance coverage placed on family budgets motivated California voters in 1989 to adopt, after a hard-fought popular referendum, Proposition 103, dealing with insurance rates in California. The initiative was described in these terms by the California Supreme Court in *Calfarm Insurance Co. v. Deukmejian*, 771 P.2d 1247, 1250, 1254 (Cal. 1989):

Insurance rates are to be immediately reduced to “at least 20 percent less” than those in effect on November 8, 1987 (approximately the date when the initiative was proposed, and one year prior to its enactment). All rate increases require the approval of the Insurance Commissioner, who may not approve rates which are “excessive, inadequate, unfairly discriminatory, or otherwise in violation of [the initiative].” Prior to November 8, 1989, however, rates may be increased only if the commissioner finds “that an insurer is substantially threatened with insolvency.” “Certain procedures are specified for hearing applications for rate approval.”

The California Supreme Court upheld the basic initiative, but struck down, as a taking of the invested capital of insurance companies under the due process clause, its central provision allowing a rate increase before November 1989 only upon a showing of a substantial threat of insolvency:

The insolvency standard of subdivision (b) refers to the financial position of the company as a whole, not merely to the regulated lines of insurance. Many insurers do substantial business outside of California, or in lines of insurance within this state which are not regulated by Proposition 103. If an insurer had substantial net worth, or significant income from sources unregulated by Proposition 103, it might be able to sustain substantial and continuing losses on regulated insurance without danger of insolvency. In such a case the continued solvency of the

insurer could not suffice to demonstrate that the regulated rate constitutes a fair return.

That decision was consistent with earlier Supreme Court law, such as *Brooks-Scanlon v. Railroad Commission*, 251 U.S. 396, 399 (1920), where the issue was whether the defendant had to operate his narrow-gauge railroad line at a loss because he made profits from his sawmill and lumber business. Justice Holmes struck down the order, saying, “The plaintiff may be making money from its sawmill and lumber business but it no more can be compelled to spend that than it can be compelled to spend any other money to maintain a railroad for the benefit of others who do not care to pay for it.” More generally, what justification, if any, exists for imposing rate-of-return regulation in a competitive industry? Prior to *Calfarm*, in *Aetna Casualty & Surety Co. v. Commissioner of Insurance*, 263 N.E.2d 698, 703 (Mass. 1971), Quirico, J., wrote:

While [Massachusetts] is not constitutionally required to fix rates which will guarantee a profit to all insurers, it may not constitutionally fix rates which are so low

p. 855

that if the insurers engage in business they may do so only at a loss. The insurers are not required to either submit to confiscatory rates or go out of business.

For the Supreme Court’s more recent pronouncements on the constitutionality of various systems of rate regulation, see *Duquesne Light Co. v. Barasch*, 488 U.S. 299 (1989); and *Verizon Communications, Inc. v. Federal Communications Commission*, 535 U.S. 467 (2002).

b. The Distinctive Provisions of the Automobile Insurance Contract

i. The Omnibus Clause

Automobile insurance policies contain specialized provisions that merit some brief attention. Chief among these is the so-called omnibus clause:

The following are insureds [for tort liability] with respect to the owned automobile, (1) the named insured and any resident of the same household; (2) any other person using such automobile with the permission of the named insured, provided his actual operation or (if he is not operating) his actual use thereof is within the scope of such permission. . . .

*"Let's just say you both went up this hill to fetch a pail of water, then Jack fell down and broke his crown, and you, Jill, came tumbling after.
With this policy, you'd be covered for that."*

Source: Michael Maslin / The New Yorker Collection / The Cartoon Bank

For one variation, see, e.g., Cal. Ins. Code §11580.1(b)(4) (2019). The clause protects the insurers from vicarious liability and under “the family purpose doctrine,” when some nonemployee uses the owner’s vehicle with his consent or for his benefit. The clause protects the owner when his car is used with his permission by third parties, even if the owner is not liable. It is a case of insurance beyond liability. But where the injury is caused by the negligence of someone who did not drive with the owner’s permission, the courts have enforced limitations in the omnibus clause that corresponded to the state’s compulsory coverage rules. See *Hays v. Country Mut. Ins. Co.*, 192 N.E.2d 855, 859 (Ill. 1963). And when the insured allows someone else to use the automobile for some but not all purposes, the cases are divided. Some provide no coverage for any unauthorized use. Some cover minor deviations. Some cover any use by a party given permission to drive the car. See *Branch v. U.S. Fid. & Guar. Co.*, 198 F.2d 1007, 1009 (6th Cir. 1952). The modern trend is clearly in favor of the broad initial permission rule with respect to initial

permittee, but are more divided when the first permittee allows a second person to drive the vehicle against the express instructions of its owner. For a collection of cases on all sides of the issue, see Commercial

Union Insurance Co. v. Johnson, 745 S.W.2d 589 (Ark. 1988). Given the uncertainties in determining the scope of authorization, does it make sense for an insurance company to offer the most extensive coverage, reserving subrogation rights against the unauthorized driver?

ii. “Drive the Other Car” Clauses

A “drive the other car” clause gives the owner of an insured car (and normally the owner’s spouse) liability coverage while driving another car, usually on a casual or occasional basis. See, e.g., Hochgurtel v. San Felippo, 253 N.W.2d 526 (Wis. 1977). This clause conflicts with the omnibus clause, which makes coverage run with the vehicle, while the “drive the other car” clause makes it run with the driver. If each insurance policy says that its coverage is secondary to other policies, the insured with two valid policies might in principle be left with no protection at all. This conclusion has been stoutly resisted by the courts. See, e.g., American Automobile Insurance Co. v. Penn Mutual Indemnity Co., 161 F.2d 62 (3d Cir. 1947), which held that primary coverage lay with the “drive the other car” policy. Today’s standard automobile policy treats the omnibus clause as primary. See generally Schermer & Schermer, *Automobile Liability Insurance* §3:9 (4th ed. 2004).

iii. Uninsured Motorist Coverage

Automobile insurance contracts now commonly provide that the insurance company will pay limited sums of money to its own insured who is harmed by an uninsured or underinsured motorist (UIM) who is legally responsible for the accident. To guard against the possibility of collusion between the insured and the uninsured motorist, these provisions stipulate that the insurance company must approve before the insured settles any claim against the uninsured motorist. The coverage runs in favor of the insured, his immediate family, and any other person injured while occupying the insured’s automobile.

“Within uninsured motorist insurance, third-party liability rights are implemented through a first-party insurance system.” Schwartz, A Proposal for Tort Reform: Reformulating Uninsured Motorist Plans, 48 Ohio St. L.J. 419, 425 (1987). Accordingly, coverage extends to pain and suffering and punitive damages, even though these are not normally part of first-party coverage. Uninsured motorist policies treat the *underinsured* motorist like an uninsured motorist to the extent of the shortfall in coverage. Complications can arise if an injured person is harmed by two persons, only one of whom is uninsured. Under the general rule the insurer who supplied coverage to the UIM cannot deduct from its payment any sums received from an insured third-party driver so long as there is any uncovered loss. Thus if the UIM coverage is \$100,000, and the insured receives \$40,000 from a third-party wrongdoer or its insurer, the tortfeasor recovers the full amount of the UIM policy if the tort liability is \$140,000 or more. For a loss, say, of \$130,000, the UIM pays \$90,000, which when added to \$40,000

p. 857

from the outside source makes the injured party whole. See Victor v. State Farm Fire & Cas. Co., 908 P.2d 1043 (Alaska 1996). In Feeley v. Allstate Insurance Co., 882 A.2d 1230 (Vt. 2005), the court held that the insurance company could not deduct the plaintiff’s workers’ compensation coverage from the sums due under the UIM policy.

The problem of underinsurance has been addressed also explicitly in legislation, with a small handful of

states mandating the coverage while in most states the coverage need merely be offered. See, e.g., Ariz. Rev. Stat. Ann. §20-259.01 (2019). Punitive damages are not normally covered. See Bodner v. United Servs. Auto. Ass'n, 610 A.2d 1212 (Conn. 1992). See also 3 Widiss, Uninsured and Underinsured Motorist Insurance ch. 32 (3d ed. 2005).

iv. Medical Payments

Many current policies allow payment for medical expenses even before any dispute over liability is resolved, given that

the basic purpose of medical pay provisions such as here involved is to make available a fund to assure prompt and adequate medical care when injury is incurred, to relieve the physical suffering of the insured and to relieve the insured of the anxiety of not knowing from what source the money to pay the bills is coming.

Jackson v. Country Mut. Ins. Co., 190 N.E.2d 490, 492 (Ill. App. Ct. 1963). Typically these payments are credited against any judgment or settlement, but they are not recoverable in the event that the insured is not held liable. Edwards v. Passarelli Bros. Auto. Serv., Inc., 221 N.E.2d 708 (Ohio 1966).

A second medical benefit covers “all reasonable expenses incurred within one year from the date of accident for necessary medical, surgical, X-ray and dental services, including prosthetic devices and necessary ambulance, hospital, professional nursing and funeral services.” These clauses benefit the insured and members of his immediate family, and all persons in the insured’s car with his permission, but are usually subject to explicit dollar limitations.

c. Key Provisions of the Standard Insurance Contract

The expansion of tort liability has led to a major transformation of insurance contracts so that today automobile insurance is only one among many lines of coverage. This section examines some of the major challenges in the drafting and implementation of insurance contracts that apply to all lines of insurance. Most of modern insurance litigation centers on the Commercial General Liability Coverage form, which consists of 16 dense pages that outline the various coverages and exemptions supplied under the policy. The starting point for the analysis is contained in the key provisions in section 1, which are set out as follows, where all of the terms in quotation marks are defined terms whose meaning only becomes clear by a close examination of the individual provisions in light of the extensive judicial territory that has grown up around the text.

Commercial General Liability Coverage Form

SECTION 1—COVERAGES

COVERAGE A—BODILY INJURY AND PROPERTY DAMAGE LIABILITY

1. Insuring Agreement

a. We will pay those sums that the insured becomes legally obligated to pay as damages because of “bodily injury” or “property damage” to which this insurance applies. We will have the right and duty to defend the insured against any “suit” seeking those damages. However, we will have no duty to defend the insured against “suit” seeking damages for “bodily injury” or “property damage” to which this insurance applies. We may, at our discretion, investigate any “occurrence” and settle any claim or “suit” that may occur [within policy limits relating to any individual case of any aggregate claims.]

b. This insurance applies to “bodily injury” and “property damage” only if:

- (1) The “bodily injury” or “property damage” is caused by an “occurrence” that takes place within the “coverage territory”;
- (2) The “bodily injury” or “property damage” occurs during the policy period.

i. Misrepresentation and Nondisclosure

The rules on misrepresentation and nondisclosure set out basic obligations found in most lines of insurance. In these cases the insurance company may set aside any policy that the insured has obtained through either misrepresentation or nondisclosure of a material fact. These rules were first introduced with marine insurance under the general rubric of good faith, as a way to combat the problem of asymmetrical information, where the insured was likely to know more about the level of risk than the insurer. As stated by Bayley, J.,

I think that in all cases of insurance, whether of ships, houses or lives the underwriter should be informed of every material circumstance within the knowledge of the assured; and that the proper question is, whether any particular circumstance was in fact material, not whether the party believed it to be so.

Lindenau v. Desborough, 108 Eng. Rep. 1160, 1162 (K.B. 1828).

Under the conventional rule any material statement or omission made in any application for insurance will allow the insurer to void its obligation under the policy. Thus in *Continental Casualty v. Law Offices of Melbourne Mills*, 676 F.3d 534 (6th Cir. 2012), the plaintiff insurer was allowed to set aside its insurance

coverage because the insured had failed to disclose an ongoing state bar disciplinary inquiry. Rogers, J., concluded: “A misrepresentation is material if there is sufficient evidence that the insurance company would not have issued the policy or would have issued a different policy if it had knowledge of Mills’s actions and omissions under [Kentucky statutory law].”

p. 859

One advantage of this rule is that it avoids any need to examine the causal question of exactly how the insurance company would respond if it had known the full state of affairs. In dealing with this issue, section 8 of RLI adds the additional requirement for an insurer to prove that, if it had known of the defect, it would have only issued the policy on “substantially different terms” than those on which it was issued. Once again

the Restatement's shift moves the locus of the inquiry from observable facts to difficult causal inferences. How can that determination be made without precise knowledge of the weight of the missing information? What should be done if, as is commonly the case, true information would have led the insurer to decline issuing the policy?

These misrepresentation rules are commonly softened by doctrines of waiver and estoppel. By waiver, the insurer expressly, or by its conduct impliedly, surrenders up a known privilege or right otherwise available under the policy. By estoppel, the law protects an insured who has changed his position in reliance upon representations, by word or conduct, of the insurance company when it is inequitable for the insurer to deny the truth of the representations.

For an attack on the dominant rule, see Barnes, *Against Insurance Rescission*, 120 Yale L.J. 328, 331 (2010), which argues that the dominant rule overcompensates insurers by allowing them "to refuse benefits to people who make innocent misrepresentations and suffer losses even while retaining the premiums of similarly situated people who never file claims." Will competition force insurers to reduce their basic rates to compensate an insured for risk of cancellation? Does the current rule reduce the initial risk of misrepresentation?

ii. Notice and Cooperation

In order to be able to mount an intelligent claim defense, an insurance company must first receive timely notice of the claim, and then be able to count on the cooperation of the insured in order to acquire the information needed to contest or settle a claim. Two clauses help achieve that end.

The typical notice clauses provide as follows:

Notice of accident. When an accident occurs written notice shall be given by or on behalf of the insured to the company or any of its authorized agents as soon as practicable. Such notice shall contain particulars sufficient to identify the insured and also reasonably obtainable information respecting the time, place and circumstances of the accident, the names and addresses of the injured and of available witnesses.

Notice of claim or suit. If claim is made or suit is brought against the insured, the insured shall immediately forward to the company every demand, notice, summons or other process received by him or his representative.

The most commonly litigated question under these clauses is whether an insurance company must prove actual prejudice to decline coverage or whether that prejudice should be presumed from the mere fact of delay. The automatic rule avoids an expensive inquiry into causation, but it also lets an insurer disavow coverage for an insured's inconsequential delay in notification. In general these clauses are enforced as written. Thus in *Country Mutual Insurance Co. v. Livorsi Marine, Inc.*, 856 N.E.2d 338, 346 (Ill. 2006), Garman, J., speaking for a unanimous court, wrote: "[W]e hold that once it is determined that the insurer

did not receive reasonable notice of an occurrence or a lawsuit, the policyholder may not recover under the policy, regardless of whether the lack of reasonable notice prejudiced the insurer.” What should be said for (or against) a rule that any failure to notify within 30 days shall be treated as immaterial, while any failure to notify after 30 days shall be treated as prejudicial?

The typical cooperation clause reads as follows:

Assistance and cooperation of the insured. The insured shall cooperate with the company and, upon the company’s request, shall attend hearings and trials and shall assist in effecting settlements, securing and giving evidence, obtaining the attendance of witnesses and in the conduct of suits. The insured shall not, except at his own cost, voluntarily make any payment, assume any obligation or incur any expense other than for such immediate medical and surgical relief to others as shall be imperative at the time of accident.

In *Northwest Prosthetic & Orthotic Clinic, Inc. v. Centennial Insurance Co.*, 997 P.2d 972, 973 (Wash. App. 2000), Berker, A.C.J., wrote:

An insured’s breach of insurance policy provisions will not result in denial of coverage unless the breach caused actual prejudice. In this case, the insured settled a debatable defamation claim before the insurer had a meaningful opportunity to investigate it. We affirm a summary judgment order excusing the insurer from its obligation to provide coverage because the loss of the opportunity to investigate amounted to actual prejudice.

Should the requirement of prejudice require that the insurer would have made a better deal if given the opportunity to control the case? Or should the prejudice be deemed solely from the loss of opportunity, as in *Northwest Prosthetic*?

Once again RLI §30, comment *b* takes a somewhat different position.

Accordingly, it is appropriate to conclude that the prejudice determination focused primarily on the impact of the failure to cooperate on the outcome of the action. It is not ordinarily enough that the insured’s failure to cooperate increased the cost or difficulty of the defense. Rather, *that failure must be one that has affected or will affect the outcome of the action for the insurer.*

Once again the tradeoff is clear. The traditional rule uses clear rules with harsh consequences that avoid causal complications while the RLI makes more

nuanced inquiries. What should be done if the litigation settles on terms less favorable to the defendant because of the want of cooperation?

iii. The Duty to Defend

The ordinary liability policy obligates the insurer not only to pay all sums the insured becomes legally

obligated to pay for personal injury or property damage, but it also stipulates that “the company shall defend any suit alleging such bodily injury or property damage—even if any of the allegations of the suit are groundless, false or fraudulent; but the company may make such investigation and settlement of any claim or suit as it deems expedient.” By this rule the insurer obtains control of both litigation and settlement, regardless of the level of potential exposure. This rule therefore puts an experienced party in charge of litigation, and bonds the insurer’s performance by making it pay damages for any adverse outcome. Most insurers are not willing to take on the risk of infinite liability but limit their maximum exposure by setting explicit contractual limits. These limitations in turn create a conflict of interest between the insurer and insured, which may break the united front that they prefer to present to the tort plaintiff where the potential tort liability exceeds the stated policy limits, in dealing both with the duty to defend and the duty to settle in good faith within policy limits.

At the outset of a case, the insurer must determine whether the underlying events of the accident are covered by the policy, and, if they do, whether the accident falls into any policy exclusion. In *Admiral Insurance Co. v. Ford*, 607 F.3d 420, 424-425 (5th Cir. 2010), the court was asked to construe the scope of a professional service exemption from a CGL policy. In finding the exemption blocked coverage, Garza, J., noted:

In determining the applicability of a professional services exclusion, Texas courts apply the “eight corners rule.” They look only to the four corners of the policy and the four corners of the underlying complaint to determine whether a duty to defend exists. . . . The court must focus on the factual allegations in the underlying pleading rather than the legal theories alleged. . . . If the pleading contains allegations that, when fairly and reasonably construed, state a cause of action that is potentially covered by the policy, then the insurer has a duty to defend the insured in the underlying lawsuit. (citation omitted).

This traditional rule allows coverage determinations to be made on the strength of the paper record alone at the outset of litigation, without use of parol evidence. The duty applies of course in those cases where the plaintiff fails on either factual or legal grounds.

The duty to defend receives a broader construction under RLI §13, comment *b*, which goes beyond the common law rule to hold that the insurer has a duty to defend if it “should reasonably know” some information that would trigger a duty to defend, such that “the insurer must defend . . . if the insurer *possesses* extrinsic information.” How much investigation, if any, must an insurer make to decide whether it has sufficient information to trigger that duty to defend? Should any

rule be adopted that has been uniformly rejected for commercial disputes, as in *Admiral Insurance*? And if the rule works in commercial disputes, why should it be rejected in consumer contexts?

iv. The Obligation to Settle in Good Faith

CRISCI v. SECURITY INSURANCE CO.

PETERS, J. In an action against The Security Insurance Company of New Haven, Connecticut, the trial court awarded Rosina Crisci \$91,000 (plus interest) because she suffered a judgment in a personal injury action after Security, her insurer, refused to settle the claim. . . . Security has appealed.

[Mrs. Crisci's tenants, June DiMare and her husband, brought suit for physical injuries and severe psychosis when DiMare was hurt on the premises after she fell through a broken step and was left hanging 15 feet above the ground. Mrs. Crisci had an insurance policy with Security for \$10,000 with the usual defense obligations. After much negotiation, Security refused to settle the case for the policy limit even though the underlying claim was for \$400,000. At trial, the jury awarded Mrs. DiMare \$100,000 and her husband \$1,000. Security paid its \$10,000 policy limit. Mrs. Crisci could not pay the remaining \$91,000 in cash, so under her settlement with Mrs. DiMare she transferred some property to Mrs. DiMare, including her right to sue Security for the \$91,000 in excess of policy limits.]

The liability of an insurer in excess of its policy limits for failure to accept a settlement offer within those limits was considered by this court in *Comunale v. Traders & General Ins. Co.*, 328 P.2d 198 (Cal. 1958). It was there reasoned that in every contract, including policies of insurance, there is an implied covenant of good faith and fair dealing that neither party will do anything which will injure the right of the other to receive the benefits of the agreement; that it is common knowledge that one of the usual methods by which an insured receives protection under a liability insurance policy is by settlement of claims without litigation; that the implied obligation of good faith and fair dealing requires the insurer to settle in an appropriate case although the express terms of the policy do not impose the duty; that in determining whether to settle the insurer must give the interests of the insured at least as much consideration as it gives to its own interests; and that when "there is great risk of a recovery beyond the policy limits so that the most reasonable manner of disposing of the claim is a settlement which can be made within those limits, a consideration in good faith of the insured's interest requires the insurer to settle the claim."

In determining whether an insurer has given consideration to the interests of the insured, the test is whether a prudent insurer without policy limits would have accepted the settlement offer. . . .

Several cases, in considering the liability of the insurer, contain language to the effect that bad faith is the equivalent of dishonesty, fraud, and concealment. Obviously a showing that the insurer has been guilty of actual dishonesty, fraud, or concealment is relevant to the determination whether it has given consideration to the insured's interest in considering a settlement offer within the policy limits. The language used in the cases, however, should not be understood as meaning that in the absence of evidence establishing actual dishonesty, fraud, or concealment no recovery may be had for a judgment in excess of the policy limits. *Comunale* makes it clear that liability based on an implied covenant exists whenever the insurer refuses to settle in an appropriate case and that liability may exist when the insurer unwarrantedly refuses an offered settlement where the most reasonable manner of disposing of the claim is by accepting the settlement. Liability is imposed not for a bad faith breach of the contract but for failure to meet the duty to accept reasonable settlements, a duty included within the implied covenant of good faith and fair dealing.

Moreover, examination of the balance of [our prior] opinions makes it abundantly clear that recovery may be based on unwarranted rejection of a reasonable settlement offer and that the absence of evidence, circumstantial or direct, showing actual dishonesty, fraud, or concealment is not fatal to the cause of action.

Amicus curiae argues that, whenever an insurer receives an offer to settle within the policy limits and rejects it, the insurer should be liable in every case for the amount of any final judgment whether or not within the policy limits. As we have seen, the duty of the insurer to consider the insured's interest in settlement offers within the policy limits arises from an implied covenant in the contract, and ordinarily contract duties are strictly enforced and not subject to a standard of reasonableness. Obviously, it will always be in the insured's interest to settle within the policy limits when there is any danger, however slight, of a judgment in excess of those limits. Accordingly the rejection of a settlement within the limits where there is any danger of a judgment in excess of the limits can be justified, if at all, only on the basis of interests of the insurer, and, in light of the common knowledge that settlement is one of the usual methods by which an insured receives protection under a liability policy, it may not be unreasonable for an insured who purchases a policy with limits to believe that a sum of money equal to the limits is available and will be used so as to avoid liability on his part with regard to any covered accident. In view of such expectation an insurer should not be permitted to further its own interests by rejecting opportunities to settle within the policy limits unless it is also willing to absorb losses which may result from its failure to settle.

The proposed rule is a simple one to apply and avoids the burdens of a determination whether a settlement offer within the policy limits was reasonable. The proposed rule would also eliminate the danger that an insurer, faced with a settlement offer at or near the policy limits, will reject it and gamble with the insured's money to further its own interests. Moreover, it is not entirely clear that the proposed rule would place a burden on insurers substantially greater than that which

p. 864

is present under existing law. The size of the judgment recovered in the personal injury action when it exceeds the policy limits, although not conclusive, furnishes an inference that the value of the claim is the equivalent of the amount of the judgment and that acceptance of an offer within those limits was the most reasonable method of dealing with the claim.

Finally, and most important, there is more than a small amount of elementary justice in a rule that would require that, in this situation where the insurer's and insured's interests necessarily conflict, the insurer, which may reap the benefits of its determination not to settle, should also suffer the detriments of its decision. On the basis of these and other considerations, a number of commentators have urged that the insurer should be liable for any resulting judgment where it refuses to settle within the policy limits. . . .

We need not, however, here determine whether there might be some countervailing considerations precluding adoption of the proposed rule because, under *Comunale v. Traders & General Ins. Co.*, and the cases following it, the evidence is clearly sufficient to support the determination that Security breached its duty to consider the interests of Mrs. Crisci in proposed settlements [owing to the inherent uncertainty in all psychiatric evidence].

The trial court found that defendant "knew that there was a considerable risk of substantial recovery beyond

said policy limits" and that "the defendant did not give as much consideration to the financial interests of its said insured as it gave to its own interests." That is all that was required. The award of \$91,000 must therefore be affirmed.

NOTES

1. *Conflicts of interest between insurer and insured.* Should the insurer's liability be confined only to bad faith behavior, or should it embrace a more stringent duty to look after the interests of the insured in light of the potential conflicts of interest? The California Court of Appeal in *Merritt v. Reserve Insurance Co.*, 110 Cal. Rptr. 511, 519-520 (Ct. App. 1973), contains an excellent discussion of the conflicts of interest between insurer and insured, when defendant's policy provided only the minimum allowable coverage of \$15,000 per injury and the plaintiff sought \$50,000 in damages. The basic tension arises because the insurance company must shoulder all the costs of litigation under the standard policy, even if it will not have to pay the full damages if liability exceeds policy limits. The insurance company that looks solely to its own financial interest will compare its costs of defense with the \$15,000 policy maximum regardless of the potential size of the verdict. Thus, if litigation costs \$5,000, with a 50 percent likelihood of liability, the insurance company will refuse to settle for \$15,000. That \$15,000 payment exceeds its expected losses from defending the suit, which are \$12,500 (the \$5,000 in litigation expenses incurred in all cases, plus \$7,500 in damages, equal to the 50 percent chance of losing \$15,000). The prudential decision for the insurance company may, however, have adverse consequences for the insured. Settling the case for the \$15,000 policy limit completely insulates the insured from any possibility of liability. Litigating it at the

p. 865

insurer's expense exposes the insured to a 50 percent chance of \$35,000 in liability (i.e., the \$50,000 verdict less the \$15,000 payment from the insurer), an expected loss of \$17,500 for a risk-neutral insured.

To resolve this conflict, Peters, J., intimated that once the risk of piercing policy limits is known, then a strong presumption arises in favor of having the insured settle. But the more precise inquiry asks how the insurance company should behave if its policy limits were in excess of the anticipated \$50,000 liability so that it bore all the loss from either settlement or litigation. Now the company would settle the case because a \$15,000 payment is less than the anticipated liability of \$30,000 (\$5,000 in legal fees plus the 50 percent chance of having to pay \$50,000). If the company would settle a case under a no-limits policy, it has a duty to settle that case under a policy that contains occurrence or aggregate limits. But suppose that the plaintiff only has a 5 percent chance of winning in the underlying litigation. The insured will still prefer for the insurer to settle for the policy limit of \$15,000 because it faces no loss with a settlement and a loss of \$1,750 (5 percent of \$35,000). But from the combined point of view the settlement makes no sense because the expected costs of the suit are only \$7,500 (5 percent of \$50,000 in payment plus \$5,000 in litigation expenses). So long as "the test is whether a prudent insurer without policy limits would have accepted the settlement offer," a per se duty to compensate for all verdicts in excess of policy limits appears to be mistaken. See generally Abraham, *Distributing Risk: Insurance, Legal Theory, and Public Policy* 191-192 (1986).

To what extent is this position adopted in the RLI?

Restatement of the Law of Liability Insurance

§24. THE INSURER'S DUTY TO MAKE REASONABLE SETTLEMENT DECISIONS

- (1) When an insurer has the authority to settle a legal action brought against the insured, or the insurer's prior consent is required for any settlement by the insured to be payable by the insurer, and there is a potential for a judgment in excess of the applicable policy limit, the insurer has a duty to make reasonable settlement decisions.
- (2) A reasonable settlement decision is one that would have been made by a reasonable insurer that bears the sole financial responsibility for the full amount of the potential judgment.
- (3) An insurer's duty to make reasonable settlement decisions includes the duty to make its policy limits available to the insured for the settlement of a covered legal action that exceeds those policy limits if a reasonable insurer would do so in the circumstances.

p. 866

Restatement of the Law of Liability Insurance

§27. REMEDIES FOR BREACH OF THE DUTY TO MAKE REASONABLE SETTLEMENT DECISIONS

- (1) An insurer that breaches the duty to make reasonable settlement decisions is subject to liability for any foreseeable harm caused by the breach, including the full amount of damages assessed against the insured in the underlying action, without regard to policy limits.
- (2) When an insurer has breached the duty to make reasonable settlement decisions, the insured may settle the action without the insurer's consent and without violating the duty to cooperate or other restrictions on the insured's settlement rights contained in the policy if:
 - (a) The insurer receives all information necessary to evaluate the legal action and has a reasonable amount of time to do so;
 - (b) The insurer is given a reasonable opportunity to participate, and is kept reasonably informed of developments, in the settlement process;
 - (c) The insured makes a reasonable effort to obtain the insurer's consent or approval of the settlement, including by providing the insurer with a reasonable amount of time to evaluate all the terms of the settlement agreement; and
 - (d) The settlement agreed to by the insured is one that a reasonable person who bears the sole financial responsibility for the full amount of the potential covered judgment would make.

The RLI uses the term "reasonable settlement decision" to make it clear that the insurer is not under a duty to settle if it turns out that the key requirement of section 24(2) establishes that a single owner would not

enter into a settlement. These two sections, moreover, consciously refuse to impose a good-faith limitation on the ability of the insurer to sue from the insured. Often there is a genuine disagreement on the value of the underlying claim. Does section 24(2) impose an objective standard in the event of disagreement? How is that different from a strict liability standard? And if the stricter duty is breached, does the potential liability under section 27(1) relating to “foreseeable harm” cover more than the payment of the full judgment? How should an insurer reduce the relevant risks? Offer full payment at policy limits in all doubtful cases? If so, does the duty to defend remain?

2. *Good faith as a two-way street.* The general view of the duty of good faith is that it is intended to deal with potential misconduct by an insurance carrier. But is that always so? In Allstate v. Herron, 634 F.3d 1101, 1109 (9th Cir. 2011), Angelina Trailov suffered serious injuries in a one-car accident. The driver of the car, Charles Herron, was covered under his parent’s policy that contained a

p. 867

\$100,000 limit. The injuries were severe and Allstate paid \$25,000 toward medical expenses. Thereafter Trailov’s attorney demanded that the full policy limits be paid within two weeks, or otherwise she would seek to hold Allstate responsible for the near \$2 million in Trailov’s injuries. Allstate investigated the claim and did pay the full policy limits two weeks after the plaintiff’s deadline. The applicable rule in Alaska holds that “[w]hen a plaintiff makes a policy limits demand, the covenant of good faith and fair dealing places a duty on an insurer to tender maximum policy limits to settle a plaintiff’s demand when there is a substantial likelihood of an excess verdict against the insured.”

Allstate then sought a declaratory judgment against Herron insisting on its good-faith behavior. But before that motion was filed, Herron assigned the full claim to Trailov in favor of the plaintiff in breach of the insurance contract. Allstate then filed to recover the \$25,000 already paid on the grounds that Herron’s actions voided the policy. O’Scannlain, J., refused to allow the recovery on the ground that Allstate was not prejudiced by the limits. Is that true if Allstate now has to defend a \$2 million claim? Under sections 24 and 27 does it make sense to allow a two-week delay in claiming settlement under the policy limits to trigger a huge lawsuit? What about a rule that holds an insurance company in breach of its good-faith duty liable for double the policy limits?

3. *Excess insurance.* An insurer’s duty to settle a case within its policy limits has been extensively debated whenever an excess insurance policy covers catastrophic losses beyond the limits of the primary policy. When the primary carrier does not settle a case within policy limits, should the primary carrier owe a duty to settle in good faith to the excess carrier? Commercial Union Assurance v. Safeway Stores, 610 P.2d 1038, 1043 (Cal. 1980), denied that potential liability: “If an excess carrier wishes to insulate itself from liability for an insured’s failure to accept what it deems to be a reasonable settlement offer, it may do so by appropriate language in the policy.” Would that stipulation bind the insured’s primary insurer? One possible way to achieve that result is to let the excess insurer “use the doctrine of equitable subrogation to assert the insured’s right to insist that the primary insurer use due care to avoid an excess judgment against the insured.” See Fire Ins. Co. v. Gen. Star Indem. Co., 183 F.3d 578 (7th Cir. 1999). Note also that some of these conflicts can be avoided if the primary carrier pays the excess carrier a premium in exchange for having it assume all potential defense and indemnity obligations, or, alternatively, the excess carrier could assume all liability after receiving a payment from the primary carrier. Either way, one carrier bears both

the full defense and full indemnity obligation, obviating the conflict. What obstacles lie in the path of these deals? And which party should soldier on alone?

DIMMITT CHEVROLET, INC. v. SOUTHEASTERN FIDELITY INSURANCE CORP.

636 So. 2d 700 (Fla. 1993)

PER CURIAM. This cause is before the Court on the following certified question of law from the United States Court of Appeals in *Industrial Indemnity Insurance Co. v. Crown Auto Dealerships, Inc.*, 935 F.2d 240 (11th Cir. 1991) [on the scope

p. 868

of the pollution exclusion clause contained within the comprehensive general liability policy as it applies to environmental contamination.

Dimmitt Chevrolet operated two dealerships, which sold the used crankcase oil generated by its business to Peak Oil Company from 1974 to 1979. During that time, Peak recycled oil from Dimmitt and other sources for sale as used oil. In 1983, the Environmental Protection Agency determined that substantial pollution at Peak's worksite had resulted from Peak's storage of its waste sludge in unlined bins. In addition to its suit against Peak, the EPA designated Dimmitt as a potentially responsible party (PRP) under CERCLA (Superfund) because it had generated and transported hazardous materials to the Peak site. Dimmitt agreed to undertake remedial measures without conceding its liability under CERCLA.] The court of appeals set forth the following statement of facts and procedural history of this case for our consideration.

Appellee Southeastern Fidelity Insurance Corporation ("Southeastern") provided comprehensive general [which was modified in 1986—Eds.]. The policy covered Dimmitt

for all sums which the INSURED shall become legally obligated to pay as DAMAGES because of A. BODILY INJURY or B. PROPERTY DAMAGE to which this insurance applies, caused by an occurrence, and the Company shall have the right and duty to defend any suit against the INSURED seeking DAMAGES on account of such BODILY INJURY or PROPERTY DAMAGE, even if any of the allegations of the suit are groundless. . . .

An "occurrence" is defined by the policy as

an accident including continuous or repeated exposure to conditions, which results in BODILY INJURY or PROPERTY DAMAGE neither expected nor intended from the standpoint of the INSURED. . . .

However, the policy excluded coverage for

BODILY INJURY or PROPERTY DAMAGE arising out of the discharge, dispersal, release or escape of smoke, vapors, soot, fumes, acids, alkalis, toxic chemicals, liquids, or gases, waste

materials . . . into or upon land, the atmosphere or any water course or body of water; but this exclusion does not apply if such discharge, dispersal, release or escape is sudden and accidental.

...

. . . The issue before us is whether Dimmitt's comprehensive liability insurance policy was intended to cover hazardous waste pollution under the circumstances set forth in the court of appeals' opinion. The question turns on the meaning of the term "sudden and accidental" within the pollution exclusion clause of Dimmitt's policy.

Dimmitt asserts that the term "sudden and accidental" is ambiguous because it is subject to multiple definitions. Thus, because ambiguous terms within an insurance policy should be construed in favor of the insured, the policy should

p. 869

be construed in Dimmitt's favor. Dimmitt argues that the word "sudden" does not have a temporal meaning and that the term was intentionally written so as to provide coverage for unexpected and unintended pollution discharge.

Southeastern Fidelity Insurance Corporation (Southeastern) contends that the clause excludes coverage for all pollution except when the discharge or dispersal of the pollutant occurs abruptly and accidentally. As such, Southeastern asserts that it had no duty to defend or indemnify Dimmitt because the pollution by the actual polluter, Peak Oil Company (Peak), was gradual and occurred over a period of several years.

Both sides also argue that the drafting history of pollution exclusion clauses favors their respective positions. In this regard, it should be noted that comprehensive general liability (CGL) policies are standard insurance policies developed by insurance industry trade associations, and these policies are the primary form of commercial insurance coverage obtained by businesses throughout the country. Before 1966, the standard CGL policy covered only property and personal injury damage that was caused by "accident." In 1966 the insurance industry switched to "occurrence-based" policies in which the term "occurrence" was defined as "'an accident, including continuous or repeated exposure to conditions, which results in bodily injury or property damage neither expected nor intended from the standpoint of the insured.'" Beginning in 1970, the pollution exclusion clause at issue in this case was added to the standard policy. Finally, the policy was again changed in 1984 by the addition of what has been called an "absolute exclusion clause," which totally excludes coverage for pollution clean-up costs that arise from governmental directives. Kenneth S. Abraham, Environmental Liability Insurance Law 161 (1991). . . .

The policy language at issue here has been the subject of extensive litigation throughout the United States. One group of cases were also persuaded by the drafting history that the words "sudden and accidental" were intended to mean "unexpected and unintended." But the majority of courts have held that the word "sudden" has a temporal context. Therefore, when the word "sudden" is combined with the word "accidental," the clause means abrupt and unintended. . . .

We are persuaded that the federal district judge properly construed Southeastern's pollution exclusion clause. The ordinary and common usage of the term "sudden" includes a temporal aspect with a sense of

immediacy or abruptness. . . .

The use of the word “sudden” can connote a sense of the unexpected. However, rather than standing alone in the pollution exclusion clause, it is an integral part of the conjunctive phrase “sudden and accidental.” The term accidental is generally understood to mean unexpected or unintended. Therefore, to construe sudden also to mean unintended and unexpected would render the words sudden and accidental entirely redundant. . . .

Applying the policy language to the facts of this case, we hold that the pollution damage was not within the scope of Southeastern’s policy. The pollution took place over a period of many years and most of it occurred gradually. With respect to the pollution which resulted from oil spills and leaks at the site as well as from occasional runoff of contaminated rain water, we agree with the

p. 870

analysis of the federal district judge in this case when he said: These spills and leaks appear to be common place events which occurred in the course of daily business, and therefore cannot, as a matter of law, be classified as “sudden and accidental.” That is, these “occasional accidental spills” are recurring events that took place in the usual course of recycling the oil. . . .

We answer the certified question in the affirmative and return the record to the Eleventh Circuit.

It is so ordered.

GRIMES, J., concurring.

I originally concurred with the position of the dissenters in this case. . . . [Yet] [t]ry as I will, I cannot wrench the words “sudden and accidental” to mean “gradual and accidental,” which must be done in order to provide coverage in this case.

OVERTON, J., dissenting.

I dissent. . . .

In my view, the term “sudden and accidental” must be found to be ambiguous given that the term is, in fact, subject to [both the above interpretations]. . . . Notably, however, perhaps the most important illustration of this ambiguity is the definition that the insurance industry itself embraced in regulatory presentations. An examination of the pollution exclusion clause drafting history set forth below unquestionably supports the conclusion that the clause was included only to preclude coverage for intentionally caused pollution damage, not to preclude damage that was “unexpected and unintended.” . . .

The drafting history of the pollution exclusion clause leads to the inescapable conclusion that the insurance industry was attempting to exclude from coverage those polluters who committed their acts intentionally. The record of representations by the insurance industry itself clearly support this conclusion. The addition

of the pollution exclusion clause, specifically the term “sudden and accidental” was presented by the insurance industries to the regulators to mean that coverage would continue for those events that were “unexpected and unintended”; the clause’s purpose was simply to make clear that intentionally committed pollution would not be covered.

NOTES

1. The battle over pollution coverage. As *Dimmitt* indicates, state and federal courts have fought a battle royale over the scope of the insurer’s responsibility for pollution since the passage of CERCLA in 1980. *Dutton-Lainson v. Continental Insurance Co.*, 716 N.W.2d 87, 96 (Neb. 2006), noted that courts

that have considered the qualified pollution exclusion here presented have generally held that while the burden rests with the insurer to establish the initial applicability of the pollution exclusion by showing the discharge or release of a pollutant into the environment, the burden then shifts to the insured to show that the ‘sudden and accidental’ exception to that exclusion is applicable.

Dutton then noted that many courts follow the position of the *Dimmitt* dissent.

p. 871

Representative of these is *Textron, Inc. v. Aetna Casualty & Surety Co.*, 754 A.2d 742, 650 (R.I. 2000), in which the insured sued to recover the costs needed to clean up groundwater contamination under CERCLA. Unbeknownst to the plaintiff, some of its toxic waste had leaked from an artificial holding pond only to contaminate the surrounding groundwater. Flanders, J., rebuffed the insurer’s effort to rely on a policy exclusion for the release of pollutants, except “if such discharge, dispersal, release or escape is sudden and accidental,” holding that

a manufacturer that uses state-of-the-art technology, adheres to state and federal environmental regulations, and regularly inspects, evaluates, and upgrades its waste-containment system in accordance with advances in available technology should reap the benefits of coverage under our construction of this type of pollution-exclusion clause. But one that knowingly or recklessly disposes of waste without the necessary and advisable precautions will forfeit coverage under this clause.

2. CERCLA remediation versus tort damage actions. Different issues arose in *Boeing Co. v. Aetna Casualty & Surety Co.*, 784 P.2d 507, 511-512 (Wash. 1990), in which the insurer claimed that clean-up costs under CERCLA were not covered by the CGL policy, which was limited to “all sums which the insured shall become legally obligated to pay as damages.”

If the state were to sue in court to recover in traditional “damages,” including the state’s costs incurred in cleaning up the contamination, for the injury to the ground water, defendant’s

obligation to defend against the lawsuit and to pay damages would be clear. It is merely fortuitous from the standpoint of either plaintiff or defendant that the state has chosen to have plaintiff remedy the contamination problem, rather than choosing to incur the costs of clean-up itself and then suing the plaintiff to recover those costs. The damage to the natural resources is simply measured in the cost to restore the water to its original state.

Exhibit 10.2 Origins of CERCLA, or Superfund

Image source: AP Images

This image of the Cuyahoga River on fire in 1952 in Cleveland, Ohio, appeared in *Time* magazine, and helped awaken the country to the damage caused by super-polluted waters. The photo accompanied a story about a fire on the Cuyahoga in June of 1969—at the time, the latest of more than a dozen such fires—but the magazine ran this earlier (and more dramatic) image before photos of that blast were available. The 1969 fire was one touchpoint that contributed to the passage of the Clean Water Act in 1972 and the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, or Superfund) in 1980, to provide funds for clean-up of contaminated sites. Superfund created a “polluter pays” liability framework, in which owners, operators, arrangers, and transporters were held retroactively strictly liable for the pollution they caused.

It is instructive to contrast the coverage for clean-up damages in *Boeing* with the effort of power companies to obtain coverage for installing, pursuant to federal mandate, new equipment to minimize their future emissions under the Clean Air Act. In *Cinergy v. Associated Electric and Gas Insurance, Inc.*, 865 N.E.2d

571, 582 (Ind. 2007), Dickson, J., held that these costs were not covered because

the installation costs for equipment to prevent future emissions [are] not caused by the *happening* of an accident, event, or exposure to conditions but rather result from the *prevention* of such an occurrence. . . . Notwithstanding our preference to construe ambiguous insurance policy language strictly and against the insurer, we discern no ambiguity here that would permit the occurrence requirement reasonably to be understood to allow coverage for damages in the form of installation costs for government-mandated equipment intended to reduce future emissions of pollutants and to prevent future environmental harm.

3. Implied conditions and shared expectations. In many coverage disputes courts are prepared to read into the basic contract implied conditions that they think comport with the joint expectations of the parties. Thus in *Fayad v. Clarendon National Insurance Co.*, 899 So. 2d 1082, 1084 (Fla. 2005), the insurer asserted that certain damage from blasting was covered by an exclusion in a homeowner's policy for "earth movement, meaning earthquake, including land shock waves or tremors before, during or after a volcanic eruption; landslide; mine subsidence; mudflow; earth sinking, rising or shifting." The court, however, held that "well-established principles of insurance contract interpretation" required the exclusion to be limited to earth movements triggered by natural events, not human actions, including blasting. Accordingly it held that the insurer's all-risk policy covered the claimed losses. Should it make a difference whether the third party is, or is not, liable for the blasting damage?

4. Pollution coverage for global warming. How will the standard CGL policies treat liabilities for global warming attributable to carbon dioxide emissions, which are now subject to direct regulation by the Environmental Protection Agency after *Massachusetts v. EPA*, 549 U.S. 497 (2007)? In *AES Corporation v. Steadfast Insurance Co.*, 725 S.E.2d 532 (Va. 2012), the Virginia Supreme Court held that an insurer on the basic CGL policy did not have coverage over a global warming claim brought by the Native Village of Kivalina and the City of Kivalina against AES, claiming that the tribe and village, located on Alaskan barrier islands, had suffered damage because AES "*intentionally* emits millions of tons of carbon dioxide and other greenhouse gases into the atmosphere annually," when AES "*knew or should have known* of the impacts of [its] emissions" . . . on global warming and on particularly vulnerable communities such as coastal Alaskan villages."

Under the CGL policies, Steadfast would not be liable because AES's acts as alleged in the complaint were intentional and the consequences of those acts are alleged by Kivalina to be not merely foreseeable, but natural or probable. Where the harmful consequences of an act are alleged to have been not just possible, but the natural or probable consequences of an intentional act, choosing to perform

p. 873

the act deliberately, even if in ignorance of that fact, does not make the resulting injury an "accident" even when the complaint alleges that such action was negligent.

Kivalina asserts that the deleterious results of emitting carbon dioxide and greenhouse gases are something that AES knew or should have known about. If an insured knew or should have

known that certain results were the natural or probable consequences of intentional acts or omissions, there is no “occurrence” within the meaning of a CGL policy. . . . Even if AES were actually ignorant of the effect of its actions and/or did not intend for such damages to occur, Kivalina alleges its damages were the natural and probable consequence of AES’s intentional actions. Therefore, Kivalina does not allege that its property damage was the result of a fortuitous event or accident, and such loss is not covered under the relevant CGL policies.

The Village of Kivalina, the Alaskan town at the center of AES, had good reason to bring its case. As of 2015, “[s]cientists estimate that due to climate change, the village of Kivalina, in northwestern Alaska, will be underwater by the year 2025.”
Wernick, Will These Alaska Villagers Be America’s First Climate Change Refugees?, PRI, Aug. 9, 2015, <http://www.pri.org/stories/2015-08-09/will-residents-kivalina-alaska-be-first-climate-change-refugees-us>.

Source: Don Bartletti / Los Angeles Times via Getty Images

For the claim that the definitions of pollution in the GCL do not follow federal regulation, see Donald & Davis, Carbon Dioxide: Harmless, Ubiquitous, and Certainly Not a Pollutant Under a Liability Policy’s Absolute Pollution Exclusion, 39 Seton Hall L. Rev. 107 (2009), which denied that carbon dioxide counted as a “pollutant” in CGL policies, given that it is essential for life. Note that AES does not cite American Electric Power Co. v. Connecticut, 564 U.S. 323 (2011), where Ginsburg, J., held that the active involvement of the EPA in the direct regulation of pollution displaced all causes of action based on federal common law, but remanded the case for further consideration of whether state common law actions were preempted based on the principles articulated in *City of Oakland*, Chapter 7, *supra* at 641.

2. Cumulative Trauma Cases

Initial insurance coverage for most injuries is routine with ordinary traumatic injuries, which, like “sudden

and accidental” discharges, are confined to a single period. But finding the proper trigger or triggers for coverage is far more vexing in so-called cumulative trauma cases in which the period between initial exposure and the first manifestation of bodily injury or property damage spans multiple

policies. In general, it is possible to identify four distinct rules (each with its own variations) to resolve these coverage difficulties.

First, the *exposure or proration* approach apportions the cost of indemnity over the entire period between the initial exposure and the first manifestation of illness or disease. See, e.g., *Insurance Co. of North America v. Forty-Eight Insulations, Inc.*, 633 F.2d 1212 (6th Cir. 1980), *modified*, 657 F.2d 814 (6th Cir. 1981), which prorated indemnity and defense coverage across the entire period from initial exposure to the defendant’s asbestos to the manifestation of disease. The exposure approach leaves the insured at risk for periods in which no coverage was purchased or available coverage has been exhausted.

Second, the *manifestation* approach ties the coverage to the moment at which the plaintiff first manifests symptoms, for example, of an asbestos-related disease. As with ordinary accidents, this approach covers each tort dispute under a single insurance policy. See *Eagle-Picher Indus., Inc. v. Liberty Mut. Ins. Co.*, 682 F.2d 12 (1st Cir. 1982).

Third, the *continuous trigger or “triple trigger” view* was championed in *Keene v. Insurance Co. of North America*, 667 F.2d 1034 (D.C. Cir. 1981). The triple trigger lets the insured elect to assign the loss to any policy in effect at the time of initial exposure, at first manifestation, or at any time in between. It quickly became the asbestos industry benchmark for future settlement negotiations, which in effect allows an insurer after the fact to assign individual claims to policy periods in ways that maximize their coverage.

Fourth, an *injury-in-fact* trigger ties coverage to that point in time when some actual injury to the person can be identified. In general, this position offers more limited protection than the basic continuous trigger test because it excludes from coverage at least some fraction of the exposure period. As stated in *Wolverine World Wide, Inc. v. Liberty Mutual Insurance Co.*, 2007 WL 705981 (Mich. Ct. App. 2007), with the “flexible” injury-in-fact rule, a “fact-finder can determine that injury occurred at any number of points, from initial exposure through manifestation. Further, in continuous damages cases, injury may occur repeatedly through numerous consecutive policy periods.”

Most courts have adopted some form of the exposure or continuous trigger approaches. In *Montrose Chemical Corp. v. Admiral Insurance Co.*, 913 P.2d 878, 902-903 (Cal. 1995), Lucas, C.J., opted for the continuous trigger approach. He first noted that “courts will generally apply equitable considerations to spread the cost among the several policies and insurers.” He then explained that the expanded coverage implied by the term “occurrence” meant that

they specifically considered and rejected the suggestion that language establishing a manifestation or discovery trigger of coverage be incorporated into the standard form CGL policy. Among the reasons relied on for rejecting the incorporation of such limitations into the standard definitions in the coverage clauses were several stated equitable concerns: the

difficulty of applying such limitations or requirements in cases of continuing damage or injury over the course of successive policy periods, the uncertainty of who would bear the burden of a discovery requirement

p. 875

(i.e., the insured or third party claimants), the arbitrariness, from the carrier's perspective, of telescoping all damage in a continuing injury case into a single policy period, and the fear that policyholders could be disadvantaged by such an approach. . . .

Finally, we agree with Montrose that application of a manifestation trigger of coverage to an occurrence-based CGL policy would unduly transform it into a "claims made" policy. Claims made policies were specifically developed to limit an insurer's risk by restricting coverage to the single policy in effect at the time a claim was asserted against the insured, without regard to the timing of the damage or injury, thus permitting the carrier to establish reserves without regard to possibilities of inflation, upward-spiraling jury awards, or enlargements of tort liability after the policy period. . . . We agree with the conclusion of the Court of Appeal below that to apply a manifestation trigger of coverage to Admiral's occurrence-based CGL policies would be to effectively rewrite Admiral's contracts of insurance with Montrose, transforming the broader and more expensive occurrence-based CGL policy into a claims made policy.

Note that under the triple trigger theory, the insurer that supplies coverage on January 1, 1990, for instance, must, if requested, supply full coverage for all cases in which any exposure *prior* to that date manifests itself in damages *after* that date no matter how short a time its policy was in effect. Does Lucas, C.J., explain why the triple trigger theory should be preferred to the proration theory of *Forty-Eight Insulations*, which ties the level of coverage to the period for which insurance was supplied?

Should the triple trigger theory be rejected on the ground that it allows the insured to allocate losses to the most favorable coverage period after it knows the distribution and severity of all relevant claims? For a defense of the first manifestation position, see Epstein, The Legal and Insurance Dynamics of Mass Tort Litigation, 13 J. Legal Stud. 475, 495-505 (1984); for a defense of Keene's triple trigger, see Note, Adjudicating Asbestos Insurance Liability: Alternatives to Contract Analysis, 97 Harv. L. Rev. 739 (1984). See generally Fischer, Insurance Coverage for Mass Exposure Tort Claims: The Debate over the Appropriate Trigger Rule, 45 Drake L. Rev. 625 (1997).

SECTION C. THE NO-FAULT SYSTEMS

The insurance coverage rules discussed in the first part of this chapter are intended to backstop the operation of the tort system. Side by side with their development has been a reform movement that seeks to displace the tort system with a variety of no-fault programs loosely patterned on the workers' compensation system, the first and most well established of these systems. During the 1960s in the United States, scholars developed approaches to apply the no-fault concept for automobiles, medical malpractice, and product liability. None of these systems have taken off, and there is little prospect that any one will break out soon. The one permanent no-fault system is the New Zealand comprehensive no-fault

system for all accidental injuries administered by its Accident Compensation System. It is useful briefly to survey the fate of these various programs.

A brief list of their common points helps show the close kinship of the various no-fault systems. Workers' compensation and modern no-fault systems provide compensation for individual injuries that are everywhere noncompensable at common law. Each of these programs makes extensive use of broad coverage formulas (arising out of employment or the use of an automobile, consumer product, vaccine treatment, and so forth). Each system contemplates sharp limitations on damages, with little or no recovery for pain and suffering. Finally each plan must be coordinated with the common law tort rules retained after its adoption.

Second, workers' compensation serves as the model for a number of contemporary no-fault systems of liability. This heterogeneous group includes compensation programs for injuries arising out of the use of automobiles, the distribution of consumer products, the provision of medical services, the supply of childhood vaccine programs, and, most recently, the special 9/11 fund for victims at the World Trade Center and other sites.

Accordingly we start with the workers' compensation system before turning to its modern offshoots. The first section examines its historical origins from the common law of industrial accident law. The second section deals with the traditional coverage formula of "injuries arising out of and in the course of employment."

1. Workers' Compensation

The workers' compensation system is the major no-fault system in the United States. In recent years, the study of workers' compensation has gained new urgency for two reasons.

First, the workers' compensation system is big business. In 2016, the most recent year for which comprehensive statistics are available, there were more than 138 million covered workers, representing a 7.9 percent increase over the 2012 figure. Covered payroll over that period was about \$7.4 trillion for a 17.3 percent increase from the base 2012 year. Yet by the same token total benefits paid out were \$61.9 billion, which represented a decrease of 1.1 percent from the base 2012 year. Of the decrease, 0.5 percent were the reduction in medical benefits, while cash payouts decreased by 1.8 percent. Total benefits were \$0.83 per \$100 of covered payroll, which worked out to a \$0.16 decrease since 2012. Total premiums collected for the system were about \$96.5 billion, up from about \$83.2 billion in 2012. In 2016, the total payout for benefits was about \$61.6 billion, and for administrative expenses was \$34.9 billion. The comparable figures for 2012 were \$61.9 billion in payouts to covered workers and \$21.3 billion for various administrative costs. The percentage of total premiums devoted to administration rose from about 25.6 percent to about 36.1 percent. Why? For the basic statistics, see National Academy of Social Insurance, https://www.nasi.org/sites/default/files/WorkersComp2016_FINAL.pdf (2018).

a. Historical Origins

The emergence of workers' compensation laws follows a long and tortuous path. Before the English case of *Priestley v. Fowler*, 150 Eng. Rep. 1030 (Ex. 1837), there were no recorded cases in which an employee sued an employer for a work-related injury. The first employee's suit in the United States was the leading case of *Farwell v. Boston & Worcester R.R. Corp.*, 45 Mass. (4 Met.) 49 (1842), *supra* Chapter 4 at 315. These suits for workplace negligence had to overcome the famous trinity of common law defenses: common employment, assumption of risk, and contributory negligence. Efforts to surmount these legal barriers followed two distinct paths. First, private firms and their (often unionized) workers voluntarily and expressly contracted out of the common law rules for industrial accidents, frequently by putting in its place a complex compensation system that formed the basis for modern workers' compensation laws. See, e.g., *Griffiths v. Earl of Dudley*, [1882] 9 Q.B. 357; *Clements v. London & N.E. Ry.*, [1894] 2 Q.B. 482. Second, explicit legislative intervention modified the common law tort rules for industrial accidents. The first of these statutes—the Employer's Liability Act, 1880 (ELA), 43 & 44 Vict. ch. 42—eliminated the defense of common employment while confirming that the employer's liability to his workers rested on negligence principles. The English courts in *Griffiths* and *Clements* held the ELA did not limit the prior common institutional practice whereby employers and employees had contracted out of the statutory rules into a compensation-like system.

The ELA became the model for many American state statutes on employment relations. See, e.g., Massachusetts Employer's Liability Act, 1887 Mass. Acts 566; California Employer's Liability Act, 1907 Cal. Stat. 119. At the federal level the common law rules were also displaced by the Federal Employer's Liability Act, 35 Stat. 65 (1908). The FELA only covered employees of interstate common carriers. It withstood constitutional challenge in the Second Employer's Liability Cases, 223 U.S. 1 (1912), after some earlier doubts about its constitutionality under the Commerce Clause, U.S. Const. art. I, §8, cl. 3, had sidetracked the earlier legislation. See *The Employers' Liability Cases*, 207 U.S. 463 (1908). The FELA is still in effect today, as amended, 45 U.S.C. §§51-60 (2019), and has generated extensive litigation. See, e.g., *Wilkerson v. McCarthy*, *supra* at 253, Note 2.

For very different views on the early history, see Friedman, *A History of American Law* pt. 4, ch. 2 (3d ed. 2005); Epstein, *The Historical Origins and Economic Structure of the Workers' Compensation Act*, 16 Ga. L. Rev. 775 (1982); Fishback, *Liability Rules and Accident Prevention in the Workplace: Empirical Evidence from the Early Twentieth Century*, 16 J. Legal Stud. 305 (1987); Fishback & Kantor, *A Prelude to the Welfare State: The Origins of Workers' Compensation* (2000).

The various employer's liability acts marked the first stage in the transformation of the law of industrial accidents. In England the ELA was supplanted in 1897 by the pioneering Workmen's Compensation Act, 1897, 60 & 61 Vict. ch. 37, which explicitly banned any contractual waiver of the protection afforded workers. The 1897 Act in turn set up an extensive debate in the United States, which reached a turning point when New York enacted the first American workers' compensation statute in 1910, 1910 N.Y. Laws 625, to implement the recommendations of its blue-ribbon Wainwright Commission, which summarized its conclusions as follows:

THE
EMPLOYERS' LIABILITY ACT,
1880,
AND
THE
WORKMEN'S COMPENSATION ACT,
1906.

p. 879

First, that the present system in New York rests on a basis that is economically unwise and unfair, and that in operation it is wasteful, uncertain and productive of antagonism between workmen and employers.

Second, that it is satisfactory to none and tolerable only to those employers and workmen who practically disregard their legal rights and obligations, and fairly share the burden of accidents in industries.

Third, that the evils of the system are most marked in hazardous employments, where the trade risk is high and serious accidents frequent.

Fourth, that, as a matter of fact, workmen in the dangerous trades do not, and practically cannot, provide for themselves adequate accident insurance, and therefore, the burden of serious accidents falls on the workmen least able to bear it, and brings many of them and their families to want.

The 1910 law was immediately challenged on constitutional grounds and was overturned by the New York Court of Appeals in *Ives v. South Buffalo Railway*, 94 N.E. 431, 436, 439-440, 449 (N.Y. 1911). *Ives* described the workers' compensation law in terms that in broad outline are still accurate today.

The statute, judged by our common-law standards, is plainly revolutionary. Its central and controlling feature is that every employer who is engaged in any of the classified industries shall be liable for any injury to a workman arising out of and in the course of the employment by "a necessary risk or danger of the employment or one inherent in the nature thereof, . . . provided that the employer shall not be liable in respect of any injury to the workman which is caused in whole or in part by the serious and willful misconduct of the workman." This rule of liability, stated in another form, is that the employer is responsible to the employee for every accident in the course of the employment, whether the employer is at fault or not, and whether the employee is at fault or not, except when the fault of the employee is so grave as to constitute serious and willful misconduct on his part. The radical character of this legislation is at once revealed by contrasting it with the rule of the common law, under which the employer is liable for injuries to his employee only when the employer is guilty of some act or acts of negligence which caused the occurrence out of which the injuries arise, and then only when the employee is shown to be free from any negligence which contributes to the occurrence.

Werner, J., then addressed the objections to the statute and concluded that it was constitutionally permissible to abolish the employer's "trinity" of common law defenses in personal injury actions: the fellow servant doctrine (whereby the injured party could not recover from the employer for harm caused by

the negligence of a fellow servant), assumption of risk, and contributory negligence. Yet in spite of the admittedly impressive economic and sociological brief made on behalf of the statute, the court struck it down as an impermissible exercise of the police

p. 880

power because it bore no relationship to the health, safety, or morals of employees. The court also found that the statutory imposition of "liability without fault" worked an unconstitutional deprivation of property without due process of law:

Law as used in [its constitutional] sense means the basic law and not the very act of legislation which deprives the citizen of his rights, privileges or property. Any other view would lead to the absurdity that the Constitutions protect only those rights which the legislatures do not take away. If such economic and sociologic arguments as are here advanced in support of this statute can be allowed to subvert the fundamental idea of property, then there is no private right entirely safe, because there is no limitation upon the absolute discretion of legislatures, and the guarantees of the Constitution are a mere waste of words. . . . If the argument in support of this statute is sound we do not see why it cannot logically be carried much further. Poverty and misfortune from every cause are detrimental to the state. It would probably conduce to the welfare of all concerned if there could be a more equal distribution of wealth. Many persons have much more property than they can use to advantage and many more find it impossible to get the means for a comfortable existence. If the legislature can say to an employer, "you must compensate your employee for an injury not caused by you or by your fault," why can it not go further and say to the man of wealth, "you have more property than you need and your neighbor is so poor that he can barely subsist; in the interest of natural justice you must divide with your neighbor so that he and his dependents shall not become a charge upon the State?" The argument that the risk to an employee should be borne by the employer because it is inherent in the employment, may be economically sound, but it is at war with the legal principle that no employer can be compelled to assume a risk which is inseparable from the work of the employee, and which may exist in spite of a degree of care by the employer far greater than may be exacted by the most drastic law. If it is competent to impose upon an employer, who has omitted no legal duty and has committed no wrong, a liability based solely upon a legislative fiat that his business is inherently dangerous, it is equally competent to visit upon him a special tax for the support of hospitals and other charitable institutions, upon the theory that they are devoted largely to the alleviation of ills primarily due to his business. In its final and simple analysis that is taking the property of *A* and giving it to *B*, and that cannot be done under our Constitutions.

Cullen, C.J., echoed similar themes in his concurrence:

I know of no principle on which one can be compelled to indemnify another for loss unless it is based upon contractual obligation or fault. It might as well be argued in support of a law requiring a man to pay his neighbor's debts, that the common law requires each man to pay his own debts, and the statute in question was a mere modification of the common law so as to require each to pay his neighbor's debts.

This early judicial setback was short-lived. Pursuant to a suggestion made by the court in *Ives*, New York amended its constitution to authorize a workers' compensation statute. In *New York Central Railroad Co. v. White*, 243 U.S. 188,

p. 881

202-204, 208 (1916), a unanimous United States Supreme Court upheld the new statute against federal constitutional challenges. Justice Pitney wrote:

Of course, we cannot ignore the question whether the new arrangement is arbitrary and unreasonable, from the standpoint of natural justice. Respecting this, it is important to be observed that the act applies only to disabling or fatal personal injuries received in the course of hazardous employment in gainful occupation. Reduced to its elements, the situation to be dealt with is this: Employer and employee, by mutual consent, engage in a common operation intended to be advantageous to both; the employee is to contribute his personal services, and for these is to receive wages, and ordinarily nothing more; the employer is to furnish plant, facilities, organization, capital, credit, is to control and manage the operation, paying the wages and other expenses, disposing of the product at such prices as he can obtain, taking all the profits, if any there be, and of necessity bearing the entire losses. In the nature of things, there is more or less of a probability that the employee may lose his life through some accidental injury arising out of the employment, leaving his widow or children deprived of their natural support or that he may sustain an injury not mortal but resulting in his total or partial disablement, temporary or permanent, with corresponding impairment of earning capacity. The physical suffering must be borne by the employee alone; the laws of nature prevent this from being evaded or shifted to another, and the statute makes no attempt to afford an equivalent in compensation. But, besides, there is the loss of earning power; a loss of that which stands to the employee as his capital in trade. This is a loss arising out of the business, and, however it may be charged up, is an expense of the operation, as truly as the cost of repairing broken machinery or any other expense that ordinarily is paid by the employer. Who is to bear the charge? It is plain that, on grounds of natural justice, it is not unreasonable for the State, while relieving the employer from responsibility for damages measured by common-law standards and payable in cases where he or those for whose conduct he is answerable are found to be at fault, to require him to contribute a reasonable amount, and according to a reasonable and definite scale, by way of compensation for the loss of earning power incurred in the common enterprise, irrespective of the question of negligence, instead of leaving the entire loss to rest where it may chance to fall—that is, upon the injured employee or his dependents. Nor can it be deemed arbitrary and unreasonable, from the standpoint of the employee's interest, to supplant a system under which he assumed the entire risk of injury in ordinary cases, and in others had a right to recover an amount more or less speculative upon proving facts of negligence that often were difficult to prove, and substitute a system under which in all ordinary cases of accidental injury he is sure of a definite and easily ascertained compensation, not being obliged to assume the entire loss in any case but in all cases assuming any loss beyond the prescribed scale.

Much emphasis is laid upon the criticism that the act creates liability without fault. This is sufficiently answered by what has been said, but we may add that liability without fault is not a novelty in the law. The common-law liability of the carrier, of the inn-keeper, of him who

employed fire or other dangerous agency or harbored a mischievous animal, was not dependent altogether upon questions of fault or negligence. Statutes imposing liability without fault have been sustained. . . .

p. 882

We conclude that the prescribed scheme of compulsory compensation is not repugnant to the provisions of the Fourteenth Amendment.

What is the nature of the “bargain between workers and employers set by the workmen’s compensation statutes”? If that bargain benefits all concerned, why must it be imposed by legislation? Can other schemes of redistribution, such as those that aid the poor, be justified on the same grounds as the implicit quid pro quo that is built into the fabric of the workers’ compensation laws?

The challenges to workers’ compensation went beyond the constitutional issues. As early as 1913, Professor Jeremiah Smith, *Sequel to Workmen’s Compensation Acts*, 27 Harv. L. Rev. 235, 252-253 (1914), argued that workers’ compensation could not be justified on grounds of “justice and expediency.” In so doing, he addressed the common argument that workers should receive special protection from the state because the employer “will reap the net profit of the business,” as follows:

The employee is himself a part of the undertaking. He has, in one sense, voluntarily participated in it; and is deriving benefit from it. Whereas outsiders have nothing to do with the undertaking. Frequently they “are exposed, without any choice on their side, to more or less risk of injury arising from what is done in the conduct of it by the owner or his servants.” An outsider is not a participant in the business and “derives no direct benefit from its carrying on.”

Why single out workmen employed in the undertaking and constitute them a specially protected class, while overlooking other persons whose claim stands on at least equal ground?

One further clarification helps put the workers’ compensation laws in context. “Liability without fault” (which plays a large role in stranger cases) has often been misconstrued to represent a belated triumph of the strict liability of the old common law in the field of industrial relations. Thus in *White*, for example, Justice Pitney grappled with cases of fire or mischievous animals, precisely because of the strict character of the rules that govern these cases. Likewise Jeremiah Smith could conclude: “If the Workmen’s Compensation Act is regarded as right in principle and the common law of A.D. 1900 as wrong in principle, then the argument is strong in favor of repudiating the common law of A.D. 1900 and going back to the common law of A.D. 1400.” *Sequel to Workmen’s Compensation Acts* (pt. 2), 27 Harv. L. Rev. 344, 368 (1914).

Yet with workers’ compensation, the words “liability without fault”—and the basic theory of liability and the permissible defenses it spawns—differs as much from common law strict liability as it does from common law negligence.

First, on liability, the modern workers’ compensation law imposes upon employers liability for injuries, to

use the time-honored phrase, “arising out of and in the course of employment.” That test for compensation largely eliminates the requirement of a causal nexus between defendant’s (particular) acts and the plaintiff’s harm that is so central to strict liability at common law. Thus under common law strict liability for physical injuries, the defendant or his servant must

p. 883

hit the plaintiff or create some trap into which she falls. Likewise in fire damage cases, the plaintiff must demonstrate that the defendant, or perhaps his guests or servants, set the fire in question. If the defendant is an “insurer” under this scheme, he is an insurer only for the consequences of his own acts or those persons on his premises with his permission. He is not an insurer with regard to the plaintiff’s harms attributable to an independent source like an act of God. The workers’ compensation scheme, however, focuses on the injuries to the worker. The emphasis is on where and when the worker suffered the harm by fire—it is of no importance whether or not the employer or a fellow employee set the fire. “Liability without fault” in the context of workers’ compensation means not only liability without defendant’s negligence, but also liability without the causal connection to defendant’s conduct required under the strict common law liability rules. Workers’ compensation coverage most definitely includes harms for which the plaintiff is the sole cause of her own harms.

Second, on plaintiff’s conduct, the common law rule of strict liability, properly conceived, makes allowances for affirmative defenses based on the plaintiff’s conduct, including both assumption of risk and contributory negligence. These defenses are expressly abolished or restricted by the workers’ compensation statutes. Only the willful misconduct of the worker will remove or limit in some circumstances coverage under these acts. The workers’ compensation bargain features broader coverage but lower compensation per covered event.

We are now in a position to look more closely at the deceptively difficult “arising out of and in the course of employment” language of the workers’ compensation statutes. For exhaustive treatment, see Larson, Larson’s Workers’ Compensation Law §§3-29 (2019). After evaluating the coverage formula, we will turn to two other distinctive features of workers’ compensation laws: damage rules and coordination with the common law rules of tort.

b. The Scope of Coverage: “Arising Out of and in the Course of Employment”

CLODGO v. RENTAVISION, INC.

701 A.2d 1044 (Vt. 1997)

GIBSON, J. On July 22, 1995, claimant was working as manager of Rentavision’s store in Brattleboro. During a lull between customers, claimant began firing staples with a staple gun at a co-worker, who was sitting on a couch watching television. The co-worker first protested, but then, after claimant had fired twenty or thirty staples at him, fired three staples back at claimant. As claimant ducked, the third staple hit him in the eye.

[The defendant argued] that claimant was engaged in noncompensable horseplay at the time of the injury.

Following a hearing in March 1996, the Commissioner awarded permanent partial disability and vocational rehabilitation benefits, medical expenses, and attorney's fees and costs. This appeal followed. . . .

The question certified for review is whether claimant's horseplay bars him from recovery for the resulting injury under Vermont's Workers' Compensation Act. Rentavision contends the Commissioner misapplied the law in concluding that claimant's horseplay-related injury was compensable. We agree. An injury arises out of employment if it would not have occurred but for the fact that the conditions and obligations of the employment placed claimant in the position where he or she was injured. Thus, claimant must show that "but for" the employment and his position at work, the injury would not have happened.

Although the accident here would not have happened but for claimant's participation in the horseplay and therefore was not exclusively linked to his employment, it also was not a purely personal risk that would have occurred regardless of his location and activity on that day. He was injured during work hours with a staple gun provided for use on the job, and thus the findings support a causal connection between claimant's work conditions and the injury adequate to conclude that the accident arose out of his employment.

Nonetheless, claimant must also show that the injury occurred in the course of the employment. An accident occurs in the course of employment when it was within the period of time the employee was on duty at a place where the employee was reasonably expected to be *while fulfilling the duties of the employment contract*. Thus, while some horseplay among employees during work hours can be expected and is not an automatic bar to compensation, the key inquiry is whether the employee deviated too far from his or her duties.

The Commissioner must therefore consider (1) the extent and seriousness of the deviation; (2) the completeness of the deviation (i.e., whether the activity was commingled with performance of a work duty or was a complete abandonment of duty); (3) the extent to which the activity had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay. The Commissioner found that although shooting staples was common among employees, such activity was not considered acceptable behavior by Rentavision. She made no finding concerning whether Rentavision knew that staple-shooting occurred at work, but did find that claimant made material misrepresentations of fact designed to avoid an inference of horseplay or inappropriate behavior in order that he might obtain workers' compensation benefits. Claimant makes no showing that shooting staples at fellow employees was an accepted part of claimant's employment or furthered Rentavision's interests. . . .

The facts show that the accident was unrelated to any legitimate use of the staplers at the time, indicating there was no commingling of the horseplay with work duties. The Commissioner focused on the slack time inherent in claimant's job, but this factor alone is not dispositive. Although some horseplay was reasonably to be expected during idle periods between customers, the obvious dangerousness of shooting staples at fellow employees and the absence of connection between duties as a salesperson and the horseplay events indicates the accident occurred during a substantial deviation from work duties. Therefore, we reverse the Commissioner's award.

MORSE, J., dissenting. I respectfully dissent. . . .

With respect to the extent and seriousness of the deviation, as well as its completeness, the Commissioner found that claimant and his fellow employee had completed virtually all the work that needed to be done in the absence of customers and that business was very slow that day. When the injury occurred, claimant and his fellow employee were in a period of enforced idleness while they waited for customers. They were not actively pursuing any specific tasks and were passing the time as required by their jobs. As Larson points out, when there is a lull in work, there are no duties to abandon. During such periods, the deviation can be more substantial than at other times when an employee may be actively pursuing a task directly related to employment. The Commissioner could thus reasonably conclude that the horseplay in this case did not constitute an abandonment of duties or even a serious deviation from the demands of work at that time of day.

Regarding the extent to which such horseplay had become an accepted activity, the Commissioner found that it had been a commonplace occurrence at the store. Although the executive assistant to defendant's president testified that claimant's horseplay was not considered acceptable behavior, he acknowledged that an employee would not be fired for engaging in such activity. The Commissioner thus reasonably concluded that the horseplay as engaged in by claimant, while not condoned by the employer, was a tacit part of employment.

NOTES

1. Injuries “arising out of and in the course of employment.” *Clodgo* is one of literally thousands of cases that have probed the outer limits of coverage under the workers’ compensation statutes. In a sense, the unending stream of litigation under the statute shows that these laws cannot escape the high volume of case-by-case adjudication found under negligence law that formerly governed employer liability cases. The broader coverage formula of the standard workers’ compensation statute rendered many liability questions easy that were once vexed at common law. But by expanding the class of compensable events, the law ushered in a new class of contested cases, of which injury during an employee’s horseplay is only one.

The standard view of the subject treats “arising out of” and “in the course of” employment as distinct requirements. “The words ‘in the course of’ refer to the time, place, and circumstances of the injury. The term ‘arising out of’ refers to the cause and origin of the injury.” *Miedema v. Dial Corp.*, 551 N.W.2d 309 (Iowa 1996). With those words spoken, the court held that an employee who strained his back after making a trip to the employer’s restroom while getting ready for work was injured in the course of employment, but that his injury did not arise out of his employment. He could not show that the incident did not “coincidentally [occur] while at work,” because neither “the design of the restroom or of the toilet Dial provided for its employees contributed to [his] injury. . . . The risk of a back injury in this circumstance is in no way connected to nor increased by his employment with Dial.” These two elements also govern the countless separate coverage questions.

2. *Employee theft.* In Matter of Richardson v. Fiedler, 493 N.E.2d 228, 229, 231, 233 (N.Y. 1986), the decedent, a waterproofer and roofing mechanic, fell to his death while attempting to steal copper downspouts from the roof of his job site. Simons, J., held that the death was covered under the workers' compensation law even though the theft was antithetical to the employer's interests.

The Board found from the evidence in this case that it was common practice in the industry for roofers to remove copper downspouts and sell them for scrap. It further found that this employer not only knew of the practice but also frequently had been required to pay for or replace downspouts stolen by its employees. Despite this experience, the employer had never disciplined or discharged an employee for these thefts, and after it learned that decedent and his co-worker had been stealing downspouts on the day of the accident, it did not discipline or discharge the coemployee. Accordingly, the Board found that decedent's activities while waiting for necessary work materials to arrive did not constitute a deviation from, or an abandonment of, his employment and that the death arose out of and in the course of decedent's employment. These findings are supported by substantial evidence and thus are conclusive on the court. . . .

Although the appellants' argument is based on moral grounds—the need to prevent parties from profiting from illegal acts—the suspicion is that the concern has more to do with dollars and cents than morality. The way for an employer to express dissatisfaction with its employees' acts and also avoid paying benefits for such claims, however, is not for the Board to disqualify innocent dependents but for the employer to make clear to its employees that illegal conduct on the job will not be tolerated.

The dissent of Titone, J., argued that it was "totally unacceptable" to award coverage "where an employer tolerates conduct blatantly in violation of the Penal Law." What result in *Richardson* if the employer had disciplined or discharged workers found to have stolen copper downspouts from the workplace?

3. *Workers' compensation for acts of third parties.* Workers' compensation statutes have universally extended coverage for injuries to workers caused by third persons while they are on the job—a leading cause of death in the United States today. In Martinez v. Workers' Compensation Appeals Board, 544 P.2d 1350, 1352 (Cal. 1976), the injured worker had been hired to operate a beer stand at a fiesta operated by the Roman Catholic Church between noon and 4:30 P.M. While strolling through the fiesta with his family after work, he heard reports that some teenagers had pilfered beer from the church's supplies. At 8:00 P.M. he encountered a group of boys with beer that he believed to be stolen and tried to grab it from them, at which point he was brutally beaten. The hearing examiner denied compensation because the injuries occurred after hours and because the employee had not been hired as a security guard. On appeal the court held that the plaintiff's injuries were emergency actions for the employer's benefit covered by workers' compensation because a reasonable employee might "attempt" to prevent theft even if not explicitly hired to do so.

In *Grant v. Grant Textiles*, 641 S.E.2d 869, 872 (S.C. 2007), a vice president in the family business was injured when he drove his company-owned truck to the Clinton House to meet his father and some potential customers. As he approached the Clinton House, he swerved to avoid what appeared to be an animal lying in the road. He then insisted on helping a Clinton House employee clean up the debris, when he was hit by a pick-up truck. The claimant testified that his offer to help was made to prevent further injury to his father and his customers. The Compensation Commission denied the claim. Moore, J., reversed, saying:

The full commission erred by finding that the accident did not have a causal connection with Claimant's employment. The accident would not have happened but for Claimant's business trip to the Clinton House to meet his employer's customers. Because removing road hazards was not part of Claimant's job duties, he could have ignored the hazard in the road; however, he chose to remove the hazard to benefit himself, his co-worker father, and his customers. . . . Claimant's act, while outside his regular duties, was undertaken in good faith to advance his employer's interest and, therefore, was within the course of his employment.

4. *Athletic injuries.* In most cases, those workers who receive athletic injuries while participating in employee sporting events, either formal or informal, are entitled to receive compensation. In *Anderton v. WasteAway Services*, 880 A.2d 1003, 1007-1008 (Conn. App. Ct. 2005), the plaintiff tore his left Achilles tendon while playing in a basketball stadium across the street from the stadium at which he worked. Lavery, C.J., reversed the decision of the compensation board denying coverage, saying:

In the present case, the activity in question was a basketball game occurring during working hours, thereby fulfilling the time requirement. The employers exercised some compulsion in that they invited the plaintiff and his supervisor to play and scheduled it during the plaintiff's work hours. It also was known that the employers were visiting the stadium because of the maintenance staff's poor performance. The plaintiff believed that if he refused to play, his employers and his supervisor would look on him unfavorably as an employee. Also, one of the employers acknowledged that the notion of playing basketball with employees was to benefit the company by boosting company morale and fostering employee loyalty.

5. *Personal work.* Under the workers' compensation law how should the line be drawn between activities that pertain to the personal affairs of the worker and those that pertain to the job? In *Orsini v. Industrial Commission*, 509 N.E.2d 1005, 1009 (Ill. 1987), the plaintiff mechanic who used his employer's service bay to repair his own car was injured when a missing transmission pin in his car caused the vehicle to lurch forward, pinning his legs between the car and a workbench. The court held that the accident was personal and noncompensable. It was not "a risk peculiar to the work or a risk to which the employee is exposed to a greater degree than the general public by reason of his employment." The court explained its decision as follows:

In the instant case, the risk of harm to Orsini was not increased by any condition of the employment premises. Unlike [other cases] cited by the appellee, where the harm to the employee came about as a result of a defect in the employer's premises, the injury here came

about solely as a result of a defect in Orsini's own car—the missing retainer pin. It is undisputed that the malfunction on Orsini's car could have occurred anytime or anywhere, and only coincidentally occurred at the Wilmette Texaco service station. Nor is there any suggestion here that the tools provided by Wilmette Texaco and used by Orsini in repairing his car were in any way defective. Further, under the terms of his employment, Orsini was not required to work on his personal automobile during working hours, and Wilmette Texaco could just as well have permitted him to do nothing while he was waiting for the additional brake parts needed to complete the job he was performing for his employer.

6. *Acts of God under workers' compensation.* Workers' compensation cases have also had to determine coverage for injuries caused by acts of God. In *Electro-Voice, Inc. v. O'Dell*, 519 S.W.2d 395, 397 (Tenn. 1975), the claimant was awarded disability benefits when she suffered a violent allergic reaction after being stung by a bee while working on an assembly line. In demonstrating that the injury "arose out of" her employment, the claimant showed that the conditions in the plant "increased the risk or hazard" of suffering bee stings by proving that "bees often entered walls of buildings in the warm summer months and came out later in the year," and that the walls in the employer's building had been treated twice in the past two years in order to kill the bees that lived in them.

Electro-Voice adopted what is known as the "actual risk" test, whereby the claimant is allowed to recover only by showing that the employment increased (perhaps "materially") the risk of the harm beyond the levels to which an ordinary member of the public is exposed. In contrast, the so-called positional risk theory adopted by a minority of jurisdictions allows compensation under a "but for" test if the employer's activities require the employee to work in a position to suffer the harm.

A different result was reached in *Connor v. City of Danville*, 826 S.E.2d 337, 340 (Va. 2019). The plaintiff, a former corporal in the Danville Police Department, slipped, and nearly fell, on wet grass while trying to find shelter from a storm after she had spent some time on a porch interviewing a potential suspect. Her claim that her injuries were compensable because they arose out of her employment was rejected by Beales, J., who upheld the determination of the Deputy Commissioner that the actual risk test precluded her recovery:

These findings by the Commission are supported by credible evidence in the record. Despite Conner's characterization of the suspect as being "detained," the suspect was not under arrest or actually in custody, which could necessitate their following him quickly off the porch to keep him in custody. According to Conner's testimony, they did not even continue interviewing the suspect once they left the porch. In addition, as the deputy commissioner noted, in Conner's deposition testimony, she stated that her purpose in leaving the porch was to "get out of the

weather"—rather than to chase the suspect or to accomplish an employment-related task. Therefore, because Conner did not establish that the conditions of her employment subjected her to the particular danger of slipping and almost falling on wet grass during a storm, we agree with the Commission that Conner's injury was not caused by an actual risk of her employment.

Would the plaintiff have recovered if the suspect had been at her side when she fell?

7. *Drunkenness.* As *Richardson* makes plain, an employee's willful misconduct, drunkenness, and aggression may either bar or reduce recovery. Section 3600 of the California Labor Code (2019) denies compensation for an injury caused by the intoxication of the injured employee for an injury that is intentionally self-inflicted, and "where the employee has willfully and deliberately caused his own death." Is there any reason why the drunkenness rule should apply only to injury and not to death? What should be done if a worker starts drinking while on the job and is injured after continuing to drink after hours? In *Van Vleet v. Montana Ass'n of Counties Workers' Compensation Trust*, 103 P.3d 544, 548 (Mont. 2004), the court allowed compensation if the afterhours drinking did not constitute a "substantial deviation" from the drinking while on the job.

8. *Causal complications.* In many cases, a claimant argues that a compensable injury at work produces dangerous complications down the road. Thus in *Transcontinental Insurance Co. v. Crump*, 330 S.W.3d 211 (Tex. 2010), Charles Crump received a kidney transplant in 1975 that required him to remain on immunosuppressant drugs for the rest of his life. In 2000, he received workers' compensation when he struck his knee against some machinery, resulting in both contusion and bruises. Seven months later he died, aged 43, after prolonged bouts of hospitalization. A decision in favor of compensation was reversed on the ground that the commissioner did not use the right definition of "producing cause"—"a substantial factor in bringing about the injury or death and without which the injury or death would not have occurred"—which the court held applies as much in workers' compensation cases as in ordinary tort actions.

9. *Beyond accidents.* The original compensation statutes typically limited compensation to "personal injury by accident" where the last two words limited compensable injuries to those caused by a sudden and unexpected blow. In modern cases, workers' compensation statutes have dispensed with the requirement that the claimant establish a definite time, place, and cause to recover. Thus in *Johannesen v. New York City Department of Housing Preservation and Development*, 638 N.E.2d 981, 984-985 (N.Y. 1994), the claimant suffered "two sudden and traumatic asthmatic attacks at work" when she had been exposed to high levels of secondhand smoke in a closed work environment. She had kept the position for ten years although her physicians had recommended a transfer. Bellacosa, J., held that the injuries were accidental because the exposures, from a commonsense point of view, had "an exacerbative and excessive quality. . . . Claimant worked in an office where the tools of her trade are papers, pens, files, computers and telephones. Cigarette smoke is surely not a natural by-product

p. 890

of the Department of Housing Preservation and Development's activities and her employment role." On the scope of "by accident," see *Larson, supra at 883*, §§42.01-42.03.

Constant stress and exposure can also lead, for example, to a heart attack suffered on the job by a worker who already suffered from arteriosclerotic heart disease. In *Kostamo v. Marquette Iron Mining Co.*, 274 N.W.2d 411, 415 (Mich. 1979), Levin, J., addressed the coverage challenge as follows:

The workers' compensation law does not provide compensation for a person afflicted by an illness or disease not caused or aggravated by his work or working conditions. Nor is a different

result required because debility has progressed to the point where the worker cannot work without pain or injury. Accordingly, compensation cannot be awarded because the worker may suffer heart damage which would be work-related if he continued to work. Unless the work has accelerated or aggravated the illness, disease or deterioration and, thus, contributed to it, or the work, coupled with the illness, disease or deterioration, in fact causes an injury, compensation is not payable.

Arteriosclerosis is an ordinary disease of life which is not caused by work or aggravated by the stress of work. However, stress that would not adversely affect a person who does not have arteriosclerosis may cause a person who has that disease to have a heart attack.

The medical evidence necessary to establish that work aggravated, accelerated, or precipitated a heart attack is, of course, expensive to assemble and difficult to evaluate. Further, because the coverage question does not depend solely on medical issues, Levin, J., held that the Workers' Compensation Appeal Board could properly consider such additional factors as the “[t]emporal proximity of the cardiac episodes to the work experience, the hot and dusty conditions of employment, the repeated return to work after each episode, and the mental stress” to which the worker was subjected.

In recent years, explicit statutes have regulated compensation in these exertion cases. N.J. Stat. Ann. §34:15-7.2 (2019) provides:

In any claim for compensation for injury or death from cardiovascular or cerebral vascular causes, the claimant shall prove by a preponderance of the credible evidence that the injury or death was produced by the work effort or strain involving a substantial condition, event or happening in excess of the wear and tear of the claimant's daily living and in reasonable medical probability caused in a material degree the cardiovascular or cerebral vascular injury or death resulting therefrom.

Material degree means an appreciable degree or a degree substantially greater than de minimis.

In some cases, the challenge is deciding which of two employers is responsible for disabilities that start with one job only to be aggravated by work on a second. Frequently the operative test is called the “last injurious exposure” rule, which requires the compensation board to decide whether exertions on the second job count as separate accidents or as merely aggravating a preexisting condition.

The causation problems are still more difficult for cumulative trauma when no clear temporal division separates non-work-related from work-related causes. See, e.g., *Pullman Kellogg v. Workers' Compensation Appeals Board*, 605 P.2d 422, 424 (Cal. 1980), in which the California Supreme Court grappled with the apportionment rules for cases of chronic bronchitis and emphysema aggravated by the claimant's heavy smoking over the entire length of the employment period. The court concluded that under the California statute “the board must allow compensation not only for the disability resulting solely from the employment, but also for that which results from the acceleration, aggravation, or ‘lighting up’ of a

prior nondisabling disease.” How should the rule be applied in asbestos cases when smoking can increase the risk of disease 30-fold?

WILSON v. WORKERS’ COMPENSATION APPEALS BOARD

545 P.2d 225 (Cal. 1976)

CLARK, J. Applicant seeks review of a Workers’ Compensation Appeals Board decision vacating a referee’s compensation award and holding that her injury did not arise “out of and in the course of the employment.” (Lab. Code, §3600.) We affirm the board’s order.

After driving her children to their school, applicant, a grade school teacher, sustained injury in an automobile accident driving to her school. Her car contained a small bag of thread spools for use in art class, materials graded at home the previous evening, and a few books, including her teaching manual.

The employing school district did not require instructors to commute in their personal cars. The school grounds were unitary and teachers did not travel elsewhere during the day. Public transportation was available and regularly used by at least one teacher. Since the class schedule did not include a specific period for planning lessons or grading papers, instructors commonly performed these duties at school outside class periods or at home in the evening. Teachers could complete class preparation at school but usually chose to work at home for their own convenience. . . .

The board denied benefits after making the following principal findings: (1) applicant’s home was not a second job site because her activities outside school hours were matters of personal choice, (2) only convenience motivated applicant’s automobile trip, and (3) the “transportation of the work-related items was not a major part of the trip, nor even a significant alternative reason for the trip.”

The “going and coming” rule provides that workers’ compensation does not ordinarily compensate injuries sustained while the employee travels to or from work. . . .

Applicant contends that, although the accident occurred during her regular commute, she is entitled to exemption from the going and coming rule because exceptional circumstances are established by her performing work at home the night before the accident and by her transporting work-related items—the graded materials and the spools—to class.

p. 892

Work done at home may exempt an injury occurring during a regular commute from the going and coming rule if circumstances of the employment—and not mere dictates of convenience to the employee—make the home a second jobsite. . . . However, if work is performed at home for the employee’s convenience, the commute does not constitute a business trip, since serving the employee’s own convenience in selecting an off-premise place to work is a personal and not business purpose.

The record compels the board’s determination that applicant’s home did not constitute a second jobsite

warranting exemption from the going and coming rule. The explicit job requirements demanded only that she report to the school grounds—nowhere else. Her employer’s implicit requirement to work beyond classroom hours did not require labor at home. Teachers often worked after 3:15 in the school building unless their broad personal freedom vis-à-vis the nature and hours of class preparation led them home for the sake of convenience. There is no claim that facilities at school were not sufficient to permit completion of the preparatory chores.

That applicant’s type of work regularly is performed at home must not disturb the board’s determination. The contemporary professional frequently takes work home. There, the draftsman designs on a napkin, the businessman plans at breakfast, the lawyer labors in the evening. But this hearthside activity—while commendable—does not create a white-collar exception to the going and coming rule.

[Tobriner, J., joined by Mosk, J., dissented on the ground that the case fell into one of the “special” exceptions to the “going and coming” rule because the employee was expressly or implicitly “required or expected to furnish [her] own means of transportation to the job.”]

NOTES

1. The “going and coming” rule. A great mass of litigation has helped establish the precise contours of the basic going and coming rule and its many exceptions. As a first approximation, the going and coming rule only bars recovery to those employees who, with fixed hours and places of employment, are injured while *off* the employer’s premises. The rule itself is, however, subject to elaborate qualifications in most jurisdictions.

Additional complications arise for an employee with no single fixed place of work. *Hinojosa v. Workmen’s Compensation Appeals Board*, 501 P.2d 1176, 1181 (Cal. 1972), involved a farm laborer whose employer owned several noncontiguous ranches. As a condition of his employment, the plaintiff was required to find transportation between worksites. He therefore arranged to be driven by a fellow worker, whom he paid \$3.00 to cover his share of the operating expenses. The employee’s accident occurred in a collision while he was being driven home from one of the employer’s ranches. The court awarded compensation because the trips in question were “the extraordinary transits that vary from the norm because the employer requires a special,

p. 893

different transit, means of transit, or use of a car, for some particular reason of his own.” Should compensation be awarded when the routine commute is over hazardous roads? When the employee is required to work long hours of overtime before returning home?

A different outcome was reached in *Atkins v. Webcon*, 419 P.3d 1, 7-8 (Kan. 2018), where the plaintiff was a general laborer, working away from home, who was hit by a drunk driver at 2:25 a.m. while heading back alone to his hotel after meeting with friends in a bar. Kan. Stat. Ann. 2008 Supp. 44-508(f) reads:

The words, “arising out of and in the course of employment” as used in the workers compensation act shall not be construed to include injuries to employees while engaged in recreational or social events under circumstances where the employee was under no duty to attend and where the injury did not result from the performance of tasks related to the employee’s normal job duties or as specifically instructed to be performed by the employer.

His claim for workers’ compensation benefits was rebuffed by Stegall, J.:

[T]he facts simply demonstrate that Atkins was not going to or coming from work when he was injured. Atkins and [his friend] Wittekind walked to the bar after dinner to have a few drinks and unwind after a day of work. While at the bar, Atkins was not fulfilling a work related duty. While walking from the bar back to his hotel room in the early morning hours, Atkins was not on the way to assuming any of the duties of his employment. The plain language of [the Kansas statute] therefore, makes it clear the going and coming exclusion is not at issue here.

2. *Personal injuries while away from work.* Defining the course of employment often gives rise to intractable difficulties when the injury is suffered by an employee away from the employer’s premises. Thus in *Capizzi v. Southern District Reporters*, 459 N.E.2d 847, 849 (N.Y. 1984), the claimant, a court reporter, was injured when she slipped and fell while getting out of a hotel bathtub while out of town on a business trip. The traditional New York rule in this area allowed compensation only when the claimant was injured “while traveling on behalf of his employer.” Nonetheless the court rejected its earlier cases and awarded compensation.

Given the expanded theory of compensability with respect to injuries sustained by traveling employees involving incidents other than dressing or bathing, it is difficult to reconcile a compensation award to an employee who, when returning to her hotel after dinner, slipped and fell on a sidewalk with the denial of an award to a claimant in the present matter, who slipped and fell in a hotel bathtub in preparation for her return to her place of employment in New York City. Both employees sent by their employers on a business trip were removed from their normal environments, thereby increasing the risk of injury; and, as a result, were injured while engaged in “personal acts” attendant to their employment, although not participating in the actual duties of their employment.

Should the court apply an increased risk or positional risk analysis to the situation? Should workers who telecommute recover while injured at home, when work hours are erratic and the employee has full control over the premises?

3. *Fraud and abuse on the system.* The workers’ compensation system has periodically faced large cost increases because of fraud and abuse, especially for mental distress claims that do not result in such discrete episodes as asthma or heart attacks. These mental distress claims were unrecognized before 1971, but have mushroomed under the broader state interpretations of the phrase “compensable injury.” See generally Larson, *supra* at 883, §§56.04, 56.06[1]. These claims have invited an elaborate *institutional* network of

fraud against the system. Schwartz, Waste, Fraud, and Abuse in Workers' Compensation: The Recent California Experience, 52 Md. L. Rev. 983 (1993), offers a detailed account of the situation as it existed before 1992, which involved fraud rings that included "cappers" who approached workers, and the lawyers and doctors that administered a barrage of tests on workers for which they received large fees whether or not they revealed any compensable injuries, sometimes even for bogus tests. At its peak, Schwartz reports the estimate for California was "that ten percent of all workers' compensation claims are fraudulent and that twenty-five percent of all employer payments are the result of either fraudulent claims or the deliberate padding of otherwise valid claims."

Statutory reform has proved difficult. Demanding that workers show that at least 10 percent of the emotional distress was tied to "actual events" on the job was widely regarded as a joke by the bar and easily evaded in practice. Criminal prosecution for fraud and insurance company racketeering claims under RICO against certain workers' compensation mills had greater effect, and Schwartz's subsequent informal investigations found that the fraud mills had been closed down by the various reform measures.

Today, Cal. Lab. Code §3208.3(a)-(j) (2019) contains an elaborate set of requirements for the recovery for psychiatric injuries. Its explicit purpose is "to establish a new and higher threshold of compensability for psychiatric injury under this division." The legislative tools used to achieve that end include "using the terminology and criteria of the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders, Third Edition-Revised, or the terminology and diagnostic criteria of other psychiatric diagnostic manuals generally approved and accepted nationally by practitioners in the field of psychiatric medicine." Under section 32083(b), the employee is required to "demonstrate by a preponderance of the evidence that actual events of employment were predominant as to all causes combined of the psychiatric injury."

c. Benefits Under the Workers' Compensation Statutes

It is most instructive to compare workers' compensation benefits to common law damages. The common law imposes no maximum limitation on tort damages and allows full recovery of lost earnings, medical expenses, and pain and suffering. In contrast, all workers' compensation awards have a statutory base that is geared not to the severity of the claimant's injury as such but only to its resulting

"disability," that is, the degree to which it impairs the worker's earning capacity. The worker who is able to carry on without loss of income notwithstanding some physical impairment may be injured but has not ordinarily sustained any compensable disability under the statutes.

p. 895

Workers' compensation schemes, albeit with wide variation, strictly limit the amount of compensation recoverable from the employer. In all states, the benefits payable to the employee are usually calculated in terms of the average weekly wage (AWW). The definition of the AWW provided under N.Y. Workers' Comp. Law §14 (2019) is typical. That statute provides:

§14. WEEKLY WAGES BASIS OF COMPENSATION

Except as otherwise provided in this chapter, the average weekly wages of the injured employee at the time of the injury shall be taken as the basis upon which to compute compensation or death benefits, and shall be determined as follows:

1. If the injured employee shall have worked in the employment in which he was working at the time of the accident, whether for the same employer or not, during substantially the whole of the year immediately preceding his injury, his average annual earnings shall consist of three hundred times the average daily wage or salary for a six-day worker, and two hundred sixty times the average daily wage or salary for a five-day worker, which he shall have earned in such employment during the days when so employed. . . .

Section 14(2) governs seasonal and part-time workers, looking at wage patterns in the same or similar employment. These formulas are difficult to apply to injured workers who have just started a new career, have changed jobs or locations, or have recently reentered the workforce. See Larson, *supra* at 883, §93.

The workers' compensation laws typically place work-related injuries in one of four categories: temporary partial, temporary total, permanent partial, and permanent total. The disability is treated as temporary when it is believed that the employee, within some period set by statute, will be able to return to work with his capabilities undiminished by the accident. The disability is regarded as permanent when the employee's capacities remain impaired even after the recuperation period. Total and partial are more or less self-defining terms. Finally the death cases receive separate treatment from the disability cases.

The statutes in every state set out in some detail the levels of compensation appropriate for the different categories of injuries. With permanent total benefits, most states set compensation at a figure equal to two-thirds of the worker's weekly wage, although some states set benefits presumptively equal to 80 percent of spendable earnings. Thereafter this individual weekly wage figure is subject to both statutory minimums and maximums. In California, for example, “[p]ermanent total disability benefits (based on permanent disability of 100%) are paid for life, at the temporary disability rate. For injuries that occur on or after January 1, 2003, the benefit rate will be adjusted each year based on any increase in the state average weekly wage (SAWW).” That figure has increased from \$806.11 in 2005 to \$1,242.78 in 2019. Similarly, 2019 death

p. 896

benefits range from \$250,000 for people with one dependent to \$320,000 for three or more dependents. Complex schedules also apply to temporary disabilities. For the full information, see California Department of Industrial Relations, Workers' Compensation Benefits, <http://www.dir.ca.gov/dwc-WorkerscompensationBenefits.htm>. By way of contrast, average weekly wages in Georgia vary by county, in 2018, from a high of \$1,480 in Fulton County (where Atlanta is located) to a low of \$755 in Henry County. See News Release, U.S. Dep't of Labor, County Employment and Wages in Georgia—Fourth Quarter 2018 (July 2, 2019), https://www.bls.gov/regions/southeast/news-release/pdf/countyemploymentandwages_georgia.pdf.

Temporary losses are often exceptionally difficult to calculate. One part of the picture is the medical condition itself and its amenability to improvement over time. A second part is whether the particular

employee has engaged in useful employment after the injury. When such employment is established, account must be taken of the wages earned on that new job in order to determine the diminution of earning capacity. When, however, there is no continued employment, it must be determined whether the employee is fit for any further employment and whether the employer has offered him work that is appropriate to his current condition. For an exhaustive summary of these rules, see Larson, *supra* at 883, §81.

The workers' compensation laws also rely on "scheduled benefits" for the loss or destruction of an organ or limb, which are set out by statute separately from average weekly wages. In this context, not only is the nature of the disability (e.g., loss of sight in one eye, loss of leg below knee but above ankle) taken into account, but also the employee's occupation, age, and sometimes, as in California, number of dependents. Scheduled damages are not set out in dollar figures, but are typically expressed as some multiple of the AWW. Thus, the New York workers' compensation statute provides, in section 15(3) (2019), as follows:

<i>Member lost</i>	<i>Number of weeks' compensation</i>
a. Arm	312
b. Leg	288
c. Hand	244
d. Foot	205
e. Eye	160
f. Thumb	75
g. First finger	46
h. Great toe	38
i. Second finger	30
j. Third finger	25
k. Toe other than great toe	16
l. Fourth finger	15

The basic theme is embellished by setting an appropriate number of weeks for persons who suffer multiple disabilities, e.g., loss of a hand plus loss of an eye. Thereafter, further adjustments are made for moneys

received from collateral sources, such as Social Security disability payments. *Id.* §15(3)(u)-(v).

p. 897

The benefits calculated under these formulas belong to the worker and are in no event tied to any actual wage loss. The worker who by good fortune can earn as much after the injury as before is, in effect, compensated for the extra effort needed to perform the job. Whenever there is an impairment in use, but not a total disability, statutory awards are reduced to reflect the partial nature of the permanent disability. Thus, for a 50 percent loss in the use of an arm, under section 15(3)(a) of the New York statute the claimant will be entitled to receive 166 weeks of compensation, one half the 312 weeks of benefits for permanent total disability. On scheduled benefits, see Larson, *supra* at 883, ch. 86.

d. Exclusive Remedy

RAINER v. UNION CARBIDE CORP.

402 F.3d 608 (6th Cir. 2005)

GILMAN, Circuit Judge. Workers at a uranium-enrichment plant near Paducah, Kentucky were exposed over many years to dangerous radioactive substances without their knowledge. Although not yet suffering from any symptoms of a clinical disease, four such workers and members of their families have sued General Electric (GE), the supplier of the spent uranium fuel to the plant, and the plant's three successive operators (the defendant-operators) on various state and federal grounds. In a series of orders, the district court rejected all of the plaintiffs' claims on the basis that no present harm has been shown and that the Kentucky Workers' Compensation Act provides the exclusive remedy for the former workers. For the reasons set forth below, we Affirm the judgment of the district court.

I. Background

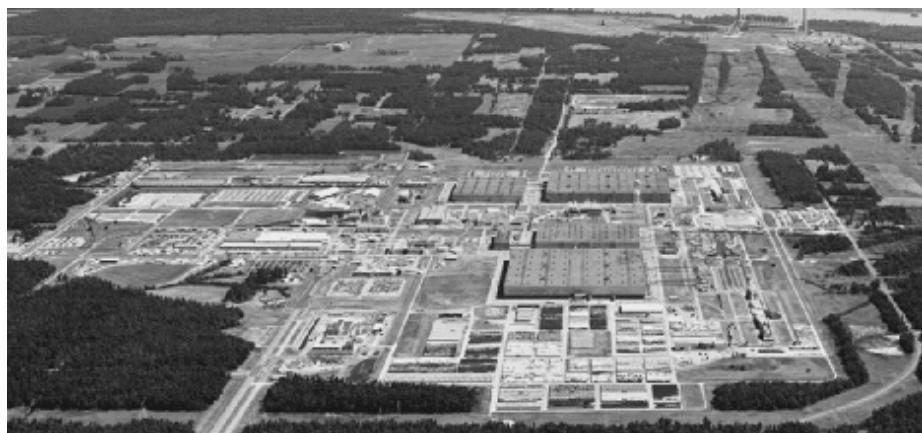

A. FACTUAL BACKGROUND

The Paducah Gas Diffusion Plant (PGDP) is a sprawling industrial plant located on a 3,425-acre tract of land in western Kentucky. It was built by the federal government in the early 1950s as part of an initial foray into uranium processing. Although the Department of Energy (DOE) retains full ownership of the plant, the PGDP has been managed since its construction by three successive operators all who have all been named as defendants in this suit. They are Union Carbide (1950-1984), Martin Marietta (1984-1995), and Lockheed Martin Utilities Services (1995 to the present). Approximately 1,800 individuals have been employed by the PGDP at any one time.

The primary purpose of the PGDP is and always has been to enrich uranium. [The court then describes how uranium is processed and reprocessed, yielding spent uranium that contains two unwanted byproducts, both highly radioactive: neptunium-237 and plutonium-239, which have contaminated the PGDP since 1959 in quantities "well beyond the amount considered safe for a plant the size of the PGDP."]

p. 898

The rank-and-file PGDP employees were apparently kept ignorant about the presence of transuranics at the plant. One manager testified during a deposition that, despite his ten-year tenure, he could not recall whether workers were ever informed about the presence of either neptunium or plutonium. Company documents also reveal a disregard for worker safety. A 1960 memo written by a medical researcher, for example, noted that management hesitated to have approximately 300 workers examined because of the “union’s use of this as an excuse for hazard pay.” The same researcher noted that he had “watched one man push up his mask and smoke a cigarette using potentially contaminated hands and gloves.” Another memo commented that analyzing neptunium exposure through urine samples would be too “tedious and expensive.” Workers were not required to wash their hands and, into the late 1970s, not required to use respirators. . . .

The Paducah Gas Diffusion Plant. After more than 60 years of operation, the PGDP was returned to the United States Department of Energy in 2014 to clean up and dispose of the site. The plant is massive, with more than 500 facilities constituting 74 acres all under roof cover.

Source: United States Department of Energy

Despite the fact that these transuranics are dangerous carcinogens, however, the plaintiffs have yet to display any salient clinical symptoms. . . .

The plaintiffs nevertheless assert that they have suffered certain subcellular damage to their DNA and chromosomes. [The court then reviews the expert evidence.]

B. PROCEDURAL BACKGROUND

. . . The plaintiffs commenced suit in September of 1999. In an order dated March 30, 2001, the district court dismissed the claims brought by [these] plaintiffs, concluding that the Kentucky Workers’ Compensation Act, Ky. Rev. Stat. Ann. §342.610(4) (2004), provided the exclusive remedy for claims brought by employees against their employers. . . . The relevant provision of the Act states as follows:

If an employer secures payment of compensation as required by this chapter, the liability of such employer under this chapter shall be exclusive and in place of all other liability of such employer to the employee, his legal representative, husband or wife, parents, dependents, next

of kin, and anyone otherwise entitled to recover damages from such employer at law or in admiralty on account of such injury or death.

The plaintiffs acknowledge the normal exclusivity of the Kentucky Workers' Compensation Act, but contend that their claim falls under one of the Act's main exceptions, which reserves a cause of action to a worker who is injured "through

p. 899

the deliberate intention of his employer to produce such injury or death." Ky. Rev. Stat. Ann. §342.610(4) (2004). In so arguing, the plaintiffs assert that the phrase "deliberate intention" must "include conduct undertaken with the knowledge that it will produce a certain result, or is substantially certain to do so." They claim that a narrower interpretation "would mean that a landscaping employer who ordered his workers to mow grass and plant trees in a garden filled with land mines . . . would not be liable under the common law due to the exclusive remedy provisions of the Kentucky Workers' Compensation Act."

We do not find the plaintiffs' hypothetical to be analogous to the facts before us, nor is their position supported by Kentucky law. In *Fryman v. Electric Steam Radiator Corp.*, 277 S.W.2d 25 (Ky. 1955), the first case to directly address the specific meaning of Ky. Rev. Stat. Ann. §342.610(4)'s "deliberate intention" language, the Kentucky Supreme Court considered the case of an employee injured while operating a defective metal press. The court dismissed the worker's claims, concluding that the employer had not possessed the "deliberate intention" to injure as required by Ky. Rev. Stat. Ann. §342.610(4), and noting that "the phrase 'deliberate intention' implies that the employer must have determined to injure the employee." *Id.* at 26. . . .

. . . The plaintiffs nonetheless point to a number of cases from other jurisdictions and to secondary authorities that support the proposition that "deliberate intention" may also include instances where the employer acts with the knowledge that harm might follow. But even if this is the appropriate standard in other jurisdictions and in other fields of law, this is not the Kentucky Supreme Court's interpretation of the Kentucky Workers' Compensation Act. As the district court noted in its lengthy and persuasive assessment, "the definition of 'deliberate intention to produce injury' as used in the [Kentucky Workers' Compensation Act] is much narrower than 'intent' in general tort law, where the substantial certainty analysis is proper. And . . . although a few states have either legislatively or judicially adopted the substantial certainty standard for their intent-based exclusivity exception, none had their genesis in a federal court."

In sum, Kentucky caselaw is dispositive of the claims brought by [these] plaintiffs. Cases like *Fryman* have established that the "deliberate intention" exception to the Kentucky Workers' Compensation Act is viable only when the employer has "determined to injure an employee and used some means appropriate to that end, and there must be a specific intent." *Fryman*. Because no proof has been presented in this case to demonstrate that the defendants possessed the specific intention to injure the PGDP employees, the district court did not err in dismissing [these claims].

NOTES

1. Intentional wrongs by the employer. Rainer's narrow view of the intentional harm exception was followed in *Zurbriggen v. Twin Hill Acquisition Co.*, 338 F. Supp. 3d 875, 884, 886-887 (N.D. Ill. 2018). American Airlines, as a tort codefendant, was faced with a class action brought by its employees who complained of a

p. 900

serious "plague of health problems," associated with a new line of uniforms manufactured by Twin Hill that American introduced in 2016. After many futile tests and adjustments, American terminated its contract with Twin Hill, only to face a class action lawsuit for battery and intentional infliction of emotional harm. In an effort to exploit the intentional harm exception, the plaintiffs sought to place their claim within that exception by pointing out that employees of other airlines had experienced similar difficulties and some of American's employees showed adverse effects shortly after they used the new uniforms. There was no allegation that American had a specific intention to harm the class members.

Tharp, Jr., J., first noted that there was a wide division of opinion on what mental state was needed to overcome the exclusive remedy position, which

turns (depending on the jurisdiction) on whether the defendants specifically intended, were certain or were substantially certain that the new Twin Hill uniforms would injure the plaintiffs. Because the allegations of the complaint do not plausibly suggest that American was even substantially certain that any of the named plaintiffs would be injured by the new uniforms, it falls short of stating causes of action for the intentional torts of battery and intentional infliction of emotional distress under the law of any of the Applicable States. . . .

[T]he Court [also] finds that the complaint plausibly alleges that the uniforms are unreasonably dangerous. And the Court agrees with plaintiffs that the allegations of the complaint, taken as true, provide a basis to conclude that American knew something was amiss with the uniforms even before September 2016. Nevertheless, where the complaint falls short in alleging an intentional tort is that it fails to give rise to the inference that American knew with requisite certainty that any particular employees, much less *the named plaintiffs*, would be harmed by the Twin Hill uniforms.

2. Dual capacity. A second important exception to the exclusive remedy provisions is the so-called dual capacity doctrine. In *Duprey v. Shane*, 249 P.2d 8, 15 (Cal. 1952), the defendant chiropractor mistreated his nurse when he treated her work-related injury. The court held that the defendant was a "person other than the employer" and allowed her tort action on the ground that since "Dr. Shane bore towards his employee two relationships—that of employer and that of a doctor—there should be no hesitancy in recognizing this fact as a fact." *Duprey* was distinguished in *Hendy v. Losse*, 819 P.2d 1, 34 (Cal. 1991). There a professional football player sued the team physician in tort for a misdiagnosis of a knee injury, which led to the end of his career. Baxter, J., noted first that the statutory protection under the exclusive remedy provision had been extended to co-employees, such that they could only be held liable when the employer could be held liable. He then continued: "Unlike the situation of the defendants in *Duprey* defendant did not step out of his coemployee role when he treated plaintiff. He did exactly what he was employed to do"—which was to treat injured players in the ordinary course of their employment.

Duprey continues to raise difficulties to the present time. In *Odom v. Penske Truck Leasing Co.*, 415 P.3d 521, 532 (Okla. 2018), the plaintiff Odom was

p. 901

an employee of Penske Logistics, LLC, which was a wholly owned subsidiary of Penske Truck Leasing Co. (PTLC). He suffered injuries when one of PTLC's trailers fell on him during his employment. PTLC insisted that it too was protected by the exclusive remedy provision of the Oklahoma Workers' Compensation Act. The plaintiff overcame that defense by showing that the defendant in the tort action was only a shareholder of Odom's employer. Combs, C.J., explained:

Recent decisions of this Court have stressed that the workers' compensation system is a mutual compromise between employers and employees, and that exclusivity was at the heart of the grand bargain between employers and employees. In that context, abrogation of the dual-capacity doctrine with respect to employers is in keeping with this compromise because what matters for the purposes of exclusivity is the employment relationship and not any other role the employer may have. But an interpretation that extends the protections of the exclusivity provision absolutely to potentially legally distinct non-employer entities such as stockholders, regardless of how passive their connection to the employment relationship is, goes far beyond that original purpose and conflicts with later portions of [the workers' compensation law].

Accordingly, the plaintiff's tort action was allowed to go forward because the PTLC, being wholly passive in this transaction, had a persona that was independent of that of plaintiff's employer. Why should there be any difference between a wholly owned subsidiary of PTLC and division within the same corporation?

3. Tort claims against fellow employees. In *Fuerschbach v. Southwest Airlines Co.*, 439 F.3d 1197 (10th Cir. 2006), the plaintiff had just completed her probation period at Southwest Airlines. As a graduation prank, two of Southwest's supervisors persuaded two Albuquerque police officers to stage a mock arrest of the plaintiff, which included handcuffing her for a supposed prior offense in front of her coworkers. This "joke gone bad" caused alleged psychological injuries for which the plaintiff sought tort damages against the two supervisors and Southwest. Lucero, C.J., held that workers' compensation was the plaintiff's sole remedy, saying:

Fuerschbach, however, argues that the incident giving rise to this case was so egregious that it cannot be considered horseplay. Although we agree that [the supervisors' request of the officers] was ill-considered, the horseplay jurisprudence is broad enough to encompass it. Analogous cases from other jurisdictions show that diverse and even more repugnant workplace incidents have properly been considered compensable. See, e.g., *Nelson v. Winnebago Indus.*, 619 N.W.2d 385 (Iowa 2000) (suit claiming false imprisonment and battery, where plaintiff was duct taped from head to toe "like a mummy" in a prank to commemorate his transfer); *Diaz v. Newark Industrial Spraying, Inc.*, 35 N.J. 588, 174 A.2d 478 (N.J. 1961) (co-employee threw bucket of lacquer thinner on plaintiff; thinner was immediately ignited by nearby flame causing serious injuries). . . .

4. Tort actions against a third-party defendant. A uniform line of cases has held that the exclusive remedy

from bringing tort actions against unrelated third parties. Courts have treated third-party automobile drivers and product manufacturers, for example, as strangers to the workers' compensation bargain who are not entitled to any benefit from it. See generally Larson, *supra* at 883, ch. 110. The hard question asks whether the exclusive remedy provision then protects the employer against an action for indemnity and contribution by a third-party defendant found liable to the plaintiff. In the early case of *Westchester Lighting Co. v. Westchester County Small Estates Corp.*, 15 N.E.2d 567, 569 (N.Y. 1938), the court allowed the action on a theory of implied indemnity based on the "independent obligation" of care that the employer owes the third party. *Westchester Lighting* was followed under the Federal Employees Compensation Act (FECA) in *Lockheed Aircraft Corp. v. United States*, 460 U.S. 190 (1983). There a civilian employee of the United States was killed when a C-5A transport, operated by the United States and manufactured by Lockheed, crashed outside of Saigon in April 1975. The employee sued Lockheed for its defective manufacture of the aircraft and Lockheed in turn sought indemnity from the United States, which argued that Lockheed's suit was barred by section 8116(c) of the FECA, which, like the New York statute, provided that liability under the statute is "exclusive . . . to the employee, his legal representative, spouse, dependents, next of kin [or] any other person otherwise entitled to recover tort damages against the United States." The Supreme Court held that the words "any other person" were not broad enough to encompass the third-party claim of Lockheed and allowed the action to go forward.

5. *Breaking the eternal triangle.* Under the current law, the employee's successful third-party action also benefits the employer who is normally allowed to recoup workers' compensation benefits already paid to the worker, in order to prevent the injured party from obtaining a double recovery. An alternative approach stipulates that in third-party actions, the injured worker may recover only damages in excess of the amounts paid or payable for such injury under the workers' compensation statutes. The employer would then remain liable in full under such statutes but would be denied any workers' compensation lien against the employee's (reduced) tort recovery against a third party. This plan also eliminates the need for any third-party indemnity actions against the employer. For a defense of this compensation setoff, see Epstein, *The Coordination of Workers' Compensation Benefits with Tort Damage Awards*, 13 Forum 464 (1978).

2. Automobile No-Fault Insurance

a. The Basic Reform Proposal

Proposals to extend workers' compensation principles to cover *nonindustrial* accidents date back to the early days of workers' compensation laws. Ballantine, *A Compensation Plan for Railway Accident Claims*, 29 Harv. L. Rev. 705 (1916), identifies the two elements that shape most modern no-fault proposals. First, liability, irrespective of negligence, "is founded upon

conviction that the cost of transportation service should include the expense of insuring the passenger against all risks peculiar to the service for which he pays his fare." The second, which calls for a fixed and limited schedule of damages,

is founded upon the belief that exact money compensation for physical injury, now supposed to

be determined by juries, is impossible, and that if companies are held as insurers and not as wrongdoers there is no reason why the entire risk involved in the transportation service should be borne by the transportation agency.

Although Ballantine envisioned his no-fault scheme for railway accidents, in fact his article was the template for the no-fault automobile insurance proposal contained in the Columbia Plan of 1932. See Report of Committee to Study Compensation for Automobile Accidents (Columbia Reports) (1932). The Columbia Plan also envisioned a system of third-party insurance: "Every owner of a motor vehicle shall pay compensation for disability or death from personal injury caused by the operation of such motor vehicle, without regard to fault as a cause of the injury or death. . ." The basic rule was then qualified by limited exceptions: Persons who intentionally brought about their own injuries could not recover; nor did coverage extend to people who drove without the owner's permission, express or implied. When published, the plan was extensively discussed and debated, receiving serious study in Connecticut, New York, Virginia, and Wisconsin. It was never adopted in any jurisdiction.

The next wave of no-fault automobile legislation peaked in the 1960s and shifted to a system of first-party coverage. The most influential defense of this system was Keeton & O'Connell, *Basic Protection for the Accident Victim* (1965). Their "Basic Protection Plan" for personal injuries involved the payment of periodic damages, without the use of scheduled damages found in the workers' compensation cases. The plan also contained a partial exemption provision that jettisoned the tort system for less serious injuries, while allowing plaintiffs with major injuries to get two sources of recovery when the tort defendant was found liable, and one if he was not. This no-fault system was defended in an extensive government report, U.S. Department of Transportation, *Motor Vehicle Crash Losses and Their Compensation in the United States*, 94-129 (1971). It argued that the first-party system would substitute the convenience of homeowners and health insurance for the dangers of an adversarial relationship, by covering all those individuals who could not prove fault under the traditional tort system. More concretely, it claimed that the tort system fails because:

Only 45% of all those killed or seriously injured in auto accidents benefited in any way under the tort liability system. . . .

Tort liability insurance would appear to cost in the neighborhood of \$1.07 in total system expenses to deliver \$1.00 in net benefits to victims. . . .

How might these charges be answered?

American Bar Association, Special Committee on Automobile Insurance Litigation, Why the Statistical Studies Critical of the Fault System Are Fatally Flawed

[Each of the above mentioned] “findings” is seriously misleading, if not demonstrably incorrect. The first, that only 45 percent of those seriously injured in automobile accidents received any benefits under the tort liability system, is meaningless once it is recognized that tort liability is not intended as a system of insurance that can properly be evaluated under a criterion of comprehensiveness. Since not all accidents are the result of culpable fault solely on the part of the injurer, it is not surprising that not all accident victims recover under the tort system. Indeed, if all did, that would be evidence that judges and juries had converted the tort system into an insurance scheme, contrary to its purposes. This illustrates the dilemma of tort liability, when evaluated as if it were an insurance system: if a low percentage of victims recover, this fact can be used as evidence that liability provides inadequate compensation; but if a high percentage recover, this fact can be used as evidence that liability has been converted into, and hence should be replaced by, explicit insurance.

The 45 percent figure is also misleading in ignoring the degree to which victims of automobile accidents obtain compensation outside of the tort system—from life, collision, disability, accident, medical, and other first-party insurance, and from wage-replacement sources such as sick leave and workers’ compensation. When these sources of compensation are included, as DOT [Department of Transportation] acknowledged, of those suffering serious injury or death in automobile accidents, “about 9 out of 10 recovered some losses.” This is twice the percentage recovering in tort alone. It suggests that a combination of tort liability with voluntary first-party insurance and other sources of compensation provides compensation for almost all victims of automobile accidents. . . .

One of the most frequently cited statements in the DOT studies is that it costs about \$1.07 in administrative expenses for each \$1.00 in net benefits delivered to the accident victim. This may seem a high ratio of expense to pay-out—until it is remembered that a major benefit of tort liability which is not counted in the benefits received by victims is the reduction in the accident rate that is brought about by adherence to the standard of care established by the fault system. This effect of tort liability has not been adequately measured, nor its monetary equivalent computed, but to ignore it completely is to give a specious plausibility to DOT’s statistical demonstration that the expenses of the system exceed its benefits.

Epstein, Automobile No-Fault Plans: A Second Look at First Principles

13 Creighton L. Rev. 769, 789-790 (1980)

[It is also important to examine the] soundness of the automobile no-fault plans when set in opposition to their nontort rival, the total abolition of the tort system without any substitute compulsory first party protection. In this connection the benefits of the no-liability system must be stressed. One of its great attractions is that it neatly avoids the troublesome question of how to make a collective determination of the level of payments for certain injuries, and the corresponding question of how to distribute the premium burden amongst those who will be conscripted to finance the system. To the contrary, it is a little noticed but important feature of most automobile no-fault plans that they achieve their universality of coverage by the *compulsory* purchase of the benefits in question, thereby committing all individuals to take a certain set

of benefits in accordance with a predetermined set of coverage formulas. As I have in general a strong basic preference for voluntary markets, both on efficiency and liberty grounds, I think that there is much to be said for the system that allows individuals to choose the nature and type of benefits in light of their own estimation of their personal circumstances and needs. Those who wish to buy deep coverage with high deductibles should be allowed to do so, while those who want first dollar coverage with shallow protection should be free to do so as well. Those who want group coverage are free to explore that possibility. It may well be that the case is made for the abolition of all tort liability, but it does not follow that those same arguments require instituting compulsory first party insurance. The real quid pro quo for losing the benefits of being a tort plaintiff is being freed from the burden of being a tort defendant. It is *not* the surrender of a tort claim for the receipt of a set of benefits that are not requested, and which perhaps ill suit the needs of the party to whom they are provided.

NOTE

References. The no-fault liability issue generated extensive debate for many years. L. Rev. 548 (1985); Blum & Kalven, Jr., The Empty Cabinet of Dr. Calabresi: Auto Accidents and General Deterrence, 34 U. Chi. L. Rev. 239 (1967); Calabresi, Fault, Accidents and the Wonderful World of Blum and Kalven, 75 Yale L.J. 216 (1965); Trebilcock, Incentive Issues in the Design of “No-Fault” Compensation Systems, 39 U. Toronto L.J. 19 (1989).

b. Constitutionality

In states like Massachusetts that adopted a first-party automobile plan, aggrieved accident victims brought constitutional challenges to the proposed plans. In *Pinnick v. Cleary*, 271 N.E.2d 592 (Mass. 1971), Reardon, J., rebuffed

p. 906

these challenges with arguments reminiscent of those made by Pitney, J., in *New York Central Railroad v. White*, 243 U.S. 188 (1917), *supra* at 881. After outlining the basic plan features, Reardon, J., continued:

. . . The plaintiff claims that c. 670 [the Massachusetts plan] has impaired a cause of action which is on a higher, more sacrosanct level than the “ordinary” common law cause of action. Two alternative reasons are advanced in support of this contention: first, that the tort action has the status of a “vested property right,” and, second, that the function of the cause of action is to safeguard the fundamental “right of personal security and bodily integrity” which, although not mentioned in the Bill of Rights of the United States Constitution, is nonetheless protected by it. We find both grounds unpersuasive.

In arguing that the cause of action affected by c. 670 constitutes a vested property right, the plaintiff seems to ignore the distinction between a cause of action which has accrued and the expectation which every citizen has if a legal wrong should occur to find redress according to

the rules of statutory and common law applicable at that time. The Legislature is admittedly restricted in the extent to which it can retroactively affect common law rights of redress which have already accrued. However, there is authority in abundance for the proposition that “[n]o person has a vested interest in any rule of law entitling him to insist that it shall remain unchanged for his benefit.” New York Cent. R.R. v. White, 243 U.S. 188, 198 [1916]; Munn v. Illinois, 94 U.S. 113, 134 [1876]. . . .

In the instant case, however, the Legislature has not attempted to abolish the preexisting right of tort recovery and leave the automobile accident victim without redress. On the contrary, as was pointed out above, the statute has affected his substantive rights of recovery only in one respect and has simply altered his method of enforcing them in all others. Therefore, c. 670 may be judged by the stricter test which the plaintiff urges upon us and for which there is considerable authority in workmen’s compensation cases: whether the statute provides an adequate and reasonable substitute for preexisting rights. The similarity between c. 670 and the workmen’s compensation statutes, in the nature of their purposes and the means chosen to achieve them, also leads us to conclude that the reasonable and adequate substitute test is appropriate to apply here even if its application is not constitutionally required. . . .

In considering the effect of c. 670, we cannot view it from the point of view of plaintiffs and defendants, for these are not preexisting categories as are the employers and employees affected by a workmen’s compensation act. Every driver is a potential plaintiff and, equally, a potential defendant. The desired effect of c. 670 on all motorists alike is initially to make available to them compulsory insurance at lower rates due to the savings to insurance companies in administrative expenses and total payments which are expected to follow from c. 670. If injury occurs on the road, motorists are assured of the probability of quick and efficient payment of the first \$2,000 of defined losses incurred. In cases of accidents in which the motorist was not negligent, he avoids the uncertainty, delay and cost of a tort proceeding. He still retains the option of recovering more by litigation if he so wishes and the facts so warrant. Although c. 670 may also have the effect of depriving him of his damages for pain and suffering in such an instance, the exchange of rights involved with respect to the driver in an accident in which he

p. 907

was not negligent bears considerable resemblance to that effected by the statute in the *White* case with respect to employees.

Pinnick v. Cleary has been followed in other states. See *Montgomery v. Daniels*, 340 N.E.2d 444 (N.Y. 1975); Opinion of the Justices, 304 A.2d 881 (N.H. 1973). Where the no-fault schemes have been struck down, courts have usually relied on the specific language of state constitutions and not on the broad principles of the due process or equal protection clauses. Thus in *Grace v. Howlett*, 283 N.E.2d 474 (Ill. 1972), the Illinois Supreme Court struck down the state no-fault scheme as offending several state constitutional provisions, including one that required that no “special law” be passed when a “general law” could be made applicable. Likewise the Florida court in *Kluger v. White*, 281 So. 2d 1 (Fla. 1973), invalidated the property no-fault provisions of the Florida law as violative of the state constitutional provisions guaranteeing that the courts “shall be open for redress of any injury.” This legislation did not

provide any “reasonable alternative” remedy to protect the rights of individuals whose property was damaged or destroyed by the acts of another.

c. The Implementation of Automobile No-Fault Plans

The automobile no-fault systems raise a number of issues that can be grouped as follows:

Coordination with tort system. Although no-fault plans typically provide first-party compensation not based on fault, they differ in their treatment of limits, deductibles, options, collateral sources, and the like. For example, in New York, in some cases, individual drivers may have a “full tort” and a “limited tort” option in which recoverable damages typically vary between \$25,000 and \$100,000, with various offsets for disability benefits payable either by New York State or by Social Security. The plans also differ among themselves as to whether the plaintiff must cross some tort threshold to maintain some action. The monetary threshold is usually set between \$1,000 and \$5,000. Other states rely on a verbal threshold usually couched in terms of a permanent, permanent and significant, or permanent and serious disfigurement. See, e.g., *Gillman v. Gillman*, 319 So. 2d 165, 166-167 (Fla. App. 1975), treating a permanent scar as a permanent disfigurement.

Tort thresholds. Choosing the right tort threshold affects the overall operation of the no-fault system. Numerical thresholds act as magnets that encourage parties (as with the workers’ compensation system) to inflate their medical costs in order to obtain the keys to the tort kingdom. Verbal thresholds are much more immune from manipulation, but more subject to disputation. The verbal threshold in New York blocks many claims that make it into the tort system in states like California that preserve the traditional tort system. As one measure of the difference, note that in 1989, for every 100 property damage claims there were 56 claims for bodily injury in California and only 11 in New York. For discussion of this and similar issues, see O’Connell et al., *Consumer Choice in the Auto Insurance Market*, 52 Md. L. Rev. 1016 (1993). For a review of the various types of tort thresholds, see Velikova, *Theorizing*

p. 908

the Automobile No-Fault Tort Threshold, 42 *Tort Trial & Ins. Prac. L.J.* 1043, 1044 (2007). For an exhaustive survey of the evidence, see Anderson et al., RAND Inst. for Civil Justice, *The U.S. Experience with No-Fault Automobile Insurance: A Retrospective* (2010). This report observes: “In general, verbal thresholds are thought to be more effective in keeping cases out of the tort system because they are more rigid.” *Id.* at 13. The study also reports that hard-to-verify injuries are less prevalent in no-fault systems than under tort law, and are least prevalent in verbal threshold states. *Id.* at 106. The study also finds that overclaiming was more common in monetary threshold states like Massachusetts than in verbal threshold states. It was also unable to identify any clear patterns of greater fraud for hard-to-verify injuries.

The economic efficiency of no-fault plans. The wide range of no-fault plans makes it difficult to assess their performance. On theoretical grounds, no-fault plans have been attacked as inefficient because they allow careless drivers to impose costs on others, and induce careful drivers to engage in cautious defensive tactics. See Landes, *Insurance, Liability, and Accidents: A Theoretical and Empirical Investigation of No-Fault Accidents*, 25 *J.L. & Econ.* 49 (1982). After controlling for such variables as age, race, and sex, she concludes that for the years 1967 to 1976, “a medical expense threshold of \$500 implies about a 4 percent increase in fatal accident rates; a medical expense threshold of \$1,500 implies an increase in fatal accidents

of more than 10 percent.” For a reply to Landes, see O’Connell & Levmore, A Reply to Landes: A Faulty Study of No-Fault’s Effect on Fault, 48 Mo. L. Rev. 649 (1983). For a more recent review of the evidence, see Schwartz, Auto No-Fault and First-Party Insurance: Advantages and Problems, 73 S. Cal. L. Rev. 611 (2000), which notes that no-fault systems reverse the premiums for heavy and light vehicles. Under the tort system, the lion’s share of the loss goes to drivers of large vehicles owing to the harm that they cause. But under a first-party system this loss is shifted to the lighter vehicles that are hit. Which regime sets the appropriate baseline, and why?

Unlike workers’ compensation litigation, the coverage disputes under automobile no-fault plans have been largely humdrum. The basic Michigan statute, for example, holds that an insurer “is liable to pay benefits for accidental bodily injury arising out of the ownership, operation, maintenance or use of a motor vehicle as a motor vehicle.” Mich. Comp. Laws Ann. §500.3105(1) (2019). In *McKenzie v. Auto Club Insurance Ass’n*, 580 N.W.2d 424 (Mich. 1998), the court denied coverage to two plaintiffs who were nearly asphyxiated by carbon monoxide fumes from their air heater while sleeping in a camper/trailer attached to plaintiff’s pick-up truck because the injury did not arise out of the use of a motor vehicle “as a motor vehicle.” The court distinguished the earlier case of *Putkamer v. Transamerica Insurance Corp. of America*, 563 N.W.2d 683 (Mich. 1997), which held that injuries sustained while entering a motor vehicle were so closely tied to its transportation function that they were covered under the act.

For the most comprehensive treatise on no-fault, see generally Schermer & Schermer, *supra* at 856, chs. 65-86.

p. 909

d. The 2019 Michigan No-Fault Law Reforms

In the political arena, the massive push for automobile no-fault peaked in the early 1970s, and since then no new plans have been enacted, although several have been repealed, and early on, others (e.g., Florida, Massachusetts, and Pennsylvania) have undergone extensive reform. But automobile no-fault insurance surged to the fore as a political issue in Michigan, where it resulted in the passage, with strong bipartisan support, of Enrolled Senate Bill No. 1 (*available at* <https://www.michiganautolaw.com/wp-content/uploads/2019/06/No-Fault-New-Law-Senate-Bill-1-Public-Act-21-of-2019.pdf>), which contains 35 dense pages of statutory reform.

The key impetus for the Michigan reform had nothing to do with the general economic arguments, pro or con, regarding the no-fault system. Rather the major focus of the legislation was the Personal Insurance Protection (PIP) benefits, which under the previous law had to be unlimited in amount. The huge payouts under this program drove first-party premiums sharply upward, prompting a huge public outcry, which led to the bipartisan legislation. Here are some of the most salient features.

PIP benefits. As of July 1, 2020, every driver in Michigan has a choice of these benefit levels: \$50,000 (for drivers enrolled in Medicaid); \$250,000; \$500,000; or no limits. In addition, drivers enrolled in Medicare have the option to opt out of the PIP program entirely. The estimated savings are substantial: 45 percent for those with \$50,000 in coverage; 35 percent for those with \$250,000; and 20 percent for those who choose

the \$500,000 limit. Persons who exercise the Medicare option enjoy a 100 percent saving. The single major complaint was that the inflation of PIP benefits made no-fault insurance unaffordable.

Third-party insurance. Also, as of July 1, 2020, the Michigan law increases the level of insurance coverage that drivers must carry with respect to potential third-party liability. Before the statutory reforms, the applicable limits were \$20,000 for one person in a one-car crash and \$40,000 for two or more persons in a one-car crash. The new legislation raises these figures to \$50,000 and \$100,000, respectively.

Price controls for medical services. The Michigan legislation puts into place a “no-fault” fee schedule, tied to Medicare rates, that limits how much doctors, hospitals, clinics, rehabilitation facilities, and other health care providers can charge patients covered by the no-fault plans. The clear message of this section was that overcharges drove up costs to unacceptable levels.

Requirements for independent medical examinations. By way of counterpoint to this cost-control effort, the Michigan law also limits the types of independent physicians that insurance companies can use to make medical determinations. Physicians must be licensed in Michigan, they must be certified in all relevant areas of expertise, and they must spend the majority of their time in academic or clinical pursuits within the state.

Attendant care. Yet another provision limits payment for attendant care to 56 hours per week for no-fault in-home provisions. It also establishes a new anti-fraud unit.

p. 910

Verbal thresholds. The new legislation introduces a stiffer verbal threshold with many moving parts. A “serious impairment” must be one that “is objectively manifested, meaning it is observable or perceivable from actual symptoms or conditions by someone other than the injured person”; “is an impairment of an important body function, which is a body function of great value, significance or consequence to the injured person”; and “affects the injured person’s general ability to lead his or her normal life.”

Rebates to customers. The legislation requires that all premium savings be passed onto customers from the adoption of this plan. As an offset, the statute seeks to address the risk of confiscatory rates by allowing insurers to prove that any rate reduction would violate their constitutional rights or leave them with insufficient capital to meet their obligations.

Nondiscrimination pledge. The law holds that the premiums charged for no-fault coverage cannot be based on sex, marital status, homeownership, educational attainment, occupation, postal zone, or credit score.

For a more detailed account, see Gursten, New Michigan No-Fault Law Passes: What You Need to Know, Michigan Auto Law (May 24, 2019), <https://www.michiganautolaw.com/blog/2019/05/24/new-michigan-no-fault-law>.

It is worth pausing a moment to ask why such a thorough-going reform was needed. More specifically it was urged in the Epstein excerpt, *supra at 905*, the true quid pro quo for automobile no-fault being the

mutual releases from tort obligation. On that view, the actual provision of first-party benefits should be left entirely to contract. When that did not happen, the PIP benefits soared out of control. Is the statutory scheme outlined above superior to a contract solution?

3. No-Fault Insurance for Medical and Product Injuries

The widespread adoption of automobile no-fault plans in the early 1970s spurred efforts to extend no-fault plans into both the medical malpractice and products liability arenas. Unlike automobile no-fault plans, these plans necessarily rely on the third-party coverage mechanisms originally championed by Ballantine for no-fault railway insurance. During the 1970s, one such no-fault proposal was put forward on an elective or voluntary basis. O'Connell, *Ending Insult to Injury: No-Fault Insurance for Products and Services* 97 (1975):

Any enterprise should be allowed to elect, if it chooses, to pay from then on for injuries it causes on a no-fault basis, thereby foreclosing claims based on fault or a defect. Under such an option, payment would be made regardless not only of lack of fault or defect on the payer's part but also, as under no-fault auto insurance and workers' compensation, regardless of any fault on the victim's part. In other words, elective no-fault liability would be true no-fault insurance, with the fault of neither the injurer nor the injured having a bearing on payment. The enterprise would be allowed to select all or, if it chose, just certain risks of personal injury it typically creates, for which it could agree to pay for out-of-pocket losses when injury results from those risks. To the extent—and only to the extent—a guarantee of no-fault payment exists at the time of the accident, as under no-fault auto or

p. 911

workers' compensation insurance, no claim based on fault or a defect would be allowed against the party electing to be covered under no-fault liability insurance.

The idea garnered little support, even by those who favored automobile no-fault insurance. One obstacle is that product manufacturers (especially of component products) cannot easily notify the ultimate user or consumer that it has elected coverage under the plan. Indeed that notice is wholly impossible with bystander injuries. In addition, it is difficult to coordinate this new no-fault coverage with tort liability, workers' compensation, and first-party insurance. Most importantly the plan lacks any limiting concept of product defect, without which the class of product-related injuries expands beyond recognition. Professor Blum asked *which* manufacturer should provide coverage when a worker wearing slippery shoes falls off a well-constructed ladder after drinking a few beers. Blum, *Book Review*, 43 U. Chi. L. Rev. 217 (1975) (reviewing O'Connell, *Ending Insult to Injury* (1975)).

While proposals for comprehensive no-fault coverage have largely disappeared in the products area, they have had modest traction in the area of medical and hospital injuries. As before, the basic no-fault bargain offers broader coverage and lower administrative expenses in exchange for reduced coverage awards on either an elective or a mandatory basis. And, as before, the central challenge has been to develop a workable definition of a compensable event, which is especially hard to define with respect to missed medical diagnoses. See Epstein, *Medical Malpractice: The Case for Contract*, 1 Am. Bar Found. Res. J. 87, 141-147 (1976). If these are covered, the expansion of liability under the medical no-fault system is

enormous, where the most skilled physicians will face huge exposure. But if they are entirely excluded, even serious diagnostic blunders would no longer count as compensable events. One proposed intermediate solution ties compensation for diagnostic errors back to the reasonable care standard of the negligence system. See Weiler, *The Case for No-Fault Medical Liability*, 52 Md. L. Rev. 908 (1993), acknowledging that a comprehensive no-fault system must “reinstate the fault principle as the basis for compensating at least this category of iatrogenic injuries.”

The interpretative conundrums of broad coverage definitions have brought forth proposals to limit the program by building lists of designated compensable events, or DCEs, in consultation with medical professionals. See Havighurst & Tancredi, “Medical Adversity Insurance”—A No-Fault Approach to Medical Malpractice and Quality Assurance, *The Milbank Memorial Fund Quarterly/Health and Society* (Spring 1973), *reprinted in* 613 Ins. L.J. 69 (1974), and developed at greater length in Commission of Medical Professional Liability of the ABA, *Designated Compensable Event System: A Feasibility Study* (1979). This type of system requires an enormous front-end investment, for lists are needed for each specialty. These lists must be constantly updated, and they face the thorny problem of disentangling responsibility for the adverse consequences of surgery from those of anesthesiology. The use of the DCE system has been criticized in Danzon, *Medical*

p. 912

Malpractice: Theory, Evidence and Public Policy 217-219 (1985). She worries that the complexities could simply discourage physicians from taking on high-risk patients in the first place.

One area in which a no-fault scheme has made headway is a highly particularistic, but important, legislative initiative, the National Childhood Vaccine Injury Act of 1986 (NCVIA), which was passed in response to a sharp increase in the price of vaccines that threatened to drive many vaccine manufacturers out of the marketplace. The issues of coverage in these cases turn heavily on the question of causation in fact, which brings to the fore many of the issues raised in Chapter 5, Section B, *supra*. Recovery is based on the deceptively simple question of whether the vaccine in question caused the conditions for which the plaintiff seeks damages. In addition, they raise serious questions of federal preemption. See *Bruesewitz v. Wyeth LLC*, 562 U.S. 223 (2011), *supra* Chapter 8, at 790. As most vaccines are administered to children, the NCVIA covers a large portion of the overall market. Its basic provisions provide for a complex system of no-fault compensation of up to \$250,000 for persons who suffer particular side effects from certain vaccine programs within specified time limits. 42 U.S.C. §300aa (2019). In many cases, the statute employs explicit tests for determining whether compensation is owed. For example, the recipient of a measles vaccine who suffers an anaphylactic shock within 24 hours of inoculation can receive payment. The statute also provides that persons who have met the conditions for no-fault recovery may nonetheless choose to reject the payment and sue for tort damages.

According to the Health Resources and Services Administration (HRSA), “[a]ny individual, of any age, who received a covered vaccine and believes he or she was injured as a result, can file a petition. Parents, legal guardians and legal representatives can file on behalf of children, disabled adults, and individuals who are deceased.” Covered vaccines include most vaccines routinely administered in the United States, subject to caveats that they must be recommended for use by children or pregnant women. The payouts under the program were summarized by the HRSA as follows:

According to the CDC, from 2006 to 2017 over 3.4 billion doses of covered vaccines were distributed in the U.S. For petitions filed in this time period, 6,411 petitions were adjudicated by the Court, and of those 4,408 were compensated. This means for every one million doses of vaccine that were distributed, approximately one individual was compensated.

Since 1988, over 20,913 petitions have been filed with the VICP. Over that 30-year time period, 18,070 petitions have been adjudicated, with 6,706 of those determined to be compensable, while 11,364 were dismissed. Total compensation paid over the life of the program is approximately \$4.2 billion.

Updated information is available from the HRSA website, which is available at <https://www.hrsa.gov/vaccine-compensation/index.html>.

p. 913

SECTION D. THE 9/11 VICTIM COMPENSATION FUND

Eleven days after the September 11, 2001, attacks on the World Trade Center, the Pentagon, and the airplanes, Congress passed the Air Transportation Safety and System Stabilization Act of 2001, Pub. L. No. 107-42, 115 Stat. 230 (2001) (codified at 49 U.S.C. §40101). Title IV of that Act created the Victim Compensation Fund for any person who was killed or injured in the September 11th terrorist attacks. Pursuant to the Act, President George W. Bush appointed Kenneth Feinberg to administer the victim compensation program. Feinberg was charged with setting out the rules and regulations by which compensation was to be paid without regard to the negligence of any party. To participate in the fund, the claimants had to waive all suits against any airline, airline manufacturer, airport sponsor, or property holder of the World Trade Center. These restrictions were upheld as unambiguous, in *Virgilio v. City of New York*, 407 F.3d 105, 112-113 (2d Cir. 2005), in wrongful death actions brought against both New York City and Motorola on behalf of firefighters caught in the burning towers. Tort actions, however, were explicitly preserved against the knowing participants in the hijacking conspiracy. Unlike tort damages, recoveries in question were offset by payments from collateral sources, but allowed compensation for all forms of economic and noneconomic losses, without a maximum dollar limitation. These recoveries were not governed by any set rule, but were to be based only on the “facts of the claim,” including evidence on the extent of harm.

Exhibit 10.3 Kenneth Feinberg

Kenneth Feinberg (b. 1945) is known in many circles as the “compensation czar.” Beyond the 9/11 Fund, Feinberg has become a one-man shop for structuring and administering alternate compensation schemes for governments and private corporations. His work has included serving as a special master for the Troubled Asset Relief Program (TARP) Executive Compensation, initiated in the wake of the collapse or near-collapse of major financial institutions in 2008, and overseeing similar funds in the aftermath of the 2007 mass shooting at Virginia Tech, the 2010 Deep Water Horizon oil spill in the Gulf of Mexico, the Boston Marathon bombing in 2013, and in 2014, the injury or death of motorists in General Motors cars due to faulty ignition switches.

To facilitate his work, Feinberg divided the cases on two tracks. The first track set out an elaborate grid that allowed claimants to recover under a formula that contained both economic and noneconomic loss components. The economic

losses were based on victims’ average income between 1998 and 2000, but only up to the 98th percentile, or about \$231,000 per year. Noneconomic losses per decedent were set at \$250,000, with an additional \$100,000 for a spouse and each dependent. These presumptive awards were payable, no questions asked, within 120 days of filing. Alternatively claimants who were dissatisfied with the presumptive levels of compensation could ask for an individual determination of their claim. In Colaio v. Feinberg, 262 F. Supp. 2d 273, 301 (S.D.N.Y. 2003), a number of high-income earners challenged Feinberg’s presumptive

structure of awards because of “the sharp truncation of potential damage awards at the top of the earnings distribution,” which affected traders whose incomes were far above those amounts. Hellerstein, J., rejected those claims, noting that “[t]he duty of a judge is to give deference to the Department of Justice’s regulations and respect to the Special Master’s policies to the extent that they are rooted in law.”

Feinberg sought to track, but not entirely replicate, the distribution of outcomes that would have been obtained in a tort action against the terrorists. All told, about \$7 billion in compensation was paid out, with an average award of \$2.1 million to 97 percent of the families that filed claims. The amounts paid to surviving families ranged from a low of \$250,000 to a high of \$7.1 million. The amounts paid to survivors with personal injuries ranged between \$5.0 and \$8.6 million. Administrative costs for running the system were 1.2 percent of the total awards paid. Of the total claimants, some 1,600 asked for individual hearings. Feinberg personally conducted over 900 of these hearings. For his own reflections, see Feinberg, *What Is Life Worth?: The Unprecedented Effort to Compensate the Victims of 9/11* (2005). His bottom line: “There is not one family member I’ve met who wouldn’t gladly give back the check, or, in many cases, their own lives to have that loved one back. ‘Happy’ never enters into this equation.”

SECTION E. THE NEW ZEALAND PLAN

The New Zealand Accident Compensation Act (as amended by the Accident Compensation Amendment (no. 2) Act of 1973) is still, over 45 years after its initial enactment, the most radical no-fault plan in existence. The New Zealand plan abolishes virtually all actions for personal injuries or death. Their place is

filled by a comprehensive insurance scheme that awards benefits to all persons who suffer “personal injury by accident,” where the words “by accident” were intended largely to exclude

p. 915

compensation for death or injury caused by sickness. The definition of accident under the Act is generally resolved from the point of view of the injured party, so that compensation is awarded to victims of intentional torts (including criminal assaults), as well as those who have been harmed in automobile accidents and product-related injuries. The statute also covers certain occupational diseases, including deafness. In 1972, amendments to the original Accident Compensation Act extended coverage to “medical, surgical, dental or first aid misadventure,” §2(1)(a)(ii), without further elaboration.

The justifications for the New Zealand plan were outlined in 1967 in the Report of the Royal Commission of Inquiry, Compensation for Personal Injury in New Zealand, more commonly known as the Woodhouse Report after the commission’s chairman, Justice Owen Woodhouse. That report criticized the negligence system as a “lottery,” and concluded that coverage under workers’ compensation and social security was spotty at best in dealing with the 100,000 accidents large and small annually in New Zealand. The Report sought to meet five objectives: community responsibility, comprehensive entitlement, complete rehabilitation, real compensation, and administrative efficiency. These were elaborated as follows:

Report of the Royal Commission of Inquiry, Compensation for Personal Injury in New Zealand

19-22, 26 (1967)

...

5. Community Responsibility—If the well-being of the work force is neglected, the economy must suffer injury. For this reason the nation has not merely a clear duty but also a vested interest in urging forward the physical and economic rehabilitation of every adult citizen whose activities bear upon the general welfare. This is the plain answer to any who might query the responsibility of the community in the matter. Of course, the injured worker himself has a moral claim, and further a more material claim based upon his earlier contribution, or his readiness to contribute to the national product. But the whole community has a very real stake in the matter. There is nothing new in this idea. It is something which for 30 years in New Zealand has been recognized for every citizen in the country in the area of medical and health services.

6. Injury, not Cause, is the Issue—Once the principle of community responsibility is recognized the principle of comprehensive entitlement follows automatically. Few would attempt to argue that injured workers should be treated by society in different ways depending upon the cause of injury. Unless economic reasons demanded it the protection and remedy society might have to offer could not in justice be concentrated upon a single type of accident to the exclusion of others. With the admirable exception of the health services this has occurred in the past. There has been such concentration upon the risks faced by men during the working day that the considerable hazards they must face during the rest

p. 916

of each 24 hours (particularly on every road in the country) have been virtually disregarded. But workers do

not change their status at 5 P.M., and if injured on the highway or at home they are the same men, and their needs and the country's need of them are unchanged.

7. The Self-employed and the Housewives—Exactly similar considerations clearly apply to every other gainfully employed person such as independent contractors and others who are self-employed. The same considerations must apply, also, to the women in the population who as housewives make it possible for the productive work to be done. The need is for an integrated solution with comprehensive entitlement for every man and woman, and coverage in respect of every type of accident. This is the central recommendation of our Report.

8. Incentive—Incentive must be the driving purpose of any effective scheme. Incentive offered by effective rehabilitation to get well; incentive to return to work by leaving to each man a fair margin for independent effort; incentive which is not restricted by averaging benefits or begrudging help for long-term incapacities. Real compensation must be the aim, tailored to the severity of the injury and to the needs of citizens at all levels of employment and every normal level of income. . . .

9. The Cost—It will be asked, we do not doubt, whether we have kept in mind the need to balance the ideal with the practical. Even if the country were entirely free from current economic pressures, the money argument would weigh heavily upon an inquiry concerned, as this is, with systems of social insurance. The proposals we make for unifying and widening the scope of present arrangements must, of course, pass the economic test. And although difficulty has arisen from a dearth of statistical information, our proposals do this. In fact it seems that in overall terms the rationalization put forward avoids new large expenditures and yet permits at the same time greatly increased relief where it is needed most—for the losses which are greatest. . . .

17. Sickness and Disease—It may be asked how incapacity arising from sickness and disease can be left aside. In logic there is no answer. A man overcome by ill health is no more able to work and no less afflicted than his neighbour hit by a car. In the industrial field certain diseases are included already. But logic on this occasion must give way to other considerations. First, it might be thought unwise to attempt one massive leap when two considered steps can be taken. Second, the urgent need is to co-ordinate the unrelated systems at present working in the injury field. Third, there is a virtual absence of the statistical signposting which alone can demonstrate the feasibility of the further move. And finally, the proposals now put forward for injury leave the way entirely open for sickness to follow whenever the relevant decision is taken.

18. Summary—On the basis of the principles outlined, the scheme proposed

would provide immediate compensation without proof of fault for every injured person, regardless of his or her fault, and whether the accident occurred in the factory, on the highway, or in the home;

p. 917
would entitle that person to compensation both for permanent physical disability and also for income losses on an income-related basis;

would provide for regular adjustment in the level of payment to accord with variations in the value of money;

would provide benefits, if necessary, for life, and in certain circumstances they would be commutable in whole or in part to lump sum payments;

would lift the present weekly maximum rate of compensation to \$120 and thus safeguard the interests of persons on every normal level of income;

would be geared to urge forward their physical and vocational rehabilitation; and in all these ways it would provide them with effective insurance for all the risks of the day. If the scheme can be said to have a single purpose it is 24-hour insurance for every member of the work force, and for the housewives who sustain them.

Accident Compensation: Options for Reform

Credit Suisse First Boston 9-12 (1998)

At its introduction, the ACS was promoted as a comprehensive programme to protect New Zealanders from losses incurred due to personal injury by accident. It was meant to establish a model of effective accident compensation that would be emulated by other countries seeking to avoid the problems associated with schemes based on common law. It was claimed that the centralised monopoly structure would reduce costs to society of accidents, encourage rehabilitation, and facilitate collection of detailed information for research. The proponents of the ACS were so convinced of the merits of a social insurance approach that they sought to extend it to all forms of incapacity.

The consensus 25 years later is that the ACS has failed to meet expectations. Rehabilitation has not been a priority. Claims have largely been rubber-stamped to minimise administrative costs, yet total ACS costs have escalated well beyond projections since the scheme began. The Corporation has failed to develop a useful information database. Coverage levels have been a never-ending source of dispute and political pressure. The Corporation itself is perceived as failing to meet basic standards of professionalism. Media reports suggest a great deal of successful rent-seeking by professionals associated with the scheme and by opportunistic claimants. Cross-subsidies within and between industries distort incentives. Total ACS expenditure has increased at an annual average growth rate of 8 percent since 1985. A significant tail of long-term claimants and a massive unfunded liability of \$7.5 billion complete the picture. . . .

NOTES

1. Assessment of the no-fault plan. As the Credit Suisse report makes clear, the major difficulties with the New Zealand plan stem less from the changes in substantive tort law, and more from managing the state

monopoly that ran the insurance system. On the former, the ACS made relatively little difference in the New

p. 918

Zealand tort law that was far more restrictive in handling medical malpractice and product liability claims than most American states; liability was tightly circumscribed and damages were a fraction of what they are in the United States. Yet administration and loss-management is a different matter.

There are many reasons why these plans proved unstable. First, large claims in the early years took a long time to resolve and thus were recorded only after the plan was in operation. More critical perhaps was the shift in its internal accounting methods. Until 1982, the system was fully funded, which meant that the premiums collected in any single year were sufficient to cover all costs for claims arising in that year, including payments to be made in future years. In 1982, the system shifted to “pay as you go” financing, whereby only enough money was collected to pay the bills for that year, without reserving funds to pay the future expenses associated with current accidents. These plans turn out to be unstable, because of the heavy premium increases required annually. In the first year, say, 1995, this convention led to a reduction in costs as only the current expenditures that year were counted as costs. But by the next year, it was necessary to cover the second year of the outstanding 1995 claims as well as the first year of the 1996 claims. By 1999, the ACC switched back to the “fully funded” model, which required putting aside an amount necessary to cover all future years of the claim. Nonetheless the system was plagued by difficulties similar to those in Michigan because of more generous awards, including extensive treatment of physiotherapy services, which by 2009 led the ACC to incur a \$4.8 billion loss. The ACC 2017/2018 Annual Report noted that the surplus in the plan for 2018 was \$28 million, down from \$602 million in the previous year. Reserves for future claims under the full funding model rose by \$2.9 billion to \$40.6 billion. Claims during 2017/2018 were up by 2 percent to 1.98 million, and the cost of treatment and rehabilitation was \$4 billion, up 8 percent from the previous year. ACC 2017/2018 Annual Report Media statement, <https://www.nzdoctor.co.nz/article/undocored/acc-201718-annual-report-media-statement>.

For an exhaustive account of the New Zealand plan and the unsuccessful efforts to secure its introduction in Australia, see Palmer, Compensation for Incapacity: A Study of Law and Social Change in New Zealand and Australia (1979). For an analysis by New Zealand’s National Minister of Labour, who is in charge of the program, see Birch, Accident Compensation: A Fairer Scheme (1991). For an insider’s account of the New Zealand experience, see Palmer, New Zealand’s Accident Compensation Scheme: Twenty Years On, 44 U. Toronto L.J. 223 (1994).

2. Administration of the system. The New Zealand plan has also generated some tricky coverage disputes. In ACC v. Auckland Hospital Board, [1980] 2 N.Z.L.R. 748, 751, the court awarded damages to a claimant who became pregnant when a tubal ligation failed because the surgeon, without negligence, had been unable to close her fallopian tubes with his then available forceps, subsequently replaced with a more modern variety. The court found medical misadventure because the

p. 919

unsatisfactory outcome was not “within the normal range of medical or surgical failure attendant upon even the most felicitous treatment.”

Similarly, in *MacDonald v. Accident Compensation Corp.*, [1985] 5 N.Z.A.R. 276, the plaintiff, who suffered a leaky bowel (a small but predictable risk) from a properly performed operation was awarded compensation because the event had “turned out badly” and thus constituted a medical misadventure under the statute. For an account of these developments, see generally Gellhorn, *Medical Malpractice Litigation* (U.S.)—*Medical Mishap Compensation* (N.Z.), 73 Cornell L. Rev. 170 (1988). Cases of this sort led to the formulation of a two-page definition of the bad outcomes compensable in the context of medical treatment that raise all the difficulties found in connection with schemes for no-fault medical liability in this country. See *Accident Rehabilitation and Compensation Insurance Act of 1992* No. 13, §1.

More recently, in *Algie v. ACC* [2013] NZACA 1 at [13-14, 100], a group of claimants “applied for compensation by way of backdated payment for unpaid attendant care performed by family members.” The ACC resisted payment on the ground that the insured “must have incurred an actual and reasonable expense or proved loss.” The High Court gave a detailed examination of the relevant provisions and concluded that a gratuitous payment “is permitted [under the Act] on application by the injured person, as such care is congruent with the purposes of the Act and the objectives of the rehabilitation provisions.” Is there any reason not to have a clear rule one way or the other? If the compensation is allowed, how should it be measured?

3. A final evaluation. All of these no-fault plans seek to displace the common law rules of negligence with some other standard of compensable event. The defenders of these systems have been quick to note the difficulties of the general negligence system, but it is wrong on balance to conclude that the shift to any no-fault program can solve one problem without introducing another in its place. Thus the workers’ compensation system eliminates the hard line between negligence and pure accident within the workplace, but now substitutes in its stead the equally complex problem of drawing the line between personal and work-related injuries. The vaccine compensation programs remove negligence from the equation but introduce the equally vexing question of whether causation was from a natural event outside the compensable realm or from something within it. In short, system overhaul does not supply any obvious panacea even if it makes some marginal improvements. It therefore raises the argument that incremental changes within existing tort systems—such as placing more reliance on bright-line rules in highway accidents—might shift the relative balance of advantage back to a traditional tort remedy. Perhaps the greater use of contractual limitations on liability could also ease the burden in areas like medical malpractice and product liability. Indeed one irony is this: Some of the success of the New Zealand Accident Compensation System stems from the fact that by removing tort liability it approaches in an oblique fashion the contractual system of limited liability.

SECTION A. INTRODUCTION

Iago:

Good name in man and woman, dear my lord,
Is the immediate jewel of their souls:
Who steals my purse steals trash; 'tis something, nothing;
'Twas mine, 'tis his, and has been slave to thousands;

But he that filches from me my good name
Robs me of that which not enriches him,
And makes me poor indeed.

Othello, Act III, scene iii

Of all the areas of tort law, defamation is perhaps the most difficult to organize and to understand. At one time defamation was, with only the occasional statutory intervention, a common law subject. Starting from the premise that an individual's reputation should be protected against false words, the common law judges developed an elaborate set of rules to determine what statements were defamatory, when they were actionable or privileged, and what damages could be recovered for them.

The common law of defamation is still important today, but its uncontested supremacy was undermined over 55 years ago by the epochal (no lesser word will do) Supreme Court decision in *New York Times v. Sullivan*, 376 U.S. 254 (1964), which, for the first time, invoked the First Amendment guarantee of freedom of speech to limit the common law of defamation. More specifically, *Sullivan* held that public officials could maintain actions in defamation only upon proof that the defendant's statement was made with "actual malice," defined by

p. 924

the Supreme Court as "knowledge that [the statement] was false or with reckless disregard of whether it was false or not." *Sullivan* was quickly extended to public figures in *Curtis Publishing Co. v. Butts*, 388 U.S. 130 (1967). Finally, the third of the great constitutional trilogy, *Gertz v. Robert Welch, Inc.*, 418 U.S. 323 (1974), constitutionalized the law of defamation governing suits by private plaintiffs against media defendants. The 1980s witnessed many complex and contentious First Amendment cases in which, by and large, the media defendants came out on top by mounting fierce defenses. Today there are relatively few high-profile defamation suits against media defendants, so the basic constitutional ground rules have remained unchanged for the past generation.

Constitutionalizing large portions of the law of defamation did not mark, however, the end of traditional common law issues. Even when public officials sue media defendants, it is still necessary to determine whether the statements made were defamatory, whether they were true, and whether they caused damage to the plaintiff. A complex network of common law issues weaves its way through the modern constitutional fabric so that the skilled defamation lawyer must be a master of two intersecting approaches. In addition, as suits by public officials and public figures have dwindled, recent years have witnessed an uptick in defamation actions against businesses, colleges and universities, and charitable organizations, for example, in various personnel matters. Also, suits against Internet service providers for messages posted by others began to emerge in the late 1990s. Congress and the courts, fearing the possible adverse effect of tort liability on new digital means of communications, cut back on the scope of liability for Internet providers.

The shifting patterns of litigation should not be allowed to conceal the significant differences between the constitutional and common law orientations. Everyone agrees that the central task of the modern law of defamation is to reconcile the interest in reputation with that in freedom of speech. No one thinks that the appropriate balance permits the complete protection of one interest to the exclusion of the other. The disagreement is over the proper balance. Roughly speaking the common law set its initial presumption in favor of reputation, while the Supreme Court has tilted the constitutional balance in favor of freedom of speech. As a result defamation (and for similar reasons, privacy) stands virtually alone in modern tort law. As the plaintiff's right to recover has been vigorously expanded in other areas, in defamation cases the balance has shifted, often quite dramatically, in favor of the defendant.

The rapid changes in the law of defamation suggest two possible approaches to the subject. The first begins with *New York Times v. Sullivan* and the constitutional materials and works backward to the common law doctrines as the need arises. Although that approach highlights dramatic and memorable disputes, on balance it suffers from the greater handicap of requiring us to jump midstream into a most troubled area of the law, without the benefit of a (more or less) systematic presentation of its historical development, and without a sense of its special character and language. This chapter, for the sake of historical continuity and analytical clarity, examines the common law tort before turning to the

p. 925

constitutional overlay. These traditional inquiries include: What is publication? What is defamation? What is the distinction between libel and slander, and why is it important? What is the basis of liability in defamation—strict liability, negligence, or intention to harm? What are general and special damages? What privileges are available for defamatory statements in both the private and the public spheres? Are these privileges “absolute” or “qualified”? Only thereafter is the constitutional material taken up in its historical sequence.

SECTION B. PUBLICATION

MIMS v. METROPOLITAN LIFE INSURANCE CO.

200 F.2d 800 (5th Cir. 1952)

STRUM, J. This is an action for libel brought by appellant against appellee, a corporation. The trial court entered summary judgment for defendant below on the ground, amongst others, that there was no publication of the alleged libel, from which judgment plaintiff appeals.

After about 32 years in the employ of defendant company as a branch manager and in other capacities, plaintiff was discharged. He suspected that the reason for this discharge was his refusal to contribute \$1.00 to the campaign fund of Senator Taft of Ohio, as suggested in a chain letter sent by defendant's supervisor of agencies in New York to a group of local agency managers, one of whom in turn forwarded a copy to plaintiff. In February, 1950, plaintiff replied to the agent from whom he received the copy that he was not in sympathy with Senator Taft's policies, and declined to contribute.

When plaintiff's services were discontinued early in 1951, he wrote to his friend Senator Sparkman of

Alabama, asking the latter to investigate the cause thereof. Pursuant to this request, and with plaintiff's knowledge and approval, Senator Sparkman directed a letter of inquiry to the defendant's president in New York, summarizing Senator Sparkman's understanding of the situation, and concluding: "I shall appreciate your attention to this matter and your giving me such information as you may care to give."

Defendant's president replied at length by letter, denying that plaintiff's discharge was in any way due to his refusal to contribute to the campaign fund, and stating in effect that it was due to inefficiency and to unsatisfactory production in the branch agencies of which plaintiff was manager from 1934 to 1951, so that it finally became necessary to discontinue plaintiff's services. The letter concludes that the only mistake made by defendant was in giving plaintiff so long an opportunity to make good, in the hope that he might improve. That letter is the basis of this suit. Plaintiff asserts that the statements therein are false, made with malice, and are therefore libelous and unprivileged.

The letter in question was dictated by the president of the defendant company to a company-employed stenographer, who wrote it. It was then mailed to Senator

p. 926

Sparkman in reply to his inquiry, and was received and read by him in Washington, D.C. Plaintiff relies on these circumstances as a sufficient publication to support an action for libel against the corporate defendant. It is not charged that the letter was seen by any other person.

Publication is essential to libel, and the publication must be made to one or more third parties. It is held in New York that dictation of a libelous letter by an individual to his own employee constitutes a sufficient publication in an action against the individual who dictated the letter, as in such circumstances the stenographer is a third party. *Ostrowe v. Lee*, 256 N.Y. 36, 175 N.E. 505. . . .

But this is not such a case. Here, the letter was written by, and the action is against, a corporate defendant which can act only through its agents. Both the person who dictated the letter, and the stenographer who transcribed it, were employed by and acting for the corporation in the performance of a single corporate function, each supplying a component part thereof. When the letter was thus dictated and transcribed, it was not the act of two individuals acting separately. It was one corporate entity acting through two instrumentalities, neither of whom is a third party as respects the corporation, because each is acting as a part of the corporate entity in the performance of a single corporate act, the production of the letter, in the regular course of their duties.

This court has held that where the language complained of was communicated only by one corporate officer to another in the regular course of the corporation's business, such communication did not amount to a publication which would support an action for libel. Although there is one case to the contrary, the weight of authority in New York, where the letter in question was dictated and transcribed, is that mere dictation of libelous matter by a corporate officer or employee to a stenographer also employed by the corporation, in the regular course of the corporation's business, is not such a publication as will support an action for libel against the corporation itself, as in such circumstances the stenographer is not a third party. . . . This is not such a case as *Kennedy v. James Butler*, 245 N.Y. 204, 156 N.E. 666, in which a corporate defendant communicated libelous matter to employees who had no part in producing the writing, thus exceeding the

normal necessities of preparing the writing. If the language of this letter had been communicated to an employee of the corporation whose duties were unconnected with the process by which the letter was produced, such communication might be regarded as an actionable publication. But such is not the case here. Upon the authorities above cited, we hold that there was no sufficient publication of the letter in New York.

We have been directed to no decision squarely in point in the District of Columbia, as to whether writing the letter to Senator Sparkman, in the circumstances here involved, would constitute publication, although that jurisdiction follows the established general rule that it is essential to liability for either libel or slander that the defamatory language be communicated to some one other than the person defamed. It is the law of Alabama, however, which is the state of the forum in which this action was brought, and the state of which the plaintiff is a citizen, that if the language complained of was uttered only to the complaining

p. 927

party or to his agent representing him in the matter discussed in the communication, it is not such a publication as will support an action for slander. Particularly is this true where the communication was solicited by the plaintiff or his agent. This rule prevails in many other jurisdictions, though there is authority to the contrary. See note, 172 A.L.R. 208.

In making the inquiry above mentioned, Senator Sparkman was acting at the express request of plaintiff and with his approval,—virtually as plaintiff's alter ego. Defendant's president replied to the person through whom the inquiry was thus made. The letter complained of having been solicited by plaintiff, through his representative Senator Sparkman, plaintiff thereby impliedly consented that defendant reply through the same representative. In contemplation of law it was a reply to the plaintiff himself. Without plaintiff's solicitation, the letter would not have been written. Upon the authorities about cited, we hold that there was no sufficient publication in the District of Columbia. The statements in the letter sued on do not exceed the scope of the inquiry so as to render the publication actionable because excessive, within the doctrine of *Massee v. Williams*, 6 Cir., 207 F. 222.

Plaintiff asserts that the language of the letter was uttered with malice, thus destroying the qualified privilege which would otherwise attend it. But we do not reach the matter of privilege or malice until publication has been established, which here has not been done.

Affirmed.

RIVES, J., dissenting. There was publication I think, in New York; and the evidence made a strong, if not compelling, case for the jury that there was also publication in Washington.

The fact that a corporation is an artificial entity, and therefore can act only through its agents, does not give it any added immunity for its torts. Corporate agents are just as much individual human beings as are the agents of natural persons. The same rules should apply to both. . . .

The controlling case in New York, it seems to me, should be *Ostrowe v. Lee*, 256 N.Y. 36, 175 N.E. 505, where Judge Cardozo's opinion settled beyond dispute that publication results from dictation, where the

stenographic notes have been transcribed. That case involved a stenographer employed by an individual, but there is nothing in Judge Cardozo's opinion to indicate that the rule would be different if the stenographer were employed by a corporation. . . .

It seems clear to me, however, that the matter did not concern merely the plaintiff but was of great public interest and that Senator Sparkman was properly acting not as a representative of the plaintiff, but in his capacity as a Senator of the United States. He was giving the defendant an opportunity to offer an explanation before referring the matter to the Senate Elections Subcommittee. Certainly the jury could have found that Senator Sparkman was not the plaintiff's alter ego. I therefore respectfully dissent.

NOTES

1. Publication, privilege, and the defamation triangle. The publication requirement has important structural significance for the law of defamation. Without

p. 928

this requirement, defamation would be indistinguishable from the insult or deceit that arises when the defendant utters an abusive or false statement to the plaintiff directly. The publication requirement shows that the tort of defamation protects only the interest in reputation, not self-esteem. The publication requirement also accounts for much of the complexity of defamation law, for it ensures that every defamation case must involve at least three people—the plaintiff, the defendant, and the third party to whom the statement was made. Indeed oftentimes defamation expands this simple triangle. For example, one defendant can defame a plaintiff to many third parties, each of whom interacts with the plaintiff in different ways.

Restatement of the Law (Second) of Torts

§577. WHAT CONSTITUTES PUBLICATION

- (1) Publication of defamatory matter is its communication intentionally or by a negligent act to one other than the person defamed.
- (2) One who intentionally and unreasonably fails to remove defamatory matter that he knows to be exhibited on land or chattels in his possession or under his control is subject to liability for its continued publication.

Comment e. Publication to agent: The fact that the defamatory matter is communicated to an agent of the defamer does not prevent it from being a publication sufficient to constitute actionable defamation. The publication may be privileged, however. . . . So too, the communication to a servant or agent of the person defamed is a publication although if the communication is in answer to a letter or a request from the other or his agent, the publication may not be actionable in defamation.

2. Publication by default. Section 577(2) is vividly illustrated by *Hellar v. Bianco*, 244 P.2d 757, 758 (Cal.

App. 1952), in which the

[r]espondents were the proprietors of a public tavern and for the convenience of patrons maintained a toilet room for men on the wall of which there appeared on May 4, 1950, libelous matter indicating that appellant was an unchaste woman who indulged in illicit amatory ventures. The writer recommended that anyone interested should call a stated telephone number, which was the number of the telephone in appellant's home, and "ask for Isabelle," that being appellant's given name.

The plaintiff was told of the writing by a telephone call from a stranger requesting a date. The defendant did not promptly remove the material when requested to do so by the plaintiff's husband. The trial court dismissed the plaintiff's claim,

p. 929

and the appellate court reversed, holding that knowingly permitting such matter to remain after a reasonable opportunity to remove it made the owner of the tavern liable for a republication. Could a patron of the bar be charged with defamation if he saw the statement and did not remove it?

3. Republication by the plaintiff. A particularly troublesome question arises when the plaintiff herself shows defamatory material to others. Normally this is held to be a publication by the plaintiff. The problem is acute in the area of employment recommendations. In Kiblitsky v. Lutheran Medical Center, 922 N.Y.S.2d 769 (Sup. Ct. 2011), Demarest, J., discussed the merits of a cause of action for "compelled self-publication" or permitting

a discharged employee to sue for defamation even if an employer made the defamatory statement to no one other than the employee if the employer knows, or should know, of circumstances where the employee is later put in a position in which he or she has no reasonable means of avoiding publication of the statement and must repeat such statement; usually when seeking new employment.

On the one hand,

the adoption of the doctrine of self-publication would encourage every employee who feels he or she was discharged for an unflattering reason to bring suit thus unduly burdening the courts as well as creating a huge potential for liability for employers who could do very little to prevent such suits.

On the other hand, self-defamation claims seem warranted where "a plaintiff has no realistic alternative but to submit the defamatory material," in situations where "the defendant knew or could have foreseen that the plaintiff would be compelled to repeat the defamatory statement."

In the case at hand, the plaintiff psychiatrist was terminated "for cause" and then compelled to report this not only to future employers but also to the New York State Board of Education in the process of renewing her license; her claim, however, did not succeed. Some courts, however, have allowed the cause of action

because of the strong causal link “where the foreseeable republication is made by the person defamed operating under a strong compulsion to republish the defamatory statement and the circumstances which create the strong compulsion are known to the originator of the defamatory statement at the time he communicates it to the person defamed.”

FIRTH v. STATE OF NEW YORK

775 N.E.2d 463 (N.Y. 2002)

LEVINE, J. This appeal presents the first occasion for us to determine how our defamation jurisprudence, developed in connection with traditional mass media communications, applies to communications in a new medium—cyberspace—in the modern Information Age. Specifically, we must resolve the question whether, for

p. 930

statute of limitations purposes, the single publication rule is applicable to allegedly defamatory statements that are posted on an Internet site and, if so, whether an unrelated modification to a different portion of the Web site constitutes a republication.

Claimant George Firth was formerly employed by the Department of Environmental Conservation as Director of the Division of Law Enforcement. His responsibilities included weapons acquisition. At a press conference held on December 16, 1996, the Office of the State Inspector General issued a report entitled “The Best Bang for Their Buck,” which was critical of claimant’s managerial style and procurement of weapons. On the same day, the State Education Department posted an executive summary with links to the full text of the report on its Government Information Locator Service Internet site.

On March 18, 1998, more than one year after the report was first released and posted on the Internet, claimant filed a claim against the State alleging that the report defamed him. The State moved to dismiss on the ground that the claim was time-barred under the one-year statute of limitations for defamation. In opposition, claimant argued the merits of his defamation claim, failing to address the statute of limitations issue. . . .

The Court of Claims granted summary judgment to the State, rejecting claimant’s argument that the ongoing availability of the report via the Internet constituted a continuing wrong or new publication. The court concluded that the statute of limitations began to run on December 16, 1996, when the report was first made available on the Internet. The court did not address whether the modification of the State’s Web site by the addition of the report on the DMV constituted a republication of the report concerning claimant.

The Appellate Division affirmed. . . . Claimant now appeals as of right to this Court (see CPLR 5601[a]).

In Gregoire v. Putnam’s Sons, we adopted the single publication rule, namely that

the publication of a defamatory statement in a single issue of a newspaper, or a single issue of a magazine, although such publication consists of thousands of copies widely distributed, is, in

legal effect, one publication which gives rise to one cause of action and that the applicable statute of limitation[s] runs from the date of that publication (81 N.E.2d 45, 47 [N.Y. 1948]; see RST §577A[3]).

Claimant argues that the single publication rule should not be applied verbatim to defamatory publications posted on the Internet in light of significant differences between Internet publications and traditional mass media. Instead, claimant maintains that because a Web site may be altered at any time by its publisher or owner and because publications on the Internet are available only to those who seek them, each “hit” or viewing of the report should be considered a new publication that retriggers the statute of limitations. We disagree.

Under the early common law of defamation, which claimant seeks to have applied in this case, each communication of a defamatory statement to a third

p. 931

person constituted a separate publication giving rise to a new cause of action. In *Gregoire*, we held that a publisher’s sale from stock of a copy of a book containing libelous language did not constitute a new publication. We explained that if the multiple publication rule were applied to such a sale, “the [s]tatute of [l]imitation[s] would never expire so long as a copy of such book remained in stock and is made by the publisher the subject of a sale or inspection by the public. Such a rule would thwart the purpose of the Legislature . . . to bar completely and forever all actions which, as to the time of their commencement, overpass the limitation there prescribed upon litigation.”

In addition to increasing the exposure of publishers to stale claims, applying the multiple publication rule to a communication distributed via mass media would permit a multiplicity of actions, leading to potential harassment and excessive liability, and draining of judicial resources. Further, the single publication rule actually reduces the possibility of hardship to plaintiffs by allowing the collection of all damages in one case commenced in a single jurisdiction. . . .

The policies impelling the original adoption of the single publication rule support its application to the posting of the Inspector General’s report regarding claimant on the State’s Web site. Communications accessible over a public Web site resemble those contained in traditional mass media, only on a far grander scale. . . . Communications posted on Web sites may be viewed by thousands, if not millions, over an expansive geographic area for an indefinite period of time.

Thus, a multiple publication rule would implicate an even greater potential for endless retriggering of the statute of limitations, multiplicity of suits and harassment of defendants. Inevitably, there would be a serious inhibitory effect on the open, pervasive dissemination of information and ideas over the Internet, which is, of course, its greatest beneficial promise. Thus, we hold that the single publication rule applies in this case.

Claimant alternatively argues that if the single publication rule governs, the State should be deemed to have republished the report within one year of the filing of the claim when it added an unrelated report of the Inspector General on the DMV to the Education Department’s Web site in May 1997. We conclude as a

matter of law that this modification of the State's Web site did not constitute a republication of the allegedly defamatory report at issue here.

Republication, retriggering the period of limitations, occurs upon a separate aggregate publication from the original, on a different occasion, which is not merely "a delayed circulation of the original edition." The justification for this exception to the single publication rule is that the subsequent publication is intended to and actually reaches a new audience. Thus, for example, repetition of a defamatory statement in a later edition of a book, magazine or newspaper may give rise to a new cause of action.

The mere addition of unrelated information to a Web site cannot be equated with the repetition of defamatory matter in a separately published edition of a book or newspaper. . . . The justification for the republication exception has no application at all to the addition of unrelated material on a Web site, for it is not reasonably inferable that the addition was made either with the intent or the

p. 932

result of communicating the earlier and separate defamatory information to a new audience.

We observe that many Web sites are in a constant state of change, with information posted sequentially on a frequent basis. For example, this Court has a Web site which includes its decisions, to which it continually adds its slip opinions as they are handed down. Similarly, Web sites are used by news organizations to provide readily accessible records of newsworthy events as they occur and are reported. Those unrelated additions are indistinguishable from the asserted DMV report modification of the State's Web site here. A rule applying the republication exception under the circumstances here would either discourage the placement of information on the Internet or slow the exchange of such information, reducing the Internet's unique advantages. In order not to retrigger the statute of limitations, a publisher would be forced either to avoid posting on a Web site or use a separate site for each new piece of information. These policy concerns militate against a holding that any modification to a Web site constitutes a republication of the defamatory communication itself.

[Affirmed.]

NOTES

1. Mass publication. *Firth* follows the Restatement (Second) of Torts §577A, which provides that "[a]ny one edition of a book or newspaper, or any one radio or television broadcast, exhibition of a motion picture or similar aggregate communication is a single publication" for which only one action in defamation may be maintained. Courts have uniformly followed *Firth* in applying the single publication rule to Internet publication. As Easterbrook, J., explains in *Pippen v. NBC Universal Media, LLC*, 734 F.3d 610 (7th Cir. 2013):

[N]o court has been persuaded that the even greater control that Internet publishers have over their content [as compared to book publishers]—and the much lower cost of editing or deleting

that content—is a reason to exclude them from the [single publication rule]. Indeed, courts have drawn the opposite conclusion: the Internet’s greater reach comes with an “even greater potential for endless retriggering of the statute of limitations, multiplicity of suits and harassment of defendants.”

A contrary ruling, as Griffin, J., notes in *Clark v. Viacom International Inc.*, 2015 WL 4098320 (6th Cir. 2015), would “as a functional matter . . . make the statute of limitations irrelevant in the online defamation context,” given that “[t]he possibility of defamation liability would hover over any publicly available online statement regardless of its age as long as a plaintiff could find a third party who had not previously seen it.”

2. *Republication exception.* In *Firth*, posting of an unrelated report to a website housing the allegedly defamatory statement did not constitute republication. Nor

p. 933

have courts found the following to constitute republication: a third party reposting the statement elsewhere on the Internet (see *Jankovic v. Int’l Crisis Grp.*, 494 F.3d 1080 (D.C. Cir. 2007)); creating hypertext links to the previously published statement (see *Salyer v. Southern Poverty Law Center, Inc.*, 701 F. Supp. 2d 912 (W.D. Ky. 2009)); or changing the URL where the story was posted (see *Canatalla v. Van De Kamp*, 486 F.3d 1128 (9th Cir. 2007)).

By contrast, in *Larue v. Brown*, 333 P.3d 767 (Ariz. Ct. App. 2014), Gould, J., held that updates or modifications that affect the substance of the allegedly defamatory material constituted “republication” of the defamatory statements. Thus a husband and wife’s defamation action against the wife’s ex-husband and his wife based on Internet articles alleging that the husband had molested the wife’s four-year-old daughter was not barred by the statute of limitations where defendants had replied to comments made in response to their original defamatory articles when “[t]he comments were displayed directly beneath the original articles, thereby implying they were supplements to the original articles.”

Not all changes to alleged defamatory material constitute republication. In many defamation cases, there is a delicate question of whether minor modifications constitute the publication of a new article or a modest modification of an old one. The question assumes a good deal of urgency when the statute of limitations has run on the original publication but not on the revision. In *Petro-Lubricant Test v. Adelman*, 184 A.3d 457, 462, 463 (N.J. 2018), defendant Adelman operated a website that published a list of “America’s Worst Bosses,” on which the individual plaintiff, John Wintermute, ranked thirty-ninth. After Wintermute complained, the article was modified, but not to Wintermute’s liking. Albin, J., split the baby:

We now hold that the single publication rule applies to an internet article. However, if a material and substantive change is made to the article’s defamatory content, then the modified article will constitute a republication, restarting the statute of limitations. In the record before us, there are genuine issues of disputed fact concerning whether Adelman made a material and substantive change to the original article....

The most significant change for purposes of this appeal is the replacement of, “[Wintermute] also allegedly forced workers to listen to and read white supremacist materials,” with “John

Wintermute also allegedly regularly subjected his employees to ‘anti-religion, anti-minority, anti-Jewish, anti-[C]atholic, anti-gay rants,’” quoting from Laforgia’s complaint.

Adelman continued to rank Wintermute as number thirty-nine on eBossWatch.com’s worst-bosses list.

Should the statute of limitations ever start anew if the revised version of the article is less defamatory than the original?

3. Republication by third parties. Even before the advent of the Internet, the common law held the defendant liable for defamation only when he had both

p. 934

knowledge of what was published and discretion over whether to make or withhold publication. Neither of those requirements were met, for example, by a public library that rarely knew the contents of its many holdings and could not refuse to check out a book that might contain some defamatory material.

Those who merely deliver or transmit defamatory material previously published by another will be considered to have published the material only if they knew, or had reason to know, that the material was false and defamatory. It is this rule that protects libraries and vendors of books, magazines, and newspapers.

Church of Scientology of Minn. v. Minn. State Med. Ass’n Found., 264 N.W.2d 152, 156 (Minn. 1978).

This rule has particular relevance to active Internet sites. In February 1996, Congress enacted the Communications Decency Act of 1996 (CDA), 47 U.S.C. §230(c)(1), which effectively immunizes Internet service providers from liability for distributing or publishing defamatory material created by others. But what if the Internet service provider takes an active role in promoting defamatory material created by another?

BLUMENTHAL v. DRUDGE

992 F. Supp. 44 (D.D.C. 1998)

[In early 1995, Matt Drudge created an electronic publication called the Drudge Report, a gossip column focusing on gossip from Hollywood and Washington, D.C. In addition to posting content on a free Internet website, Drudge had developed a list of regular subscribers to whom he emailed the Drudge Report. In 1997, Drudge entered into an agreement with America Online (AOL), an Internet service provider, to make the Drudge Report available to all members of AOL’s service for a period of one year. Drudge agreed to create, edit, update, and “otherwise manage” the content of the Drudge Report, and AOL retained the right to “remove content that AOL reasonably determine[s] to violate AOL’s then standard terms of service.” Under the licensing agreement, Drudge transmitted new editions of the Drudge Report by emailing them to AOL and AOL then posted the new editions on its service. In exchange, Drudge received a flat monthly “royalty payment” of \$3,000 from AOL. Drudge had no other source of income.

On August 10, 1997, the Drudge Report posted a story claiming that Sidney Blumenthal, who was about to begin employment as an assistant to President Clinton, had physically abused his wife, Jacqueline Jordan Blumenthal, who also worked in the White House as Director of the President's Commission on White House Fellowships. The Blumenthals sued AOL and Drudge, contending that the statement was defamatory. Drudge later retracted the story and publicly apologized. AOL filed a motion for summary judgment, arguing that it was immune from suit under section 230 of the CDA.]

p. 935

FRIEDMAN, J. . . .

[Under the Communications Decency Act of 1996], whether wisely or not, [Congress] made the legislative judgment to effectively immunize providers of interactive computer services from civil liability in tort with respect to material disseminated by them but created by others. In recognition of the speed with which information may be disseminated and the near impossibility of regulating information content, Congress decided not to treat providers of interactive computer services like other information providers such as newspapers, magazines or television and radio stations, all of which may be held liable for publishing or distributing obscene or defamatory material written or prepared by others. While Congress could have made a different policy choice, it opted not to hold interactive computer services liable for their failure to edit, withhold or restrict access to offensive material disseminated through their medium.

Section 230(c) of the Communications Decency Act of 1996 provides:

No provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider.

AOL acknowledges both that section 230(c)(1) would not immunize AOL with respect to any information AOL developed or created entirely by itself and that there are situations in which there may be two or more information content providers responsible for material disseminated on the Internet-joint authors, a

lyricist and a composer, for example. While section 230 does not preclude joint liability for the joint development of content, AOL maintains that there simply is no evidence here that AOL had any role in creating or developing any of the information in the Drudge Report. The Court agrees. It is undisputed that the Blumenthal story was written by Drudge without any substantive or editorial involvement by AOL. AOL was nothing more than a provider of an interactive computer service on which the Drudge Report was carried, and Congress has said quite clearly that such a provider shall not be treated as a “publisher or speaker” and therefore may not be held liable in tort. 47 U.S.C. §230(c)(1).

As Chief Judge Wilkinson recently wrote for the Fourth Circuit [in *Zeran v. America Online, Inc.*, 129 F.3d 327, 330-331 (4th Cir. 1997)]:

. . . The purpose of this statutory immunity is not difficult to discern. Congress recognized the threat that tort-based lawsuits pose to freedom of speech in the new and burgeoning Internet medium. The imposition of tort liability on service providers for the communications of others represented, for Congress, simply another form of intrusive government regulation of speech. Section 230 was enacted, in part, to maintain the robust nature of Internet communication and, accordingly, to keep government interference in the medium to a minimum.

. . . The court in *Zeran* has provided a complete answer to plaintiffs’ primary argument, an answer grounded in the statutory language and intent of Section 230.

Plaintiffs make the additional argument, however, that Section 230 of the Communications Decency Act does not provide immunity to AOL in this case because Drudge was not just an anonymous person who sent a message over the Internet through AOL. He is a person with whom AOL contracted, whom AOL paid \$3,000 a month—\$36,000 a year, Drudge’s sole, consistent source of income—and whom AOL promoted to its subscribers and potential subscribers as a reason to subscribe to AOL. Furthermore, the license agreement between AOL and Drudge by its terms contemplates more than a passive role for AOL; in it, AOL reserves the “right to remove, or direct [Drudge] to remove, any content which, as reasonably determined by AOL . . . violates AOL’s then-standard Terms of Service. . . .” By the terms of the agreement, AOL also is “entitled to require reasonable changes to . . . content, to the extent such content will, in AOL’s good faith judgment, adversely affect operations of the AOL network.”

In addition, shortly after it entered into the licensing agreement with Drudge, AOL issued a press release making clear the kind of material Drudge would provide to AOL subscribers—gossip and rumor—and urged potential subscribers to sign onto AOL in order to get the benefit of the Drudge Report. The press release was captioned: “AOL Hires Runaway Gossip Success Matt Drudge.” It noted that “[m]averick gossip columnist Matt Drudge has teamed up with America Online,” and stated: “Giving the Drudge Report

a home on America Online (keyword: Drudge) opens up the floodgates to an audience ripe for Drudge's brand of reporting. . . . AOL has made Matt Drudge instantly accessible to members who

p. 937

crave instant gossip and news breaks." Why is this different, the Blumenthals suggest, from AOL advertising and promoting a new purveyor of child pornography or other offensive material? Why should AOL be permitted to tout someone as a gossip columnist or rumor monger who will make such rumors and gossip "instantly accessible" to AOL subscribers, and then claim immunity when that person, as might be anticipated, defames another?

If it were writing on a clean slate, this Court would agree with plaintiffs, [given that AOL is not a "passive conduit like the telephone company," but instead exercises "editorial control" over Drudge's work]. But Congress has made a different policy choice by providing immunity even where the interactive service provider has an active, even aggressive role in making available content prepared by others. In some sort of tacit *quid pro quo* arrangement with the service provider community, Congress has conferred immunity from tort liability as an incentive to Internet service providers to self-police the Internet for obscenity and other offensive material, even where the self-policing is unsuccessful or not even attempted. . . .

Any attempt to distinguish between "publisher" liability and notice-based "distributor" liability and to argue that Section 230 was only intended to immunize the former would be unavailing. Congress made no distinction between publishers and distributors in providing immunity from liability. As the Fourth Circuit has noted: "[I]f computer service providers were subject to distributor liability, they would face potential liability each time they receive notice of a potentially defamatory statement—from any party, concerning any message," and such notice-based liability "would deter service providers from regulating the dissemination of offensive material over their own services" by confronting them with "ceaseless choices of suppressing controversial speech or sustaining prohibitive liability"—exactly what Congress intended to insulate them from in Section 230. *Zeran*, 129 F.3d at 333. While it appears to this Court that AOL in this case has taken advantage of all the benefits conferred by Congress in the Communications Decency Act, and then some, without accepting any of the burdens that Congress intended, the statutory language is clear: AOL is immune from suit, and the Court therefore must grant its motion for summary judgment.

NOTES

1. Internet service providers as publishers. Before the passage of the Communications Decency Act of 1996, courts struggled to decide whether Internet service providers should be considered distributors or publishers. In *Cubby, Inc. v. CompuServ, Inc.*, 776 F. Supp. 135 (S.D.N.Y. 1991), the court held that a computer service company that provided its subscribers with access to an electronic library of news publications put together by an independent third party and loaded onto a server was a mere "distributor" of information. Accordingly it could not be held liable for defamatory statements made in news publications absent a showing that it knew or had reason to know of specific defamatory material. In contrast, the court in *Stratton Oakmont, Inc. v. Prodigy Servs. Co.*, 23 Media L. Rep. 1794 (N.Y. Sup. Ct. 1995), distinguished *Cubby* and held that Prodigy, a

company that used an automatic software screening program to control content on its bulletin boards, was a publisher rather than a distributor. Section 230 of the CDA was passed a year later to remove the liability created by the *Stratton* decision. Did Congress find the appropriate balance between incentivizing self-regulation and the promotion of Internet communications?

2. Scope of CDA §230 immunity. In *Zeran v. America Online, Inc.*, 129 F.3d 327 (4th Cir. 1997), cited in *Blumenthal*, the court applied the CDA on behalf of AOL when an unknown third party posted messages on an AOL bulletin board falsely stating that the plaintiff was selling tasteless “naughty Oklahoma T-Shirts” celebrating the bombing of the Alfred P. Murrah Federal Building, which had killed 168 people in 1995. AOL did not remove the material from its site for some time despite promising to do so, exposing the plaintiff to death threats and other abusive communications. Why grant the immunity after the defendant has been informed of the defamatory material?

Courts have continued to construe the immunity provisions in section 230 broadly, with few discernible limits. Thus liability as a creator or developer was imposed upon “a website owner who intentionally encourage[d] illegal or actionable third-party postings to which he add[ed] his own comments ratifying or adopting the posts” in *Jones v. Dirty World Entertainment Recordings LLC*, 965 F. Supp. 2d 818, 821 (E.D. Ky. 2013), upholding a jury award of \$38,000 in compensatory damages and \$300,000 in punitive damages to plaintiff Jones. Jones was “the unwelcome subject of several posts anonymously uploaded to www.TheDirty.com [“a user-generated tabloid primarily targeting nonpublic figures”] and of remarks the website operator posted on the site.” Jones alleged that the postings “undermin[ed] her position as an educator, her membership in the Cincinnati BenGals, and her personal life.” The Sixth Circuit overturned the verdict below, rejecting the lower court’s “encouragement test” of CDA immunity. Gibbons, J., reasoned that “to read the term [develop] so broadly would defeat the purposes of the CDA and swallow the core [of section 230] immunity.” She instead applied the “material contribution” measure of development, holding that because the website owner did not “materially contribute to the illegality” of the statements posted by anonymous third parties, CDA immunity persists. Does the broad immunity furnished by the CDA leave persons who are the objects of anonymously posted, online, defamatory content without remedy?

The boundaries of section 230 immunity have also been tested in the brave new world where online service providers replace traditional housing services, subject to the strictures of law prohibiting discrimination. In *Fair Housing Council of San Fernando Valley v. Roommates.Com, LLC*, 521 F.3d 1157 (9th Cir. 2008) (en banc), the court found that CDA immunity did not protect a website designed to force subscribers to divulge their protected characteristics and discriminatory preferences. It then used that information to match owners of rooms with potential customers based on criteria that appeared to be prohibited by the Fair Housing Act. But in *Chicago Lawyers’ Committee for Civil Rights Under Law, Inc. v. Craigslist, Inc.*, 519 F.3d 666 (7th Cir. 2008), an online service provider offered an electronic meeting place for buyers, sellers, or renters to post notices advertising

housing that stated preference, limitation, or discrimination based on race, religion, sex, or family status. The court held it was not a “publisher” or “speaker,” under the CDA, of posted notices with information

provided by someone else. Should the distinction between a publisher and distributor rest upon whether or not a website prepares survey questions or only offers an open entry field?

With the rise of artificial intelligence and machine learning, how should the “material contribution” test apply to websites that generate news feed content based on users’ past browsing data? In *Gonzalez v. Google, Inc.*, 282 F. Supp. 3d 1150 (N.D. Cal. 2017), the plaintiffs argued that Google forfeited CDA immunity by materially contributing to videos uploaded by ISIS by spreading the video through YouTube video-sharing channels’ subscribers. The court rejected the plaintiffs’ argument that Google’s algorithms constituted “development,” because “development” required “not merely . . . augmenting the content generally, but [rather] materially contributing to its alleged unlawfulness.” Since Google’s targeted algorithms were content neutral, Google did not satisfy the “material contribution test” and therefore did not lose CDA immunity for the upload of ISIS videos. However, as machine-learning algorithms based on user-generated data become increasingly sophisticated, at what point should they qualify as “development” sufficient to strip away CDA immunity? Tremble, Wild Westworld: Section 230 of the CDA and Social Networks’ Use of Machine-Learning Algorithms, 86 Fordham L. Rev. 825 (2017), discusses the phenomenon of websites like Facebook taking increasingly active roles by providing catered news feeds and suggested contacts based on its algorithms.

Should Facebook qualify as a co-developer of content, where the suggested newsfeeds and groups are generated by its machine-learning algorithms, instead of humans? With the increasing sophistication of machine-learning algorithms and aggregation of user-generated data, how should CDA respond? If the original purposes of granting Internet service providers immunity were to protect the development of the Internet and promote self-regulation, what new purposes does CDA immunity serve in the age of artificial intelligence?

3. *CDA §230 immunity and online censorship.* With the strong populist resentment against Internet providers like Facebook and Google, pressure continues to mount to either repeal or limit section 230. For a cautionary response, see Kosseff, Section 230 Created the Internet as We Know It. Don’t Mess with It, Los Angeles Times, Mar. 29, 2019, <https://www.latimes.com/opinion/op-ed/la-oe-kosseff-section-230-internet-20190329-story.html>. An August 2019 draft executive order entitled “Protecting Americans from Online Censorship” proposed significant limitations on the autonomy that Internet service providers enjoy under CDA §230. The White House proposal contemplates having the Federal Communications Commission (FCC) police alleged social media censorship. The draft order “calls for the FCC to develop new regulations clarifying how and when the law protects social media websites when they decide to remove or suppress content on their platforms.” Should the FCC step in to regulate social media platforms? If so, would government intervention create more or less online censorship?

SECTION C. FALSE OR DEFAMATORY STATEMENTS

Restatement of the Law (Second) of Torts

§559. DEFAMATORY COMMUNICATION DEFINED

A communication is defamatory if it tends so to harm the reputation of another as to lower him in the estimation of the community or to deter third persons from associating or dealing with him.

PARMITER v. COUPLAND

151 Eng. Rep. 340, 342 (Ex. 1840)

PARKE, B. A publication, without justification or lawful excuse, which is calculated to injure the reputation of another, by exposing him to hatred, contempt, or ridicule, is a libel.

MUZIKOWSKI v. PARAMOUNT PICTURES CORP.

322 F.3d 918 (7th Cir. 2003)

WOOD, J. [In 2000, defendant Paramount Pictures released a movie, *Hardball*, with the actor Keanu Reeves, which was based on a book written by Daniel Coyle, *Hardball: A Season in the Projects*. The book recorded Coyle's experiences as a coach in the Little Leagues on the North Side of Chicago. The book was described as a work of non-fiction and contained throughout it various references to plaintiff Robert Muzikowski by name. In contrast to the book, the movie credits stated: "While this motion picture is in part inspired by actual events, persons and organizations, this is a fictitious story and no actual persons, events or organizations have been portrayed." The movie then chronicles the activities of other coaches in the league, including one fictitious coach named Conor O'Neill. Neither Robert Muzikowski's first or last name is used in the film. O'Neill's character was based in part on the plaintiff Muzikowski, but the movie attributed to O'Neill certain derogatory features that Muzikowski did not have. The accurate biographical information was that the O'Neill character had dropped out of college after the death of his father, had used illegal drugs and alcohol, had been arrested for participating in a bar brawl that left a scar on his left hand, had driven a blue station wagon, had from time to time "lost it," and had spoken at the funeral of one of his players who had been killed in a gang incident. After Paramount began promoting the movie in 2000, Muzikowski began getting telephone calls from all over the country from friends and acquaintances telling him that Paramount was about to make a movie about him. The defamation suit arose because of the negative features that *Hardball* had added to the historical record. It stated that O'Neill

p. 941

had not been able to break his drinking habit when, in reality, Muzikowski had not had a drink in 17 years. The movie depicted O'Neill as having committed various crimes such as "battery, theft, criminal destruction of property, disorderly conduct, and drinking on the public way," and depicted him as falsely representing himself as a broker when he did not hold a license. In the movie, O'Neill is a ticket scalper and gambler, and gets involved with the Little League in order to pay off a gambling debt when in fact Muzikowski had done so "solely out of a genuine concern for children."

The plaintiff's efforts to enjoin distribution of the film came to naught, and the district court dismissed his

claim for damages on summary judgment. After disposing of some preliminary procedural matters, Wood, J., continued:]

III

The parties agree that Illinois law applies to the substance of Muzikowski's claim, and so (to the extent it is pertinent) we will confine our discussion accordingly. A defamatory statement is one that "tends to cause such harm to the reputation of another that it lowers that person in the eyes of the community or deters third persons from associating with him." *Kolegas v. Heftel Broad. Corp.*, 607 N.E.2d 201, 206 (Ill. 1992). An Illinois defamation action may state a claim either for defamation *per se* (statements so harmful to reputation that damages are presumed) or defamation *per quod* (statements requiring extrinsic facts to show their defamatory meaning). *Bryson v. News Am. Publ'ns, Inc.*, 672 N.E.2d 1207, 1214 (Ill. 1996). The district court found that Muzikowski had not stated a claim for defamation *per se* because the statements Paramount made were reasonably capable of an "innocent construction" or of referring to somebody other than Muzikowski. It dismissed the *per quod* claim because, under Fed. R. Civ. P. 9(g) (which applies to a state law defamation case in federal court), Muzikowski had not met the heightened pleading standard for special damages and pecuniary loss.

A

We begin with the defamation *per se* claim. In a *per se* action, Muzikowski may recover only if Paramount's statements fit into one of the limited categories of statements or imputations that Illinois considers actionable *per se*: (1) commission of a criminal offense; (2) infection with a venereal disease; (3) inability to perform or want of integrity in the discharge of duties of public office; (4) fornication or adultery; or (5) words that prejudice a party in her trade, profession, or business.

Even if a statement falls into a recognized category, it will not be actionable *per se* if the statement "may reasonably be innocently interpreted or reasonably be interpreted as referring to someone other than the plaintiff." *Chapski v. Copley Press*, 442 N.E.2d 195, 199 (Ill. 1982). In Illinois courts, this determination is made by the judge and it is regarded as a question of law. Allocation of functions between judge and jury in federal court, however, are a matter of federal law.

p. 942

Moreover, facts beyond those that appear in a federal complaint may be relevant to the reasonableness inquiry, which requires that statements be read in their natural sense, not in the light most favorable to the defendant. However, if a statement is capable of two reasonable constructions, one defamatory and one innocent, the innocent one will prevail.

Paramount provides two reasons why it is reasonable to construe the statements in question as referring to someone other than Muzikowski (namely O'Neill, an entirely fictional character). First, it points to material differences between Muzikowski and O'Neill, which Muzikowski himself identifies in his complaint. Second, it contends that because Hardball is a work of fiction, it cannot reasonably be interpreted to refer to Muzikowski.

The second contention is more easily dispensed with and so we turn to it first. "[S]imply because the story

is labeled ‘fiction’ and, therefore, does not purport to describe any real person” does not mean that it may not be defamatory *per se*. In *Bryson*, the plaintiff sued a magazine publisher over an article appearing in its fiction section. The article featured a character who also had the last name of Bryson (but not the plaintiff’s first name), and who was described as a “slut.” The article was set in southern Illinois, where both the plaintiff and the author of the article resided, and the plaintiff alleged 25 other physical attributes and life experiences she shared with the character. Under these circumstances, the Illinois Supreme Court held that the plaintiff should have the opportunity to prove that the character bore “such a close resemblance to the plaintiff that reasonable persons would understand that the character was actually intended to portray the plaintiff.” In light of *Bryson*, the mere fact that Paramount labeled its movie “fictitious” is not enough to shield it from an Illinois defamation action.

Paramount responds that its case is different from *Bryson* because Robert Muzikowski is never referenced by name in *Hardball*, and thus his pleading cannot be construed to support a claim for defamation *per se* [Bryson and other cases suggest] that there is no automatic ban on recovery if the plaintiff is not named, . . . but that instead that Illinois imposes a heightened pleading standard for complaints basing claims on publications that do not literally name the plaintiff.

That may be the Illinois pleading rule, but it of course does not apply in a federal court. . . . Even if Muzikowski’s complaint would not have met Illinois’s heightened pleading standard, we are satisfied that it was sufficient to put Paramount on notice of his claim. In his complaint, he lists in great detail many similarities between himself and O’Neill that could cause a reasonable person in the community to believe that O’Neill was intended to depict him and that Paramount intended *Hardball*’s mischaracterizations to refer to him.

Notwithstanding those details, Paramount argues that Muzikowski has failed to plead a category of speech that is defamatory *per se*. Muzikowski in response asserts that he fits within two of the five possible categories. First, Muzikowski claims Paramount’s portrayal of O’Neill has injured him in his profession or business. In *Hardball*, O’Neill is lying when he tells people that he is a licensed securities broker. As a matter of substantive Illinois law, alleging or implying that a person is not a legitimate member of her profession is defamatory *per se*. Paramount is

p. 943

correct that some of Muzikowski’s other allegations, such as his claim that he will be damaged because the movie asserts that his motives for coaching were pecuniary and not philanthropic, are statements of opinion which do not amount to defamation *per se*. But the narrow accusation that O’Neill/Muzikowski is an unlicensed broker fits squarely within the *per se* category.

Furthermore, Muzikowski has adequately alleged that Paramount has imputed to him the commission of a crime of moral turpitude. Such a crime cannot be a mere misdemeanor but must be punishable by imprisonment. Muzikowski describes numerous crimes that the O’Neill character commits, some of which (such as ticket scalping and drinking on the public way) are not punishable by imprisonment. Some of them, however, are more serious, such as the crime of theft, which has been held to be defamatory *per se*.

In the end, the most serious hurdle Muzikowski faces is the question whether he has in essence pleaded

himself out of court, by showing that the federal trier of fact (whether judge or jury) would be compelled to find an innocent construction of the movie. Paramount argues that this is the case, and in support of its position it points to a number of differences between the real and the fictional man that are apparent on the face of the complaint. *Hardball* focuses on how O'Neill, a down-and-out gambler, finds redemption by coaching an inner-city baseball league. Muzikowski, in contrast, found redemption long before he became involved in Little League. O'Neill drinks alcohol, while Muzikowski no longer does. O'Neill gambles while Muzikowski does not, and O'Neill begins coaching only to pay for his gambling addiction while Muzikowski co-founded multiple inner-city leagues out of a genuine concern for children.

In our view, Muzikowski might be able to produce evidence showing that there is in fact no *reasonable* interpretation of the movie that would support an innocent construction. He may be able to show that no one could think that anyone but him was meant, and the changes to “his” character, far from supporting an innocent construction that O'Neill is a fictional or different person, only serve to defame him in the ways already discussed. We conclude that Muzikowski’s allegations, read in the light most favorable to him, entitle him to the chance to prove his claim under a defamation *per se* theory. As the case develops further, of course, it is entirely possible that Paramount will be able to produce enough facts to support its “innocent construction” argument. At this stage, however, we believe it was premature to reject Muzikowski’s case.

B

[The court then dismissed Muzikowski’s per quod claim because he “concedes in his reply brief that he did not itemize his losses or plead specific damages of actual financial injury.”]

[Reversed and remanded.]

NOTES

1. *Mitior sensus*. As *Muzikowski* indicates, defamation law must set rules of construction for ambiguous statements. In the early common actions for slander,

p. 944

the maxim was: “Sensus verborum est duplex, mitis et asper, et verba semper sunt accipienda in mitiore sensu.” (Loosely translated: “When words have two meanings, lenient and severe, they will always be construed in the more lenient sense.”) An early work, Bower, *Actionable Defamation* 332, 333 (1908), recounted the extremes to which this rule had been taken:

To take a few illustrations, it was solemnly held in one case that a “coiner” *might* mean an officer in the Mint; in another, the expression “forger” *might* conceivably import no more than the honourable industry of the metal-worker. . . .

This curious doctrine originated at a period in the history of the English law of defamation when the devices employed by the courts of common law to recover their lost jurisdiction over

actions of slander had achieved an embarrassing success, and similarly artificial methods had to be resorted to in order to keep within manageable bounds the ever rising flood of this species of litigation. The fact that the doctrine was never applied to libel, the courts not being burdened overmuch with actions of this description, betrays the opportunism of its origin, and so also does the fact that, as soon as the practical necessity for its application ceased to exist, the rule, like all other expedients “ad hoc,” disappeared utterly.

For a modern account of this and other early developments in the law of defamation, see Helmholz, *Select Cases on Defamation to 1600* (1985).

2. *Ordinary meaning versus innocent construction.* The question of innocent construction often turns on time and circumstances. In *Bryson*, discussed in *Muzikowski*, the defendant described the plaintiff using the term “slut,” which *Roby v. Murphy*, 27 Ill. App. 394 (1888), had held to be not defamatory in 1888.

At the time *Roby* was decided, Webster’s dictionary defined the term “slut” as “an untidy woman,” “a slattern” or “a female dog,” and stated that the term was “the same as ‘bitch.’” Apparently, when *Roby* was decided, none of the dictionary definitions of “slut” implied sexual promiscuity. Moreover, the *Roby* court found that, even in its “common acceptance,” the term “slut” did not amount to a charge of unchastity.

We cannot simply assume that the term “slut” means the same thing today as it did a century ago. Many modern dictionaries include the definitions of the term “slut” cited in *Roby*, but add new definitions that imply sexual promiscuity. See, e.g., Webster’s New World Dictionary (2d Coll. ed. 1975) (“a sexually immoral woman”); American Heritage Dictionary 1153 (2d Coll. ed. 1985) (“[a] woman of loose morals” “prostitute”). Moreover, in the present age, the term “slut” is commonly used and understood to refer to sexual promiscuity.

McMorrow, J., weighed in with this dissent:

As a general rule, it is not actionable to call a woman a “slut” unless the word is used in such a manner as to impute whoredom. This rule recognizes that the word itself does not always impute a breach of chastity, but carries with it such nonactionable connotations as brazen or shameless. Indeed, as defendants point out, and the majority concedes, the American Heritage Dictionary contains several

p. 945

definitions of the word “slut,” such as a “slovenly, dirty woman,” “a woman of loose morals,” a “prostitute,” “a bold, brazen girl,” or “a female dog.” Consequently, because the word has many different meanings, most of which are not defamatory *per se*, context is crucial; for as noted above, if a word “may reasonably be innocently interpreted,” it is not actionable *per se*.

The Supreme Court refused to apply any rule of innocent construction in *Milkovich v. Lorain Journal Co.*, 497 U.S. 1, 21 (1990), as follows: “It is simply this: if you get in a jam, lie your way out,” and “[i]f you’re successful enough, and powerful enough, and can sound sincere enough, you stand an excellent chance of

making the lie stand up, regardless of what really happened.” The Court rebuffed defendant’s efforts to dismiss these statements as “loose, figurative or hyperbolic language” to which the opinion privilege would attach. “Simply couching such statements in terms of opinion does not dispel these implications; and the statement, ‘In my opinion Jones is a liar,’ can cause as much damage to reputation as the statement, ‘Jones is a liar.’”

Similarly, in *Masson v. New Yorker Magazine, Inc.*, 501 U.S. 496, 513 (1991), the Supreme Court refused to afford the opinion privilege to allegedly fabricated quotations in which the plaintiff was said to have described himself as an “intellectual gigolo”—“you get pleasure from him, but don’t take him out in public,” during an interview with Janet Malcolm, the writer of the *New Yorker* story. Kennedy, J., noted that in a serious account published in a magazine that “seemed to enjoy a reputation for scrupulous factual accuracy,” a reader could be expected to take these words at “face value.”

A defendant may be able to argue to the jury that quotations should be viewed by the reader as nonliteral or reconstructions, but we conclude that a trier of fact in this case could find that the reasonable reader would understand the quotations to be nearly verbatim reports of statements made by the subject.

Masson further explained the common law principle that inaccuracies alone do not render a statement false if there remains “substantial truth” to what was said. “Minor inaccuracies do not amount to falsity so long as ‘the substance, the gist, the sting, of the libelous charge be justified.’”

Masson finally came to closure 11 years after the publication of the original *New Yorker* story, when the jury found that two of Malcolm’s statements were false, one of which was defamatory, but that none had been published with the actual malice necessary for awarding damages. For an account of the subdued ending to an epic struggle, see Margolick, Psychoanalyst Loses Libel Suit Against New Yorker Reporter, N.Y. Times, Nov. 3, 1994, at A1.

In *Lott v. Levitt*, 556 F.3d 564, 569-570 (7th Cir. 2009), defendant Steven Levitt (and his unnamed coauthor Steven Dubner) published in their best-selling book *Freakonomics*, which embarked on a “treasure-hunt” of freakish curiosities, the following passage about the economist John Lott, who was the author of the book *More Guns, Less Crime*:

p. 946

Then there was the troubling allegation that Lott actually invented some of the survey data that support his more-guns/less-crime theory. Regardless of whether the data were faked, Lott’s admittedly intriguing hypothesis doesn’t seem to be true. When other scholars have tried to replicate his results, they found that right-to-carry laws simply don’t bring down crime.

John Lott

Source: Wikimedia Commons

In response to Lott's claim that this passage "amounted to an accusation that he falsified his results," Evans, J., invoked the doctrine of innocent construction to deflect Lott's claim that the statement was defamatory per se:

Using an academic definition of "replicate," Lott maintains that the passage means that others repeated, to a tee, his technical analysis but were unable to duplicate his results, suggesting that he either faked his data or performed his analysis incompetently.

But this technical reading is not the only reasonable interpretation of the passage. After all, *Freakonomics* didn't become a bestseller by targeting just academics. . . . In this context, it is reasonable to read "replicate" in more generic terms. That is, the sentence could mean that scholars tried to reach the same conclusion as Lott, using different models, data, and assumptions, but could not do so. This reading does not imply that Lott falsified his results or was incompetent; instead, it suggests only that scholars have disagreed with Lott's findings about the controversial relationship between guns and crime. By concluding that this more generic definition of "replicate" is reasonable, we are not assuming that the reader is a simpleton. After all, econometrics is far from conventional wisdom. We are, however, taking into account the context of the statement and acknowledging that the natural and obvious meaning of "replicate" can lie outside the realm of academia for this broadly appealing book.

A closer look at the paragraph where the contested sentence is found supports this innocent reading. The paragraph describes and critiques Lott’s “idea,” “theory,” and “hypothesis,” but makes no mention of his methodology or what data set he used. In this context, it is natural to read Levitt’s statement as a critique on his theory, rather than an accusation of falsifying data. In fact, instead of weighing in on the rumor that Lott faked some of his results, Levitt distanced himself from it. Levitt mentioned the “troubling allegation,” but noted that “[r]egardless of whether the data were faked, Lott’s admittedly intriguing hypothesis doesn’t seem to be true.” Far from assailing Lott’s competence, he acknowledged that Lott’s theory is “sensible” and “intriguing.”

Does Lott’s claim survive if it applies only to the professional economists who read the book?

p. 947

3. *Newspaper headlines.* Unlike reviews and opinion pieces, context plays a diminished role with newspaper headlines, which are thereafter corrected by qualifications buried in the body of the text. A headline may be libelous even though the full story sufficiently explains it. The rule was justified in *Sprouse v. Clay Communication, Inc.*, 211 S.E.2d 674, 686 (W. Va. 1975):

Generally, where the headline is of normal size and does not lead to a conclusion totally unsupported by the body of the story, both story and headline are to be considered together for their total impression. However, where oversized headlines are published which reasonably lead the average reader to an entirely different conclusion [from] the facts recited in the body of the story, and where the plaintiff can demonstrate that it was the intent of the publisher to use such misleading headlines to create a false impression on the normal reader, the headlines may be considered separately with regard to whether a known falsehood was published.

See also Restatement (Second) of Torts §563, comment *d*, which notes that the “context” of a defamatory newspaper headline does not “ordinarily” include the text of the article itself. These principles were applied in *Kaelin v. Globe Communications Corp.*, 162 F.3d 1036 (9th Cir. 1998), in which the defendant published in the *National Examiner* a headline—COPS THINK KATO DID IT—one week after O.J. Simpson was acquitted of the murders of Nicole Brown Simpson and Ronald Goldman. The court held that the headline standing alone was capable of meaning that Kato Kaelin, who was staying in a guest house on the Simpson property, had committed the murders. It rejected the argument that a sub-headline—he fears that they want him for perjury, says pals—and the story buried 17 pages in the interior of the *National Examiner* were sufficient to escape liability.

Since the publication occurred just one week after O.J. Simpson’s highly publicized acquittal for murder, we believe that a reasonable person, at that time, might well have concluded that the “it” in the first sentence of the cover and the internal headlines referred to the murders. Such a reading of the first sentence is not negated by or inconsistent with the second sentence as a matter of logic, grammar, or otherwise. In our view, an ordinary reader reasonably could have read the headline to mean that the cops think that Kato committed the murders *and* that Kato thinks that he is wanted for perjury.

4. Of and concerning the plaintiff. H. Walker Royall was involved in controversial development activities in Freeport, Texas. His efforts, along with those of others, were chronicled in a book, *Bulldozed*, written by Carla Main, portions of which sought to “tell the story of the City’s plan to use eminent domain to condemn waterfront property along the Old Brazos River to build a private yacht marina.” Royall sued Main, her publisher Encounter books, and Professor Richard Epstein for defamation. Epstein had written this blurb on the back of the book:

Like a Greek tragedy unfolding, Carla Main’s book chronicles the eminent domain struggles in Freeport, Texas, which pitted the Gore family, with its longtime

p. 948

shrimp business, against the machinations of an unholy alliance between city politicians and avaricious developers. If you have ever shared the Supreme Court’s unquestioned deference to the public planning process that shaped its ill-fated *Kelo* decision, you’ll surely change your mind as you follow this sordid saga to its bitter end. You’ll never look at eminent domain in the same way again.

Even though Royall was not named in the blurb, could he prevail on a defamation claim based on the blurb, by seeking to link it to specific statements about him in the book? If so, is the statement defamatory?

Such issues are even trickier with regard to charges of libel in fictional writings. Thus in *Greene v. Paramount Pictures Corp.*, 138 F. Supp. 3d 226, 236 (E.D.N.Y. 2015), Greene alleged that he had been defamed in the portrayal of Nicky “Rugrat” Koskoff in the movie *The Wolf of Wall Street*. Seybert, J., noted that libel in fiction plaintiffs walk a fine line of “simultaneously assert[ing] that the character is ‘of and concerning’ him and her because of their similarities, but also must deny significant aspects of the fictional character, i.e. the defamatory aspects of the character.” She held that, given the similarities between plaintiff and Koskoff and the public nature of the fraud, the plaintiff’s claims survived a motion to dismiss.

On the constitutional status of the “of and concerning” requirement, see *New York Times v. Sullivan*, *infra* at 1002.

WILKOW v. FORBES, INC.

241 F.3d 552 (7th Cir. 2001)

EASTERBROOK, J.

[This case pertains to a *Forbes* magazine column on the case of *Bank of America National Trust & Savings Ass’n v. 203 North LaSalle Street Partnership*, 526 U.S. 434 (1999), which involved the interaction of two bankruptcy rules. The first, the absolute-priority rule, requires that secured creditors be paid off in the order of their loan, such that a senior mortgagee has to be paid off in full before a junior mortgagee receives any payment. The second, the new-value rule, allows a subsequent contributor of equity to the business to vault over preexisting lenders to the extent that they contribute new value to the enterprise.] . . . [I]n *203 North LaSalle* we [the Seventh Circuit] held that the equity investors could retain ownership of a commercial

office building, in exchange for about \$6 million in new capital over a five-year period, even though the principal lender would fall about \$38 million short of full repayment. This was the decision on which *Forbes* published a short column, seven months before the Supreme Court held the plan “doomed, . . . without necessarily exhausting its flaws, by its provision for vesting equity in the reorganized business in the Debtor’s partners without extending an opportunity for anyone else either to compete for that equity or to propose a competing reorganization plan.” 526 U.S. at 454.

The majority opinion in the Supreme Court required about 8,000 words to resolve the case—and without reaching a final decision on the vitality of the

p. 949

new-value exception (though the majority’s analysis hog-tied the doctrine). The majority opinion in this court ran about 9,500 words, with 5,200 more in a dissent. A 670-word article such as the one *Forbes* published could not present either the facts of the case or the subtleties of the law. What the article lacked in analysis, however, it made up for with colorful verbs and adjectives. Taking lenders’ side, *Forbes* complained that “many judges, ever more sympathetic to debtors, are allowing unscrupulous business owners to rob creditors.” According to the article, a partnership led by Marc Wilkow “stiffed” the bank, paying only \$55 million on a \$93 million loan while retaining ownership of the building. . . . Its core paragraph reads:

By the mid-1990s, rents were not keeping up with costs. When the principal came due in January 1995, Wilkow and his partners pleaded poverty. To keep the bank from foreclosing, LaSalle Partnership filed for bankruptcy. Appraisals of the property came in at less than \$60 million. In theory the bank was entitled to the entire amount. It suggested selling the property to the highest bidder. Determined to keep the building, LaSalle partners asked the bankruptcy court instead to accept a plan under which the bank would likely receive a fraction of what it was owed while the partners would keep the building. The bank, not the equity holder, would take the hit.

Wilkow replied with this libel suit under the diversity jurisdiction, contending that *Forbes* and Brigid McMenamin, the article’s author, defamed him by asserting that he was in poverty (or, worse, “pledged poverty” when he was solvent) and had filched the bank’s money. According to Wilkow, *Forbes* should at least have informed its readers that the bank had lent the money without recourse against the partners, so that a downturn in the real estate market, rather than legal machinations, was the principal source of the bank’s loss. . . .

[Easterbrook, J., addressed some procedural, choice of law, and constitutional issues, and continued:]

We don’t think it necessary to consider either constitutional limits on liability for defamation or privileges under New York law, because this article is not defamatory under Illinois law in the first place. In Illinois, a “statement of fact is not shielded from an action for defamation by being prefaced with the words ‘in my opinion,’ but if it is plain that the speaker is expressing a subjective view, an interpretation, a theory, conjecture, or surmise, rather than claiming to be in possession of objectively verifiable facts, the statement is not actionable.” *Haynes v. Alfred A. Knopf, Inc.*, 8 F.3d 1222, 1227 (7th Cir. 1993).

Characterizations such as “stiffing” and “rob” convey McMenamin’s objection to the new-value exception. She expostulates against judicial willingness to allow debtors to retain interests in exchange for new value, not particularly against debtors’ seizing whatever opportunities the law allows. Nothing in the article implies that Wilkow did (or even proposed) anything illegal; *Forbes* informed the reader that the district court and this court *approved* Wilkow’s proposed plan of reorganization. Every detail in the article (other than the quotation in the final paragraph) comes from public documents; the article does not suggest that

p. 950

McMenamin knows extra information implying that Wilkow pulled the wool over judges’ eyes or engaged in other misconduct. Colloquialisms such as “pleaded poverty” do not imply that Wilkow was destitute and failing to pay his personal creditors, an allegation that would have been defamatory. Read in context, the phrase conveys the idea that the partnership could not repay the loan out of rents received from the building’s tenants. After all, inability to pay one’s debts as they come due is an ordinary reason for bankruptcy, and 203 North LaSalle Street Partnership *did* file a petition in bankruptcy. Filing a bankruptcy petition is one way of “pleading poverty.”

Although the article drips with disapproval of Wilkow’s (and the judges’) conduct, an author’s opinion about business ethics isn’t defamatory under Illinois law, as *Haynes* and *Bryson* explain. Informing the reader about the nonrecourse nature of the loan might have made Wilkow look better, but it would not have drawn the article’s sting: that the partners got to keep the property even though the bank lost \$38 million. The original deal’s fundamental structure was that the partnership would repay the loan from rental income, and that if revenue was insufficient the bank could choose to foreclose (cutting its loss and reinvesting at the market rate elsewhere), to renegotiate a new interest rate with the partners, or to forebear in the hope that the market would improve and the full debt could yet be paid. These options collectively would be worth more than the market value of the building on the date of default. Yet the partners refused to honor these promises to the bank. They persuaded judges to eliminate the bank’s rights to foreclose, to renegotiate, or to forebear and retain the full security interest. The plan of reorganization stripped down the security interest, prevented the bank from foreclosing, and required it to finance the partnership’s operations for the next decade, at a rate of interest below what the bank would have charged in light of the newly revealed riskiness of the loan. If the real estate market fell further during that time, so that the partnership could not repay even the reduced debt, then the bank was going to lose still more money. The present value of the promises made to the bank in the plan of reorganization therefore was less than the appraised value of the building. But the partners stood to make a great deal of money if the market turned up again (as it did), for they had shucked \$38 million in secured debt while retaining most appreciation in the property’s value. Whether that was a sound use of bankruptcy reorganization, independent of the plan’s new-value aspects, is open to question.

A reporter is entitled to state her view that an ethical entrepreneur should have offered the lender a better bargain, such as allowing the bank to foreclose and take its \$55 million with certainty, avoiding the additional risk that this plan fastened on the lender. Foreclosure would have had serious consequences for the partners, who would have lost about \$20 million in recaptured tax benefits. These potential losses created room for negotiation. Armed with the new-value exception, however, the partners were able to retain the tax benefits, sharing none with the bank in exchange for its approval of a restructuring, while depriving the bank of a security interest that would have been valuable when the market recovered. Although a reader might arch an eyebrow at Wilkow’s strategy, an allegation of

greed is not defamatory; sedulous pursuit of self-interest is the engine that propels a market economy. Capitalism certainly does not depend on sharp practices, but neither is an allegation of sharp dealing anything more than an uncharitable opinion. Illinois does not attach damages to name-calling. See *Stevens v. Tillman*, 855 F.2d 394, 400-402 (7th Cir. 1988) (collecting cases, including examples such as “sleazy” and “rip-off”). Wilkow’s current and potential partners would have read this article as an endorsement of Wilkow’s strategy; they want to invest with a general partner who drives the hardest possible bargain with lenders. By observing that Wilkow used every opening the courts allowed, *Forbes* may well have improved his standing with investors looking for real estate tax shelters (though surely it did not help his standing with lenders). No matter the net effect of the article, however, it was not defamatory under Illinois law, so the judgment of the district court is Affirmed.

NOTES

1. Reputation in the eyes of which beholder? The last paragraph of Easterbrook’s opinion observes that potential investors could find the *Forbes* story favorable about the plaintiffs. How should the law of defamation apply if a story is read positively by some readers and negatively by others? Does the general community response matter if only specialized individuals are likely to do business with Wilkow in the future?

Restatement of the Law (Second) of Torts

§559. DEFAMATORY COMMUNICATION DEFINED

Comment e. Standard by which defamation is determined: A communication to be defamatory need not tend to prejudice the other in the eyes of everyone in the community or of all of his associates, nor even in the eyes of a majority of them. It is enough that the communication would tend to prejudice him in the eyes of a substantial and respectable minority of them, and that it is made to one or more of them or in a manner that makes it proper to assume that it will reach them. . . . Although defamation is not a question of majority opinion, neither is it a question of the existence of some individual or individuals with views sufficiently peculiar to regard as derogatory what the vast majority of persons regard as innocent. . . .

Illustration 3: *A*, a member of a gang of hoodlums, writes to *B*, a fellow bandit, that *C*, a member of the gang, has reformed and is no longer to be trusted with the loot of the gang. *A* has not defamed *C*.

American law traditionally allows the plaintiff to prevail if she can point to any subgroup of the population that would find the statement defamatory. In *Peck v. Tribune Co.*, 214 U.S. 185, 189-190 (1909), an advertisement printed in the

defendant’s newspaper used the picture of the plaintiff, a nurse in real life, over the name of some other woman who had extolled the virtues of the malt whiskey promoted in the ad. Holmes, J., held, first, that the

ad referred to the plaintiff, notwithstanding the incorrect name below the picture. He continued:

It was pointed out that there was no general consensus of opinion that to drink whiskey is wrong or that to be a nurse is discreditable. It might have been added that very possibly giving a certificate and the use of one's portrait in aid of an advertisement would be regarded with irony, or a stronger feeling, only by a few. But it appears to us that such inquiries are beside the point. It may be that the action for libel is of little use, but while it is maintained it should be governed by the general principles of tort. If the advertisement obviously would hurt the plaintiff in the estimation of an important and respectable part of the community, liability is not a question of a majority vote.

We know of no decision in which this matter is discussed upon principle. But obviously an unprivileged falsehood need not entail universal hatred to constitute a cause of action. No falsehood is thought about or even known by all the world. No conduct is hated by all. That it will be known by a large number and will lead an appreciable fraction of that number to regard the plaintiff with contempt is enough to do her practical harm.

Accordingly Holmes held that the question of defamation should have been left to the jury. Should an offset to damages be allowed if the statement *improves* the reputation of the plaintiff in the eyes of another respectable segment of the community?

The background of both the plaintiff and her local community matter in determining whether a statement is defamatory. In *Nguyen-Lam v. Cao*, 171 Cal. App. 4th 858, 867 (Ct. App. 2009), the court emphasized that the audience—school board members—were in a heavily Vietnamese-American district when it held that a statement labeling the school superintendent a “Communist” was slander per se. Similarly, in *Parsi v. Daioleslam*, 595 F. Supp. 2d 99, 109 (D.D.C. 2009), the court concluded that allegations that plaintiffs were agents of the Iranian government were capable of conveying a defamatory meaning if those statements lowered plaintiffs in the estimation of a substantial, respectable group of their fellow Iranian residents.

2. *The “libel proof” plaintiff?* What result if the defendant defames a plaintiff who already has a horrible reputation in the relevant community for unrelated acts? *Cooper v. Greeley*, 1 Denio 347, 364-365 (N.Y. 1845), involved a celebrity literary dispute between the writer James Fenimore Cooper and Horace Greeley, the editor of *New York Tribune*. When threatened with the action Greeley famously replied: “Mr. Cooper will have to bring his action to trial somewhere. He will not like to bring it in New York, for we are known here, nor in Otsego for he is known there.” The court construed the newspaper remark to mean that plaintiff had such a poor reputation in Otsego that he would not risk filing suit there. The defendants pleaded in justification that plaintiff had acquired in Otsego “the reputation of a proud, captious, censorious, arbitrary, dogmatical, malicious, illiberal,

revengeful and litigious man, wherefore the said plaintiff was in bad repute in the said county of Otsego.” The court allowed defendant’s plea, noting: “Reputation is the estimate in which an individual is held by public fame in the place where he is known. And the existence of a good or bad reputation is, I think, a fact which may be directly put in issue.” But why should this issue be pleaded as a justification, instead of a

denial of harm flowing from the false statement? May a plaintiff's bad reputation make her "libel-proof"?

That issue came to a head during the 2016 presidential campaign when on October 12, 2016, candidate Donald Trump through his lawyer Mark Kasowitz asked the *New York Times* to remove from its website and issue an immediate apology for an article entitled "Two Women Say Donald Trump Touched Them Inappropriately." The next day David McCraw, the Times' assistant general counsel, published a tart reply that noted multiple instances of Trump's own comments regarding his actions toward women and stated that "nothing in our article has had the slightest effect on the reputation that Mr. Trump, through his own words and actions, has already created for himself."

3. *Group libel.* Yet another variation on this basic theme involves defamatory statements made about a group of which plaintiff is a member. Whether or not plaintiff succeeds in demonstrating defamation "of and concerning" herself depends on the size of the group and on whether the defamatory comment speaks of all members of the group or merely of some. In general, recovery applies only to all individuals in small groups. In *Neiman-Marcus v. Lait*, 13 F.R.D. 311 (S.D.N.Y. 1952), the defendants, in their book *U.S.A. Confidential*, charged that some models and saleswomen of the Neiman-Marcus store in Texas frequently served as "call girls" and that most of the male salesmen were homosexuals. Suit was brought by 9 models (constituting the entire staff of models at the time of publication), by 15 salesmen (out of a group of 25 at the time of publication), and by 30 saleswomen (out of a group of 382 at the time of publication). The defendants probably did not contest the claims of the nine models but moved to dismiss those of the salesmen and saleswomen. The court denied the motion as to the salesmen, emphasizing that the group was small and that the characterization was of "most" of them. It granted the motion to dismiss as to the saleswomen because of the size of the group, saying that "no reasonable man would take the writer seriously and conclude from the publication a reference to any individual sales woman."

The theory of small group defamation was established in *Elias v. Rolling Stone LLC*, 872 F.3d 97 (2d Cir. 2017), where a *Rolling Stone* article implied that seven members of the Phi Kappa Psi fraternity of UVA participated in or turned a blind eye to an allegedly brutal gang rape. That story, written by Sabrina Rubin Erdely, turned out to be fabricated, after which *Rolling Stone* issued an apology and retracted the story. The alleged rapists were not individually named. The district court dismissed the complaint on the ground that as a matter of law they were not specific enough to be "of and concerning" the plaintiffs. On appeal, Forrest, J., wrote, "[W]e

p. 954

conclude that the complaint plausibly alleged that the statements in the Article were 'of and concerning' them individually. We further conclude that the complaint plausibly alleged that all Plaintiffs were defamed as members of Phi Kappa Psi under a theory of small group defamation." "Because a reader of the Article could plausibly conclude that each member of Phi Kappa Psi was implicated either directly or indirectly in the alleged rapes, Plaintiffs can proceed under a theory of small group defamation," given that there were only 53 members of the fraternity.

For much of this century there has been considerable concern over the calculated defamation of large groups such as Jews, Catholics, and African Americans. Yet in these cases defamation claims consistently fail. Thus, in *Khalid Abdullah Tarig Al Mansour Faissal Fahd Al Talal v. Fanning*, 506 F. Supp. 186, 187

(N.D. Cal. 1980), the plaintiff brought a class action on behalf of some 600 million Muslims, alleging that the film *Death of a Princess* was defamatory to all Muslims because “it depicts the public execution of a Saudi Arabian princess for adultery.” The court denied the claim, noting that “to permit an action to lie for the defamation of such a multitudinous group . . . would render meaningless the rights guaranteed by the First Amendment to explore issues of public import.” For an argument that group libel rules should be automatically dismissed for groups over 25, see King, Reference to the Plaintiff Requirement in Defamatory Statements Directed at Groups, 35 Wake Forest L. Rev. 343 (2000).

4. *Injurious falsehood.* Should a plaintiff be allowed to recover special damages for harm caused by false but *nondefamatory* statements? In *Decker v. The Princeton Packet, Inc.*, 561 A.2d 1122 (N.J. 1989), publication of the obituary of a living plaintiff was not defamatory because it “did not impute to the plaintiff, any wrong and did not hold her up to ridicule.” Had there been proof of special damages, however, should the plaintiff have been allowed to recover, if not for defamation, for a separate tort of injurious falsehood? As the large number of defamation suits in commercial settings shows, defamation can be most devastating when it induces third parties not to do business with a plaintiff. The plaintiff’s injury is, of course, every bit as serious when the diversion of business is induced by injurious but nondefamatory falsehoods. For example, in *Radcliffe v. Evans*, 2 Q.B. 524 [Q.B. 1892], the defendant newspaper reported that the plaintiff had ceased to carry on his business as an engineer and boilermaker. The jury found specially that the words did not reflect on the plaintiff’s character and were not libelous. Judgment for plaintiff was affirmed, however, with Bowen, L.J., saying:

That an action will lie for written or oral falsehoods, not actionable per se nor even defamatory, where they are maliciously published, where they are calculated in the ordinary course of things to produce, and where they do produce, actual damage, is established law. Such an action is not one of libel or of slander, but an action on the case for damage willfully and intentionally done without just occasion or excuse, analogous to an action for slander of title.

If defamation is actionable without proof of malice, why require proof of malice in injurious falsehood cases? Should damages for emotional distress be

p. 955

allowed in injurious falsehood cases? See *Prosser, Injurious Falsehood: The Basis of Liability*, 59 Colum. L. Rev. 425 (1959).

SECTION D. LIBEL AND SLANDER

VARIAN MEDICAL SYSTEMS, INC. v. DELFINO

113 Cal. App. 4th 273 (Ct. App. 2003)

PREMO, Acting P.J. . . . Defendants Michelangelo Delfino and Mary Day used Internet bulletin boards to post numerous derogatory messages about their former employer, Varian Associates, Inc. (Varian) and two Varian executives. Varian and the two executives sued. Defendants treated the lawsuit as a challenge to their constitutional right to free speech and responded with a flood of spiteful messages posted on hundreds

of Internet bulletin boards. By the time of trial defendants had posted over 13,000 messages and vowed to continue posting until they died.

Defendants' position at trial was that their postings contained only truth, opinion, or hyperbole. They stressed their belief that they were constitutionally entitled to publish the offending messages and that large corporate plaintiffs ought not be permitted to stifle free speech by filing suit against them. The jury was not persuaded. Defendants were found liable for defamation, invasion of privacy, breach of contract, and conspiracy. The trial court determined that in view of defendants' promise to post until they died an injunction was necessary to prevent future injury. The judgment gives plaintiffs \$775,000 in damages and a broad injunction.

On appeal we are asked to consider whether the fact that defendants' messages appeared on Internet bulletin boards affects the character of the offending messages for purposes of defamation law. Specifically, defendants argue that typical Internet hyperbole cannot be considered defamatory. Defendants also argue that to the extent speech on the Internet may be defamatory it must be designated as slander, which requires proof of special damages, rather than libel, for which damages are presumed. . . .

A. Is There Sufficient Evidence to Support a Finding That Plaintiffs Were Defamed?

[The court first determined that there was sufficient evidence to support the jury's finding that defendants had defamed the plaintiffs. The statements included accusations of lies, hallucinations, mental illness, incompetence, harassment, discrimination, and stalking. Some of the derogatory messages stated that one of the plaintiffs rose in the ranks to her position through sexual favors and included other terms with sexual implications. The court also decided that even though Internet message boards were typically "freewheeling and irrelevant," they were not exempt from established legal and social norms.]

p. 956

B. Are Internet Postings Libel or Slander?

Defendants next argue that to the extent their Internet messages could be considered defamatory, they must be characterized as slander. Defendants point out that the distinction is crucial because slander requires proof of special damages and libel does not and since plaintiffs did not prove any special damages they cannot recover for defamation. . . . The issue presented here involves a question that has arisen only with the advent of Internet communications. Application of the common law to matters involving the Internet is of considerable public interest. Moreover, the distinction between libel and slander involves a practical difference in the requirements for pleading and proof so that the question is one that is likely to recur. . . .

A defamatory communication may be characterized either as libel or slander. (Civ. Code, §44.) The traditional distinction between libel and slander is that libel is written and slander is spoken. Defendants ignore this distinction and focus instead upon the practical difference, which involves the necessity to prove damages. Both distinctions are of ancient origin. Slander was considered a sin in Medieval England. When the action migrated to the civil courts the courts required proof of "temporal" or actual damages to avoid interfering with the church's authority over spiritual matters.

Libel arose with the advent of the printing press. Libel was at first a crime and was used to suppress political writings. It was later applied to non-political defamatory writings. Libel has been considered the greater wrong, either because of its criminal origins or because the permanence of its form endowed it with a greater propensity to breach the peace. In any event, by the early 19th Century libel was actionable per se, that is, damage was presumed.

Libel today is defined as a defamatory publication communicated “*by writing, printing, picture, effigy, or other fixed representation to the eye. . . .*” (Civ. Code, §45, italics added.) Slander is “*orally uttered, and also communications by radio or any mechanical or other means. . . .*” (Civ. Code, §46, italics added.) Television broadcasts are also treated as slander in this state. (See *White v. Valenta*, 234 Cal. App. 2d 243, 254 (1965).)

Defendants argue that Internet messages fall into the statutory classification of slander because they are communications by “any mechanical or other means” as specified in the slander statute. (§46.) Logic tells us that “mechanical or other means” cannot apply to all mechanical methods for producing a communication. After all, the cause of action for libel arose with the invention of mechanical means for reproducing the printed word. But the slander statute itself contains no clue to what the Legislature intended by the phrase. Accordingly, we may resort to the legislative history. Prior to 1945 Civil Code section 46 defined slander as a “false and unprivileged publication other than libel.” (Stats. 1945, ch. 1489, §2.) At the time there was some dispute about whether radio broadcasts should be characterized as slander or libel since even though communications delivered by radio were spoken, in most cases the messages were read from a written script. Some jurisdictions reasoned that because radio broadcasts had such a

p. 957

great potential for injury they should be treated as the supposedly greater wrong of libel. The California Legislature either rejected or ignored that reasoning and simply designated radio broadcasts as slander, amending the section to read as it does today. (Stats. 1945, ch. 1489, §2.) Thus, by categorizing radio broadcasts as slander, our Legislature adhered to the traditional distinction between libel and slander, i.e., that libel is written and slander is spoken.

[The court further reviewed the legislative history and rejected defendants’ contention that “communications by radio or any mechanical or other means” was intended to include anything like a computer or other device used to produce written communications.]

Defendants also urge us to categorize communications over the Internet as the supposed lesser wrong of slander because, since Internet communication is the modern-day equivalent of a speech on the “village green,” it deserves the greater protection traditionally accorded slander. The argument confuses the analyses. In defamation cases we are always mindful of the balance between the defendant’s constitutional right to free speech and the plaintiff’s interest in protecting his or her good name. However, that balance is struck by weighing factors such as the plaintiff’s status (as a public or private figure) and the subject of speech itself against the defendant’s constitutional interests. Whether the speech is classified as libel or slander is an arbitrary and, some would say, archaic distinction. At any rate, in California the distinction has little if anything to do with the constitutional analysis.

We find the plain language of the defamation statutes is dispositive. That is, defendants' messages were publications *by writing*. The messages were composed and transmitted in the form of written words just like newspapers, handbills, or notes tacked to a conventional bulletin board. They are representations "to the eye." True, when sent out over the Internet the messages may be deleted or modified and to that extent they are not "fixed." But in contrast with the spoken word, they are certainly "fixed." Furthermore, the messages are just as easily preserved (as by printing them) as they are deleted or modified. In short, the only difference between the publications defendants made in this case and traditionally libelous publications is defendants' choice to disseminate the writings electronically.

It has been noted that many forms of publication available to us today "cannot realistically be analyzed by reference to the traditional libel-slander dichotomy, which modern technology has rendered increasingly obsolete." (*Polygram Records, Inc. v. Superior Court*, 170 Cal. App. 3d 543, 552, fn. 9 (1985).) In this case, however, the publications are readily analyzed by reference to the existing statutes. We hold that written defamatory communications published by means of the Internet are properly characterized as libel.

[The court upheld the \$775,000 damage award, but overturned the original injunction placed upon defendants' future Internet posts. The court held that the portion of the injunction prohibiting future speech was an impermissible prior restraint under both the state and federal constitutions.]

NOTES

1. The common law distinction. Historically the common law drew a distinction between libel and slander. Libel was the proper theory when the defendant's statement was embodied in some permanent form, such as a book or a picture, or even a wax sculpture. Even public shadowing to prevent an individual from testifying against the defendant was treated as libelous because "[a]ctual pursuit and public surveillance of person and home are suggestive of criminality fatal to public esteem and productive of public contempt and ridicule." *Schultz v. Frankfort Marine Accident & Plate Glass Ins. Co.*, 139 N.W. 386, 390 (Wis. 1913).

Slander, for its part, consists primarily of false spoken words. In addition, "the use of a mere transitory gesture commonly understood as a substitute for spoken words, such as a nod of the head, a wave of the hand, or a sign of the fingers, is slander rather than libel." RST §568, comment *d*. More generally, Restatement (Second) of Torts §568(3) provides: "The area of dissemination, the deliberate and premeditated character of its publication and the persistence of defamation are factors to be considered in determining whether a publication is a libel rather than a slander."

The Restatement (Second) of Torts §568A states the modern position that "[b]roadcasting of defamatory matter by means of radio or television is libel, whether or not it is read from a manuscript." The English Defamation Act, 15 & 16 Geo. VI and Eliz. II. ch. 66, §§1, 16 (1952), adopts the same rule. Should social media websites, such as Facebook, Twitter, and Google Plus, be treated as libel or slander? Does it make a difference if the user is able to limit or not limit the visibility of his or her posts? How should courts handle

these communications?

For the classic criticism of the distinction between libel and slander, see Veeder, *The History and Theory of the Law of Defamation*, 3 Colum. L. Rev. 546, 571-573 (1903).

2. *Slander per se.* Under traditional law, libels were ordinarily actionable per se without proof of special damages, while slander was generally actionable only upon proof of special damages (e.g., a lost business arrangement), except in four exceptional categories of cases:

- a. *Loathsome diseases.* The presumption of damage has been confined to diseases that are not merely contagious but also “loathsome,” such as plague, leprosy, and venereal disease, and therefore result in social ostracism. The development of medical science has tended to freeze this category to the above limited examples. In *Chuy v. Philadelphia Eagles Football Club*, 595 F.2d 1265, 1281-1282 (3d Cir. 1979), the court held that cancer was not a loathsome disease, reasoning that “[t]he public’s reaction today to a victim of cancer is usually one of sympathy rather than scorn, support and not rejection.” By contrast, in *Nolan v. State*, 158 A.D.3d 186, 196, 69 N.Y.S.3d 277, 285 (App. Div. 2018), the court ruled that statements that impute HIV positive status to a person were defamatory per se under the traditional “loathsome disease” category, because “a significant segment of society has been too slow in understanding that those who have the disease are entitled to equal treatment

p. 959

under the law and the full embrace of society.” Does it make sense that cancer is no longer considered a loathsome disease, but HIV/AIDS still remains in that category?

- b. *Criminal conduct.* Also slanderous per se at common law was the imputation of criminal activities, the law apparently concerned that such a statement might expose plaintiff to criminal prosecution. However all charges of criminal misconduct are not slanderous per se. Most jurisdictions now insist that the crime involve “moral turpitude.” See, e.g., *Wooten v. Martin*, 131 S.W. 783 (Ky. 1910). Other jurisdictions follow the English rule and require that the words charge an offense punishable by death or imprisonment.

If plaintiff is accused of conduct that is criminal under the law in the state where the allegations are made, but not criminal where the conduct was performed, are the statements slanderous per se? *Klumph v. Dunn*, 66 Pa. 141 (1870), opted for the “law of the country where the words are spoken,” because it is by those laws that the reputation of the plaintiff is judged.

- c. *Imputation of unchastity.* The older common law did not treat as slanderous per se words that imputed unchastity to a woman. That result was reversed by statute in England in 1891 and in several states in the United States. States without such statutes sometimes granted recovery on the ground that the charge of fornication was criminal under local laws. Other states allowed the action regardless of whether there were imputations of criminal conduct. The first Restatement of Torts treated allegations of unchastity as slanderous per se. RT §574. See also 740 Ill. Comp. Stat. 145/1 (2015), which makes it actionable slander to publish or utter words that charge any person of being guilty of “fornication or adultery.” The Second Restatement §574 now makes slanderous per se allegations of “serious sexual misconduct,” which, as comment c now makes clear, applies to both men and women.

How should false allegations of homosexuality be treated? In *Albright v. Morton*, 321 F. Supp. 2d 130 (D. Mass. 2004), the court held that a statement identifying someone as a homosexual is not defamatory per se under Massachusetts law because such a statement no longer imputes criminal conduct. The court also said that if it were to agree that calling someone a homosexual is defamatory per se, it would, in effect, validate anti-homosexual sentiment and legitimize relegating homosexuals to second-class status. In contrast, in *Gallo v. Alitalia-Linee Aeree Italiane-Societa per Azioni*, 585 F. Supp. 2d 520, 549 (S.D.N.Y. 2008), the court recognized that many people in society no longer view homosexuality as particularly reprehensible and immoral but nonetheless acknowledged that homophobia is sufficiently widespread and deeply held that an imputation of homosexuality can be

deemed every bit as offensive as imputing unchastity to a woman and thus should be regarded as defamatory per se. But in *Yonaty v. Mincola*, 945 N.Y.S.2d 774 (App. Div. 2012), the court refused to follow *Gallo*, reasoning that “the defamatory tendency of a statement depends ‘upon the temper of the times [and] the current of contemporary public opinion.’” Should the legal status of imputations of homosexuality change as a gay people acquire more civil rights? See Bowen, The

p. 960

Times They Are a Changin’: New York’s Slow Progression Toward Eradicating Judicial Affirmation of Homophobia, 5 Charlotte L. Rev. 471 (2014).

What about false allegations of transgender status? In *Simmons v. American Media, Inc.*, No. BC660633, 2017 WL 5325381 (Cal. Super. Sept. 1, 2017), the court, citing *Albright*, rejected plaintiff’s defamation claim based upon a statement that he had withdrawn from public life “due to him transitioning from male to female,” reasoning that “even if there is a sizeable portion of the population who would view being transgender as negative, the court should not . . . ‘directly or indirectly, give effect to these prejudices.’” See generally Calvert et al., Defamation Per Se and Transgender Status: When Macro-Level Value Judgments About Equality Trump Micro-Level Reputational Injury, 85 Tenn. L. Rev. 1029, 1030 (2018).

- d. *Slander of a person’s trade or profession.* This critical category includes such charges that a surgeon is a butcher, or a cashier has his hands in the till. More problematic are statements reflecting adversely upon plaintiff’s character by charging dishonesty, sloth, immorality, or drunkenness. Also slanderous per se are unprivileged charges of dishonesty or corruption against public officials.

In *Ravnikar v. Bogojavlenksy*, 782 N.E.2d 508, 512 (Mass. 2003), both plaintiff and defendant were physicians working at a common facility. The defendant commented to a prospective new patient of the plaintiff that the plaintiff was dying of cancer when in fact she had been cured. Since the individual patient retained the plaintiff’s service anyway, no special damages could be proved. Nonetheless, the court allowed her claim for general damages to proceed, because “a statement that a physician is terminally ill can discourage potential patients by creating the natural inference that death is not far off and that the physician will be distracted by her medical condition and its treatment.” Why is this not a case of injurious falsehood?

In contrast, in *Gahafer v. Ford Motor Co.*, 328 F.3d 859, 862-863 (6th Cir. 2003), an obscenity-laced tirade accusing the plaintiff, a mid-manager employee, of fraud and castigating him for diverting time from his responsibilities as a “dimensional control engineer” was not treated as slander per se because these statements only hinted at frustration with Gahafer’s time commitment to his job responsibilities.

3. *Libel per quod and libel per se.* The elaborate common law distinction between libel per quod and libel per se, referred to in *Muzikowski, supra* at 940, depends on whether the reference to the plaintiff can be derived from the statement itself, in which case it can be libel per se (in itself) or whether it requires some reference to extrinsic evidence, in which case it is libel per quod (through which). When the defendant mentions the plaintiff by name, the statement may be libel per se. But when the defendant says, “The person who stole my money lives in the house next door,” extrinsic evidence is needed to establish that the statement refers to the plaintiff.

Even if the identity of the plaintiff is undisputed, extraneous facts may still be needed to establish the defamatory meaning. In *Braun v. Armour & Co.*, 173 N.E. 845 (N.Y. 1930), defendant had issued an advertisement setting forth a list of

p. 961

dealers in its meat products, including plaintiff, stating: “These progressive dealers listed here sell Armour’s Star Bacon in the new window-top carton.” In the complaint plaintiff added that he was a dealer in kosher meat and that bacon was a non-kosher product. Again the court held that the complaint stated a

cause of action.

SECTION E. BASIS OF LIABILITY: INTENTION, NEGLIGENCE, AND STRICT LIABILITY IN DEFAMATION

E. HULTON & CO. v. JONES

[1910] A.C. 20

[The defendant newspaper ran an article written by its Paris correspondent that in part read as follows: “‘Whist! There is Artemus Jones with a woman who is not his wife, who must be, you know—the other thing!’ whispers a fair neighbor of mine excitedly to her bosom friend’s ear. Really, is it not surprising how certain of our fellow-countrymen behave when they come abroad? Who would suppose by his goings on, that he is a church warden at Peckham?” Plaintiff was a lawyer named Thomas Artemus Jones of North Wales; he was not a church warden, nor did he reside at Peckham, but he had, up to 1901, contributed signed articles to defendant’s newspaper. Defendant’s contention that it had never heard of plaintiff and had used the name Artemus Jones as a fictitious name was accepted as true by plaintiff at the trial. Plaintiff produced witnesses who said they had read the article and thought that it referred to plaintiff. The trial judge charged the jury that the issue was not what the writer had intended but how the statement would be understood. At the trial plaintiff recovered a jury verdict of £1,750. The Court of Appeal affirmed by a two-to-one vote and, on appeal, the House of Lords affirmed.

The issue was perhaps most succinctly put during argument in the House of Lords when defendant’s counsel said: “The question is who was meant,” and Lord Loreburn asked: “Is it not rather who was hit?” Counsel replied: “No. A man cannot be held responsible for remote and improbable results of his actions.”]

LOREBURN, L.C. My Lords, I think this appeal must be dismissed. A question in regard to the law of libel has been raised which does not seem to me to be entitled to the support of your Lordships. Libel is a tortious act. What does the tort consist in? It consists in using language which others knowing the circumstances would reasonably think to be defamatory of the person complaining of and injured by it. A person charged with libel cannot defend himself by shewing that he intended in his own breast not to defame, or that he intended not to defame the plaintiff, if in fact he did both. He has none the less imputed something disgraceful and has none the less injured the plaintiff. A man in good faith may publish a libel believing it to be true, and it may be found by the jury that he acted in good faith believing it to be true, and reasonably believing it to be true, but that in fact the statement was false. Under those circumstances he has no defence to the action, however excellent his intention. If the intention of the

p. 962

writer be immaterial in considering whether the matter written is defamatory, I do not see why it need be relevant in considering whether it is defamatory of the plaintiff. The writing, according to the old form, must be malicious, and it must be of and concerning the plaintiff. Just as the defendant could not excuse himself from malice by proving that he wrote it in the most benevolent spirit, so he cannot shew that the libel was not of and concerning the plaintiff by proving that he never heard of the plaintiff. His intention in

both respects equally is inferred from what he did. His remedy is to abstain from defamatory words. . . .

The damages are certainly heavy, but I think your Lordships ought to remember two things. The first is that the jury were entitled to think, in the absence of proof satisfactory to them (and they were the judges of it), that some ingredient of recklessness, or more than recklessness, entered into the writing and the publication of this article, especially as Mr. Jones, the plaintiff, had been employed on this very newspaper, and his name was well known in the paper and also well known in the district in which the paper circulated. In the second place the jury was entitled to say this kind of article is to be condemned. There is no tribunal more fitted to decide in regard to publications, especially publications in the newspaper Press, whether they bear a stamp and character which ought to enlist sympathy and to secure protection. If they think that the licence is not fairly used and that the tone and style of the libel is reprehensible and ought to be checked, it is for the jury to say so; and for my part, although I think the damages are certainly high, I am not prepared to advise your Lordships to interfere, especially as the Court of Appeal have not thought it right to interfere, with the verdict.

NOTES

1. *Strict liability and malicious intent.* Would Lord Loreborn have reduced the plaintiff's damages if he had been convinced that the reference to plaintiff was strictly accidental? If the plaintiff's name had been Tom Jones? *Hulton* is followed today in the United States insofar as defamation cases are governed by common law rules. "Actual malice, in the sense of spite or ill will, is presumed and need not be proved if the words are defamatory on their face." *Tate v. Bradley*, 837 F.2d 206 (5th Cir. 1988).

2. *Basis of liability for publication.* Even after *Hulton*, it seems widely agreed that the defendant will be liable only if the publication was intentional or at least negligent. Thus the Restatement (Second) of Torts §577, comment *n*, excuses the defendant for "accidental" publications. That rule applies when *A* writes defamatory statements about *B*, which are stolen from a locked desk by a thief who reads or publishes them. Similarly, if *A* sends a defamatory letter about *B* to *B* through the mail, the publication is regarded as accidental if a robber reads or publishes the stolen letter. Finally, if *A* sends a defamatory letter to *B* marked "personal" that is opened and read by *B*'s secretary there is no publication, unless *A* knew of the secretary's practice. Note that if defendant is strictly liable for publication, he could escape responsibility so long as the publication was made by some independent third person.

SECTION F. DAMAGES

1. Special Damages

"By 'actual damage' is meant what in the books is usually called 'special damage.' This latter expression is either meaningless or misleading." Bower, Actionable Defamation, Article 13, at 33 (1908).

TERWILLIGER v. WANDS

17 N.Y. 54 (1858)

[Action for slander. Plaintiff proved that defendant told La Fayette Wands that plaintiff was having continued sexual intercourse with one Mrs. Fuller and that he—plaintiff—would do all he could to keep Mr. Fuller in the penitentiary so that he could continue to enjoy Mrs. Fuller's favors. Plaintiff proved that defendant had said much the same thing to one Neiper, a good friend of plaintiff's, who had told plaintiff about this statement. Also he proved that Neiper had told him that this information about plaintiff was spreading all over the county. As a result of learning this information, plaintiff became very ill, both mentally and physically, had to have medical treatment, and could not do any work; subsequently his crops and business were neglected, and he had to hire more help. The judgment for the defendant below was affirmed.]

STRONG, J. The words spoken by the defendant not being actionable of themselves, it was necessary in order to maintain the action to prove that they occasioned special damages to the plaintiff. The special damages must have been the natural, immediate and legal consequence of the words. . . . [The court first concluded that defendant was not responsible for a repetition of the words to plaintiff, and continued:]

But there is another ground upon which the judgment must be affirmed. The special damages relied upon are not of such a nature as will support the action. The action for slander is given by the law as a remedy for "injuries affecting a man's reputation or good name by malicious, scandalous and slanderous words, tending to his damage and derogation." (3 Bl. Com., 123.) It is injuries affecting the reputation only which are the subject of the action. In the case of slanderous words actionable per se, the law, from their natural and immediate tendency to produce injury, adjudges them to be injurious, though no special loss or damage can be proved. "But with regard to words that do not apparently and upon the face of them import such defamation as will of course be injurious, it is necessary that the plaintiff should aver some particular damage to have happened." (3 Bl. Com., 124.) As to what constitutes special damages, Starkie mentions the loss of a marriage, loss of hospitable gratuitous entertainment, preventing a servant or bailiff from getting a place, the loss of customers by a tradesman; and says that in general whenever a person is prevented by the slander from receiving that which would otherwise be conferred upon him, though gratuitously, it is sufficient. (1 Stark. on

p. 964

Sland., 195, 202.) . . . These instances are sufficient to illustrate the kind of special damage that must result from defamatory words not otherwise actionable to make them so; they are damages produced by, or through, impairing the reputation.

It would be highly impolitic to hold all language, wounding the feelings and affecting unfavorably the health and ability to labor, of another, a ground of action; for that would be to make the right of action depend often upon whether the sensibilities of a person spoken of are easily excited or otherwise; his strength of mind to disregard abusive, insulting remarks concerning him; and his physical strength and ability to bear them. Words which would make hardly an impression on most persons, and would be thought by them, and should be by all, undeserving of notice, might be exceedingly painful to some, occasioning sickness and an interruption of ability to attend to their ordinary avocations. . . . In this view of

the law words which do not degrade the character do not injure it, and cannot occasion loss. . . . The slander may not have been credited by or had the slightest influence upon any one unfavorable to the plaintiff; and it does not appear that anybody believed it or treated the plaintiff any different from what they would otherwise have done on account of it. The cause was not adapted to produce the result which is claimed to be special damages. Such an effect may and sometimes does follow from such a cause but not ordinarily; and the rule of law was framed in reference to common and usual effects and not those which are accidental and occasional. . . .

NOTE

Special damages today. Is there any reason to exclude recovery for mental anguish of the sort that would be suffered by a reasonable person in plaintiff's position? The modern case law still shows a certain resistance toward emotional distress as special damages. *Zeran v. Diamond Broadcasting, Inc.*, 203 F.3d 714 (10th Cir. 2000), grew out of the same unfortunate incident as *Zeran v. America Online*, *supra* at 938. Only this time, the plaintiff sued the radio station that had broadcast the show urging listeners to tell "Ken" Zeran what they thought of his tactics. Kimball, J., first held that the defamatory statements did not fall into any of the categories of slander per se, and thus required proof of special damages for two reasons:

Emotional distress is not a form of special damages, and Plaintiff's *de minimis* medical expenses, consisting of one visit to his physician and one prescription drug purchase, are insufficient to support the cause of action. Under . . . the *de minimis* doctrine, the law does not care for, or take notice of, very small or trifling matters. . . .

Plaintiff's defamation claim [also] fails because Plaintiff has not shown that any person thinks less of him, Kenneth Zeran, as a result of the broadcast. As the district court found, there was no evidence that anyone who called his number in response to the posting or the broadcast even knew his last name. In other words, under the facts of this case, there was an insufficient link between Plaintiff's business telephone number and Plaintiff himself for Plaintiff to have sustained damage to his reputation.

p. 965

If Zeran had sustained more medical expenses, would these have been recoverable even if his reputation in the community had not suffered? In *Wood v. Wood*, 693 A.2d 673, 674 (Vt. 1997), the court stated that "evidence of sleeping problems, loss of appetite, development of a temporary drinking problem, and deteriorating family relationships demonstrated actual harm. We have also recognized that proof of 'embarrassment and temporary injury to reputation' would be sufficient to support an award of general damages."

ELLSWORTH v. MARTINDALE-HUBBELL LAW DIRECTORY, INC.

280 N.W. 879 (N.D. 1938)

[In this action for libel, plaintiff alleged that defendant misstated his professional and financial rating in the code form that it used in its directory. The directory itself was widely relied on by lawyers in many states and countries who needed to forward legal business. Plaintiff claimed that his rating in defendant's private key symbols was defamatory and that as a result his reputation was injured. In his pleadings, he elaborately set forth the translation of this private key system, with which all members of his profession were presumably familiar. From 1907 through 1926, plaintiff received the rating "a v 5 g," of which "a" meant legal ability very high, "v," recommendations very high, "5," financial worth \$10,000 to \$20,000, and "g," promptness in paying bills very good. The defamation itself consisted of the ratings in the 1928 edition: "b w 5 f," of which "b" meant legal ability second class, "w," recommendations second class, "5," financial worth \$10,000 to \$20,000, and "f," promptness in paying bills fair. The defendant's 1929 edition left the rating of plaintiff blank, which plaintiff alleged meant that his rating was so low that it did not merit mention in the directory. It appeared that defendant had written a strong letter of protest after the 1928 edition.

Previously, in *Ellsworth v. Martindale-Hubbell Law Directory, Inc.*, 268 N.W. 400 (N.D. 1936), the court held that the alleged defamation was not actionable per se and therefore required that the plaintiff allege and prove special damages to maintain his action. The plaintiff's amended complaint offered allegations as to his professional income in 1928, the year prior to the alleged misstatements, and for the succeeding three years. During these years his earnings were substantially lower, allegedly because of defendant's publication, with damages over \$2,500. Defendant appealed from an order overruling its demurrer to the amended complaint.]

NUESSLE, J. . . . The sole question on this appeal is as to whether this amended paragraph sufficiently sets forth the special damages claimed to have been suffered. The defendant contends that it does not. That it fails to set out the names of the clients lost by the plaintiff because of the publication of the alleged defamatory matter, and that it does not specify particularly the origin, character, and amount of the business the plaintiff has been deprived of because of its publication.

In substance, the amended complaint alleges that the plaintiff has been engaged in the practice of law for many years; that he has always borne a good

p. 966

reputation as a man and as a lawyer; that he has had a substantial law business that came to him largely from forwarders through a widely spread foreign territory; that he was personally unacquainted with such forwarders; that the defendant's publication in which the alleged defamatory matter was published, was circulated generally throughout such territory and among those who forwarded business to the plaintiff; that, as a consequence of the circulation of such matter and immediately following such publication and circulation, his practice decreased in the manner and to the extent as set out in that portion of the complaint quoted. . . .

. . . From the nature of the circumstances as disclosed by the pleading the plaintiff cannot describe the particular items of business which he has lost or give the names of particular individuals who would have become his clients had it not been for the publication. But he does show a diminution of his business and of the income therefrom by pleading what that business amounted to prior to the publication and what it was

after the publication, and as a result thereof. As to whether he can make proof in support of the allegations contained in his pleading is another matter with which we are not now concerned. . . .

[In] Odgers, Libel & Slander, 5th ed. at page 382, it is stated:

But it is not always necessary for the plaintiff to call as his witnesses those who have ceased to deal with him. He may be able to show by his account-books or otherwise, a general diminution of business as distinct from the loss of particular known customers or promised orders. He has still to connect that diminution of business with the defendant's words. Such a connection may sometimes be established by the nature of the words themselves. Where the defendant has published a statement about the plaintiff's business, which is intended or reasonably calculated to produce, and in the ordinary course of things does produce, a general loss of business, evidence of such loss of business is admissible, and sufficient special damage to support the action, although the words are not actionable per se, and although no specific evidence is given at the trial of the loss of any particular customer or order by reason of such publication.

[Affirmed.]

NOTE

Restatement of the Law (Second) of Torts

§575. SLANDER CREATING LIABILITY BECAUSE OF SPECIAL HARM

One who publishes a slander that, although not actionable per se, is the legal cause of special harm to the person defamed, is subject to liability to him.

Comment b. Special Harm: . . . Thus, while a slander that has been so widely disseminated as to cause persons previously friendly to the plaintiff to refuse

p. 967

social intercourse with him is not of itself special harm, the loss of the material advantages of their hospitality is sufficient. Special harm may be a loss of presently existing advantage, as a discharge from employment. It may also be a failure to realize a reasonable expectation of gain, as the denial of employment which, but for the currency of the slander, the plaintiff would have received. It is not necessary that he be legally entitled to receive the benefits that are denied to him because of the slander. It is enough that the slander has disappointed his reasonable expectation of receiving a gratuity.

Proof of special damages. Plaintiff's attempt to establish special damages can raise sharp questions of fact if defendant claims that plaintiff's loss was caused not by defendant's defamatory statement but by some independent event. In *Touma v. St. Mary's Bank*, 712 A.2d 619, 622 (N.H. 1998), the defendant's foreclosure notice made it appear that plaintiff's restaurant would be closed down because of the bank's

takeover of the plaintiff's landlord who had defaulted on his loan to the bank. Horton, J., conceded that the notice was defamatory, but held, in affirming the denial of special damages below, that the plaintiff had not established that any lost profits were attributable to the defective foreclosure notice:

Although the plaintiff contends that the foreclosure notice is the only explanation for the restaurant's decline in March 1993, the record establishes that gross revenues actually began to decline several months earlier. Moreover, the trial court could reasonably have concluded that the plaintiff's rebuttal advertisements and continued operation of the restaurant should have halted any decline caused by the foreclosure notice; in fact, sales continued to decline thereafter.

In *Pippen v. NBC Universal Media LLC*, 734 F.3d 610, 614 (7th Cir. 2013), various media outlets reported that the former Chicago Bulls great Scottie Pippen had filed for bankruptcy when he had not, even though he had suffered from several well-publicized financial reversals. Easterbrook, J., wrote:

Pippen's complaint alleges that his endorsement and personal-appearance opportunities dwindled as a result of the defendants' false reports. In a proposed amended complaint, Pippen itemized losses that in his view flowed from defendants' statements; he identified specific business opportunities that had been available to him earlier but that, following the defendants' statements, were available no more. This is more than a general allegation of economic loss; it is an allegation that third parties have ceased to do business with him because of the defendants' actions. This contention may be substantively inadequate. It appears to be an example of the *post hoc ergo propter hoc* fallacy: since Pippen's opportunities diminished after the statements were made, he believes they must have diminished *because* the statements were made. This theory of causation is weak for professional athletes, whose earnings related to past stardom drop as time passes since their playing days. But, as a matter of pleading, Pippen did enough.

p. 968

Pippen's pleading victory was short lived, as his complaint was dismissed on the ground that as a public figure he could not recover for damages unless he showed that the defendants had acted with actual malice, which was not established by showing either their failure to check public records of bankruptcy filings or to ask Pippen directly about his financial position.

2. General Damages

McCormick, Damages

§116, p. 422 (1935)

When "special" damage need not be shown, "general" damage may be recovered. That such damage has been suffered need not be proved by the plaintiff, for it is presumed; however, it is customary to make proof of some of the items. The elements of "general" damage are: (1) injury to reputation; (2) loss of business; (3) wounded feelings and bodily suffering resulting therefrom.

FAULK v. AWARE, INC.

231 N.Y.S.2d 270 (Sup. Ct. 1962)

[Aware, Inc., is a “membership corporation whose purpose is to combat communism in the entertainment and communication industries.” John Henry Faulk, a popular radio and TV performer, brought a libel action against Aware, Inc., and Vincent Hartnett, its founder and president, for statements made by them and widely distributed charging him with communist sympathies and affiliations.]

GELLER, J. In this libel action the jury rendered a verdict awarding compensatory damages of \$1,000,000 against the three defendants and punitive damages of \$1,250,000 each against defendants Aware, Inc., and Vincent Hartnett. . . .

The fact that the amounts awarded are very large does not necessarily render the verdict excessive as a matter of law. The question is whether there is a rational basis for the jury’s awards in the evidence adduced and in the circumstances of this case. The court should not substitute its judgment for that of the jury, unless the amounts awarded are insupportable under any fair-minded view of the facts. . . .

However, since an award of damages always rests in the “sound discretion” of a jury, it is subject to court review. That discretion must be exercised in accordance with the applicable rules of law and on the basis of the evidence in the case.

The damages recoverable for a libel consist of two items [compensatory and punitive.]

We will consider each of these two types of awards separately, just as the jury was instructed to do in its deliberations and form of verdict.

p. 969

I. Compensatory Damages

. . .

The principal item of damages was plaintiff’s claim that he had been rendered unemployable in the television and radio industry as the direct result of the alleged libel and the concerted acts of the defendants, depriving him of the opportunity to realize his earning capacities in his profession. . . .

There was substantial testimony, which was uncontradicted, that prior to the alleged libel in February, 1956, plaintiff, in addition to his regular radio show, had appeared on a large number of television programs and had shown particular talent for that medium, being especially suited for the game, fun and quiz shows which were extremely popular during the period here involved. There also was uncontradicted testimony of an upward trend during this period in the television industry and in the income earned by television performers.

Plaintiff offered proof of his earning capacity through experts in the industry familiar with his achievements and abilities, among whom were Mark Goodson, David Susskind and Garry Moore, well-known producers of television shows.

It is well settled that a person wrongfully injured is entitled to recover for deprivation of future earning capacity, without limitation to his actual earnings preceding the injury; and that opinion testimony with regard to his potential earnings in that field by experts familiar with his capacities, is admissible.

. . . [Plaintiff's expert witnesses] testified that he would have earned between \$150,000 and \$500,000 annually, giving the reasons for their opinion. Defendants offered no proof in contradiction of plaintiff's experts.

The minimal figure of plaintiff's experts would represent damages of \$900,000 for the six years involved. Assuming that the jury accepted that figure, they could take into consideration the other elements of injury to plaintiff's reputation and his mental anguish and distress in public and private life arising from the nature of the charge made against him, and find basis for arriving at compensatory damages in the sum of \$1,000,000. . . .

II. Punitive Damages . . .

[The court upheld the award of punitive damages against the claim that they were excessive.]

FAULK v. AWARE, INC.

244 N.Y.S.2d 259 (App. Div. 1963)

RABIN, J. . . . We are greatly concerned, however, with the size of the verdict—both as to compensatory and punitive damages. . . . We find the verdict to be grossly excessive and most unrealistic—even in the field of entertainment.

The plaintiff's prior earnings are an important factor in assessing the damage suffered when his earnings are cut off. His damage need not be limited to the level of his actual earnings at the time of the libel. His potential earnings may be

taken into consideration when there is evidence to enable a jury to assess those potentialities. . . . In this case, the plaintiff's potential earnings were fixed by his witnesses in amounts ranging from \$100,000.00 to \$1,000,000.00 a year. The larger figure was arrived at by reference to the earnings of those who had reached the very top of the profession. We are mindful of the statement of our colleague, Mr. Justice Breitel, in the *Grayson* case where he said: “[I]n the case of persons of rare and special talents many are called but few are chosen.” While the plaintiff's experts testified that the plaintiff would, without doubt, be among the “chosen,” it seems that none of these experts, although in the entertainment field, was perceptive enough to contract for his services even though his earnings were never more than about \$35,000.00 a year.

Those who testified to potential earnings of between \$100,000.00 and \$250,000.00 arrived at that estimate based upon what comparable performers were receiving. Yet they gave no explanation as to why the plaintiff's earnings were so comparatively low. In short, the testimony of the experts left plenty of room for speculation.

Upon that testimony, the jury was justified in its obvious conclusion that the plaintiff's prospects for advancement in his profession were extremely good and that his income would rise correspondingly. Despite that however, there is hardly enough justification for the finding of compensatory damages in the amount of \$1,000,000.00, even making allowance for his mental pain and suffering. It is interesting to note that at current savings bank interest rates, his yearly income for life would exceed the best of his past earnings. We believe that the compensatory damages should be fixed at a figure no higher than \$400,000.00.

[The court reduced the punitive damage award against Aware to \$50,000 and against Hartnett to \$100,000.]

NOTES

1. Justification for general damages. Courts use general damages in defamation cases to avoid the administrative and evidentiary problems that arise in seeking to prove special damages. The key premise is that a rough estimate is a better first approximation of the true state of affairs than the alternative approach, which denies recovery altogether. In *Tex Smith, The Harmonica Man, Inc. v. Godfrey*, 102 N.Y.S.2d 251, 253 (Sup. Ct. 1951), the defendant, a famous media figure, had made disparaging remarks about the plaintiff's ukuleles on both television and radio. The court noted that Godfrey's words could be taken as reflecting ill upon the plaintiff or its products. If the former, damages could be recovered for slander per se. The court continued:

If the words are regarded purely as a reflection on the instruments, the same result would be reached. Here the words only become actionable if it is shown that damage followed upon their utterance. There was a time when such damage had to be specifically shown—the loss of a contract, a position, or the like. It is practicably impossible for one selling to the general public at retail or by mail order to show loss of particular sales. Under such circumstances those people were without

p. 971

remedy from the most groundless calumny. It is, however, now recognized that allegations and proof of a general loss of sales is sufficient, leaving it to the trier of the facts to determine whether the loss is properly to be attributed to the slander or not. The allegations of the complaint on this subject are sufficient by this standard.

2. Proof of general damages. In defamation cases proof of general damages does not in principle preclude proof of special damages in addition. For example, in *Bishop v. New York Times*, 135 N.E. 845, 848 (N.Y. 1922), the court stated:

We are inclined to the view that a plaintiff is not compelled to rely upon a favorable presumption with which the law endows his cause of action, but that he may prove, if he can, that he has been avoided and shunned by former friends and acquaintances as the direct and well-connected result of the libel.

In *Macy v. New York World-Telegram Corp.*, 141 N.E.2d 566, 570 (N.Y. 1957), the defendant newspaper falsely charged the plaintiff, a prominent civic figure and a Congressman running for reelection, with threatening to make public a certain letter if plaintiff were not chosen as his party's senatorial nominee. On appeal the court vacated the plaintiff's jury award of \$50,000 for general damages and granted the newspaper a new trial because the plaintiff had testified on his own behalf that he had been subject to personal attacks, expelled from his country club, and denied his seat in the House of Representatives. The court said that in some cases the plaintiff could rely on his own hearsay testimony to show the loss that followed from the libel, but it concluded that the "better practice would be to call as witnesses for plaintiff, subject to cross-examination, the persons who were supposed to have spoken or acted adversely to plaintiff and to demonstrate, if such demonstration be possible, a connection to the libel."

3. *Constitutional response.* The traditional common law views on general and punitive damages have been analyzed in a constitutional context in *Gertz v. Robert Welch, Inc.*, 418 U.S. 323 (1974), *infra* at 1018, and *Dun & Bradstreet, Inc. v. Greenmoss Builders, Inc.*, 472 U.S. 749 (1985), *infra* at 1024.

3. Other Remedies

a. Injunctions

Courts have long refused to enjoin either slander or libel. Historically that equitable remedy was said to deprive defendants of the right to a jury trial when an "adequate" remedy at law was available. More recently the rule rests squarely on the constitutional ground that injunctive relief would necessarily infringe on the freedom of speech protected by the First Amendment by denying the speaker the option of getting his message to the public at large. See *Near v. Minnesota*, 283 U.S. 697 (1931). See also Smolla, 1 Law of Defamation §§9:86-90 (2d ed. 2015).

Does defamation over the Internet present a stronger case for injunctive relief? Recall that in *Delfino, supra* at 955, the trial court granted an injunction in light of defendants' vow to continue their defamatory Internet postings until they

p. 972

died. The injunction was overturned on appeal, however, as an unconstitutional prior restraint on speech. Are plaintiffs powerless to prevent ongoing, irreparable harm caused by Internet postings?

Would CDA §230 immunity nonetheless provide a shield against any injunctive relief? A plurality of the California Supreme Court thought so in *Hassell v. Bird*, 420 P.3d 776 (Cal. 2018), holding that section 230 immunity protected Yelp from a lower court order requiring Yelp to remove defamatory comments. Cuéllar, J., vehemently dissented:

The Internet has the potential not only to enlighten but to spread lies, amplifying defamatory

communications to an extent unmatched in our history. The resulting injuries to individuals' reputational interests from defamation, revenge porn, and similar content can be grave and long-lasting, and negative effects on businesses can be equally or more severe.

See also Marano, Caught in the Web: Enjoining Defamatory Speech That Appears on the Internet, 69 Hastings L.J. 1311 (2018).

b. Retraction

Alternatively the law could require the defendant to retract the defamatory utterance, usually by publishing a withdrawal of the libel in the same newspaper or broadcast that originally published it. At common law retraction was not considered a complete defense, but only mitigated damages. See, e.g., *Webb v. Call Publishing Co.*, 180 N.W. 263 (Wis. 1920), holding that a retraction does not fully restore the plaintiff to the position enjoyed before the initial libel was published. Even if the retraction receives broad publicity, many people who read the original defamatory statement are likely to miss it. Further, the retraction itself may not erase lingering doubts that the original statement contained at least some grain of truth.

Recently many states have enacted retraction statutes that apply to print defendants, broadcast defendants, or both. For example, Minn. Stat. §548.06 (2019) limits the plaintiff to special damages unless the defendant refuses to supply a retraction "on the same page and in the same point type and the statement headed in 18-point type or larger 'RETRACTION,' as were the statements complained of, in a regular issue thereof published within one week after such service. . . ." This statute represents an elegant compromise of conflicting interests in an effort to stop litigation before it begins. The statute first gives the plaintiff an incentive to seek the retraction: Unless that is done, she can only recover special damages. The statute does not set any specific time to request the retraction. Even so, the plaintiff has a strong incentive to do so quickly in order to correct the record while the issue is current. The statute next uses both carrots and sticks to get the defendant to respond quickly to the retraction demand. If the demand is not met, the defendant exposes himself to suit for both special and general damages. If it is honored, the plaintiff gets at most special damages, but even those are denied if the defendant can show that he made an honest mistake in publishing

p. 973

the facts. Publishing the retraction also blocks suits for punitive damages. Any retraction must be full and complete since evasive apologies could confirm in the minds of readers that the defendant still stands behind the original charges. These statutory procedures are routinely invoked today, making the corrections columns of most newspapers a common feature of the modern newspaper. For an exhaustive tabulation of retraction statutes, see *Sack, Sack on Defamation: Libel, Slander and Related Problems* §11.2 (4th ed. 2013); for a general account, see *Smolla*, 1 *Law of Defamation* §§9:70-84 (2d ed. 2015).

But once again, does CDA §230 relieve ISPs of any retraction obligations? In *Bennett v. Google, LLC*, 882 F.3d 1163, 1168 (D.C. Cir. 2018), the court reasoned that Google's decision not to retract content published by a user was fundamentally a publishing decision protected by section 230.

c. Reply Statutes

In *Miami Herald Publishing Co. v. Tornillo*, 418 U.S. 241, 244, 257-258 (1974), a unanimous Supreme Court struck down a Florida “right of reply” statute that

provides that if a candidate for nomination or election is assailed regarding his personal character or official record by any newspaper, the candidate has the right to demand that the newspaper print, free of cost to the candidate, any reply the candidate may make to the newspaper’s charges. The reply must appear in as conspicuous a place and in the same kind of type as the charges which prompted the reply, provided it does not take up more space than the charges. Failure to comply with the statute constitutes a first-degree misdemeanor.

As drafted, the statute was not limited to defamatory statements. The Court held it unconstitutional in part because it increased the costs of printing and distributing a newspaper. Its decision rested, however, on more than purely economic considerations:

Faced with the penalties that would accrue to any newspaper that published news or commentary arguably within the reach of the right-of-access statute, editors might well conclude that the safe course is to avoid controversy. Therefore, under the operation of the Florida statute, political and electoral coverage would be blunted or reduced. Government-enforced right of access inescapably “dampens the vigor and limits the variety of public debate,” *New York Times Co. v. Sullivan*. . . .

Even if a newspaper would face no additional costs to comply with a compulsory access law and would not be forced to forgo publication of news or opinion by the inclusion of a reply, the Florida statute fails to clear the barriers of the First Amendment because of its intrusion into the function of editors. A newspaper is more than a passive receptacle or conduit for news, comment, and advertising. The choice of material to go into a newspaper, and the decisions made as to limitations on the size and content of the paper, and treatment of public issues and public officials—whether fair or unfair—constitute the exercise of editorial control and judgment. It has yet to be demonstrated how governmental regulation of this crucial process can be exercised consistent with First Amendment guarantees of a free press as they have evolved to this time.

Should a right to reply be granted in the context of political broadcasts?

d. Declaratory Relief and “Libel Tourism”

Libel tourism refers to the practice of obtaining libel judgments from jurisdictions with claimant-friendly libel laws, even when the author or alleged libelous material has little connection to that jurisdiction, solely to chill the author’s activities in his home country. For an eye-opening overview, see *Are English Courts Stifling Free Speech Around the World?*, *The Economist*, Jan. 8, 2009. And for a case that prompted much legislative reform, see *Ehrenfeld v. Mahfouz*, 518 F.3d 102 (2d Cir. 2008), in which the court refused to protect an American author against a Saudi Arabian plaintiff who had won a judgment against her in an

English court for selling her book *Funding Evil*, which accused him of supporting Islamic terrorism. The book sold 23 copies in the United Kingdom, but she was ordered to pay £10,000 plus costs to Mahfouz. *Ehrenfeld* provoked a strong response in the United States with the passage of The Securing the Protection of our Enduring and Established Constitutional Heritage (SPEECH) Act, Pub. L. No. 111-233, 124 Stat. 2480 (2010), which bars enforcement of foreign libel judgments that do not meet American constitutional standards of due process and First Amendment protection.

The practice of libel tourism also led the United Kingdom to pass the Defamation Act of 2013 (ch. 26), which toughened the standards needed to prevail in defamation cases by adding in section 1 “a serious harm,” in section 2 a defense for statements that were “substantially true,” in section 3 a defense for honest opinions, in section 4 a defense for statements on “a matter of public interest,” and in section 5 a general defense for operators of websites who did not post the offending statement. The net effect of these provisions is to move the UK law closer to the U.S. law. For the purposes of the SPEECH Act, is the quality of UK judgments in defamation cases measured by the terms of the UK statute, or by its application, as interpreted by UK courts?

See generally Taylor, Libel Tourism: Protecting Authors and Preserving Comity, 99 Geo. L.J. 189 (2010).

SECTION G. NONCONSTITUTIONAL DEFENSES

1. Truth

AUVIL v. CBS 60 MINUTES

67 F.3d 816 (9th Cir. 1996)

PER CURIAM: Grady and Lillie Auvil et al., suing on behalf of themselves and other similarly situated Washington State apple growers (“growers”), appeal from the district court’s summary judgment in favor of CBS “60 Minutes” (“CBS”).

p. 975

The district court held that the growers failed to prove the falsity of the message conveyed by the “60 Minutes” broadcast of “‘A’ is for Apple,” which concerned the use of Alar, a chemical sprayed on apples. We . . . affirm because we agree that the growers have failed to raise a genuine issue of material fact as to the falsity of the broadcast.

Background

On February 26, 1989, CBS’s weekly news show “60 Minutes” aired a segment on daminozide, a chemical growth regulator sprayed on apples. The broadcast, entitled “‘A’ is for Apple,” also addressed the slow pace of government efforts to recall the chemical. The broadcast was based largely on a Natural Resources Defense Council (“NRDC”) report, entitled *Intolerable Risk: Pesticides in Our Children’s Food* (“*Intolerable Risk*”), which outlined health risks associated with the use of a number of pesticides on fruit, especially the risks to children. “‘A’ is for Apple” focused on the NRDC report’s findings concerning

daminozide, as well as the EPA's knowledge of daminozide's carcinogenicity. Scientific research had indicated that daminozide, more commonly known by its trade name, Alar, breaks down into unsymmetrical dimethylhydrazine (UDMH), a carcinogen.

The segment opened with the following capsule summary from Ed Bradley, a "60 Minutes" commentator:

The most potent cancer-causing agent in our food supply is a substance sprayed on apples to keep them on the trees longer and make them look better. That's the conclusion of a number of scientific experts. And who is most at risk? Children, who may someday develop cancer from this one chemical called daminozide. Daminozide, which has been sprayed on apples for more than 20 years, breaks down into another chemical called UDMH.

During the broadcast, Bradley garnered a number of viewpoints on the Alar issue. Those interviewed included an Environmental Protection Agency ("EPA") administrator, an NRDC attorney, a U.S. congressman, a professor of pediatrics at Harvard Medical School, and a scientist from the Consumers Union, which publishes *Consumer Reports* magazine. After Bradley's opening synopsis, the broadcast segment began with the EPA administrator's admission that the EPA had known of cancer risks associated with daminozide for sixteen years, but that EPA regulations had hampered the removal of the chemical from the market. The U.S. Congressman rejected the EPA administrator's explanation that the laws were to blame for the EPA's hesitation. He thought that it was well within the EPA's power to remove daminozide from the market, and that the EPA's reluctance stemmed from its fear that Uniroyal, the company that manufactured daminozide, would sue the EPA. The broadcast segment continued with testimonials from the NRDC attorney, who discussed the findings published in *Intolerable Risk*, focusing on the cancer risks to children from ingestion of apples treated with daminozide. The NRDC's findings were corroborated both by the EPA administrator and the Harvard pediatrician. The broadcast ended with the statements of a Consumers

p. 976

Union scientist, who revealed that most manufacturers of apple products said they no longer use apples treated with daminozide but that the manufacturers were unsuccessful in keeping daminozide completely out of their products.

Following the "60 Minutes" broadcast, consumer demand for apples and apple products decreased dramatically. The apple growers and others dependent upon apple production lost millions of dollars. Many of the growers lost their homes and livelihoods.

In November 1990, eleven Washington State apple growers, representing some 4,700 growers in the Washington area, filed a complaint in Washington State Superior Court against CBS, local CBS affiliates, the NRDC, and Fenton Communications, Inc., a public relations firm used by the NRDC in 1989. The growers asserted, among others, a claim for product disparagement. . . .

Discussion

We review the district court's summary judgment ruling *de novo*. To survive CBS's motion for summary

judgment, the growers must set forth specific facts showing that there is a genuine issue for trial. . . .

[The court first held that the plaintiffs] whose products are disparaged face a higher burden of proof than do defamation plaintiffs. . . . Accordingly, for a product disparagement claim to be actionable, the plaintiff must prove, *inter alia*, the falsity of the disparaging statements. . . .

The growers offered evidence showing that no studies have been conducted to test the relationship between ingestion of daminozide and incidence of cancer in *humans*. Such evidence, however, is insufficient to show a genuine issue for trial regarding the broadcast's assertions that daminozide is a potent carcinogen. Animal laboratory tests are a legitimate means for assessing cancer risks to humans. . . .

The growers provide no other challenge to the EPA's findings, nor do they directly attack the validity of the scientific studies. All of the statements referenced above are factual assertions made by the interviewees, based on the scientific findings of the NRDC. These findings were corroborated by the EPA administrator and a Harvard pediatrician. The EPA, which often relies on the results of animal studies, acknowledged that it knew of the cancer risks associated with ingestion of daminozide and, in August 1985, classified daminozide as a "probable human carcinogen." Indeed, the EPA estimated that the dietary risk to the general population from UDMH, a metabolite of daminozide, was fifty times an acceptable risk and ultimately concluded that daminozide posed an unreasonable risk to the general population. . . .

On the subject of cancer risks to children from the use of daminozide on apples, the growers point to the following factual assertions to support their falsity claim:

What we're talking about is a cancer-causing agent used on food that EPA knows is going to cause cancer for thousands of children over their lifetime.

p. 977

[T]he Natural Resources Defense Council[] has completed the most careful study yet on the effect of daminozide and seven other cancer-causing pesticides on the food children eat.

[O]ver a lifetime, one child out of every 4,000 or so of our preschoolers will develop cancer just from these eight pesticides. [The NRDC study] says children are being exposed to a pesticide risk several hundred times greater than what the agency says is acceptable.

The growers offered evidence showing that no scientific study has been conducted on cancer risks to children from the use of pesticides. However, CBS based its statements regarding cancer and children on the NRDC's findings that the daminozide found on apples is more harmful to children because they ingest more apple products per unit of body weight than do adults. The growers have provided no affirmative evidence that daminozide does not pose a risk to children. The fact that there have been no studies conducted specifically on the cancer risks to children from daminozide does nothing to disprove the conclusion that, if children consume more of a carcinogenic substance than do adults, they are at higher risk for contracting cancer. The growers' evidence, therefore, does not create a genuine issue as to the falsity of the broadcast's assertion that daminozide is more harmful to children.

Despite their inability to prove that *statements* made during the broadcast were false, the growers assert that summary judgment for CBS was improper because a jury could find that the broadcast contained a provably false *message*, viewing the broadcast segment in its entirety. They further argue that, if they can prove the falsity of this implied message, they have satisfied their burden of proving falsity.

The growers' contentions are . . . unprecedeted and inconsistent with Washington law. No Washington court has held that the analysis of falsity proceeds from an implied, disparaging message. It is the statements themselves that are of primary concern in the analysis. . . .

The Washington courts' view finds support in the Restatement, which instructs that a product disparagement plaintiff has the burden of proving the "falsity of the *statement*." Restatement (Second) of Torts §651(1)(c) (emphasis added). This standard refers to individual statements and not to any overall message. Therefore, we must reject the growers' invitation to infer an overall message from the broadcast and determine whether that message is false.

We also note that, if we were to accept the growers' argument, plaintiffs bringing suit based on disparaging speech would escape summary judgment merely by arguing, as the growers have, that a jury should be allowed to determine both the overall message of a broadcast and whether that overall message is false. Because a broadcast could be interpreted in numerous, nuanced ways, a great deal of uncertainty would arise as to the message conveyed by the broadcast. Such uncertainty would make it difficult for broadcasters to predict whether their work would subject them to tort liability. Furthermore, such uncertainty raises the spectre of a chilling effect on speech.

Conclusion

Because the growers have failed to raise a genuine issue of material fact regarding the falsity of statements made during the broadcast of "'A' is for Apple," the district court's decision granting CBS's motion for summary judgment is

Affirmed.

NOTES

1. *The Alar "scare."* Should the plaintiff or defendant bear the burden of proof on the truth issue? What if the plaintiffs in *Auvil* had introduced evidence showing no increased incidence of cancer among children who ate large numbers of apples? Airing the *60 Minutes* segment to 40 million people across the country was estimated to cause apple growers nationwide more than \$100 million in lost sales. The story affected sales of all apples even though only about 15 percent of apples were treated with Alar. A few months after the original CBS story, Uniroyal Chemical Co. pulled Alar from the market and had its registration cancelled with the EPA. In 1991, C. Everett Koop, the former U.S. Surgeon General, concluded that,

properly used, “Alar-treated apple products posed no hazard to the health of children or adults.” A 1991 study of the National Cancer Institute concluded that the Alar flap was an “unfounded carcinogen scare.” Wynder, Primary Prevention of Cancer: Planning and Policy Considerations, 83 J. Nat’l Cancer Inst. 475 (1991). For a retrospective on the controversy, see Ashton, After 10 Years, Debate Continues over Pesticide That Tainted Red Apples, Seattle Post-Intelligencer, Mar. 1, 1999, at B4.

2. *Defamation and truth.* What is the proper relationship between defamation and truth? The conventional view holds that the *prima facie* case in defamation does not require a showing that the defendant published a false statement. Instead it is enough that the defendant published defamatory matter about (“of and concerning”) the plaintiff that tends to lower the estimation of plaintiff in the eyes of third parties to whom it is directed. Truth is regarded as an absolute defense to the defamation so published, which is tantamount to an assertion that a statement is defamatory only if it is false. See RST §581A. Should truthful statements of the defendant ever be regarded as libelous?

Meryl Streep in the 1980s. In 1989, Streep testified before Congress and on TV talk shows about Alar’s dangers.

Source: Hulton-Deutsch Collection / Corbis

The allocation of truth as a defense suggests that the burden lies on the defendant to establish the defense. That orientation is consistent with the approach of the earlier common law, which was more hostile to the defense of truth than *Auvil*. In order to protect reputation, common law courts often read statements quite closely, rejecting the

defense where there had been small and seemingly insignificant factual errors in the defendant’s statement. The headnote in *Sharpe v. Stevenson*, 34 N.C. 348, 348 (1851), gives some hint of the required level of precision: “In an action of slander (under our statute) for charging that the plaintiff had criminal intercourse with one A. at a particular time and place, the defendant cannot justify by showing that she had such intercourse with A. at another time and place.” That result was criticized in *Courtney, Absurdities of the Law of Slander and Libel*, 36 Am. L. Rev. 552, 563 (1902), in which the author observed: “A criminal

abandon in the drawing-room as completely destroys all claim to a reputation for chastity as a lascivious embrace in the bushes.” For a modern hint of the same point, see *Haynes v. Alfred A. Knopf, Inc.*, 8 F.3d 1222, 1228 (7th Cir. 1993), in which Posner, C.J., observes: “The rule of substantial truth is based on a recognition that falsehoods which do no *incremental* damage to the plaintiff’s reputation do not injure the only interest that the law of defamation protects.”

3. *Quotations.* The defense of truth did not allow the defendant to obtain summary judgment in *Price v. Stossel*, 620 F.3d 992, 1003 (9th Cir. 2010). There the court overturned a lower court’s dismissal of a televised preacher’s defamation claim against John Stossel and ABC’s show *20/20* based upon excerpts from the plaintiff’s sermon that were included in a segment of Stossel’s show titled “Enough.” Stossel introduced the segment: “They preach the gospel of giving to God. But how much of what you give do they keep for themselves? Is it time for someone to say ‘enough’?” An audio-visual clip shows the plaintiff boasting: “I live in a 25-room mansion. I have my own \$6 million yacht. I have my own private jet, and I have my own helicopter, and I have seven luxury automobiles.” Yet context matters. Schroeder, J., held that because in evaluating the defense of truth

the proper comparison is between the meaning of the quotation as published and the meaning of the words as uttered, we conclude that the video quotation of Price’s statement materially changed the meaning of Price’s words. Price did not make any representations about his own wealth when he delivered the sermon that was excerpted in the Clip. In the quote, as misrepresented by the Clip, Price is speaking about himself, whereas in the context of the actual sermon, Price is telling a story about someone entirely different.

Why not grant the plaintiff a summary judgment on the issue of truth?

4. *Known to be false.* In the usual defamation case, the false information leads people to shun the plaintiff because they revise their opinion of her. But what should be done in those cases where the false statement leads people to hold the plaintiff in hatred, ridicule, and/or contempt when they *know* the statement to be false, but are titillated by it nonetheless? In *Hustler Magazine v. Falwell*, 485 U.S. 46 (1988), *supra* Chapter 1 at 71, the Supreme Court held that the vicious nature of the defendant’s parody rendered it intrinsically unbelievable and therefore undercut the plaintiff’s libel claim. *Falwell* has been followed with enthusiasm by lower courts that have treated *deliberate* parody as outside the scope of defamation

p. 980

on the ground that no one could believe it to be true. In *New Times, Inc. v. Isaacks*, 146 S.W.3d 144 (Tex. 2004), the plaintiff, District Attorney Bruce Isaacks, was pilloried in a satirical article in the *Dallas Observer* lampooning officials involved in the arrest and detention of a 13-year-old for writing a Halloween story that was deemed to contain “terrorist threats.”

Entitled “Stop the madness,” the fictitious article described the arrest and detention of “diminutive 6 year-old” Cindy Bradley, who was purportedly jailed for writing a book report about “cannibalism, fanaticism, and disorderly conduct” in Maurice Sendak’s classic children’s book, *Where the Wild Things Are*. Adjacent to the article was a picture of a smiling child holding a stuffed animal and bearing the caption, “Do they make handcuffs this small? Be afraid

of this little girl.”

Fabricated facts and false quotes attributed to Isaacks and others were strewn throughout the piece. Isaacks demanded an apology, requested a retraction, and then sued for libel. The court below affirmed the trial court’s denial of the defendant publisher’s summary judgment motion because the article “fails to provide any notice to a reasonable reader that it was a satire or parody and that a reasonable reader could conclude that the article made statements of fact.” On appeal, Jefferson, J., disagreed, dismissing the libel claim:

On balance, the obvious clues in the article itself, the *Observer*’s general and intentionally irreverent tone, its semi-regular publication of satire, as well as the satire’s timing and commentary on a then-existing controversy, lead us to conclude that “Stop the madness” could not reasonably be understood as stating actual facts about Isaacks. . . .

In a similar vein, in *Farah v. Esquire Magazine*, 736 F.3d 528 (D.C. Cir. 2013), Rogers, J., affirmed the dismissal of a defamation action brought by the author of *Where’s the Birth Certificate? The Case That Barack Obama Is Not Eligible to Be President* against *Esquire Magazine* for an article criticizing the book on its blog. The article claimed that the publisher had “suddenly and without any warning decided to recall and ‘pulp’ the . . . book the very day after it was released.” It also attributed to the author an obviously fictitious book entitled “Capricorn One: NASA, JFK, and the Great ‘Moon Landing’ Cover-Up.” Rogers, J., emphasized the significance of “context,” which includes “the immediate context of the disputed statements,” “the type of publication, the genre of writing, and the publication’s history of similar works,” as well as “[t]he broader social context.” And she held: “Even if none of these elements standing alone—the story’s substance, outlandish and humorous details, stylistic elements—would convince the reasonable reader that the blog post was satirical, taken in context and as a whole they could lead to no other conclusion.”

For the constitutional dimension, see *Philadelphia Newspapers, Inc. v. Hepps*, 475 U.S. 767 (1986), *infra* Note 4 at 1026.

2. Privileges in the Private Sphere

WATT v. LONGSDON

[1930] 1 K.B. 130

[Watt sued Longsdon for three separate defamatory publications. Plaintiff was the managing director in Casablanca, Morocco, of a British oil company of which the defendant was a director. At the time the various communications took place, the company was in the process of voluntary liquidation. In April 1928, Browne, who was the company’s manager in Casablanca, wrote a letter to the defendant in England at about the time the plaintiff left Casablanca for Lisbon after the plaintiff’s wife had returned to England. Browne’s letter charged that plaintiff had left a liquor bill of £88, which Browne doubted would ever get

paid, and related in detail how the plaintiff's maid had been plaintiff's mistress for several months. Browne expressed his surprise, "especially as she is an old woman, stone deaf, almost blind, with dyed hair!!!" but stated that the maid was able to give corroborating details. Browne's letter stated further that servants had told him that the plaintiff had had "orgies" with dancing girls, that he had designs on Browne's wife, and that plaintiff had shown himself to be "a blackguard, a thief, a liar and . . . lives exclusively to satisfy his own passions and lust." In a postscript, Browne suggested that it would probably be better not to show the plaintiff's wife the letter but that Mr. Singer, chairman of the board of directors of the company, should be told. In May 1928, defendant sent Browne's letter to Singer; and this is the first act of defamation complained of.

Defendant at the same time wrote Browne a letter in which he shared Browne's general view of the plaintiff and asked Browne to obtain sworn statements from his informants, offering to pay any bribes necessary to obtain such statements; the letter further said he thought it his duty to inform plaintiff's wife but that he would not do so until he had the sworn statements in his hand. This letter from the defendant to Browne was the second act of defamation complained of.

A few days later, without having received further confirmation of the statements in Browne's letter, the defendant showed it to plaintiff's wife, with the result that plaintiff and his wife separated, and she began suit for divorce. The showing of Browne's letter to plaintiff's wife was the third act of defamation complained of.

Defendant did not defend the truth of the libels contained in the letters. Nevertheless, Horridge, J., gave judgment for the defendant, ruling that all three publications were privileged. The Court of Appeal reversed for the reasons indicated below.]

SCRUTTON, L.J. This case raises, amongst other matters, the extremely difficult question, equally important in its legal and social aspect, as to the circumstances, if any, in which a person will be justified in giving to one partner to a marriage information which that person honestly believes to be correct, but

p. 982

which is in fact untrue, about the matrimonial delinquencies of the other party to the marriage. . . .

By the law of England there are occasions on which a person may make defamatory statements about another which are untrue without incurring any legal liability for his statements. These occasions are called privileged occasions. A reason frequently given for this privilege is that the allegation that the speaker has "unlawfully and maliciously published," is displaced by proof that the speaker had either a duty or an interest to publish, and that this duty or interest confers the privilege. But communications made on these occasions may lose their privilege: (1.) they may exceed the privilege of the occasion by going beyond the limits of the duty or interest, or (2.) they may be published with express malice, so that the occasion is not being legitimately used, but abused. . . . The classical definition of "privileged occasions" is that of Parke B. in *Toogood v. Spyring*, a case where the tenant of a farm complained to the agent of the landlord, who had sent a workman to do repairs, that the workman had broken into the tenant's cellar, got drunk on the tenant's cider, and spoilt the work he was sent to do. The workman sued the tenant. Parke B. gave the explanation of privileged occasions in these words: "In general, an action lies for the malicious publication

of statements which are false in fact, and injurious to the character of another (within the well-known limits as to verbal slander), and the law considers such publication as malicious, unless it is fairly made by a person in the discharge of some public or private duty, whether legal or moral, or in the conduct of his own affairs, in matters where his interest is concerned. In such cases, the occasion prevents the inference of malice, which the law draws from unauthorized communications, and affords a qualified defence depending upon the absence of actual malice. If fairly warranted by any reasonable occasion or exigency, and honestly made, such communications are protected for the common convenience and welfare of society; and the law has not restricted the right to make them within any narrow limits." It will be seen that the learned judge requires: (1.) a public or private duty to communicate, whether legal or moral; (2.) that the communication should be "fairly warranted by any reasonable occasion or exigency"; (3.) or a statement in the conduct of his own affairs where his interest is concerned. Parke B. had given several other definitions in slightly varying terms. [Later cases add] to the protection of his own interest spoken of in *Toogood v. Spyring* the protection of the interests of another where the situation of the writer requires him to protect those interests. This, I think, involves that his "situation" imposes on him a legal or moral duty. The question whether the occasion was privileged is for the judge, and so far as "duty" is concerned, the question is: Was there a duty, legal, moral, or social, to communicate? As to legal duty, the judge should have no difficulty; the judge should know the law; but as to moral or social duties of imperfect obligation, the task is far more troublesome. The judge has no evidence as to the view the community takes of moral or social duties. . . . Is the judge merely to give his own view of moral and social duty, though he thinks a considerable portion of the community hold a different opinion? Or is he to endeavour to ascertain what view "the great mass

p. 983

of right-minded men" would take? It is not surprising that with such a standard both judges and text-writers treat the matter as one of great difficulty in which no definite line can be drawn. . . .

[After considering various other English precedents, the court summarized the occasions giving rise to a privileged communication as follows:] [E]ither (1.) a duty to communicate information believed to be true to a person who has a material interest in receiving the information, or (2.) an interest in the speaker to be protected by communicating information, if true, relevant to that interest, to a person honestly believed to have a duty to protect that interest, or (3.) a common interest in and reciprocal duty in respect of the subject matter of the communication between speaker and recipient. . . .

In my opinion Horridge J. went too far in holding that there could be a privileged occasion on the ground of interest in the recipient without any duty to communicate on the part of the person making the communication. But that does not settle the question, for it is necessary to consider, in the present case, whether there was, as to each communication, a duty to communicate, and an interest in the recipient.

First as to the communication between Longsdon and Singer, I think the case must proceed on the admission that at all material times Watt, Longsdon and Browne were in the employment of the same company, and the evidence afforded by the answer to the interrogatory put in by the plaintiff that Longsdon believed the statements in Browne's letter. In my view on these facts there was a duty, both from a moral and material point of view, on Longsdon to communicate the letter to Singer, the chairman of his company, who, apart from questions of present employment, might be asked by Watt for a testimonial to a future employer. Equally, I think Longsdon receiving the letter from Browne, might discuss the matter with him,

and ask for further information, on the ground of a common interest in the affairs of the company, and to obtain further information for the chairman. I should therefore agree with the view of Horridge J. that these two occasions were privileged, though for different reasons. Horridge J. further held that there was no evidence of malice fit to be left to the jury, and, while I think some of Longsdon's action and language in this respect was unfortunate, as the plaintiff has put in the answer that Longsdon believed the truth of the statements in Browne's and his own letter, like Lord Dunedin in *Adam v. Ward*, I should not try excess with too nice scales, and I do not dissent from his view as to malice. As to the communications to Singer and Browne, in my opinion the appeal should fail, but as both my brethren take the view that there was evidence of malice which should be left to the jury, there must, of course, be a new trial as to the claim based on these two publications.

The communication to Mrs. Watt stands on a different footing. I have no intention of writing an exhaustive treatise on the circumstances when a stranger or a friend should communicate to husband or wife information he receives as to the conduct of the other party to the marriage. I am clear that it is impossible to say he is always under a moral or social duty to do so; it is equally impossible to say he is never under such a duty. It must depend on the circumstances of each

p. 984

case, the nature of the information, and the relation of speaker and recipient. It cannot, on the one hand, be the duty even of a friend to communicate all the gossip the friend hears at men's clubs or women's bridge parties to one of the spouses affected. On the other hand, most men would hold that it was the moral duty of a doctor who attended his sister in law, and believed her to be suffering from a miscarriage, for which an absent husband could not be responsible, to communicate that fact to his wife and the husband. . . . If this is so, the decision must turn on the circumstances of each case, the judge being much influenced by the consideration that as a general rule it is not desirable for any one, even a mother in law, to interfere in the affairs of man and wife. Using the best judgment I can in this difficult matter, I have come to the conclusion that there was not a moral or social duty in Longsdon to make this communication to Mrs. Watt such as to make the occasion privileged, and that there must be a new trial so far as it relates to the claim for publication of a libel to Mrs. Watt. The communications to Singer and Browne being made on a privileged occasion, there must be a new trial of the issue as to malice defeating the privilege. There must also be a new trial of the complaint as to publication to Mrs. Watt, the occasion being held not to be privileged. . . .

GREER, L.J. . . . In my judgment no right minded man in the position of the defendant, a friend of the plaintiff and his wife, would have thought it right to communicate the horrible accusations contained in Mr. Browne's letter to the plaintiff's wife. The information came to Mr. Browne from a very doubtful source, and in my judgment no reasonably right-minded person could think it his duty, without obtaining some corroboration of the story, and without first communicating with the plaintiff, to pass on these outrageous charges of marital infidelity of a gross kind, and drunkenness and dishonesty to the plaintiff's wife. As regards the publication to the plaintiff's wife, the occasion was not privileged, and it is unnecessary to consider whether there was evidence of express malice. As regards the publication to the chairman of the company, who owned nearly all the shares, and to Mr. Browne, I think on the facts as pleaded there was between the defendant and the recipients of the letters a common interest which would make the occasion privileged, but I also think there is intrinsic evidence in the letter to Browne, and evidence in the hasty and unjustifiable communication to the plaintiff's wife, which would be sufficient to entitle the plaintiff to ask for a verdict on these publications on the ground of express malice. . . .

I think the defendant's conduct in disseminating the gross charges that he did to the plaintiff's wife, and to Mr. Singer, and repeating and to some extent adding to them in his letter to Mr. Browne, and his offer to provide funds for procuring the evidence of the two women in Casablanca, affords some evidence of malice which ought to have been left to the jury. It is not for us to weigh the evidence. It will be for the jury to decide whether they are satisfied that in publishing the libels the defendant was in fact giving effect to his malicious or otherwise improper feelings towards the plaintiff, and was not merely using the occasion for the protection of the interests of himself and his two correspondents.

NOTES

1. When is a communication privileged? The common law has sought to identify those socially useful private communications that should be encouraged by relaxing the basic rule of liability, whether strict, or more recently, negligence. To achieve the proper balance most courts and commentators, both in England and the United States, have closely followed Baron Park's scheme outlined in *Toogood v. Spyring*, 149 Eng. Rep. 1044 (Ex. 1834), discussed in *Watt*. Under this scheme, the existence of privileged occasions depends on the interest of the speaker, the interest of his audience, or a common interest between the speaker and his audience. See RST §§594-596, following the basic rule.

Restatement of the Law (Second) of Torts

§594. PROTECTION OF THE PUBLISHER'S INTEREST

An occasion makes a publication conditionally privileged if the circumstances induce a correct or reasonable belief that

- (a) there is information that affects a sufficiently important interest of the publisher, and
- (b) the recipient's knowledge of the defamatory matter will be of service in the lawful protection of the interest.

Restatement of the Law (Second) of Torts

§595. PROTECTION OF INTEREST OF RECIPIENT OF A THIRD PERSON

(1) An occasion makes a publication conditionally privileged if the circumstances induce a correct or reasonable belief that

- (a) there is information that affects a sufficiently important interest of the recipient or a third person, and
- (b) the recipient is one to whom the publisher is under a legal duty to publish the defamatory matter or is a person to whom its publication is otherwise within the generally accepted

standards of decent conduct.

(2) In determining whether a publication is within generally accepted standards of decent conduct it is an important factor that

- (a) the publication is made in response to a request rather than volunteered by the publisher or
- (b) a family or other relationship exists between the parties.

Restatement of the Law (Second) of Torts

§596. COMMON INTEREST

An occasion makes a publication conditionally privileged if the circumstances lead any one of several persons having a common interest in a particular subject matter correctly or reasonably to believe that there is information that another sharing the common interest is entitled to know.

References (or “characters”) concerning (or for) former servants can be privileged, where the defendant is replying to an inquiry. In *Gardner v. Slade*, 116 Eng. Rep. 1467, 1470 (Q.B. 1849), a case involving a domestic servant, Wightman, J., said:

It is quite a mistake to treat questions of this kind as if the law allowed a privilege only for the benefit of the giver of the character. It is of importance to the public that characters should be readily given. The servant who applies for the character, and the person who is to take him, are equally benefited. Indeed, there is no class to whom it is of so much importance that characters should be freely given as honest servants.

The privilege has been extended to many intragroup situations such as churches, fraternal organizations, labor unions, shareholders of a corporation, and, more recently, faculty evaluation committees (*Colson v. Stieg*, 433 N.E.2d 246 (Ill. 1982)), student evaluation committees (see *Doe v. Gonzaga Univ.*, 24 P.3d 390 (Wash. 2001)), and physicians and their health plans with respect to the medical records of their patients (*Kuwik v. Starmark Star Mktg. & Admin., Inc.*, 619 N.E.2d 129, 134, 135 (Ill. 1993)).

The potential dangers in this area, especially with references for former employees, has sparked an effort to regulate the matter by consent, which, when given, is generally understood to create only a qualified privilege. See RST §583: “[O]ne who agrees to submit his conduct to investigation, knowing that its results will be published, consents to the publication of honest findings of investigators.” In many cases, the fear of defamation suits has led former employers to adopt a strict rule under which they only provide information as to dates of employment and last position held. Even salary information (which is hard to interpret with bonuses and the like) is often not disclosed.

2. *Credit reports.* In *Smith v. Thomas*, 132 Eng. Rep. 146 (C.P. 1835), a case involving a credit reference,

the court observed:

The publication is alleged to have taken place in the course of a confidential communication between one tradesman and another, as to the solvency of a third person, whom the inquirer was about to trust. If such communications are not protected by law from the danger of vexatious litigation in cases where they turn

p. 987

out to be incorrect in fact, the stability of men engaged in trade and commerce would be exposed to the greatest hazard, for no man would answer an inquiry as to the solvency of another.

This privilege has also been extended to commercial credit agencies. In *Shore v. Retailers Commercial Agency*, 174 N.E.2d 376, 379 (Mass. 1961), Spaulding, J., wrote:

We are of opinion that reports made by a mercantile agency to an interested subscriber should be conditionally privileged. Those about to engage in a commercial transaction like to know something about the persons with whom they are dealing. Often they are unable to get that information themselves and must obtain it through mercantile agencies. In furnishing such information the agencies are supplying a legitimate business need and ought to have the protection of the privilege. Without such protection few would undertake to furnish the information, and the cost would be high, if not prohibitive. . . . We are not to be understood as holding that there is a privilege where information is published by the agency generally to subscribers having no particular interest in the report. Restatement: Torts, §595, comment g.

Shore reflects the majority view in the United States, with only Georgia and Idaho denying that a conditional privilege attaches to credit reports. See Sack, Sack on Defamation: Libel, Slander and Related Problems §9.2.2.C (4th ed. 2013). This area of privilege has generally not been affected by *New York Times*. See *Dun & Bradstreet, Inc. v. Greenmoss Builders*, 472 U.S. 749 (1985), *infra* at 1024, Note 2.

3. *Volunteers*. As Watt indicates, one troublesome problem arises when the defendant has volunteered communication to a third party without a request. Generally a party is not necessarily protected in answering an inquiry; nor is he necessarily exposed by volunteering information. Rather, Restatement (Second) of Torts §595(2)(a) notes that it is an “important factor” that “the publication is made in response to a request rather than volunteered by the publisher.”

In *Count Joannes v. Bennett*, 87 Mass. 169, 172 (1862), defendant, the family pastor and intimate friend, was persuaded by the father to write the daughter a letter urging her to call off her proposed marriage to plaintiff. The court held that the contents of the letter were not privileged, pointing out that the defendant, although he acted “from laudable motives in writing it,” was no longer the daughter’s pastor and was in no way related to her other than as a friend. The court said, in part:

It is obvious that if such communications could be protected merely on the ground that the party making them held friendly relations with those to whom they were written or spoken, a wide

door would be left open by which indiscriminate aspersion of private character could escape with impunity. Indeed, it would rarely be difficult for a party to shelter himself from the consequences of uttering or publishing a slander or libel under a privilege which could be readily made to embrace almost every species of communication. The law does not tolerate any such license of speech or pen.

p. 988

Does the same result obtain under *Watt*?

4. Defamation in self-defense. A distinct form of conditional privilege also arises “when the person making the publication reasonably believes that his interest in his own reputation has been unlawfully invaded by another person and that the defamatory matter that he publishes about the other is reasonably necessary to defend himself”—“including the statement that his accuser is an unmitigated liar.” RST §594, comment *k*. The boundaries of this privilege are not clearly established, which gives rise to questions reminiscent of those raised with self-defense against physical attack: How vigorous must the plaintiff’s original aggression have been? Must the original attack have been defamatory? What if it was true or privileged? Must the statement made in self-defense concern the precise subject as the original accusation and, if not, how much leeway is there? Again, how much verbal force may the defendant use in reply? Does the privilege extend to the defense of third parties? Further, the doctrine has strong overtones of assumption of risk and contributory negligence because the plaintiff, having invited a reply, cannot complain when a vigorous one is given to a public already alert to controversy.

3. Privileges in the Public Sphere

a. Legal Proceedings and Reports Thereon

KENNEDY v. CANNON

182 A.2d 54 (Md. 1962)

SYBERT, J. This appeal questions whether the trial court erred in directing a verdict for the defendant, an attorney, in a suit for slander on the grounds that the allegedly slanderous statement was privileged as part of the defendant’s duty as counsel to his client, and that no malice on the part of the defendant had been shown.

[The defendant-appellee was the lawyer for an African American man, Charles Humphreys, charged with raping the plaintiff-appellant, a white woman. He admitted to having had intercourse with her but claimed that she had consented to the act. The defendant spoke to the editor of the local paper, giving his side of the story. The editor said it would be “impossible to print matter of that type and at such great length.” The story in the afternoon paper recounted the plaintiff’s charges against Humphreys, noted his admission of intercourse, and concluded with the defendant saying, “He [Humphreys] emphatically denies the charge. He says that the woman submitted to his advances willingly.”]

As a result of the publication of the statement appellant alleged she suffered humiliation and harassment by

annoying phone calls from unknown persons and eventually was forced to move with her family out of the community and the State. She instituted a suit against appellee alleging that the words spoken by him to the newspaper charged her with the crime of adultery, were slanderous per se under Art. 88, §1, Code (1957), and were not privileged.

The appellee admitted on the witness stand that the newspaper article correctly quoted his statement to the editor. He sought to justify its publication on the ground that the physical safety of his client required it. He stated he feared the possibility of a lynching if only the material released by the State's Attorney were published. Recalling a lynching which had occurred in Salisbury under similar circumstances some 25 years previously, he said he felt that the account should include a denial of the charge based upon his client's claim of consent by the woman. At the conclusion of the testimony before a jury, the trial court granted appellee's motion for a directed verdict, expressing the opinion that when the State had undertaken to publish a statement about the case damaging to his client, the appellee was justified and privileged in replying as he did. Appellant appeals from the judgment for costs entered in favor of appellee. . . .

The privilege afforded an attorney in a judicial proceeding and its rationale are discussed in the leading case of *Maulsby v. Reifsnyder*, 69 Md. 143 (1888), where this Court stated:

. . . All agree, that counsel are privileged and protected to a certain extent, at least, for defamatory words spoken *in a judicial proceeding*, and words thus spoken are not actionable, which would in themselves be actionable, if spoken elsewhere. He is obliged, in the discharge of a professional duty, to prosecute and defend the most important rights and interests, the life it may be, or the liberty or the property of his client, and it is absolutely essential to the administration of justice that he should be allowed the widest latitude in commenting on the character, the conduct and motives of parties and witnesses and other persons directly or remotely connected with the subject-matter in litigation. And to subject him to actions of slander by every one who may consider himself aggrieved, and to the costs and expenses of a harassing litigation, would be to fetter and restrain him in that open and fearless discharge of duty which he owes to his client, and which the demands of justice require. Not that the law means to say, that one, because he is counsel in the trial of a cause, has the right, abstractly considered, deliberately and maliciously to slander another, but it is the fear that if the rule were otherwise, actions without number might be brought against counsel who had not spoken falsely and maliciously. It is better therefore to make the rule of law so large that counsel acting bona fide in the discharge of duty, shall never be troubled, although by making it so large, others who have acted mala fide and maliciously, are included. The question whether words spoken by counsel were spoken maliciously or in good faith, are, and always will be, open questions, upon which opinion may differ, and counsel, however innocent, would be liable if not to judgments, to a vexatious and expensive litigation. The privilege thus recognized by law is not the privilege merely of counsel, but the privilege of clients, and the evil, if any, resulting from it must be endured for the sake of the greater good which is thereby secured. But this privilege is not an absolute and unqualified privilege, and cannot be extended beyond the reason and principles on which it is founded. . . . (Emphasis added.)

[The court went on to hold that the words, in order for an absolute privilege to attach, also had to be relevant to the judicial proceedings in which they were spoken.]

p. 990

This absolute immunity extends to the judge as well as to witnesses and parties to the litigation, for defamatory statements uttered in the course of a trial or contained in pleadings, affidavits, depositions, and other documents directly related to the case. . . . An absolute privilege is distinguished from a qualified privilege in that the former provides immunity regardless of the purpose or motive of the defendant, or the reasonableness of his conduct, while the latter is conditioned upon the absence of malice and is forfeited if it is abused. . . .

Appellee in this case contends that under the *Maulsby* case, his statement was absolutely privileged. It is not disputed that the statement was relevant to the criminal proceeding. The essential question to be answered is whether it was published in—that is, as part of—a “judicial proceeding.”

The term “judicial proceeding” is broad enough to cover all steps in a criminal action, so that when Humphreys was arrested and charged with rape it would be a valid conclusion that the judicial proceeding had commenced. . . . However, this does not necessarily mean that every statement made by an attorney after the inception of a judicial proceeding will be privileged.

Appellee cites the oft quoted rule from 3 Restatement, Torts, §586:

An attorney at law is absolutely privileged to publish false and defamatory matter of another in communications preliminary to a proposed judicial proceeding, or in the institution of, or during the course and as a part of a judicial proceeding in which he participates as counsel, if it has some relation thereto.

However, the extension of this absolute privilege to statements not made in the judicial proceeding itself is limited both by the comments on the rule of the Restatement itself, and by the decisions. The scope of the privilege is restricted to communications such as those made between an attorney and his client, or in the examination of witnesses by counsel, or in statements made by counsel to the court or jury. . . . Appellee cites no authorities which would extend the privilege beyond a communication to one actually involved in the proceeding, either as judge, attorney, party or witness. On the other hand, it has been held that such absolute privilege will not attach to counsel’s extrajudicial publications, related to the litigation, which are made outside the purview of the judicial proceeding. . . . Nor will the attorney be privileged for actionable words spoken before persons in no way connected with the proceeding. [The court discusses several cases.]

All of the above cited cases make it obvious that aside from any question of ethics, an attorney who wishes to litigate his case in the press will do so at his own risk. We hold that appellee had no absolute privilege in regard to the statement made by him to the newspaper.

However, the argument is made (and the language of the trial court’s opinion shows that it was persuasive there) that the forum had been chosen by the State’s Attorney, and not by appellee, and that he had a right,

perhaps even a duty to his client, to publish the statement in question. This argument raises indirectly the contention that because of the attorney client relationship, at least a qualified privilege existed in the absence of a showing of malice or abuse of the privilege.

p. 991

[The court then denied that the appellee had met the requirements for a qualified privilege defeasible on proof of malice.] . . . Other steps more consonant with Canon 20, Canons of Professional Ethics, were open to appellee. He could have requested the transfer of Humphreys to the jail of another jurisdiction for safekeeping until trial. He could have sought to have the objectionable matter, contained in the proposed article, kept out of publication. Even if this attempt were unsuccessful, other tactics were possible to the attorney who eventually defended the case, e.g., a request for change of venue, voir dire examination of prospective jurors in regard to the article, and preservation of the question of the prejudicial effect of the article, for appellate review.

[The court concluded that even though it “disapproved” of the actions of the State’s Attorney, the appellees’ claims for absolute and qualified privilege had to be denied. Yet owing to the unsettled state of the law, it held that on retrial the jury could consider the defendant’s good faith on the question of mitigation of damages.]

...

For the reasons stated, the granting of a directed verdict for appellee was erroneous and the case should have been submitted to the jury.

NOTES

1. *Litigating in the press.* The *Kennedy* adage—lawyers who try their cases in the media do so at their peril—retains its vitality. But distinctions are made. In *Norman v. Borison*, 17 A.3d 697 (Md. 2011), Harrell, J., extended the absolute privilege to the republication of incomplete judicial proceedings to the press and on the Internet in a putative class action case. Attorneys in the case provided to the press a copy of their complaint before it was filed, along with verbal “sound bites” for potential articles. Distinguishing *Kennedy*, Harrell, J., noted that the attorneys “were not attempting to set up a slanderous defense to the allegation of rape or some other crime in the press.” Instead, “[b]y republishing or reporting on those erstwhile pleadings, the press could be seen as a tool assisting in the notification to potential class members of the contemplated proceedings.” The justification was sweeping:

We extend the absolute privilege to [extrinsic, out-of-court, statements] for the traditional reason—to encourage the free divulgence of information in pursuit of justice. More specifically, we apply the privilege because “the evaluation and investigation of facts and opinions for the purpose of determining what, if anything, is to be raised or used in pending litigation is as integral a part of the search for truth . . . as is the presentation of such facts and opinions during

the course of the trial.”

But with a significant caveat: “[B]ut for the fact that the mortgage rescue scam suit was striving to become a class action, our conclusion might have been different.” Can framing a suit as a class action provide cover for funneling defamatory statements to the press?

p. 992

2. Scope of the absolute privilege. The common law courts have long recognized that the absolute privilege extends without doubt to judges in the course of official business, to lawyers for conduct both preliminary to and in the course of judicial proceedings, and to parties to judicial proceedings. RST §§585-587. But courts continue to grapple with the question of the privilege’s scope. In *Barker v. Huang*, 610 A.2d 1341, 1345-1346 (Del. 1992), the court rebuffed plaintiff’s invitation to create an exception for sham statements made in the course of litigation. Horsey, J., wrote:

To allow claims of defamation in the context of judicial proceedings to proceed to costly discovery in an attempt to ferret out facts purporting to show a sham nature to the litigation would largely defeat the purpose of the privilege. Moreover, sufficient sanctions already exist to deter and punish frivolous litigation. We therefore hold that no “sham litigation” exception to the defense of absolute privilege exists under the law of Delaware.

In *Toice v. Proskauer Rose, L.L.P.*, 816 F.3d 341 (5th Cir. 2016), the court did not countenance a fraud exception to the attorney privilege. So long as an attorney’s behavior fell within the scope of representation, it was protected—“That some of it was allegedly wrongful, or that he allegedly carried out some of his responsibilities in a fraudulent manner, is no matter.” Does this expand the litigation privilege too far? Steinberg & Weissler, *The Litigation Privilege as a Shelter for Miscreant Legal Counsel*, 97 Or. L. Rev. 1, 49 (2018), thinks so.

3. Other governmental bodies. In what other settings are statements absolutely privileged? This basic question has been raised countless times in other bodies of the modern administrative state, most of which have complex internal procedures. Thus in *Craig v. Stafford Construction Co.*, 856 A.2d 372, 382 (Conn. 2004), the plaintiff Craig was a police officer who claimed that the defendant company and its employee “had defamed him when they filed a citizen complaint with the [internal affairs division of the Hartford police] department alleging that he had directed racial slurs toward them at a construction site.” The plaintiff was charged with “conduct unbecoming of a police officer.” The court found that “[d]uring the investigatory process, Ramistella [the employee] made a false statement” regarding the incident and thereafter withdrew his complaint. Several months later the plaintiff was found not guilty.

A unanimous court held that the extensive procedures—including taking sworn statements from witnesses and the accused and preparing an extensive report subject to internal review—created a quasi-judicial proceeding in which the charging witnesses were protected by an absolute privilege.

[A]lthough we recognize the debilitating affect [sic] that a false allegation of racial discrimination can have on a police officer, we conclude that the policy of encouraging citizens’

complaints against those people who wield extraordinary power within the community outweighs the need to protect the reputation of the police officer against whom the complaint is made.

Should the rule be relaxed when the defendant admits to a false statement? Similarly, all reports that private individuals make to police officers about possible criminal activity of other private parties are also treated as communications “made preliminary to a proposed judicial proceeding.” RST §587, comment *b*. See, e.g., Correlas v. Viverios, 572 N.E.2d 7, 13 (Mass. 1991), defending this rule on the ground that any witness has a strong incentive to tell the truth, for “[b]y implicating the plaintiff, the defendant knew that she would have to repeat her accusations at the plaintiff’s trial, and do so under oath, subjecting herself to possible perjury for any false testimony.”

But the absolute privilege has not been extended to police officers’ own investigatory reports. In Dear v. Devaney, 983 N.E.2d 240 (Mass. App. Ct. 2013), Kafker, J., held that statements—including “speculation” and “recounting of unidentified hearsay”—made by police officers during the investigation, not prosecution, of license suspension proceedings were not protected by an absolute privilege. Kafker, J., relied heavily on the fact that “as he was neither a party nor a witness at the proceeding, Dear had no opportunity to test the validity of the statements at the proceeding.”

States are divided on the type of privilege accorded to hospital peer review committees that evaluate—often in response to individual complaints—the performance of staff physicians. Franklin v. Blank, 525 P.2d 945, 946 (N.M. App. 1974), held that both a letter written to initiate peer review and the peer review process at common law were shielded by an absolute privilege. “The appropriate professional societies, by exercising peer review, can and do perform a great public service by exercising control over those persons placed in a position of public trust but nevertheless unfit to bear that responsibility.” But in DiMiceli v. Klieger, 206 N.W.2d 184 (Wis. 1973), the court recognized only a qualified privilege. Today, most states have specific statutes that supply some privilege for peer review proceedings. Thus Fla. Stat. Ann. §766.101 (2019) protects a peer review committee member, or health care provider who gives information to a peer review committee, when “the committee member or health care provider acts without intentional fraud.” Further amendments limit the use that can be made in court of information presented to a peer review committee. In contrast, Cal. Civ. Code §47 (2019) extends the privilege to “any other official proceeding authorized by law,” with unrelated exceptions.

For bodies that look less like courts and more like political fora, a conditional privilege is the norm. In Park Knoll Associates v. Schmidt, 451 N.E.2d 182 (N.Y. 1983), the court, with two judges dissenting, held that the president of a tenant’s association did *not* enjoy absolute privilege from liability, as he was not an attorney, party, or witness in a judicial or quasi-judicial proceeding. Likewise a claim for absolute privilege was rebuffed in Ezekiel v. Jones Motor Co., Inc., 372 N.E.2d 1281, 1285 (Mass. 1978), when the defendant’s employee, testifying before a joint management-union grievance board, falsely accused the plaintiff of stealing company property.

For a still classic discussion, see Veeder, Absolute Immunity in Defamation: Judicial Proceedings, 9 Colum.

b. Reports of Public Proceedings or Meetings

BROWN & WILLIAMSON TOBACCO CORP. v. JACOBSON

713 F.2d 262 (7th Cir. 1983)

POSNER, J.

This diversity suit brought by Brown & Williamson, the manufacturer of Viceroy cigarettes, charges CBS and Walter Jacobson with libel and other violations of Illinois law. Jacobson is a news commentator for WBBM-TV, a Chicago television station owned by CBS. [In 1975, the Ted Bates advertising agency teamed up with the Kennan market-research firm to develop a strategy for selling Viceroy to young people by placing smoking in the same “illicit pleasure category” as “wine, beer, shaving, wearing a bra (or purposely not wearing one).” Brown & Williamson promptly rejected the entire approach and fired Ted Bates “primarily because of displeasure with the proposed strategy.”] In 1981 the Federal Trade Commission published a report that discussed the Kennan report and announced that “B & W adopted many of the ideas contained in this report in the development of a Viceroy advertising campaign,” and quoted passages from a “Viceroy Strategy” Report of 1976 which states: “The marketing efforts must cope with consumers’ attitudes about smoking and health, either providing them a *rationale* for smoking a full flavor VICEROY or providing a means of *repressing* their concerns about smoking a full flavor VICEROY.” In November 1981 a CBS reporter spoke with a representative of Viceroy about the initial 1975 campaign and was told that the company had rejected the proposal and had fired the Ted Bates agency. Some ten days later, and again in March 1982, Walter Jacobson broadcast a show in which he accused the “killer business” of going to Madison Avenue for help in hooking young people to smoke. As part of that segment Jacobson said:

Viceroy's got the Deep-Weave Filter
for the taste that's right!

Viceroy is scientifically made
to taste the way you'd like a
filter cigarette to taste.
Not too strong...not too light...
Viceroy's got the taste that's right.

SMOKE ALL?
Smoke all seven filter brands
and you'll agree: some taste
too strong... while others
taste too light. But Viceroy—
with the Deep-Weave Filter—
lets you like a filter cigarette to taste. That's right!

A Viceroy cigarette advertisement from 1964

Source: Viceroy

Well, there is a confidential report on cigarette advertising in the files of the Federal Government right now, a Viceroy advertising, the Viceroy strategy for attracting young people, starters they are called, to smoking—"FOR THE YOUNG SMOKER. . . . A CIGARETTE FALLS INTO THE SAME CATEGORY WITH WINE, BEER, SHAVING OR WEARING A BRA. . . ." says the Viceroy strategy—"A DECLARATION OF INDEPENDENCE AND STRIVING FOR SELF-IDENTITY." Therefore, an attempt should be made, says Viceroy, to ". . . PRESENT THE CIGARETTE AS AN INITIATION INTO THE ADULT WORLD," to ". . . PRESENT THE CIGARETTE AS AN ILLICIT PLEASURE . . . A BASIC SYMBOL

P. 995

OF THE GROWING-UP, MATURING PROCESS." An attempt should be made, say the Viceroy slicksters, "TO RELATE THE CIGARETTE TO 'POT,' WINE, BEER, SEX. DO NOT COMMUNICATE HEALTH OR HEALTH-RELATED POINTS." That's the strategy of the cigarette slicksters, the cigarette business which is insisting in public, "We are not selling cigarettes to children."

They're not slicksters, they're liars.

While Jacobson is speaking these lines the television screen is showing Viceroy ads published in print media in 1980. Each ad shows two packs of Viceroy cigarettes alongside a golf club and ball. . . .

Under contemporary as under traditional Illinois law, Jacobson's broadcast is libelous per se. Accusing a cigarette company of what many people consider the immoral strategy of enticing children to smoke—enticing them by advertising that employs themes exploitive of adolescent vulnerability—is likely to harm the company. It may make it harder for the company to fend off hostile government regulation and may invite rejection of the company's product by angry parents who smoke but may not want their children to do so. These harms cannot easily be measured, but so long as some harm is highly likely the difficulty of measurement is an additional reason, under the modern functional approach of the Illinois courts, for finding libel per se rather than insisting on proof of special damage. . . .

The defendants also argue and the district court also found that the libel was privileged as a fair and accurate summary of the Federal Trade Commission staff's report on cigarette advertising. The parties agree as they must that Illinois recognizes a privilege for fair and accurate summaries of, or reports on, government proceedings and investigations. They agree that the privilege extends to a public FTC staff report on an investigation. But they disagree over whether Jacobson's summary of the FTC staff report was "fair," that is, whether the overall impression created by the summary was no more defamatory than that created by the original. See Restatement (Second) of Torts §611, comment *f* (1977). Since this is a question of fact, and the case was dismissed on the pleadings, all we need decide is whether the fairness of the Jacobson summary emerges so incontrovertibly from a comparison of the FTC staff report with the broadcast that no rational jury considering these documents with the aid of whatever additional evidence Brown & Williamson might introduce could consider the summary unfair. . . .

The fact that there are discrepancies between a libel and the government report on which it is based need not defeat the privilege of fair summary. Unless the report is published verbatim it is bound to convey a somewhat different impression from the original, no matter how carefully the publisher attempts to summarize or paraphrase or excerpt it fairly and accurately. An unfair summary in the present context is one that amplifies the libelous effect that publication of the government report verbatim would have on a reader who read it carefully—that carries a "greater sting." The FTC staff report conveys the following message: six years ago a market-research firm submitted to Brown & Williamson a set of rather lurid proposals for enticing young people to smoke cigarettes and

p. 996

Brown & Williamson adopted many of its ideas (though not necessarily the specific proposals quoted in the report) in an advertising campaign aimed at young smokers which it conducted the following year. The Jacobson broadcast conveys the following message: Brown & Williamson currently is advertising cigarettes in a manner designed to entice children to smoke by associating smoking with drinking, sex, marijuana, and other illicit pleasures of youth. So at least a rational jury might interpret the source and the summary, and if it did it would be entitled to conclude that the summary carried a greater sting and was therefore unfair.

[Reversed and remanded.]

NOTES

1. *Brown & Williamson on remand.* At trial, Brown & Williamson recovered \$3,000,000 in actual damages and \$2,050,000 in punitive damages of which \$50,000 were against Jacobson personally and the rest against CBS. The trial judge found that there were no significant actual damages and thus awarded nominal damages of \$1.00. On appeal this amount was increased to \$1,000,000 and the punitive damages award was preserved. *Brown & Williamson Tobacco Corp. v. Jacobson*, 827 F.2d 1119 (7th Cir. 1987).

2. *English origins of the fair reporting privilege.* In general the privilege of “record libel”—the traditional term for the fair report privilege—is accorded to persons who publish to the world statements that previously have been made on the public record. In one famous early case, *Stockdale v. Hansard*, 112 Eng. Rep. 1112 (Q.B. 1839), the court held that a parliamentary report, even though published by Hansard at the direct request of Parliament, was not privileged. That decision was immediately overturned by legislation. See Parliamentary Papers Act, 1840, s. 4. It was not, however, until *Wason v. Walter*, 4 Q.B. 73 (1868), that the privilege was extended to proceedings of Parliament voluntarily republished by the press. This decision smacked of judicial legislation since Parliament had twice previously refused to create a privilege for such reports. In his opinion, Cockburn, C.J., noted that the privilege was well established for judicial proceedings, and that it was “of paramount public and national importance that the proceedings of the houses of parliament shall be communicated to the public” in order that “confidence” be maintained in the legislative process. Today in England the privilege extends not only to reports of parliamentary proceedings but to those of administrative bodies as well. See, e.g., *Perera v. Peiris*, [1949] A.C. 1 (P.C.).

3. *Scope of the privilege in the United States.* In this country, the record libel (or “fair reporting”) privilege always applied to reports of legislative, judicial, and administrative proceedings, and was quickly extended to various functions performed by “quasi-public” bodies.

Clark, J., confirmed the absolute nature of the privilege in *Funk v. Scripps Media, Inc.*, 570 S.W.3d 205 (Tenn. 2019), reasoning that “when a statement is made in a judicial proceeding, the statement is worthy of public notice, not only as a result of the contents of the statement, but also because of the context in which the statement was made.” Allowing the privilege to be defeated upon showing

p. 997

of actual malice would thus undermine the purpose of the privilege, including “lessen[ing] the public’s opportunities to be ‘apprised of what takes place in the proceedings without having been present’” and “assess[ing] the value of our government in action.”

Restatement of the Law (Second) of Torts

§611. REPORT OF OFFICIAL PROCEEDING OR PUBLIC MEETING

The publication of defamatory matter concerning another in a report of an official action or proceeding or of a meeting open to the public that deals with a matter of public concern is privileged if the report is accurate and complete or a fair abridgement of the occurrence reported.

Comment f. Accuracy and fairness of report: The rule stated in this Section requires the report to be accurate. It is not necessary that it be exact in every immaterial detail or that it conform to that precision demanded in technical or scientific reporting. It is enough that it conveys to the persons who read it a substantially correct account of the proceedings.

Not only must the report be accurate, but it must be fair. Even a report that is accurate so far as it goes may be so edited and deleted as to misrepresent the proceeding and thus be misleading. . . .

Three policy rationales support the privilege. The agency rationale protects the press when it reports on official actions and statements that members of the public could have witnessed for themselves. The public supervision rationale allows the news media to serve as a check on the power of government. The general public interest rationale applies to media reports of important but not official actions. See *Medico v. Time, Inc.*, 643 F.2d 134 (3d Cir. 1981).

Much litigation has also focused on the requirement that the defendant's statement be a fair and accurate statement or abridgment of the official proceedings. The record libel privilege at common law applies "even if the reporter of defamatory statements made in court believes or knows them to be false; the privilege is abused only if the report fails the test of fairness or accuracy." *Rosenberg v. Helinski*, 616 A.2d 866, 873 (Md. 1992).

The reporter (or indeed any other person who narrates the event) does not waive the privilege because he refuses to become a commentator as well. Nor does reliance on anonymous sources *per se* destroy the privilege. But in many respects the privilege is circumscribed. In *Howell v. Enterprise Publishing Co.*, 920 N.E.2d 1 (Mass. 2010), the court applied the absolute privilege of RST §611 to reports from anonymous sources that described non-public closed-door proceedings that led to the termination of a sewage commissioner for possession of

p. 998

lewd photographs and videos on his work computer, but warned that "a report based on [an unofficial or anonymous] source runs a risk that the underlying official action will not be accurately and fairly described by the source, and therefore will not be protected." In *Moreno v. Crookston Times Printing Co.*, 610 N.W.2d 321 (Minn. 2000), the court applied the absolute privilege to a fair and accurate report of remarks made to the city council but refused to apply it insofar as the article "included material reporting on events other than those that occurred at the city council meeting."

c. Fair Comment: Artistic and Literary Criticism

The common law privilege of fair comment extended to all matters in the public eye, thereby allowing the defendant to express defamatory opinions on matters of public interest. This privilege extended to statements about public officials and candidates for public office; about educational, charitable, and religious institutions; about quasi-public institutions such as bar and medical associations; about sporting games and contests; and about artistic, literary, and scientific matters generally. The cardinal distinction under the common law privilege is between fact and opinion; the defense of fair comment applied only to the latter. For the line between fact and opinion, see *Veeder, infra* at 999. To be sure, a substantial minority of states held that the privilege applied to false statements of fact as well as to statements of opinion. See

Noel, *Defamation of Public Officers and Candidates*, 49 Colum. L. Rev. 875, 877-880 (1949). For the best exposition of this position at common law, see *Coleman v. MacLennan*, 98 P. 281 (Kan. 1908). The leading decision in support of the majority view was written by William Howard Taft, later President of the United States and Chief Justice of the United States Supreme Court, when he was a judge on the Court of Appeals. See *Post Publishing Co. v. Hallman*, 59 F. 530 (6th Cir. 1893).

The leading common law decision on fair comment was *Carr v. Hood*, 170 Eng. Rep. 981, 983 (K.B. 1808), a libel action that arose from savage criticism of Sir John Carr's book *The Stranger in Ireland*. Lord Ellenborough rebuffed the action as follows:

Here the supposed libel has only attacked those works of which Sir John Carr is the avowed author; and one writer in exposing the follies and errors of another may make use of ridicule, however poignant. Ridicule is often the fittest weapon that can be employed for such a purpose. If the reputation or pecuniary interests of the person ridiculed suffer, it is *damnum absque injuria*. Where is the liberty of the press if an action can be maintained on such principles? Perhaps the plaintiff's *Tour through Scotland* is now unsaleable; but is he to be indemnified by receiving a compensation in damages from the person who may have opened the eyes of the public to the bad taste and inanity of his compositions? Who would have bought the works of Sir Robert Filmer after he had been refuted by Mr. Locke? But shall it be said that he might have sustained an action for defamation against that great philosopher, who was labouring to enlighten and ameliorate mankind? We really must not cramp observations upon authors and their works. They should be liable to criticism, to exposure, and even to ridicule, if their compositions be ridiculous;

p. 999

otherwise the first who writes a book on any subject will maintain a monopoly of sentiment and opinion respecting it. This would tend to the perpetuity of error.—Reflection on personal character is another thing. Shew me an attack on the moral character of this plaintiff, or any attack upon his character unconnected with his authorship, and I shall be as ready as any judge who ever sate here to protect him; but I cannot hear of malice on account of turning his works into ridicule.

Lord Ellenborough himself was taken to task for giving the privilege too narrow a scope in *Bower, Actionable Defamation* 383 (1908):

Nothing could be more misleading than the above [opinion], which assumes not that honest comment is justified, because it is comment, but that the author is to be punished for "the bad taste and inanity of his compositions," [for] the sole justification, of the protection is the freedom of *any* man, however worthless his observations may be, to criticize with the severity he pleases (provided that he does not stray beyond the assigned limits of comment into the region of personal imputation) the public conduct or the published work, however exalted or brilliant the rest of the world may deem it, of *any* other man. Sir Robert Filmer had the same right to criticize Locke, as Locke had to criticize him. The fact that one criticism may demolish the author, and another the critic himself, is utterly irrelevant to the question of the legal right.

The early decisions faithfully adhered to the distinction between criticisms of the book and the author. Thus, in *Cherry v. Des Moines Leader*, 86 N.W. 323, 323 (Iowa 1901), the court extended fair comment privilege to a vicious review of the plaintiff's three-sister vaudeville act, which described it as being performed by "strange creatures with painted faces and hideous mien." But in *Triggs v. Sun Printing & Publishing Association*, 71 N.E. 739 (N.Y. 1904), the court, consistent with *Carr*, let the jury decide whether ridicule about the private life of Professor Oscar Lovell Triggs of the English Department of the University of Chicago strayed into forbidden personal territory by stating, for example, "that he was unable to select a name for his baby until after a year of solemn deliberation." What happens to the public/private distinction after *New York Times*?

Veeder, Freedom of Public Discussion

23 Harv. L. Rev. 413, 419-420 (1910)

The distinction is fundamental, then, between comment upon given facts and the direct assertion of facts. And the significance of the distinction is plain. If the facts are stated separately, and the comment appears as an inference drawn from those facts, any injustice that the imputation might occasion is practically negatived by reason of the fact that the reader has before him the grounds upon which the unfavorable inference is based. When the facts are truthfully stated, comment thereon, if unjust, will fall harmless, for the former furnish a ready antidote for the latter. The reader is then in a position to judge whether the critic has

p. 1000

not by his unfairness or prejudice libelled himself rather than the object of his animadversion. But if a bare statement is made in terms of a fact, or if facts and comment are so intermingled that it is not clear what purports to be inference and what is claimed to be fact, the reader will naturally assume that the injurious statements are based upon adequate grounds known to the writer. In one case, the insufficiency of the facts to support the inference will lead fair-minded men to reject it; in the other, there is little, if any, room for the supposition that the injurious statement is other than a direct change of the fact, based upon grounds known to the writer, although not disclosed by him.

NOTES

1. *The fact/opinion distinction at work.* The elusive line between fact and opinion retains its importance today, for while a plaintiff may recover for false statements of fact upon proof of actual malice, statements of opinion are protected by an absolute privilege. In policing that line, courts continue to rely on Veeder's early formulation. By way of illustration, the Massachusetts Supreme Judicial Court wrote: "[I]f I write, without more, that a person is an alcoholic, I may well have committed a libel prima facie; but it is otherwise if I write that I saw the person take a martini at lunch and accordingly state that he is an alcoholic." *Nat'l Ass'n of Gov't Emps., Inc. v. Cent. Broad. Co.*, 396 N.E.2d 996, 1001 (Mass. 1979). That analogy proved persuasive in *Beattie v. Fleet National Bank*, 746 A.2d 717 (R.I. 2000). The defendant had issued a derogatory letter criticizing a real estate appraisal that Beattie had submitted to the bank, which

faulted the comparable sales data he had relied upon to arrive at his valuation of the subject property. The bank's appraiser concluded the letter by stating that "in the aggregate, the data in this [appraisal] report combines to present such a misleading indication of the value of this property as to be considered fraudulent." The writer's opinion, however, was based upon disclosed, non-defamatory facts, including a seven-page memorandum enclosed with the letter that detailed the appraisal's perceived deficiencies. As a result, we hold that it did not constitute an actionable-defamatory communication.

2. *Political disputation.* The stakes are often raised for the fact/opinion line in disputes with political overtones. *Ollman v. Evans*, 750 F.2d 970, 986 (D.C. Cir. 1984), arose from an Evans and Novak column in November 1978, called "The Marxist Professor's Intentions," that protested the planned move of the plaintiff, a Marxist, to the Department of Government and Politics at the University of Maryland. The column first attacked Ollman for using the classroom as a forum to promote "revolution" and labeled him "an outspoken proponent of political Marxism." It recounted how he had finished last of 16 candidates in an election for the council to the American Political Science Association, running under the party name of the Caucus for a New Political Science. Further it described Ollman's principal book, *Alienation: Marx's Conception of Man in Capitalist Society*, as a "ponderous tome."

p. 1001

Drawing heavily on common law precedents, Starr, J., proposed the following four-part test to elucidate the distinction between fact and opinion, with its clear constitutional overtones.

Four constituent elements point to a given statement being one of fact: first, the proposition contains a "core meaning" understood by its intended audience; second, the proposition is "verifiable" by objective tests; third, the context increases the willingness to infer that the statement has a factual context; and fourth, the broader context is one that stresses fact or narrative, as opposed to editorials and reviews, where the reader expects greater latitude from the author. . . .

The reasonable reader who peruses an Evans and Novak column on the editorial or Op-Ed page is fully aware that the statements found there are not "hard" news like those printed on the front page or elsewhere in the news sections of the newspaper. Readers expect that columnists will make strong statements, sometimes phrased in a polemical manner that would hardly be considered balanced or fair elsewhere in the newspaper. That proposition is inherent in the very notion of an "Op-Ed" page.

Bork, J., concurred to voice his worry about the onslaught of new libel actions, but he also expressed his impatience with "such things as four-factor frameworks, three-pronged tests, and two-tiered analyses," and urged a return to "first principles." He concluded that the column should be protected because "a damage award would have a heavily inhibiting effect upon the journalism of opinion."

The *Ollman* four-part test has nonetheless withstood the test of time. In rebuffing a defamation claim brought by a political activist against a journalist in *Fairbanks v. Roller*, 314 F. Supp. 3d 85, 90 (D.D.C.

2018), McFadden, J., explained that the *Ollman* factors tipped against finding defamatory a caption (“just two people doing a white power hand gesture in the White House”) in a retweeted photo of the activist in front of the White House press room making a gesture that could be interpreted alternately as an “okay” hand symbol or “white power” symbol.

3. Restaurant reviews. *Ollman* proved influential in *Mr. Chow of New York v. Ste. Jour Azur, S.A.*, 759 F.2d 219, 227-228 (2d Cir. 1985). The defendant restaurant guide published a review (in French) that castigated the plaintiff’s restaurant because, inter alia, “[i]t is impossible to have the basic condiments . . . on the table,” “the sweet and sour pork contained more dough . . . than meat,” “the green peppers . . . remained still frozen on the plate,” and the Peking Duck “was made up of only one dish (instead of the three traditional ones).” The guide defended its review in part as containing statements of opinion and not of fact. A skeptical jury awarded the plaintiff \$20,000 in actual damages and \$5,000,000 in punitive damages, which were sustained by the trial judge. On appeal Meskill, J., applied the analysis of fact and opinion adopted by Starr, J., in *Ollman* and held that the review constituted protected opinion:

Restaurant reviews are also [like the Evans and Novak column] the well recognized home of opinion and comment. Indeed, “by its very nature, an article

p. 1002

commenting upon the quality of a restaurant or its food, like a review of a play or movie, constitutes the opinion of the reviewer.” . . . The natural function of the review is to convey the critic’s opinion of the restaurant reviewed: the food, the service, the decor, the atmosphere, and so forth. Such matters are to a large extent controlled by personal tastes. The average reader approaches a review with the knowledge that it contains only one person’s views of the establishment. And importantly, “[a]s is essential in aesthetic criticism . . . the object of the judgment is available to the critic’s audience.” Appellee does not cite a single case that has found a restaurant review libelous. Appellants and *amici* on the other hand cite numerous decisions that have refused to do so. Although the rationale of each of these decisions is different, they all recognize to some extent that reviews, although they may be unkind, are not normally a breeding ground for successful libel actions.

The court then held that the statement about the Peking Duck was an assertion of fact. “The statement is not metaphorical or hyperbolic; it clearly is laden with factual content.” Plaintiff’s victory on the point was, however, bittersweet, because the false statement about the Peking Duck was found protected by the actual malice rule, applicable because the restaurant was considered a public figure.

What if the condiments were always on the table, the sweet and sour pork was encased in a thin, delicate dough, and the green peppers were cooked to a turn? Does it make a difference that customers are free to patronize the restaurant if none will spend \$40 or more for a dinner after reading that review?

SECTION H. CONSTITUTIONAL PRIVILEGES

1. Public Officials and Public Figures

NEW YORK TIMES CO. v. SULLIVAN

376 U.S. 254 (1964)

BRENNAN, J. We are required in this case to determine for the first time the extent to which the constitutional protections for speech and press limit a State's power to award damages in a libel action brought by a public official against critics of his official conduct.

[The plaintiff-respondent, L.B. Sullivan, was one of three elected Commissioners of Montgomery, Alabama, who claimed that he was defamed in a full-page ad, costing \$4,800, taken out in the *New York Times* on March 29, 1960. The ad was entitled "Heed Their Rising Voices," and it charged in part that an "unprecedented wave of terror" had been directed against those who participated in the civil rights movement in the South. The letter was signed by 64 prominent members of the civil rights movement and contained statements in two key paragraphs that were said to be defamatory:

p. 1003

Third paragraph:

"In Montgomery, Alabama, after students sang 'My Country, 'Tis of Thee' on the State Capitol steps, their leaders were expelled from school, and truckloads of police armed with shotguns and tear-gas ringed the Alabama State College Campus. When the entire student body protested to state authorities by refusing to re-register, their dining hall was padlocked in an attempt to starve them into submission."

he had oversight responsibility of the police. Sullivan did not show that he suffered any special damages from the publication, but he claimed general damages for defamation. It was “uncontroverted” some of the particulars in the story were false: for example, the police had not ringed the campus, but were only deployed nearby; during the demonstration the students sang the National Anthem, not “My Country, ‘Tis of Thee”; Dr. King had been arrested only four times, not seven; the nine students were expelled by the State Board of Education not for leading the demonstration, but “for demanding service at a lunchcounter at the Montgomery County Courthouse on another day.” The jury awarded Sullivan \$500,000 in damages and its decision was affirmed in the Alabama Supreme Court, 144 So. 2d 25 (1962).

Before publishing the ad, the Times had received a letter from A. Philip Randolph, chairman of the Committee, which certified that all the signatories had indeed signed the letter. Sullivan demanded a retraction of the letter from all parties, some of whom denied that they had authorized the use of their signatures. Those individual petitioners refused to retract the statements that they claimed they had never made; the *New York Times* wrote back, noting it was “puzzled” as to why Sullivan thought that the ad reflected adversely on him. This suit followed

p. 1004

without further reply. The Times eventually published a retraction insofar as it applied to the Governor of Alabama whom it believed could be seen as “the embodiment of the State of Alabama.” At trial the jury found the advertisement libelous per se, and hence actionable without proof of malice or special damages. The \$500,000 award followed, and the judgment was affirmed in all respects by the Alabama Supreme Court: “The First Amendment of the U.S. Constitution does not protect libelous publications” and “The Fourteenth Amendment is directed against State action and not private action.” 144 So. 2d 25, 40 (1962).]

Because of the importance of the constitutional issues involved, we granted the separate petitions for certiorari of the individual petitioners and of the Times. We reverse the judgment. We hold that the rule of law applied by the Alabama courts is constitutionally deficient for failure to provide the safeguards for freedom of speech and of the press that are required by the First and Fourteenth Amendments in a libel action brought by a public official against critics of his official conduct. We further hold that under the proper safeguards the evidence presented in this case is constitutionally insufficient to support the judgment for respondent.

[The Court first discussed two preliminary issues: whether there was state action and whether the defendant’s statement, as an advertisement, was beyond the protection of the First Amendment. It decided that the common law rule in Alabama constituted sufficient state action and that the statement was not a “commercial” advertisement but an “editorial” advertisement on an issue “of the highest public interest and concern.” It then offered a summary of Alabama law, which followed the basic principles of defamation everywhere, and continued:]

The question before us is whether this rule of liability, as applied to an action brought by a public official against critics of his official conduct, abridges the freedom of speech and of the press that is guaranteed by the First and Fourteenth Amendments.

Respondent relies heavily, as did the Alabama courts, on statements of this Court to the effect that the

Constitution does not protect libelous publications. Those statements do not foreclose our inquiry here. None of the cases sustained the use of libel laws to impose sanctions upon expression critical of the official conduct of public officials. . . . In deciding the question now, we are compelled by neither precedent nor policy to give any more weight to the epithet “libel” than we have to other “mere labels” of state law. Like insurrection, contempt, advocacy of unlawful acts, breach of the peace, obscenity, solicitation of legal business, and the various other formulae for the representation of expression that have been challenged in this Court, libel can claim no talismanic immunity from constitutional limitations. It must be measured by standards that satisfy the First Amendment. . . .

Thus we consider this case against the background of a profound national commitment to the principle that debate on public issues should be uninhibited, robust, and wide-open, and that it may well include vehement, caustic, and sometimes unpleasantly sharp attacks on government and public officials. The present advertisement, as an expression of grievance and protest on one of the major public issues of our time, would seem clearly to qualify for the constitutional

p. 1005

protection. The question is whether it forfeits that protection by the falsity of some of its factual statements and by its alleged defamation of respondent.

Authoritative interpretations of the First Amendment guarantees have consistently refused to recognize an exception for any test of truth—whether administered by judges, juries, or administrative officials—and especially one that puts the burden of proving truth on the speaker. The constitutional protection does not turn upon “the truth, popularity, or social utility of the ideas and beliefs which are offered.” N.A.A.C.P. v. Button, 371 U.S. 415, 445 (1963). As Madison said, “Some degree of abuse is inseparable from the proper use of everything; and in no instance is this more than in that of the press.” 4 Elliot’s Debates on the Federal Constitution (1876), p. 571. . . .

[E]rroneous statement is inevitable in free debate, and . . . it must be protected if the freedoms of expression are to have the “breathing space” that they “need . . . to survive.” . . .

Injury to official reputation affords no more warrant for repressing speech that would otherwise be free than does factual error. Where judicial officers are involved, this Court has held that concern for the dignity and reputation of the courts does not justify the punishment as criminal contempt of criticism of the judge or his decision. Bridges v. California, 314 U.S. 252 (1941). This is true even though the utterance contains “half-truths” and “misinformation.” Such repression can be justified, if at all, only by a clear and present danger of the obstruction of justice. If judges are to be treated as “men of fortitude, able to thrive in a hardy climate,” surely the same must be true of other government officials, such as elected city commissioners. Criticism of their official conduct does not lose its constitutional protection merely because it is effective criticism and hence diminishes their official reputations.

If neither factual error nor defamatory content suffices to remove the constitutional shield from criticism of official conduct, the combination of the two elements is no less inadequate. This is the lesson to be drawn from the great controversy over the Sedition Act of 1798, 1 Stat. 596, which first crystallized a national awareness of the central meaning of the First Amendment. That statute made it a crime, punishable by a

\$5,000 fine and five years in prison, “if any person shall write, print, utter or publish . . . any false, scandalous and malicious writing or writings against the government of the United States, or either house of the Congress . . . , or the President . . . , with intent to defame . . . or to bring them, or either of them, into contempt or disrepute; or to excite against them, or either or any of them, the hatred of the good people of the United States.” The Act allowed the defendant the defense of truth, and provided that the jury were to be judges both of the law and the facts. Despite these qualifications, the Act was vigorously condemned as unconstitutional in an attack joined in by Jefferson and Madison. . . .

Although the Sedition Act was never tested in this Court,¹⁶ the attack upon its validity has carried the day in the court of history. Fines levied in its prosecution

p. 1006

were repaid by Act of Congress on the ground that it was unconstitutional. See, e.g., Act of July 4, 1840, c. 45, 6 Stat. 802. . . .

There is no force in respondent’s argument that the constitutional limitations implicit in the history of the Sedition Act apply only to Congress and not to the States. It is true that the First Amendment was originally addressed only to action by the Federal Government, and that Jefferson, for one, while denying the power of Congress “to control the freedom of the press,” recognized such a power in the States. But this distinction was eliminated with the adoption of the Fourteenth Amendment and the application to the States of the First Amendment’s restrictions. . . .

What a State may not constitutionally bring about by means of a criminal statute is likewise beyond the reach of its civil law of libel. The fear of damage awards under a rule such as that invoked by the Alabama courts here may be markedly more inhibiting than the fear of prosecution under a criminal statute. Alabama, for example, has a criminal libel law which subjects to prosecution “any person who speaks, writes, or prints of and concerning another any accusation falsely and maliciously importing the commission by such person of a felony, or any other indictable offense involving moral turpitude,” and which allows as punishment upon conviction a fine not exceeding \$500 and a prison sentence of six months. Alabama Code, Tit. 14, §350. Presumably a person charged with violation of this statute enjoys ordinary criminal-law safeguards such as the requirements of an indictment and of proof beyond a reasonable doubt. These safeguards are not available to the defendant in a civil action. The judgment awarded in this case—without the need for any proof of actual pecuniary loss—was one thousand times greater than the maximum fine provided by the Alabama criminal statute, and one hundred times greater than that provided by the Sedition Act. And since there is no double-jeopardy limitation applicable to civil lawsuits, this is not the only judgment that may be awarded against petitioners for the same publication.¹⁸ Whether or not a newspaper can survive a succession of such judgments, the pall of fear and timidity imposed upon those who would give voice to public criticism is an atmosphere in which the First Amendment freedoms cannot survive. Plainly the Alabama law of civil libel is “a form of regulation that creates hazards to protected freedoms markedly greater than those that attend reliance upon the criminal law.” Bantam Books, Inc. v. Sullivan, 372 U.S. 58, 70 (1963).

The state rule of law is not saved by its allowance of the defense of truth. . . . A rule compelling the critic of official conduct to guarantee the truth of all his factual assertions—and to do so on pain of libel judgments

virtually unlimited in amount—leads to . . . “self-censorship.” Allowance of the defense of truth, with the burden of proving it on the defendant, does not mean that only false speech will be deterred. Even courts accepting this defense as an adequate safeguard

have recognized the difficulties of adducing legal proofs that the alleged libel was true in all its factual particulars. . . . Under such a rule, would-be critics of official conduct may be deterred from voicing their criticism, even though it is believed to be true and even though it is in fact true, because of doubt whether it can be proved in court or fear of the expense of having to do so. They tend to make only statements which “steer far wider of the unlawful zone.” The rule thus dampens the vigor and limits the variety of public debate. It is inconsistent with the First and Fourteenth Amendments.

The constitutional guarantees require, we think, a federal rule that prohibits a public official from recovering damages for a defamatory falsehood relating to his official conduct unless he proves that the statement was made with “actual malice”—that is, with knowledge that it was false or with reckless disregard of whether it was false or not. [See] *Coleman v. MacLennan*, 98 P. 281 (Kan. 1908). . . .

We hold today that the Constitution delimits a State’s power to award damages for libel in actions brought by public officials against critics of their official conduct. Since this is such an action, the rule requiring proof of actual malice is applicable. While Alabama law apparently requires proof of actual malice for an award of punitive damages, where general damages are concerned malice is “presumed.” Such a presumption is inconsistent with the federal rule. “The power to create presumptions is not a means of escape from constitutional restrictions,” *Bailey v. Alabama*, 219 U.S. 219, 239 (1911); “the showing of malice required for the forfeiture of the privilege is not presumed but is a matter for proof by the plaintiff. . . .” *Lawrence v. Fox*, 97 N.W.2d 719, 725 (Mich. 1959). Since the trial judge did not instruct the jury to differentiate between general and punitive damages, it may be that the verdict was wholly an award of one or the other. But it is impossible to know, in view of the general verdict returned. Because of this uncertainty, the judgment must be reversed and the case remanded. . . .

Since respondent may seek a new trial, we deem that considerations of effective judicial administration require us to review the evidence in the present record to determine whether it could constitutionally support a judgment for respondent. . . .

[We] consider that the proof presented to show actual malice lacks the convincing clarity which the constitutional standard demands, and hence that it would not constitutionally sustain the judgment for respondent under the proper rule of law. [The Court held that there was no evidence that the individual petitioners acted with reckless disregard, and that the evidence showed as a matter of law that the Times was at most negligent but not reckless with respect to the factual errors in the report and its handling of the retraction issue.]

We also think the evidence was constitutionally defective in another respect: it was incapable of supporting the jury’s finding that the allegedly libelous statements were made “of and concerning” respondent. Respondent relies on the words of the advertisement and the testimony of six witnesses to establish a connection between it and himself. . . .

There was no reference to respondent in the advertisement, either by name or official position. A number of the allegedly libelous statements—the charges that the dining hall was padlocked and that Dr. King's home was bombed, his person assaulted, and a perjury prosecution instituted against him—did not even concern the police; despite the ingenuity of the arguments which would attach this significance to the word "They," it is plain that these statements could not reasonably be read as accusing respondent of personal involvement in the acts in question. The statements upon which respondent principally relies as referring to him are the two allegations that did concern the police or police functions: that "truckloads of police . . . ringed the Alabama State College Campus" after the demonstration on the State Capitol steps, and that Dr. King had been "arrested . . . seven times." . . . Although the statements may be taken as referring to the police, they did not on their face make even an oblique reference to respondent as an individual. . . .

The judgment of the Supreme Court of Alabama is reversed and the case is remanded to that court for further proceedings not inconsistent with this opinion.

Reversed and remanded.

BLACK, J., with whom DOUGLAS, J., joins, concurring. I concur in reversing this half-million-dollar judgment against the New York Times Company and the four individual defendants. . . . I base my vote to reverse on the belief that the First and Fourteenth Amendments not merely "delimit" a State's power to award damages to "public officials against critics of their official conduct" but completely prohibit a State from exercising such a power. The Court goes on to hold that a State can subject such critics to damages if "actual malice" can be proved against them. "Malice," even as defined by the Court, is an elusive, abstract concept, hard to prove and hard to disprove. The requirement that malice be proved provides at best an evanescent protection for the right critically to discuss public affairs and certainly does not measure up to the sturdy safeguard embodied in the First Amendment. Unlike the Court, therefore, I vote to reverse exclusively on the ground that the Times and the individual defendants had an absolute, unconditional right to publish in the Times advertisement their criticisms of the Montgomery agencies and officials. . . .

[The concurring opinion of Justice Goldberg has been omitted.]

NOTES

1. *Constitutionalizing defamation law.* *New York Times v. Sullivan* ushered in a new constitutional jurisprudence for all defamation cases brought by public officials against media defendants. In choosing to override the common law, was the Court more swayed by the predicament of the *New York Times* or by the weaknesses of the common law of defamation? What are the narrowest grounds on which the plaintiff's verdict could be overturned? For an argument that Alabama misapplied the common law of defamation on all relevant issues, see Epstein, *Was New York Times v. Sullivan Wrong?*, 53 U. Chi. L. Rev. 782 (1986). Consider whether

any award greater than nominal damages could be supported in light of Justice Brennan's observations: "Approximately 394 copies of the edition of the Times containing the advertisement were circulated in Alabama. Of these, about 35 copies were distributed in Montgomery County. The total circulation of the Times for that day was approximately 650,000 copies." *New York Times*, 376 U.S. at 260.

2. *The private conduct of public officials.* In *Monitor Patriot Co. v. Roy*, 401 U.S. 265, 277 (1971), petitioner newspaper published a column characterizing senatorial candidate Roy as a "former small-time bootlegger." The jury found for respondent on the ground that the bootlegger charge was "in the private sector." Reversing that decision, the Court noted first that under *New York Times* "publications concerning candidates must be accorded at least as much protection under the First and Fourteenth Amendments as those concerning occupants of public office." It rejected respondent's contentions that *New York Times* applies only to a candidate's "official conduct," meaning "conduct relevant to fitness for office" and that the public-private issue is one for the jury. The Court held

as a matter of constitutional law that a charge of criminal conduct, no matter how remote in time or place, can never be irrelevant to an official's or a candidate's fitness for office for purposes of the "knowing falsehood or reckless disregard" rule of *New York Times Co. v. Sullivan*.

For an enthusiastic interpretation of *New York Times* as an occasion "for dancing in the streets," see Kalven, *The New York Times Case: A Note on "The Central Meaning of the First Amendment,"* 1964 Sup. Ct. Rev. 191.

3. *New York Times in the Internet age.* Has *New York Times* become anachronistic in the Internet age? Sunstein, *Falsehoods and the First Amendment*, Harv. J.L. & Tech. (forthcoming), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3426765, notes that *New York Times* was decided in 1964, "which might as well be a century ago, or maybe a millennium, in light of the massive technological advances that followed it." Sunstein suggests that the actual malice standard be replaced by allowing an affected individual the right of "notice and take down." Should the challenged material be allowed to remain up until the defamation claim is investigated?

What legal remedies should be available for falsehoods created by "deepfake" videos? Deepfakes use algorithms to create human image synthesis; its most recent uses include fake celebrity pornography and revenge porn. Spivak, "Deepfakes": The Newest Way to Commit One of the Oldest Crimes, 3 Geo. L. Tech. Rev. 339, 385 (2019), argues that the "actual malice" standard is automatically satisfied in all uses of deepfake technology given that "its creator must know the final result is fraudulent. . ." Should the actual malice standard apply in response to deepfakes and other recent technologies? If so, will it inevitably be satisfied?

4. *Rethinking New York Times.* Justice Thomas called for a reconsideration of *New York Times v. Sullivan* in his concurrence opinion in the denial of certiorari of *McKee v. Crosby*, 139 S. Ct. 675 (2019): "We should not continue to reflexively apply this policy-driven approach to the Constitution. Instead, we should carefully

examine the original meaning of the First and Fourteenth Amendments. If the Constitution does not require public figures to satisfy an actual-malice standard in state-law defamation suits, then neither should we.” Justice Thomas pointed out that the constitutional libel rules were not aligned with the common law of libel, and it was not clear whether the First and Fourteenth Amendments displaced such common law. For example, the common law of libel did not require public officials to prove heightened liability in order to recover damages. Is it time to reconsider *New York Times*? On the grounds that it does not align with the common law of libel, or that it has become anachronistic in light of new technologies?

CURTIS PUBLISHING CO. v. BUTTS

388 U.S. 130 (1967)

[No. 37, Curtis Publishing Co. v. Butts, involved charges in the *Saturday Evening Post* that Wally Butts, former coach of the University of Georgia football team and then director of athletics, had conspired to fix a 1962 Georgia-Alabama game by giving to Paul Bryant, coach of the University of Alabama team, crucial information about Georgia’s offensive strategy. The article concluded: “The chances are that Wally Butts will never help any football team again. . . . The investigation by university and Southeastern Conference officials is continuing; motion pictures of other games are being scrutinized; where it will end no one so far can say. But careers will be ruined, that is sure.” Butts sued for libel and a jury awarded him \$60,000 in general damages and \$3,000,000 in punitive damages. After *New York Times*, the defendant requested a new trial, but the motion was denied on two grounds—first, that *New York Times* was inapplicable because the plaintiff was not a public official and, second, that the record contained ample evidence from which a jury could have concluded that the article was published with reckless disregard for truth. The judgment of the trial court was affirmed on appeal. 351 F.2d 702 (5th Cir. 1965).]

No. 150, Associated Press v. Walker, arose out of the distribution of a news dispatch giving an eyewitness account of events on the campus of the University of Mississippi on the night of September 30, 1962, when a massive riot erupted because of federal efforts to enforce a court decree ordering the enrollment of a Negro, James Meredith, as a student in the University. The dispatch stated that respondent Edwin Walker, who was present on the campus, had taken command of the violent crowd and had personally led a charge against federal marshals sent there to effectuate the court’s decree and to assist in preserving order. Walker, a private citizen with a long and honorable military career, sued for libel claiming that he had “counseled restraint” to the students, had exercised no control over the crowd, and had not taken part in any charge against federal marshals. Some evidence showed that the Associated Press was negligent in assigning an inexperienced reporter to cover the story and had failed to catch minor discrepancies between an early oral dispatch and a later written dispatch. The jury awarded plaintiff \$500,000 in compensatory and \$300,000 in punitive damages. The trial

court refused to enter the award of punitive damages, concluding that the record contained at most evidence of negligence but not malice. Both sides appealed. The decision was affirmed by the Texas Civil Court of Appeals, 393 S.W.2d 671 (1965). The United States Supreme Court granted certiorari after the Supreme Court of Texas denied writ of error.

Both plaintiffs were public figures but not public officials. Four separate Supreme Court opinions, much condensed here, addressed the question of how the standards of *New York Times* applied.]

HARLAN, J. . . . We thus turn to a consideration, on the merits, of the constitutional claims raised by Curtis in *Butts* and by the Associated Press in *Walker*. Powerful arguments are brought to bear for the extension of the *New York Times* rule in both cases.

[Justice Harlan reviewed at length various leading precedents on free speech, and continued:]

In *New York Times* we were adjudicating in an area which lay close to seditious libel, and history dictated extreme caution in imposing liability. The plaintiff in that case was an official whose position in government was such “that the public [had] an independent interest in the qualifications and performance of the person who [held] it.” *Rosenblatt v. Baer*, 383 U.S. 75, at 86 (1966). Such officials usually enjoy a privilege against libel actions for their utterances, see, e.g., *Barr v. Matteo*, 360 U.S. 564 (1960), and there were analogous considerations involved in *New York Times*. Thus we invoked “the hypothesis that speech can rebut speech, propaganda will answer propaganda, free debate of ideas will result in the wisest governmental policies,” *Dennis v. United States*, 341 U.S. 494, 503 (1951), and limited recovery to those cases where “calculated falsehood” placed the publisher “at odds with the premises of democratic government and with the orderly manner in which economic, social, or political change is to be effected.” *Garrison v. Louisiana*, 379 U.S. 64, 75 (1964). That is to say, such officials were permitted to recover in libel only when they could prove that the publication involved was deliberately falsified, or published recklessly despite the publisher’s awareness of probable falsity. Investigatory failures alone were held insufficient to satisfy this standard.

In the cases we decide today none of the particular considerations involved in *New York Times* is present. These actions cannot be analogized to prosecutions for seditious libel. Neither plaintiff has any position in government which would permit a recovery by him to be viewed as a vindication of governmental policy. Neither was entitled to a special privilege protecting his utterances against accountability in libel. We are prompted, therefore, to seek guidance from the rules of liability which prevail in our society with respect to compensation of persons injured by the improper performance of a legitimate activity by another. Under these rules, a departure from the kind of care society may expect from a reasonable man performing such activity leaves the actor open to a judicial shifting of loss. In defining these rules, and especially in formulating the standards for determining the degree of care to be expected in the circumstances, courts have consistently given much attention to the importance of defendants’ activities. The courts have

p. 1012

also, especially in libel cases, investigated the plaintiff’s position to determine whether he has a legitimate call upon the court for protection in light of his prior activities and means of self-defense. We note that the public interest in the circulation of the materials here involved, and the publisher’s interest in circulating them, is not less than that involved in *New York Times*. And both Butts and Walker commanded a substantial amount of independent public interest at the time of the publications; both, in our opinion, would have been labeled “public figures” under ordinary tort rules. Butts may have attained that status by position alone and Walker by his purposeful activity amounting to a thrusting of his personality into the “vortex” of an important public controversy, but both commanded sufficient continuing public interest and

had sufficient access to the means of counterargument to be able to “expose through discussion the falsehood and fallacies” of the defamatory statements. *Whitney v. California*, 274 U.S. 357, 377 (1927) (Brandeis, J., dissenting).

These similarities and differences between libel actions involving persons who are public officials and libel actions involving those circumstanced as were Butts and Walker, viewed in light of the principles of liability which are of general applicability in our society, lead us to the conclusion that libel actions of the present kind cannot be left entirely to state libel laws, unlimited by any overriding constitutional safeguard, but that the rigorous federal requirements of *New York Times* are not the only appropriate accommodation of the conflicting interests at stake. We consider and would hold that a “public figure” who is not a public official may also recover damages for a defamatory falsehood whose substance makes substantial danger to reputation apparent, on a showing of highly unreasonable conduct constituting an extreme departure from the standards of investigation and reporting ordinarily adhered to by responsible publishers.

Nothing in this opinion is meant to affect the holdings in *New York Times* and its progeny, including our recent decision in *Time, Inc. v. Hill*.

Having set forth the standard by which we believe the constitutionality of the damage awards in these cases must be judged, we turn now, as the Court did in *New York Times*, to the question whether the evidence and findings below meet that standard. We find the standard satisfied in No. 37, *Butts*, and not satisfied by either the evidence or the findings in No. 150, *Walker*.

[Justice Harlan reviewed the evidence in detail. He then examined defendants’ challenge to the constitutionality of the punitive damages award and rejected it. His opinion concludes:]

The judgment of the Court of Appeals for the Fifth Circuit in No. 37 is affirmed. The judgment of the Texas Court of Civil Appeals in No. 150 is reversed and the case is remanded to that court for further proceedings not inconsistent with the opinions that have been filed herein by The Chief Justice, Justice Black, and Justice Brennan.

WARREN, C.J., concurring in the result. . . . To me, differentiation between “public figures” and “public officials” and adoption of separate standards of proof for each have no basis in law, logic, or First Amendment policy. Increasingly

in this country, the distinctions between governmental and private sectors are blurred. Since the depression of the 1930’s and World War II there has been a rapid fusion of economic and political power, a merging of science, industry, and government, and a high degree of interaction between the intellectual, governmental, and business worlds. Depression, war, international tensions, national and international markets, and the surging growth of science and technology have precipitated national and international problems that demand national and international solutions. While these trends and events have occasioned a consolidation of governmental power, power has also become much more organized in what we have commonly considered to be the private sector. In many situations, policy determinations which traditionally were channeled through formal political institutions are now originated and implemented through a complex

array of boards, committees, commissions, corporations, and associations, some only loosely connected with the Government. This blending of positions and power has also occurred in the case of individuals so that many who do not hold public office at the moment are nevertheless intimately involved in the resolution of important public questions or, by reason of their fame, shape events in areas of concern to society at large. . . .

I therefore adhere to the *New York Times* standard in the case of “public figures” as well as “public officials.” It is a manageable standard, readily stated and understood, which also balances to a proper degree the legitimate interests traditionally protected by the law of defamation. . . .

I have no difficulty in concluding that No. 150, Associated Press v. Walker, must be reversed since it is in a clear conflict with *New York Times*. . . .

But No. 37, Curtis Publishing Co. v. Butts, presents an entirely different situation. . . .

[The Chief Justice discussed the failure of the defendants to raise at the trial any First Amendment defense and noted that the decision of the Post to “change its image” in order to boost sagging sales and revenue supported the damage award, especially since the Post refused to investigate the matter further after Butts and his daughter stated that the story was absolutely untrue.]

I am satisfied that the evidence here discloses that degree of reckless disregard for the truth of which we spoke in *New York Times* and *Garrison*. Freedom of the press under the First Amendment does not include absolute license to destroy lives or careers.

[Justice Black, with whom Justice Douglas joined, concurred in the reversal of *Walker* and dissented from the affirmance of *Butts*:]

I think it is time for this Court to abandon *New York Times* Co. v. Sullivan and adopt the rule to the effect that the First Amendment was intended to leave the press free from the harassment of libel judgments.

[Justice Brennan, with whom Justice White joined, concurred in the reversal of *Walker* and dissented from the affirmance of *Butts*. He agreed with the Chief Justice that the evidence in *Butts* supported a jury award for the plaintiff under the *New York Times* rule, but thought it proper “to remand for a new trial since the charge to the jury did not comport with that standard.”]

NOTES

1. *An embarrassment of constitutional standards?* At the end of the day, *Butts* and *Walker* extended the actual malice test of *New York Times* from public officials to public figures. Five members of the Court

(Black and Douglas adopting for this purpose the Warren position) rejected the arguments put forward by Harlan, which would have allowed a public figure to override the constitutional defense by showing, in essence, the gross negligence of the defendant. For a criticism of the Harlan position as lacking in “constitutional dimensions,” see Kalven, *The Reasonable Man and the First Amendment*, 1967 Sup. Ct. Rev. 267, 300.

For centuries it has been the experience of Anglo-American law that the truth never catches up with the lie, and it is because it does not that there has been a law of defamation. I simply do not see how the constitutional protection in this area can be rested on the assurance that counterargument will take the sting out of the falsehoods the law is thereby permitting. And if this premise is not persuasive, the whole Harlan edifice tumbles.

Does Kalven’s argument justify the extension of *New York Times* to public figures, or the return to the common law rules of fair comment for both public officials and public figures?

2. *Actual malice*. The Supreme Court has strictly applied its actual malice standard to public officials and public figures alike. For example, in *St. Amant v. Thompson*, 390 U.S. 727, 732 (1968), petitioner charged respondent, a deputy sheriff, with criminal conduct during a televised political speech. The Supreme Court assumed that the charges were defamatory and false and that respondent was a public official under *New York Times*, but held that the evidence failed to support respondent’s contention that petitioner had acted with reckless disregard of the truth. The Court reaffirmed the view that “neither the defense of truth nor the standard of ordinary care would protect against self-censorship and thus adequately implement First Amendment policies” but then issued this warning about the actual malice standard:

The defendant in a defamation action brought by a public official cannot, however, automatically insure a favorable verdict by testifying that he published with a belief that the statements were true. The finder of fact must determine whether the publication was indeed made in good faith. Professions of good faith will be unlikely to prove persuasive, for example, where a story is fabricated by the defendant, is the product of his imagination, or is based wholly on an unverified anonymous telephone call. Nor will they be likely to prevail when the publisher’s allegations are so inherently improbable that only a reckless man would have put them in circulation. Likewise, recklessness may be found where there are obvious reasons to doubt the veracity of the informant or the accuracy of his reports.

3. *Summary judgments under New York Times*. Under *New York Times*, what quantum of evidence must the plaintiff present to survive a motion for summary judgment on the actual malice question? In *Anderson v. Liberty Lobby, Inc.*, 477

U.S. 242, 254-255 (1986), Jack Anderson, the columnist, published three articles about the Liberty Lobby and its key officials that “portrayed the [plaintiffs] as neo-Nazi, anti-Semitic, racist, and fascist.” All were public figures. In response to respondents’ defamation suit, the defendant moved for summary judgment on the strength of affidavits by Anderson’s key researcher that he had spent “substantial time” researching the articles. The precise issue in the case was whether “the clear-and-convincing-evidence requirement [of *New*

York Times] must be considered by a court ruling on a motion for summary judgment.” The Court, speaking through Justice White, held that it did:

Just as the “convincing clarity” requirement is relevant in ruling on a motion for directed verdict, it is relevant in ruling on a motion for summary judgment. When determining if a genuine factual issue as to actual malice exists in a libel suit brought by a public figure, a trial judge must bear in mind the actual quantum and quality of proof necessary to support liability under *New York Times*. For example, there is no genuine issue if the evidence presented in the opposing affidavits is of insufficient caliber or quantity to allow a rational finder of fact to find actual malice by clear and convincing evidence. . . .

Our holding that the clear-and-convincing standard of proof should be taken into account on summary judgment motions does not denigrate the role of the jury. It by no means authorizes trial on affidavits. Credibility determinations, the weighing of the evidence, and the drawing of legitimate inferences from the facts are jury functions, not those of a judge, whether he is ruling on a motion for summary judgment or for a directed verdict. The evidence of the non-movant is to be believed, and all justifiable inferences are to be drawn in his favor.

The Court then remanded the case to the trial judge. In separate dissents, Justices Brennan and Rehnquist argued that the case should be left to the jury. In their view, using different standards for summary judgment would invade the province of the jury, induce trial judges to conduct exhaustive minitrials before making their decisions, and lead to confusion in the granting and denying of summary judgments.

4. Discovery on mental state. The issue of actual malice necessarily injects the delicate question of the defendant’s mental state into defamation cases against public officials and public figures. The modern rules of discovery, moreover, generally give the moving party broad latitude to “obtain discovery regarding any matter, not privileged, that is relevant to the claim or defense of any party” to the litigation. Fed. R. Civ. P. 26(b)(1). In *Herbert v. Lando*, 441 U.S. 153, 170 (1979), the defendant, an editor of the television show *60 Minutes*, urged the Court to hold (as did the Second Circuit below) that

when a member of the press is alleged to have circulated damaging falsehoods and is sued for injury to the plaintiff’s reputation, the plaintiff is barred from inquiring into the editorial process of those responsible for the publication, even though the inquiry would produce evidence material to the proof of a critical element of his cause of action.

The Court rejected the claim, in part for the following reasons:

In the first place, it is plain enough that the suggested privilege for the editorial process would constitute a substantial interference with the ability of a defamation plaintiff to establish the ingredients of malice as required by *New York Times*. As respondents would have it, the defendant’s reckless disregard of the truth, a critical element, could not be shown by direct evidence through inquiry into the thoughts, opinions and conclusions of the publisher but could

be proved only by objective evidence from which the ultimate fact could be inferred. It may be that plaintiffs will rarely be successful in proving awareness of falsehood from the mouth of the defendant himself, but the relevance of answers to such inquiries, which the District Court recognized and the Court of Appeals did not deny, can hardly be doubted. To erect an impenetrable barrier to the plaintiff's use of such evidence on his side of the case is a matter of some substance, particularly when defendants themselves are prone to assert their good-faith belief in the truth of their publications, and libel plaintiffs are required to prove knowing or reckless falsehood with "convincing clarity."

Justice Brennan dissented in part:

I would hold, however, that the First Amendment requires predecisional communication among editors to be protected by an editorial privilege, but that this privilege must yield if a public-figure plaintiff is able to demonstrate to the *prima facie* satisfaction of a trial judge that the publication in question constitutes defamatory falsehood.

Litigation in the case continued for seven more years, ending with a summary judgment for the defendant on the actual malice question. See *Herbert v. Lando*, 781 F.2d 298 (2d Cir. 1986). On the Supreme Court decision, see generally Franklin, *Reflections on Herbert v. Lando*, 31 Stan. L. Rev. 1035 (1979); Friedenthal, *Herbert v. Lando: A Note on Discovery*, 31 Stan. L. Rev. 1059 (1979).

5. Public figures in the Supreme Court. The identification of public officials under the *New York Times* rule is, in general, a straightforward affair. The determination of who counts as a public figure presents, however, a trickier problem. To be sure, the list includes former public officials, professional athletes, entertainers, and celebrities (and here the ambiguity begins) most of the time and for most if not all purposes. Since *Butts*, the Supreme Court has frequently wrestled with this question. Thus, in *Time, Inc. v. Firestone*, 424 U.S. 448 (1976), the Court held that the wife of "the scion of one of America's wealthier industrial families" was not a public figure even though she held a news conference during a sensational and messy divorce trial. The Court also held that a research scientist who was awarded William Proxmire's "Golden Fleece" award was not a public figure even though—as the award itself suggests—the plaintiff had been successful in getting federal grant support. *Hutchinson v. Proxmire*, 443 U.S. 111 (1979). In the companion case of *Wolston v. Reader's Digest Association, Inc.*, 443 U.S. 157 (1979), the plaintiff was listed in *Reader's Digest* as a Soviet agent along with (among others) Julius and Ethel Rosenberg and plaintiff's uncle, Jack Soble. Plaintiff, who

p. 1017

had refused to appear before a grand jury for questioning about his uncle, was not a public figure because he was neither a person of general prominence nor had he "thrust himself to the forefront" of a particular public controversy simply because he had fled when pursued by the government. See also the discussion in *Gertz, infra* at 1018.

6. Public figures in the lower courts. The lower courts have also joined the chase. Persons who had former connections with public events have generally been held to be public figures. Thus in *Meeropol v. Nizer*, 381 F. Supp. 29 (S.D.N.Y. 1974), Tyler, J., held that the two sons of Julius and Ethel Rosenberg were public

figures, notwithstanding the fact that they “later may have renounced the public spotlight by changing their name to Meeropol,” because “as children they were the subject of considerable public attention.”

In addition, a long list of persons, large insurance companies, professional football players, navy officers during the Vietnam War, Johnny Carson, local mobsters, belly dancers, Nobel Prize winners, and debt collection agencies under public investigation have all been treated as public figures on a “limited basis” for those aspects of their conduct subjected to public scrutiny and review. In *Reuber v. Food Chemical News, Inc.*, 925 F.2d 703, 706, 708 (4th Cir. 1991), the plaintiff was a research scientist at the National Cancer Institute who “disseminated his own research and took other actions which created the misleading impression that the NCI had reversed its official position that the pesticide malathion was a non-carcinogen.” A letter from his supervisor rebuking his research and statements was published by the defendant. The Fourth Circuit held that the plaintiff was “a limited purpose” public figure because he had “injected” himself into the public arena by his previous publications on the problem. And, in *Makaeff v. Trump University, LLC*, 715 F.3d 254 (9th Cir. 2013), Wardlaw, J., held that, while Donald Trump’s public figure status could not be imputed *vel non* to Trump University, it was nonetheless a public figure for the limited purpose of a defamation claim over its educational practices on account of its “large scale, aggressive advertising.” “Advertising,” Wardlaw, J., continued, “can be a way of ‘voluntarily expos[ing] [the company] to increased risk of injury from defamatory falsehood’”; moreover, a company that aggressively advertises “enjoy[s] significantly greater access to the channels of effective communication and hence ha[s] a more realistic opportunity to counteract false statements th[a]n private individuals normally enjoy.”

7. Reform of defamation law. When handed down, *New York Times* was generally celebrated for its boost to the civil rights movement. Many commentators also thought that its actual malice rule could undo the litigation logjam in defamation cases. But starting in the 1970s and working through the 1980s, defamation suits were mammoth struggles avidly covered by the press. The expanded scope of civil litigation galvanized pressure for legislative reform. During the 1980s, the *New York Times* actual malice rule came under attack from both sides. For the plaintiffs, the chief grievance was that the actual malice rule allowed a defendant to escape liability even when admittedly false statements worked substantial damage to reputation, thereby denying official vindication for serious reputational

p. 1018

harm. Media defendants in turn protested the enormous expense of defending a defamation action. Ironically the actual malice rule may well have been part of the problem. Although it reduces the number of potential cases, it also makes litigation outcomes more uncertain. In successful claims, moreover, the proof of actual malice might easily justify large and erratic claims for punitive damages.

The two titanic struggles of the 1980s were *Sharon v. Time, Inc.*, 599 F. Supp. 538 (S.D.N.Y. 1984), and *Westmoreland v. CBS*, 10 Media L. Rep. 2417 (S.D.N.Y. 1984). In *Sharon*, the Israeli Minister of Defense filed a libel action against the publishers of *Time* magazine, for its published story “The Verdict Is Guilty: An Israeli Commission Apportions the Blame for the Beirut Massacre.” Sharon claimed that portions of the article included false characterizations of classified information. General Westmoreland’s suit alleged that a CBS broadcast claiming that he organized a conspiracy to downplay the intelligence that contradicted his own optimistic reports on the progress of the Vietnam War was libelous. Oddly enough, litigation on this

scale has not been repeated during the last generation. Indeed the Supreme Court has not heard a significant defamation case in 25 years. In a word, media defendants have proven so successful in blockbuster cases that few are brought today.

The current lull in defamation cases has reduced proposals for legal reform. But when the issue was hot, many suggestions received serious public attention. One idea was to abolish all defamation actions by public officials and public figures, at least against media defendants. In this vein, see Lewis, *New York Times v. Sullivan* Reconsidered: Time to Return to “The Central Meaning of the First Amendment,” 83 Colum. L. Rev. 603 (1983), advocating, among other changes, more frequent use of summary judgments, special verdicts, and a prohibition on recovery for mental anguish and punitive damages.

In the opposite direction, many scholars urged that the plaintiff be allowed to obtain a declaratory judgment on the question of truth or falsity without proof of actual malice, but only (under some versions of the proposal) by first waiving any right to damages. A declaratory judgment was achieved in a backhand manner in the *Sharon* case, in which, in response to specific questions propounded by special verdicts, the jury found both that *Time*’s statements were wrong and that the error was not actuated by actual malice. (Note that the trial in *Westmoreland* ended in February 1985, when the case was settled out of court right before it would have been sent to the jury.) What is the reputational effect of such a verdict on *Time*?

2. Private Parties

GERTZ v. ROBERT WELCH, INC.

418 U.S. 323 (1974)

[Elmer Gertz, a reputable attorney, was retained by the Nelson family to represent them in a civil action against Nuccio, a Chicago policeman who had previously been convicted of second-degree murder for the death of young Ronald Nelson. As counsel for the family, petitioner attended the coroner’s inquest into Nelson’s

p. 1019

death and initiated actions for damages, but he neither discussed Officer Nuccio with the press nor played any part in the criminal proceeding.

Respondent published *American Opinion*, a periodical of the John Birch Society. As part of its campaign to warn America of a communist conspiracy to discredit local law enforcement agencies, respondent published an article entitled “Frame-Up: Richard Nuccio and the War On Police” that purported to show that Nuccio was innocent, that his prosecution was a communist “frame-up,” and that petitioner was an “architect of the frame-up.” The article also falsely charged that Gertz was a communist who had engaged in communist activities. The managing editor of *American Opinion* had not independently investigated the article’s charges but had relied on its author’s “extensive research.” The article was accompanied by a photograph of petitioner over the caption “Elmer Gertz of Red Guild harasses Nuccio.”

Gertz filed a libel action in federal district court and won a jury verdict for \$50,000. The court refused to

enter judgment on the verdict on the ground that the *New York Times* standard protects discussion of any public issue without regard to the status of the person defamed. The Court of Appeals affirmed, adding that petitioner had failed to show that respondent acted with actual malice as defined by *New York Times*, “mere proof of failure to investigate, without more” being insufficient to establish reckless disregard for the truth. 471 F.2d 801 (7th Cir. 1972). The Supreme Court reversed.]

POWELL, J. . . . The principal issue in this case is whether a newspaper or broadcaster that publishes defamatory falsehoods about an individual who is neither a public official nor a public figure may claim a constitutional privilege against liability for the injury inflicted by those statements. The Court considered this question on the rather different set of facts presented in *Rosenbloom v. Metromedia, Inc.*, 403 U.S. 29 (1971). . . .

The eight Justices who participated in *Rosenbloom* announced their views in five separate opinions, none of which commanded more than three votes. . . .

[The Court then reviewed *New York Times*, *Butts*, and *Walker*, and continued:]

In his opinion for the plurality in *Rosenbloom*, Mr. Justice Brennan took the *New York Times* privilege one step further. He concluded that its protection should extend to defamatory falsehoods relating to private persons if the statements concerned matters of general or public interest. He abjured the suggested distinction between public officials and public figures on the one hand and private individuals on the other. He focused instead on society’s interest in learning about certain issues: “If a matter is a subject of public or general interest, it cannot suddenly become less so merely because a private individual is involved, or because in some sense the individual did not ‘voluntarily’ choose to become involved.” Id., at 43. Thus, under the plurality opinion, a private citizen involuntarily associated with a matter of general interest has no recourse for injury to his reputation unless he can satisfy the demanding requirements of the *New York Times* test.

[The Court then examined the other opinions in *Rosenbloom*.]

We begin with the common ground. Under the First Amendment there is no such thing as a false idea. However pernicious an opinion may seem, we depend

p. 1020

for its correction not on the conscience of judges and juries but on the competition of other ideas. But there is no constitutional value in false statements of fact. Neither the intentional lie nor the careless error materially advances society’s interest in “uninhibited, robust, and wide-open” debate on public issues. They belong to that category of utterances which “are no essential part of any exposition of ideas, and are of such slight social value as a step to truth that any benefit that may be derived from them is clearly outweighed by the social interest in order and morality.” *Chaplinsky v. New Hampshire*, 315 U.S. 568, 572 (1942).

[Powell, J., reviewed the reasons why *New York Times* calls for “breathing room” and the avoidance of self-censorship in order to promote open debate.]

The need to avoid self-censorship by the news media is, however, not the only societal value at issue. If it were, this Court would have embraced long ago the view that publishers and broadcasters enjoy an unconditional and indefeasible immunity from liability for defamation. Such a rule would, indeed, obviate the fear that the prospect of civil liability for injurious falsehood might dissuade a timorous press from the effective exercise of First Amendment freedoms. Yet absolute protection for the communications media requires a total sacrifice of the competing value served by the law of defamation.

The legitimate state interest underlying the law of libel is the compensation of individuals for the harm inflicted on them by defamatory falsehood. We would not lightly require the State to abandon this purpose.

...

Some tension necessarily exists between the need for a vigorous and uninhibited press and the legitimate interest in redressing wrongful injury. . . .

We think that [the decisions under *New York Times*] are correct, but we do not find their holdings justified solely by reference to the interest of the press and broadcast media in immunity from liability. Rather, we believe that the *New York Times* rule states an accommodation between this concern and the limited state interest present in the context of libel actions brought by public persons. For the reasons stated below, we conclude that the state interest in compensating injury to the reputation of private individuals requires that a different rule should obtain with respect to them.

Theoretically, of course, the balance between the needs of the press and the individual's claim to compensation for wrongful injury might be struck on a case-by-case basis. . . . But this approach would lead to unpredictable results and uncertain expectations, and it could render our duty to supervise the lower courts unmanageable. Because an ad hoc resolution of the competing interests at stake in each particular case is not feasible, we must lay down broad rules of general application. Such rules necessarily treat alike various cases involving differences as well as similarities. Thus it is often true that not all of the considerations which justify adoption of a given rule will obtain in each particular case decided under its authority.

With that caveat we have no difficulty in distinguishing among defamation plaintiffs. The first remedy of any victim of defamation is self-help—using available opportunities to contradict the lie or correct the error and thereby to minimize its adverse impact on reputation. Public officials and public figures usually

p. 1021

enjoy significantly greater access to the channels of effective communication and hence have a more realistic opportunity to counteract false statements than private individuals normally enjoy. Private individuals are therefore more vulnerable to injury, and the state interest in protecting them is correspondingly greater.

More important than the likelihood that private individuals will lack effective opportunities for rebuttal, there is a compelling normative consideration underlying the distinction between public and private defamation plaintiffs. An individual who decides to seek governmental office must accept certain necessary consequences of that involvement in public affairs. He runs the risk of closer public scrutiny than might

otherwise be the case. And society's interest in the officers of government is not strictly limited to the formal discharge of official duties. . . .

Those classed as public figures stand in a similar position. Hypothetically, it may be possible for someone to become a public figure through no purposeful action of his own, but the instances of truly involuntary public figures must be exceedingly rare. . . .

Even if the foregoing generalities do not obtain in every instance, the communications media are entitled to act on the assumption that public officials and public figures have voluntarily exposed themselves to increased risk of injury from defamatory falsehood concerning them. No such assumption is justified with respect to a private individual. He has not accepted public office or assumed an "influential role in ordering society." *Curtis Publishing Co. v. Butts*, (Warren, C.J., concurring in result). He has relinquished no part of his interest in the protection of his own good name, and consequently he has a more compelling call on the courts for redress of injury inflicted by defamatory falsehood. Thus, private individuals are not only more vulnerable to injury than public officials and public figures; they are also more deserving of recovery. . . .

We hold that, so long as they do not impose liability without fault, the States may define for themselves the appropriate standard of liability for a publisher or broadcaster of defamatory falsehood injurious to a private individual. This approach provides a more equitable boundary between the competing concerns involved here. It recognizes the strength of the legitimate state interest in compensating private individuals for wrongful injury to reputation, yet shields the press and broadcast media from the rigors of strict liability for defamation. At least this conclusion obtains where, as here, the substance of the defamatory statement "makes substantial danger to reputation apparent." This phrase places in perspective the conclusion we announce today. Our inquiry would involve considerations somewhat different from those discussed above if a State purported to condition civil liability on a factual misstatement whose content did not warn a reasonably prudent editor or broadcaster of its defamatory potential. Such a case is not now before us, and we intimate no view as to its proper resolution.

[The Court then stated that the state interest in the protection of reputation "extends no further than compensation for actual injury."] For the reasons stated below, we hold that the States may not permit recovery of presumed or punitive damages, at least when liability is not based on a showing of knowledge of falsity or reckless disregard for the truth.

The common law of defamation is an oddity of tort law, for it allows recovery of purportedly compensatory damages without evidence of actual loss. Under the traditional rules pertaining to actions for libel, the existence of injury is presumed from the fact of publication. Juries may award substantial sums as compensation for supposed damage to reputation without any proof that such harm actually occurred. The largely uncontrolled discretion of juries to award damages where there is no loss unnecessarily compounds the potential of any system of liability for defamatory falsehood to inhibit the vigorous exercise of First Amendment freedoms. Additionally, the doctrine of presumed damages invites juries to punish unpopular opinion rather than to compensate individuals for injury sustained by the publication of a false fact. More to the point, the States have no substantial interest in securing for plaintiffs such as this petitioner gratuitous

awards of money damages far in excess of any actual injury.

We would not, of course, invalidate state law simply because we doubt its wisdom, but here we are attempting to reconcile state law with a competing interest grounded in the constitutional command of the First Amendment. It is therefore appropriate to require that state remedies for defamatory falsehood reach no farther than is necessary to protect the legitimate interest involved. It is necessary to restrict defamation plaintiffs who do not prove knowledge of falsity or reckless disregard for the truth to compensation for actual injury. We need not define "actual injury," as trial courts have wide experience in framing appropriate jury instructions in tort actions. Suffice it to say that actual injury is not limited to out-of-pocket loss. Indeed, the more customary types of actual harm inflicted by defamatory falsehood include impairment of reputation and standing in the community, personal humiliation, and mental anguish and suffering. Of course, juries must be limited by appropriate instructions, and all awards must be supported by competent evidence concerning the injury, although there need be no evidence which assigns an actual dollar value to the injury.

We also find no justification for allowing awards of punitive damages against publishers and broadcasters held liable under state-defined standards of liability for defamation. In most jurisdictions jury discretion over the amounts awarded is limited only by the gentle rule that they not be excessive. Consequently, juries assess punitive damages in wholly unpredictable amounts bearing no necessary relation to the actual harm caused. And they remain free to use their discretion selectively to punish expressions of unpopular views. Like the doctrine of presumed damages, jury discretion to award punitive damages unnecessarily exacerbates the danger of media self-censorship, but, unlike the former rule, punitive damages are wholly irrelevant to the state interest that justifies a negligence standard for private defamation actions. They are not compensation for injury. Instead, they are private fines levied by civil juries to punish reprehensible conduct and to deter its future occurrence. In short, the private defamation plaintiff who establishes liability under a less demanding standard than that stated by *New York Times* may recover only such damages as are sufficient to compensate him for actual injury.

[The Court rejected respondent's argument that plaintiff was a public official or public figure, even though he appeared at the inquest or had once served on a

p. 1023

city housing committee. Nor was he a public official even though he was a lawyer and therefore an officer of the court. Likewise, his general activities in community and professional affairs did not give him any "general fame or notoriety in the community" sufficient to make him a public figure.

Justice Blackmun concurred for two reasons. First, he thought that the Court's position gave the press sufficient protection against punitive damages. And second, although he supported the *Rosenbloom* plurality, he voted with the Court to make a majority for the Court "to come to rest in the defamation area."

Chief Justice Burger dissented, voting to reinstate the jury's verdict in favor of Gertz.

Justice Douglas dissented, for the reasons stated by Justice Black in *New York Times*.

Justice Brennan dissented, for the reasons stated in his *Rosenbloom* opinion.]

WHITE, J., dissenting. For some 200 years—from the very founding of the Nation—the law of defamation and right of the ordinary citizen to recover for false publication injurious to his reputation have been almost exclusively the business of state courts and legislatures. . . .

But now, using [the First] Amendment as the chosen instrument, the Court, in a few printed pages, has federalized major aspects of libel law by declaring unconstitutional in important respects the prevailing defamation law in all or most of the 50 States. That result is accomplished by requiring the plaintiff in each and every defamation action to prove not only the defendant's culpability beyond his act of publishing defamatory material but also actual damage to reputation resulting from the publication. Moreover, punitive damages may not be recovered by showing malice in the traditional sense of ill will; knowing falsehood or reckless disregard of the truth will now be required.

[Justice White then reviewed the 1938 Restatement of Torts on defamation and rejected the Court's opinion for "totally ignoring history and settled First Amendment law."]

The Court evinces a deep-seated antipathy to "liability without fault." But this catch-phrase has no talismanic significance and is almost meaningless in this context where the Court appears to be addressing those libels and slanders that are defamatory on their face and where the publisher is no doubt aware from the nature of the material that it would be inherently damaging to reputation. He publishes notwithstanding, knowing that he will inflict injury. . . .

In these circumstances, the law has heretofore put the risk of falsehood on the publisher where the victim is a private citizen and no grounds of special privilege are invoked. The Court would now shift this risk to the victim, even though he has done nothing to invite the calumny, is wholly innocent of fault, and is helpless to avoid his injury. I doubt that jurisprudential resistance to liability without fault is sufficient ground for employing the First Amendment to revolutionize the law of libel, and in my view, that body of legal rules poses no realistic threat to the press and its service to the public. The press today is vigorous and robust. To me, it is quite incredible to suggest that threats of libel suits from private citizens are causing the press to refrain from publishing the

p. 1024

truth. I know of no hard facts to support that proposition, and the Court furnishes none.

[Justice White concluded that a concentrated communications industry was well equipped to cope with the common law rules of defamation and attacked the Court for its rejection of the common law rules on actual and punitive damages.]

NOTES

1. *The negligence principle under Gertz.* Some sense of the height of the negligence barrier can be gleaned

from the subsequent history of *Gertz*. On retrial, the jury awarded the plaintiff \$100,000 in compensatory damages and \$300,000 in punitive damages, sums far in excess of those awarded in the original action. On appeal, in *Gertz v. Robert Welch Inc.*, 680 F.2d 527 (7th Cir. 1982), both elements of the award were upheld over a number of objections regarding (1) the proof of actual malice, (2) the ability of the plaintiff to relitigate the malice question, and (3) the clarity of the instructions on both actual and punitive damages.

2. *Presumed damages after Gertz*. In *Dun & Bradstreet, Inc. v. Greenmoss Builders, Inc.*, 472 U.S. 749, 760-761 (1985), the defendant Dun & Bradstreet (D&B) issued a credit report on the plaintiff to several of its customers that stated that Greenmoss had filed for voluntary bankruptcy. The report had been prepared by a 17-year-old high school student who had confused the bankruptcy petition of several of Greenmoss' former employees with the bankruptcy of the firm itself. The report, therefore, gave a highly inaccurate summary of the firm's financial position. When Greenmoss found out about the error, it asked D&B to send out an immediate correction and to give Greenmoss a list of the clients to whom the report had been sent. D&B promised only to look into the matter; a week later it sent to the five subscribers who had received the original report a correction letter, which noted the error in the earlier report, but did not give a complete appraisal of Greenmoss' actual financial position. When Greenmoss again protested that the notice was inaccurate, D&B refused to take any further steps. Greenmoss sued for defamation in Vermont state court. At the trial D&B's employee testified that, although they routinely verified information with the firm that was the subject of the report, no verification had been attempted in this particular case. The jury awarded \$50,000 in presumed damages and \$300,000 in punitive damages. The Vermont Supreme Court affirmed the judgment below noting that *Gertz* was limited to media defendants and did not include credit reporting firms.

On appeal, the Supreme Court, speaking through Justice Powell, addressed two questions: first, whether the presumed and punitive damage rule in *Gertz* applied "where the defamatory statements do not involve matters of public concern"; and second, whether these statements were of public concern.

Powell first observed that private speech poses no threat to the "free and robust" debate of public issues or to questions of self-government, and continued:

The rationale of the common-law rules has been the experience and judgment of history that
"proof of actual damage will be impossible in a great many cases"

p. 1025

where, from the character of the defamatory words and the circumstances of publication, it is all but certain that serious harm has resulted in fact." W. Prosser, *The Law of Torts*, §112 p. 765 (4th ed. 1971). As a result, courts for centuries have allowed juries to presume that some damage occurred from many defamatory utterances and publications. This rule furthers the state interest in providing remedies for defamation by ensuring that those remedies are effective. In light of the reduced constitutional value of speech involving no matters of public concern, we hold that the state interest adequately supports awards of presumed and punitive damages—even absent a showing of "actual malice."

The Court then held that the credit report was not directed to a public issue. "It was speech solely in the

individual interest of the speaker and its specific business audience.”

The Court was badly fractured on the question; only three Justices (Powell, Rehnquist, and O’Connor) adopted this middle course. Two Justices (Burger and White) concurred in the result. Justice White concluded his long opinion by urging that *Gertz* be overruled, and further that “the defamatory publication in this case does not deal with a matter of public importance.” The four dissenting Justices took exactly the opposite tack and urged that the speech involved in this case deserved explicit constitutional protection.

The credit reporting at issue here surely involves a subject matter of sufficient public concern to require the comprehensive protections of *Gertz*. Were this speech appropriately characterized as a matter of only private concern, moreover, the elimination of the *Gertz* restrictions on presumed and punitive damages would still violate basic First Amendment requirements.

3. *State law responses to Gertz.* *Gertz* treats negligence as the minimum threshold in defamation cases brought by private parties but allows states to impose more stringent requirements on plaintiffs. Over 40 states and the District of Columbia have at present chosen to adhere to *Gertz*’s negligence standard in suits by private figures against media defendants on matters of public concern. Only four states—Alaska, Colorado, Indiana, and New Jersey—require that the plaintiff prove actual malice. See Smolla, 1 Law of Defamation §§3.30-31 (2d ed. 2015). Early on New York adopted a gross negligence standard, requiring that “the publisher acted in a grossly irresponsible manner without due consideration for the standards of information gathering and dissemination ordinarily followed by responsible parties.” *Chapadeau v. Utica Observer-Dispatch*, 341 N.E. 569 (N.Y. 1975).

In addition, *Dun & Bradstreet* may permit states to return to a strict liability standard when private plaintiffs sue media defendants on matters of no public concern. Indeed some states apply *Gertz* to nonmedia as well as media defendants. See, e.g., *Jacron Sales Co. v. Sindorf*, 350 A.2d 688 (Md. 1976). Massachusetts, fearing “excessive and unbridled jury verdicts,” abolished punitive damage actions after *Gertz* “in any defamation action, on any state of proof, whether based in negligence or reckless or wilful conduct.” *Stone v. Essex County Newspapers, Inc.*, 330 N.E.2d 161 (Mass. 1975).

4. *Falsity?* In *Philadelphia Newspapers v. Hepps*, 475 U.S. 767 (1986), the Supreme Court added a falsity requirement to *Gertz*’s fault requirement: “[W]e hold that, at least where a newspaper publishes speech of public concern, a private-figure plaintiff cannot recover damages without also showing that the statements at issue are false.” The defendants had published five stories between May 1975 and May 1976 about Hepps and the corporation of which he was principal stockholder. The stories claimed that both had links to organized crime and had used those connections “to influence the State’s governmental processes, both legislative and administrative.” The trial judge held that the plaintiff bore the burden of proving falsity, as distinguished from fault, and the Pennsylvania Supreme Court affirmed. The Supreme Court recognized that “[t]here will always be instances when the factfinding process will be unable to resolve conclusively whether the speech is true or false; it is in those cases that the burden of proof is dispositive.” But, “where the scales are in such an uncertain balance, we believe that the Constitution requires us to tip them in favor of protecting true speech.” The Court thus erred on the side of “ensur[ing] that true speech on matters of

public concern is not deterred.” *Hepps* rejects the uniform common law view requiring the defendant to demonstrate the truth of his statements. Wholly apart from the Constitution, are there good reasons to question the common law allocation of burden of proof?

5. Matters of public concern revived? The “matter of public concern” test of Brennan, J., in *Rosenbloom* received an indirect boost in *Snyder v. Phelps*, 562 U.S. 443 (2011) (discussed *supra* in Chapter 1 at 71). *Snyder* involved a claim of intentional infliction of emotional distress on the family of a fallen Marine, which arose when the defendant members of the Westboro Baptist Church picketed nearby the funeral service of the plaintiff’s son but stayed out of sight and hearing from the service. Even though the claim for defamation had been dropped below, Roberts, C.J., held that since the picketers addressed a matter of public concern, they were entitled to First Amendment protection.

[E]ven if a few of the signs—such as “You’re Going to Hell” and “God Hates You”—were viewed as containing messages related to [the private-figure plaintiffs] specifically, that would not change the fact that the overall thrust and dominant theme of [the church group’s] demonstration spoke to broader public issues.

To what extent has the Internet changed our understanding of matters of public concern? Eroded the public/private figure distinction?

OBSIDIAN FINANCE GROUP, LLC v. COX

740 F.3d 1284 (9th Cir. 2014)

HURWITZ, Circuit Judge:

This case requires us to address a question of first impression: What First Amendment protections are afforded a blogger sued for defamation? We hold that liability for a defamatory blog post involving a matter of public concern cannot be imposed without proof of fault and actual damages.

p. 1027

I.

Kevin Padrick is a principal of Obsidian Finance Group, LLC (Obsidian), a firm that provides advice to financially distressed businesses. In December 2008, Summit Accommodators, Inc. (Summit), retained Obsidian in connection with a contemplated bankruptcy. After Summit filed for reorganization, the bankruptcy court appointed Padrick as the Chapter 11 trustee. Because Summit had misappropriated funds from clients, Padrick’s principal task was to marshal the firm’s assets for the benefit of those clients.

After Padrick’s appointment, Crystal Cox published blog posts on several websites that she created, accusing Padrick and Obsidian of fraud, corruption, money-laundering, and other illegal activities in connection with the Summit bankruptcy. Cox apparently has a history of making similar allegations and seeking payoffs in exchange for retraction. Padrick and Obsidian sent Cox a cease-and-desist letter, but she

continued posting allegations. This defamation suit ensued.

A.

The district court held that all but one of Cox's blog posts were constitutionally protected opinions because they employed figurative and hyperbolic language and could not be proved true or false. The court held, however, that a December 25, 2010 blog post on bankruptcycorruption.com made "fairly specific allegations [that] a reasonable reader could understand . . . to imply a provable fact assertion"—i.e., that Padrick, in his capacity as bankruptcy trustee, failed to pay \$174,000 in taxes owed by Summit. The district judge therefore allowed that single defamation claim to proceed to a jury trial. The jury found in favor of Padrick and Obsidian, awarding the former \$1.5 million and the latter \$1 million in compensatory damages.

B.

...

After closing arguments, the district court instructed the jury that under Oregon law, "Defendant's knowledge of whether the statements at issue were true or false and defendant's intent or purpose in publishing those statements are not elements of the claim and are not relevant to the determination of liability." The court further instructed that the "plaintiffs are entitled to receive reasonable compensation for harm to reputation, humiliation, or mental suffering even if plaintiff does not present evidence that proves actual damages . . . because the law presumes that the plaintiffs suffered these damages." The jury verdicts in favor of Padrick and Obsidian followed. . . .

II.

Cox does not contest on appeal the district court's finding that the December 25 blog post contained an assertion of fact; nor does she contest the jury's conclusions that the post was false and defamatory. She challenges only the district

p. 1028

court's rulings that (a) liability could be imposed without a showing of fault or actual damages and (b) Padrick and Obsidian were not public officials. . . .

This case involves the intersection between *Sullivan* and *Gertz* [on the choice between actual malice and ordinary negligence] in the context of a medium of publication—the Internet—entirely unknown at the time of those decisions.

1.

Padrick and Obsidian first argue that the *Gertz* negligence requirement applies only to suits against the institutional press. Padrick and Obsidian are correct in noting that *Gertz* involved an institutional media defendant and that the Court's opinion specifically cited the need to shield "the press and broadcast media from the rigors of strict liability for defamation." We conclude, however, that the holding in *Gertz* sweeps more broadly.

The *Gertz* court did not expressly limit its holding to the defamation of institutional media defendants. And, although the Supreme Court has never directly held that the *Gertz* rule applies beyond the institutional press, it has repeatedly refused in non-defamation contexts to accord greater First Amendment protection to the institutional media than to other speakers. [The opinion then discusses relevant Supreme Court precedent in trespass, copyright, and campaign finance contexts. Moreover “every other circuit to consider the issue has held that the First Amendment defamation rules in *Sullivan* and its progeny apply equally to the institutional press and individual speakers.”]

. . . The protections of the First Amendment do not turn on whether the defendant was a trained journalist, formally affiliated with traditional news entities, engaged in conflict-of-interest disclosure, went beyond just assembling others’ writings, or tried to get both sides of a story. As the Supreme Court has accurately warned, a First Amendment distinction between the institutional press and other speakers is unworkable: “With the advent of the Internet and the decline of print and broadcast media . . . the line between the media and others who wish to comment on political and social issues becomes far more blurred.” [Citizens United v. Fed. Election Comm’n, 558 U.S. 310, 352 (2010).] In defamation cases, the public-figure status of a plaintiff and the public importance of the statement at issue—not the identity of the speaker—provide the First Amendment touchstones.

We therefore hold that the *Gertz* negligence requirement for private defamation actions is not limited to cases with institutional media defendants. But this does not completely resolve the *Gertz* dispute. Padrick and Obsidian also argue that they were not required to prove Cox’s negligence because *Gertz* involved a matter of public concern and this case does not.

2.

The Supreme Court has “never considered whether the *Gertz* balance obtains when the defamatory statements involve no issue of public concern.” *Dun & Bradstreet*, [supra at 1024]. But even assuming that *Gertz* is limited to statements involving matters of public concern, Cox’s blog post qualifies.

p. 1029

The December 25 post alleged that Padrick, a court-appointed trustee, committed tax fraud while administering the assets of a company in a Chapter 11 reorganization, and called for the “IRS and the Oregon Department of Revenue to look” into the matter. Public allegations that someone is involved in crime generally are speech on a matter of public concern. . . .

Cox’s allegations in this case are similarly a matter of public concern. Padrick was appointed by a United States Bankruptcy Court as the Chapter 11 trustee of a company that had defrauded its investors through a Ponzi scheme. That company retained him and Obsidian to advise it shortly before it filed for bankruptcy. The allegations against Padrick and his company raised questions about whether they were failing to protect the defrauded investors because they were in league with their original clients.

Unlike the speech at issue in *Dun & Bradstreet* that the Court found to be a matter only of private concern, Cox’s December 25 blog post was not “solely in the individual interest of the speaker and its specific

business audience.” The post was published to the public at large, not simply made “available to only five subscribers, who, under the terms of the subscription agreement, could not disseminate it further. . . .” And, Cox’s speech was not “like advertising” and thus “hardy and unlikely to be deterred by incidental state regulation.”

Because Cox’s blog post addressed a matter of public concern, even assuming that *Gertz* is limited to such speech, the district court should have instructed the jury that it could not find Cox liable for defamation unless it found that she acted negligently. The court also should have instructed the jury that it could not award presumed damages unless it found that Cox acted with actual malice.

C.

Cox also argues that Padrick and Obsidian are “tantamount to public officials,” because Padrick was a court-appointed bankruptcy trustee. She contends that the jury therefore should have been instructed that, under the *Sullivan* standard, it could impose liability for defamation only if she acted with actual malice. We disagree.

Although bankruptcy trustees are “an integral part of the judicial process,” neither Padrick nor Obsidian became public officials simply by virtue of Padrick’s appointment. Padrick was neither elected nor appointed to a government position, and he did not exercise “substantial . . . control over the conduct of governmental affairs.” . . . No one would contend that a debtor-in-possession has become a public official simply by virtue of seeking Chapter 11 protection, and we can reach no different conclusion as to the trustee who substitutes for the debtor in administering a Chapter 11 estate. . . .

IV.

We reverse the district court’s judgment against Cox concerning the December 25, 2010 blog post and remand for a new trial consistent with this opinion.

NOTES

1. Matters of private concern. A recent high school graduate sued the operator of Gawker, an Internet news and gossip website. Gawker published a picture from her high school yearbook on the Internet in which she allegedly exposed her genitals during a graduation ceremony. In concluding that this was a private controversy (and thus Gawker was not protected by the First Amendment), Voorhees, J., reasoned:

In balancing the curiosity of the public against the potential effect on the public [prior cases have] crafted a spectrum against which cases should be judged: on the one end are public policy issues affecting a genuine public controversy; on the other are lurid personal matters that capture only the voyeuristic attention of the people.

Araya v. Deep Dive Media, LLC, 966 F. Supp. 2d 582, 592 (W.D.N.C. 2013).

In determining “matters of public concern,” should the identity of defendant matter? In *Maethner v. Someplace Safe, Inc.*, 929 N.W.2d 868, 877 (Minn. 2019) a husband alleged that his former wife defamed him by posting on a social-networking page pictures and statements that identified her as a survivor of domestic violence. He also alleged that Someplace Safe, a domestic violence advocacy organization, defamed him by presenting his former wife with a survivor award at a banquet, which it then publicized both in its press release and on its social-networking page. The Minnesota Court of Appeals allowed the case to go to the jury. Gildea, C.J., reversed, holding that both defendants were entitled summary judgment. She did not differentiate the two cases because Someplace Safe made its false statements as part of a highly publicized fundraising campaign.

Taking *Gertz* and *Dun & Bradstreet* together, the proper focus regarding the availability of presumed damages is not on the status of the defendant as a media or nonmedia defendant. Rather, the dispositive inquiry is whether the matter at issue is one of public concern. The fact that the defendant is a member of the media may be relevant to determining whether a matter is one of public concern, but it is not, as the court of appeals suggested, the dispositive inquiry.

In whose favor should the defendant’s media status cut?

2. *Twitter and Instagram?* How the courts should apply traditional defamation standards to Twitter, if at all, is a question the courts have only begun to address. Is there a threshold number of Twitter followers one must have before one can be considered some sort of public figure? O’Connor, Access to Media All A-Twitter: Revisiting *Gertz* and the Access to Media Test in the Age of Twitter, 13 J. High Tech. L. 430 (2013), expresses concern that “because the majority of Twitter users do not have the deep pockets that many plaintiffs seek in traditional defamation suits, . . . existing traditional remedies are often inadequate.” Should retractions be required in cases of falsity, even without proof of actual damages?

p. 1031

With the rise of social media celebrities and bloggers, how should traditional defamation law respond to Internet defamation? DeSimone, Insta-Famous: Challenges and Obstacles Facing Bloggers and Social Media Personalities in Defamation Cases, 11 Mod. Am. 70, 71 (2018), probes how to classify Insta-famous celebrities for defamation purposes. Fashion bloggers such as Chiara Gerragni and Leandra Medine, who became financially successful by using social media accounts, are classified as limited purpose public figures because they “set themselves apart from recreational Internet users and make it clear that their intended use is to make money.” But such fashion bloggers typically share their personal lives as “part of their overall business plan—they are creating an image and using their interests and likeability in order to create a sense of friendship with their followers.” As limited purpose public figures, do such fashion bloggers operating over social media make attacks on their personal life fair game?

Notes

¹⁶ The Act expired by its terms in 1801.

[18](#) The Times states that four other libel suits based on the advertisement have been filed against it by others who have served as Montgomery City Commissioners and by the Governor of Alabama; that another \$500,000 verdict has been awarded in the only one of these cases that has yet gone to trial; and that the damages sought in the other three total \$2,000,000.

Section E. False Light

Time, Inc. v. Hill

Section F. Commercial Appropriation of Plaintiff's Name or Likeness, or the Right of Publicity

Factors Etc., Inc. v. Pro Arts, Inc.

SECTION A. INTRODUCTION

By all accounts the protection of the individual interest in privacy is one of the essential tasks of any civilized society. Before the late nineteenth century, tort law supplied no remedy for the invasion of privacy as such but relied on other legal devices to maintain privacy protection. Thus the basic rules of private ownership, backed by the common law of trespass to land, allowed individuals to wall off their lands or buildings to preserve some measure of privacy. In addition, confidentiality arrangements, both by explicit agreement and common practice, allowed people to keep private sensitive information and records that they shared with physicians, employers, and insurers. But the great question in this area is the extent to which these traditional tort and contract rules can cover the full range of privacy issues. Historically the creation of a separate and distinct tort of privacy was long in coming. Starting in the late nineteenth century, both commentators and judges began to move on this issue. The pattern of development was twofold from the outset. On one hand, the protection of the privacy interest was viewed defensively, enabling individuals to ward off the invasions of strangers. Elsewhere privacy protection served the opposite purpose, allowing individuals the exclusive right to the commercial use of their name and likeness, in what has come to be called the right of publicity.

This chapter explores the interrelationship among these themes. Section B traces the historical evolution of

the privacy right from the classic article by Samuel Warren and Louis Brandeis through the early development of the doctrine. The next four sections take up the four standard heads of privacy analysis articulated by Prosser in 1960: intrusion upon seclusion, public disclosure of embarrassing private facts, false light, and the right of publicity.

p. 1034

How well do these categories work in the new age of social media? Since Prosser, the new technologies of the information age have spawned a new set of privacy issues, arising in our era of instant communications by mobile devices, the increased activity of social media sites, the rapid and extensive exchange of computerized information, and the development of data banks. Large corporations like Facebook and Google base their business models on collecting, analyzing, and selling user data. The numbers speak volumes. In 2019, there were billions of monthly active users of social media: Facebook (2.38 billion), WhatsApp, a text messaging app (1.5 billion), Instagram (1 billion), Tumblr (345 million), and Twitter (330 million). See www.statista.com.

While some members of society ask for increased protection of privacy interests, others question the viability of privacy when individuals voluntarily disclose details of their private lives on blog and social media websites on a regular basis. What privacy interests, if any, still warrant protection? Courts have tended to respond by holding that individuals have a reasonable expectation of privacy wherever the Internet company *creates* just that expectation by publishing a statement or policy indicating it will not collect or retain certain types of data. However where a company clearly discloses the types of data it collects, and how it will be used, courts tend to find that consumers have no reasonable expectation of privacy when the firms comply with their stated policies. Statutory responses such as the European Union's General Data Privacy Regulation and the California Consumer Privacy Act take a more privacy-protective approach, requiring companies engaged in data collection or storage to publish and comply with data privacy policies.

SECTION B. HISTORICAL BACKGROUND

Samuel Warren & Louis B. Brandeis, The Right to Privacy

4 Harv. L. Rev. 193, 193-197 (1890)

That the individual shall have full protection in person and in property is a principle as old as the common law; but it has been found necessary from time to time to define anew the exact nature and extent of such protection. Political, social, and economic changes entail the recognition of new rights, and the common law, in its eternal youth, grows to meet the demands of society. Thus, in very early times, the law gave a remedy only for physical interference with life and property, for trespasses *vi et armis*. Then the "right to life" served only to protect the subject from battery in its various forms; liberty meant freedom from actual restraint; and the right to property secured to the individual his lands and his cattle. Later, there came a recognition of man's spiritual nature, of his feelings and his intellect. Gradually the scope of these legal rights broadened; and now the right to life has come to mean the right to enjoy life,—the right to be let alone; the right to liberty secures the exercise of extensive civil privileges; and the term "property" has

grown to comprise every form of possession—intangible, as well as tangible.

p. 1035

Thus, with the recognition of the legal value of sensations, the protection against actual bodily injury was extended to prohibit mere attempts to do such injury; that is, the putting another in fear of such injury. From the action of battery grew that of assault. Much later there came a qualified protection of the individual against offensive noises and odors, against dust and smoke, and excessive vibration. The law of nuisance was developed. So regard for human emotions soon extended the scope of personal immunity beyond the body of the individual. His reputation, the standing among his fellow-men, was considered, and the law of slander and libel arose. Man's family relations became a part of the legal conception of his life, and the alienation of a wife's affections was held remediable. Occasionally the law halted,—as in its refusal to recognize the intrusion by seduction upon the honor of the family. But even here the demands of society were met. A mean fiction, the action per quod servitium amisit [through which the wife's services have been lost], was resorted to, and by allowing damages for injury to the parents' feelings, an adequate remedy was ordinarily afforded. Similar to the expansion of the right to life was the growth of the legal conception of property. From corporeal property arose the incorporeal rights issuing out of it; and then there opened the wide realm of intangible property, in the products and processes of the mind, as works of literature and art, goodwill, trade secrets, and trademarks.

This development of the law was inevitable. The intense intellectual and emotional life, and the heightening of sensations which came with the advance of civilization, made it clear to men that only a part of the pain, pleasure, and profit of life lay in physical things. Thoughts, emotions, and sensations demanded legal recognition, and the beautiful capacity for growth which characterizes the common law enabled the judges to afford the requisite protection, without the interposition of the legislature.

Recent inventions and business methods call attention to the next step which must be taken for the protection of the person, and for securing to the individual what Judge Cooley calls the right "to be let alone." Instantaneous photographs and newspaper enterprise have invaded the sacred precincts of private and domestic life; and numerous mechanical devices threaten to make good the prediction that "what is whispered in the closet shall be proclaimed from the house-tops." For years there has been a feeling that the law must afford some remedy for the unauthorized circulation of portraits of private persons; and the evil of the invasion of privacy by the newspapers, long keenly felt, has been but recently discussed by an able writer. . . .

Of the desirability—indeed of the necessity—of some such protection, there can, it is believed, be no doubt. The press is overstepping in every direction the obvious bounds of propriety and decency. Gossip is no longer the resource of the idle and of the vicious, but has become a trade, which is pursued with industry as well as effrontery. To satisfy a prurient taste the details of sexual relations are spread broadcast in the columns of the daily papers. To occupy the indolent, column upon column is filled with idle gossip, which can only be procured by intrusion upon the domestic circle. The intensity and complexity of life, attendant upon advancing civilization, have rendered necessary some retreat from the

p. 1036

world, and man, under the refining influence of culture, has become more sensitive to publicity, so that

solitude and privacy have become more essential to the individual; but modern enterprise and invention have, through invasions upon his privacy, subjected him to mental pain and distress, far greater than could be inflicted by mere bodily injury. Nor is the harm wrought by such invasions confined to the suffering of those who may be made the subjects of journalistic or other enterprise. In this, as in other branches of commerce, the supply creates the demand. Each crop of unseemly gossip, thus harvested, becomes the seed of more, and, in direct proportion to its circulation, results in a lowering of social standards and of morality. Even gossip apparently harmless, when widely and persistently circulated, is potent for evil. It both belittles and perverts. It belittles by inverting the relative importance of things, thus dwarfing the thoughts and aspirations of a people. When personal gossip attains the dignity of print, and crowds the space available for matters of real interest to the community, what wonder that the ignorant and thoughtless mistake its relative importance. Easy of comprehension, appealing to that weak side of human nature which is never wholly cast down by the misfortunes and frailties of our neighbors, no one can be surprised that it usurps the place of interest in brains capable of other things. Triviality destroys at once robustness of thought and delicacy of feeling. No enthusiasm can flourish, no generous impulse can survive under its blighting influence.

It is our purpose to consider whether the existing law affords a principle which can properly be invoked to protect the privacy of the individual and, if it does, what the nature and extent of such protection is.

William L. Prosser, Privacy

48 Calif. L. Rev. 383, 383-384 (1960)

In the year 1890 Mrs. Samuel D. Warren, a young matron of Boston, which is a large city in Massachusetts, held at her home a series of social entertainments on an elaborate scale. She was the daughter of Senator Bayard of Delaware, and her husband was a wealthy young paper manufacturer, who only the year before had given up the practice of law to devote himself to an inherited business. Socially Mrs. Warren was among the élite; and the newspapers of Boston, and in particular the *Saturday Evening Gazette*, which specialized in "blue blood" items, covered her parties in highly personal and embarrassing detail. It was the era of "yellow journalism," when the press had begun to resort to excesses in the way of prying that have become more or less commonplace today; and Boston was perhaps, of all of the cities in the country, the one in which a lady and a gentleman kept their names and their personal affairs out of the papers. The matter came to a head when the newspapers had a field day on the occasion of the wedding of a daughter, and Mr. Warren became annoyed. It was an annoyance for which the press, the advertisers and the entertainment industry of America were to pay dearly over the next seventy years.

Mr. Warren turned to his recent law partner, Louis D. Brandeis, who was destined not to be unknown to history. The result was a noted article, *The Right to*

Privacy, in the Harvard Law Review, upon which the two men collaborated. It has come to be regarded as the outstanding example of the influence of legal periodicals upon the American law. In the Harvard Law School class of 1877 the two authors had stood respectively second and first, and both of them were gifted

with scholarship, imagination, and ability. Internal evidences of style, and the probabilities of the situation, suggest that the writing, and perhaps most of the research, was done by Brandeis; but it was undoubtedly a joint effort, to which both men contributed their ideas.

In the materials excerpted above, Warren and Brandeis do not offer a strictly accurate account of the historical emergence of the new torts, as both the Roman and English law systems allowed actions for nuisance, mental distress, and defamation from very early times. But the prior existence of all these wrongs set the stage for Warren and Brandeis to isolate the common law principle for invasion of privacy. They reject analogies to libel and slander, insisting that privacy is not concerned with the plaintiff's reputation or "with the injury done to the individual in his external relations to the community." They also reject the view that the tort is designed to protect a person from "mere injury to feelings," by insisting that such harm is compensable only if the plaintiff is the victim of some "recognized" legal injury.

Warren and Brandeis then examine and reject the view that the plaintiff's right to privacy rests solely on a fiduciary or contract theory, given that these theories only protect parties from the misuse of information by others with whom they have previously formed some consensual relationship, as by posing for a picture or by lecturing to students in a private hall. Implicit in these special relationships is a firm understanding that the picture taken or the information acquired will be used only for limited purposes. These consensual theories do not explain how the right of privacy can be vindicated against a stranger who, for example, takes, as "the latest advances in photographic art" allow, the plaintiff's picture "surreptitiously," or who tape records a lecture from outside the hall.

To Warren and Brandeis the "in rem" nature of the tort means that the right must be good against the entire world. Accordingly they find the key analogy to the privacy right in the common law of copyright, which gives the owner control over access to his *unpublished* materials. "In every such case the individual is entitled to decide whether that which is his shall be given to the public." *Id.* at 199. Because the better rule protects even writing of no literary value as long as it is unpublished, they conclude: "The principle which protects personal writings and all other personal productions, not against theft and physical appropriation, but against publications in any form, is in reality not the principle of private property, but that of an inviolate personality." *Id.* at 205.

Having thus located the basic principle of protection, the authors identify six potential "limitations on this right to privacy" (*id.* at 214-219): It does not apply to oral communications in the absence of special damages; it inherits all the privileges of defamation; it is subject to a privilege for matter "which is of public or

general interest"; truth, however, is not a defense; malice in the sense of ill will is not required; and the right ceases upon voluntary publication.

Harry Kalven, Jr., Privacy in the Tort Law—Were Warren and Brandeis Wrong?

While the article is admirable in the care with which it specifies certain limitations on the new right, it makes it apparent at the birth of the right that there are certain major ambiguities. These are all points which haunt the tort today and to which we will return, but we would note here that there is no effort to specify what will constitute a *prima facie* case; no concern with how damages are to be measured; no concern, other than to dismiss actual malice, with what the basis of liability will be; and finally there is the projection of a generous set of privileges but no effort to assess whether they do not engulf the cause of action. And, of course, there is no hint that any but gentlemen will ever be moved to use the new remedy.

Twelve years after Warren and Brandeis published their article, the right to privacy was litigated in *Roberson v. Rochester Folding Box Co.*, 64 N.E. 442, 443 (N.Y. 1902). The Franklin Mills Company purchased from its codefendant, the Rochester Folding Box Company, 25,000 lithographic prints, which it circulated widely in “stores, warehouses, saloons, and other public places.” The defendants had, without her consent, reproduced on the prints a portrait of the plaintiff below the words “Flour of the Family,” and above the words “Franklin Mills Flour,” in large capital letters. The name of the defendant box company was printed in the lower right-hand corner of the picture. The plaintiff claimed that by the publication of the picture she had

been greatly humiliated by the scoffs and jeers of persons who have recognized her face and picture on this advertisement and her good name has been attacked, causing her great distress and suffering both in body and mind; that she was made sick and suffered a severe nervous shock, was confined to her bed and compelled to employ a physician, because of these facts.

The plaintiff’s case reveals the two different sides to the privacy right. The first side rests on a theory of restitution under which the plaintiff demands that the defendant disgorge the profits it obtained from the unauthorized use of her picture. The analogy is to the general law of restitution that allows the recovery of gains from the defendant’s unauthorized conversion of a physical asset. Alternatively the plaintiff challenges the defendant’s invasion of her private space, seeking compensation for anguish and loss of society derived from the attack on her reputation and good name. In this aspect the privacy tort is far closer to defamation. Parker, J., had no patience with either claim:

p. 1039

The so-called right of privacy is, as the phrase suggests, founded upon the claim that a man has the right to pass through this world, if he wills, without having his picture published, his business enterprises discussed, his successful experiments written up for the benefit of others, or his eccentricities commented upon either in handbills, circulars, catalogues, periodicals or newspapers, and, necessarily, that the things which may not be written and published of him must not be spoken of him by his neighbors, whether the comment be favorable or otherwise. While most persons would much prefer to have a good likeness of themselves appear in a responsible periodical or leading newspaper rather than upon an advertising card or sheet, the doctrine which the courts are asked to create for this case would apply as well to the one publication as to the other. . . .

If such a principle be incorporated into the body of the law through the instrumentality of a court of equity, the attempts to logically apply the principle will necessarily result, not only in a vast amount of litigation, but in litigation bordering upon the absurd, for the right of privacy, once established as a legal doctrine, cannot be confined to the restraint of the publication of a likeness but must necessarily embrace as well the publication of a word-picture, a comment upon one's looks, conduct, domestic relations or habits. And were the right of privacy once legally asserted it would necessarily be held to include the same things if spoken instead of printed, for one, as well as the other, invades the right to be absolutely let alone. . . .

The legislative body could very well interfere and arbitrarily provide that no one should be permitted for his own selfish purpose to use the picture or the name of another for advertising purposes without his consent. In such event, no embarrassment would result to the general body of the law, for the rule would be applicable only to cases provided for by the statute. The courts, however, being without authority to legislate, are required to decide cases upon principle, and so are necessarily embarrassed by precedents created by an extreme, and, therefore, unjustifiable application of an old principle. . . .

The dissent of Gray, J., took sharp issue with the majority's reasoning:

[I]f it is to be permitted that the portraiture may be put to commercial, or other, uses for gain, by the publication of prints therefrom, then an act of invasion of the individual's privacy results, possibly more formidable and more painful in its consequences, than an actual bodily assault might be. Security of person is as necessary as the security of property; and for that complete personal security, which will result in the peaceful and wholesome enjoyment of one's privileges as a member of society, there should be afforded protection, not only against the scandalous portraiture and display of one's features and person, but against the display and use thereof for another's commercial purposes or gain.

Gray's dissent was quickly adopted in *Pavesich v. New England Life Insurance Co.*, 50 S.E. 68 (Ga. 1905), another unauthorized advertisement case, and two generations later in *Hinish v. Meier & Frank Co.*, 113 P.2d 438, 447 (Or. 1941), when the defendant signed plaintiff's name to a telegram urging a veto of certain legislation that would put the defendant out of business. Plaintiff sued because he feared that the telegram might cost him his job and pension with the federal

p. 1040

government in light of a statutory prohibition against federal employee participation in political affairs. In allowing the cause of action, the Oregon Supreme Court emphatically rejected *Roberson*:

The opinion of the court in the *Roberson* case, after an exaggerated statement, as we view it, of what is claimed for the right of privacy, dwelt upon the absurd consequences which it was conceived would follow from acceptance of the doctrine. "The attempt to logically apply the principle," it was said, "will necessarily result not only in a vast amount of litigation but in litigation bordering on the absurd." It was not stated that the litigation then before the court was absurd. It may be doubted whether any court today would render the decision that the New York

court did in that case. . . . When a legal principle is pushed to an absurdity, the principle is not abandoned, but the absurdity avoided. The courts are competent, we think, to deal with difficulties of the sort suggested, and case by case, through the traditional process of inclusion and exclusion, gradually to develop the fullness of the principle and its limitations.

Why is *Hinish* not a case of defamation?

By 1960, many cases recognized some form of the right to privacy without articulating its basic structure. To fill that gap without doing too much violence to the case law, Prosser proposed his seminal fourfold classification of privacy interests.

William L. Prosser, Privacy

48 Calif. L. Rev. 383, 389, 407 (1960)

[The] law of privacy comprises four distinct kinds of invasion of four different interests of the plaintiff, which are tied together by the common name, but otherwise have almost nothing in common except that each represents an interference with the right of the plaintiff, in the phrase coined by Judge Cooley, "to be let alone." Without any attempt to exact definition, these four torts may be described as follows:

1. Intrusion upon the plaintiff's seclusion or solitude, or into his private affairs.
2. Public disclosure of embarrassing private facts about the plaintiff.
3. Publicity which places the plaintiff in a false light in the public eye.
4. Appropriation, for the defendant's advantage, of the plaintiff's name or likeness.

It should be obvious at once that these four types of invasion may be subject, in some respects at least, to different rules; and that when what is said as to any one of them is carried over to another, it may not be at all applicable, and confusion may follow. . . .

Judge Biggs has described the present state of the law of privacy as "still that of a haystack in a hurricane." Disarray there certainly is; but almost all of the

p. 1041

confusion is due to a failure to separate and distinguish these four forms of invasion, and to realize that they call for different things. . . .

Taking them in order—intrusion, disclosure, false light, and appropriation—the first and second require the invasion of something secret, secluded or private pertaining to the plaintiff; the third and fourth do not. The second and third depend upon publicity, while the first does not, nor does the fourth, although it usually involves it. The third requires falsity or fiction; the other three do not. The fourth involves a use for the defendant's advantage, which is not true of the rest. . . .

NOTE

Prosser's classification has been adopted by many courts, and it forms the basis for the treatment of the subject in the Restatement (Second) of Torts §§652A-652L, of which Prosser was the original draftsman. For subsequent commentary, see Posner, *The Right of Privacy*, 12 Ga. L. Rev. 393 (1978); Epstein, *Privacy, Property Rights, and Misrepresentations*, 12 Ga. L. Rev. 455 (1978); Zimmerman, *Requiem for a Heavyweight: A Farewell to Warren and Brandeis's Privacy Tort*, 68 Cornell L. Rev. 291 (1983); Gormley, *One Hundred Years of Privacy*, 1992 Wis. L. Rev. 1335. For critiques of Prosser's framework, see Citron, *Mainstreaming Privacy Torts*, 98 Calif. L. Rev. 1805, 1810 (2010); Strahilevitz, *Reunifying Privacy Law*, 98 Calif. L. Rev. 2007, 2032-2033 (2010).

This chapter follows Prosser's classification in order. In the first three torts, the plaintiff seeks to ward off the defendant. In the fourth, the plaintiff seeks to enter the marketplace by treating the right of publicity as a species of intellectual property ripe for commercial development.

SECTION C. INTRUSION UPON SECLUSION

Restatement of the Law (Second) of Torts

§652B. INTRUSION UPON SECLUSION

One who intentionally intrudes, physically or otherwise, upon the solitude or seclusion of another or his private affairs or concerns, is subject to liability to the other for invasion of his privacy, if the intrusion would be highly offensive to a reasonable person.

Wyoming is the latest state to join the vast majority of states that accept the Second Restatement's intrusion tort. See *Howard v. Aspen Way Enters.*, 406 P.3d 1271 (Wyo. 2017). Wyoming did so in a modern context in which the defendant had surreptitiously installed software on a computer leased to the plaintiff that allowed it to track the location of the computer, remotely activate its webcam, and capture screen shots and key strokes. Hill, J., tied recognition of the intrusion tort

p. 1042

to Wyoming's "well established" "commitment to individual privacy interests" dating back to the court's 1936 recognition that "[t]he home is a favorite of the law. It is there that the citizen can claim the right of privacy, the right to be let alone, on clear grounds."

NADER v. GENERAL MOTORS CORP.

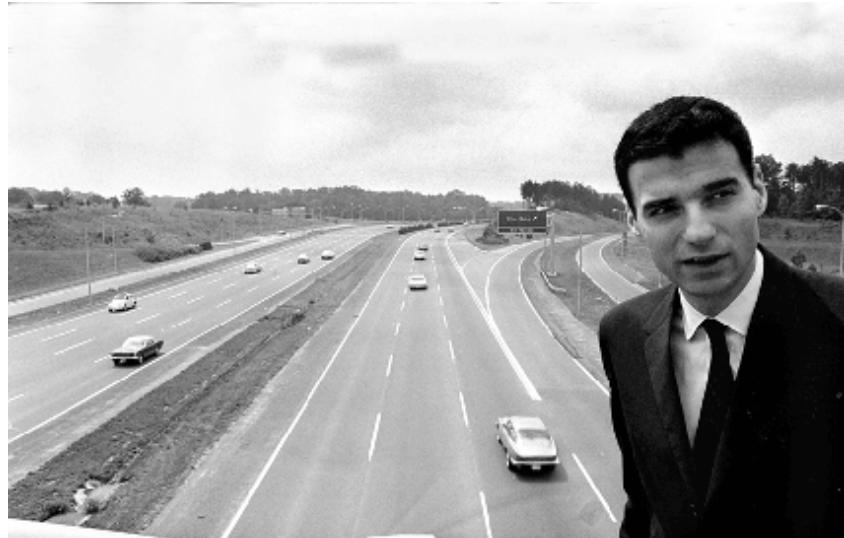

255 N.E.2d 765 (N.Y. 1970)

FULD, C.J. On this appeal, we are called upon to determine the reach of the tort of invasion of privacy as it exists under the law of the District of Columbia.

The complaint, in this action by Ralph Nader, pleads four causes of action against the appellant, General Motors Corporation, and three other defendants allegedly acting as its agents. The first two causes of action charge an invasion of privacy, the third is predicated on the intentional infliction of severe emotional distress and the fourth on interference with the plaintiff's economic advantage. This appeal concerns only the legal sufficiency of the first two causes of action, which were upheld in the courts below as against the appellant's motion to dismiss.

Exhibit 12.1 Ralph Nader

In August 1970, Nader and G.M. settled their dispute, commenced approximately three years earlier, out of court for \$425,000. "Nader said the money would be used to set up a 'continuous legal monitoring of General Motors' activities in the safety, pollution and consumer relations area.'" Nader's claims sought approximately \$2 million in compensatory damages and "an additional \$7 million punitive damages suit was filed but later dropped." <https://www.thecrimson.com/article/1970/8/14/gm-settles-out-of-court-to/>.

Source: AP Images

The plaintiff, an author and lecturer on automotive safety, has, for some years, been an articulate and severe critic of General Motors' products from the standpoint of safety and design. According to the complaint—which, for present purposes, we must assume to be true—the appellant, having learned of the imminent publication of the plaintiff's book "Unsafe at any Speed," decided to conduct a campaign of intimidation against him in order to "suppress plaintiff's criticism of and prevent his disclosure of information" about its products. To that end, the appellant authorized and directed the other defendants to engage in a series of activities which, the plaintiff claims in his first two causes of action, violated his right to privacy.

Specifically, the plaintiff alleges that the appellant's agents (1) conducted a series of interviews with acquaintances of the plaintiff, "questioning them about,

and casting aspersions upon [his] political, social . . . racial and religious views . . . ; his integrity; his sexual proclivities and inclinations; and his personal habits"; (2) kept him under surveillance in public places for an unreasonable length of time; (3) caused him to be accosted by girls for the purpose of entrapping him into illicit relationships; (4) made threatening, harassing and obnoxious telephone calls to him; (5) tapped his telephone and eavesdropped, by means of mechanical and electronic equipment, on his private conversations with others; and (6) conducted a "continuing" and harassing investigation of him. . . .

[The court then held that the District of Columbia recognized Prosser's tort of intrusion upon seclusion.]

Quite obviously, some intrusions into one's private sphere are inevitable concomitants of life in an industrial and densely populated society, which the law does not seek to proscribe even if it were possible to do so. "The law does not provide a remedy for every annoyance that occurs in everyday life." However, the District of Columbia courts have held that the law should and does protect against certain types of intrusive conduct, and we must, therefore, determine whether the plaintiff's allegations are actionable as violations of the right to privacy under the law of that jurisdiction.

It should be emphasized that the mere gathering of information about a particular individual does not give rise to a cause of action under this theory. Privacy is invaded only if the information sought is of a confidential nature and the defendant's conduct was unreasonably intrusive. Just as a common-law copyright is lost when material is published, so, too, there can be no invasion of privacy where the information sought is open to public view or has been voluntarily revealed to others. In order to sustain a cause of action for invasion of privacy, therefore, the plaintiff must show that the appellant's conduct was truly "intrusive" and that it was designed to elicit information which would not be available through normal inquiry or observation.

The majority of the Appellate Division in the present case stated that *all of "[t]he activities complained of"* in the first two counts constituted actionable invasions of privacy under the law of the District of Columbia.² We do not agree with that sweeping determination. At most, only two of the activities charged to the appellant are, in our view, actionable as invasions of privacy under the law of the District of Columbia. . . .

Turning, then, to the particular acts charged in the complaint, we cannot find any basis for a claim of invasion of privacy, under District of Columbia law, in the allegations that the appellant, through its agents or employees, interviewed many persons who knew the plaintiff, asking questions about him and casting aspersions on his character. Although those inquiries may have uncovered information of a personal nature, it is difficult to see how they may be said to have invaded the plaintiff's privacy. Information about the plaintiff which was already known to others could hardly be regarded as private to the plaintiff. Presumably, the plaintiff had previously revealed the information to such other persons, and he would necessarily assume the risk that a friend or acquaintance in whom he had confided might breach the confidence. If, as alleged, the questions tended

to disparage the plaintiff's character, his remedy would seem to be by way of an action for defamation, not for breach of his right to privacy.

Nor can we find any actionable invasion of privacy in the allegations that the appellant caused the plaintiff to be accosted by girls with illicit proposals, or that it was responsible for the making of a large number of threatening and harassing telephone calls to the plaintiff's home at odd hours. Neither of these activities, howsoever offensive and disturbing, involved intrusion for the purpose of gathering information of a private and confidential nature.

As already indicated, it is manifestly neither practical nor desirable for the law to provide a remedy against any and all activity which an individual might find annoying. On the other hand, where severe mental pain or anguish is inflicted through a deliberate and malicious campaign of harassment or intimidation, a remedy is available in the form of an action for the intentional infliction of emotional distress—the theory underlying the plaintiff's third cause of action. But the elements of such an action are decidedly different from those governing the tort of invasion of privacy, and just as we have carefully guarded against the use of the *prima facie* tort doctrine to circumvent the limitations relating to other established tort remedies we should be wary of any attempt to rely on the tort of invasion of privacy as a means of avoiding the more stringent pleading and proof requirements for an action for infliction of emotional distress.

Apart, however, from the foregoing allegations which we find inadequate to spell out a cause of action for invasion of privacy under District of Columbia law, the complaint contains allegations concerning other activities by the appellant or its agents which do satisfy the requirements for such a cause of action. The one which most clearly meets those requirements is the charge that the appellant and its codefendants engaged in unauthorized wiretapping and eavesdropping by mechanical and electronic means. The Court of Appeals in [Pearson v. Dodd, 410 F.2d 701 (D.C. 1969)] expressly recognized that such conduct constitutes a tortious intrusion and other jurisdictions have reached a similar conclusion. (See, e.g., Roach v. Harper, 105 S.E.2d 546 (W. Va. 1958).) In point of fact, the appellant does not dispute this, acknowledging that, to the extent the two challenged counts charge it with wiretapping and eavesdropping, an actionable invasion of privacy has been stated.

There are additional allegations that the appellant hired people to shadow the plaintiff and keep him under surveillance. In particular, he claims that, on one occasion, one of its agents followed him into a bank, getting sufficiently close to him to see the denomination of the bills he was withdrawing from his account. From what we have already said, it is manifest that the mere observation of the plaintiff in a public place does not amount to an invasion of his privacy. But, under certain circumstances, surveillance may be so "overzealous" as to render it actionable. Whether or not the surveillance in the present case falls into this latter category will depend on the nature of the proof. A person does not automatically make public everything he does merely by being in a public place, and the mere fact that Nader was in a bank did not give anyone the right to try to discover the amount of money he was withdrawing. On the other hand, if the plaintiff acted in such a way as to reveal that fact to any casual observer, then, it

may not be said that the appellant intruded into his private sphere. In any event, though, it is enough for present purposes to say that the surveillance allegation is not insufficient as a matter of law. . . .

[Affirmed.]

BREITEL, J., concurring in result. [I]t is inappropriate to decide that several of the allegations as they now appear are referable only to the more restricted tort of intentional infliction of mental distress rather than to the common-law right of privacy upon which the first and second causes of action depend.

NOTES

1. Invasions of privacy without trespass. The invasion of privacy on public streets necessarily involves an element of balancing under yet another version of the live and let live test, *supra* Chapter 7 at 612. Watching the comings and goings of other individuals is an inescapable part of public life from which all receive benefits that on average exceed their private burdens. It is only when extraordinary means are used in the public forum that a claim for invasion of privacy becomes viable. One conspicuous illustration of that imbalance is *Galella v. Onassis*, 487 F.2d 986, 992, 998-999 (2d Cir. 1973). There the plaintiff Donald Galella was a freelance photographer or “paparazzo,” who repeatedly hounded Jacqueline Kennedy Onassis and her children in an effort to secure photographs for publication. He often eluded the United States Secret Service agents assigned to guard her, bribed doormen, and romanced a family servant to gain access to the family.

Galella's photograph of Jacqueline Kennedy Onassis walking on Madison Avenue in New York City, Oct. 7, 1971

In *Galella*, the invasion of privacy was taken as a given, so that the entire dispute was over the choice of remedy. In the district court, Galella sued Onassis for false arrest, malicious prosecution, and interference with trade. Onassis, the defendant, then counterclaimed for invasion of privacy. The district court's initial temporary restraining order enjoined Galella from

harassing, alarming, startling, tormenting, touching the person of the defendant . . . or her children . . . and from blocking their movements in the public places and thoroughfares, invading their immediate zone of privacy by means of physical movements, gestures or with photographic equipment and from performing any act reasonably calculated to place the lives and safety of the defendant . . . and her children in jeopardy.

After a full trial,

Galella was enjoined from (1) keeping the defendant and her children under surveillance or following any of them; (2) approaching within 100 yards of the

p. 1046

home of defendant or her children, or within 100 yards of either child's school or within 75 yards of either child or 50 yards of defendant; (3) using the name, portrait or picture of defendant or her children for advertising; (4) attempting to communicate with defendant or her children except through her attorney.

On appeal, Smith, J., accepted the need for injunctive relief to forestall defendant's determined and intrusive coverage of plaintiff and her family, but then limited its scope:

The injunction, however, is broader than is required to protect the defendant. Relief must be tailored to protect Mrs. Onassis from the "paparazzo" attack which distinguishes Galella's behavior from that of other photographers; it should not unnecessarily infringe on reasonable efforts to "cover" defendant. Therefore, we modify the court's order to prohibit only (1) any approach within twenty-five (25) feet of defendant or any touching of the person of the defendant Jacqueline Onassis; (2) any blocking of her movement in public places and thoroughfares; (3) any act foreseeably or reasonably calculated to place the life and safety of defendant in jeopardy; and (4) any conduct which would reasonably be foreseen to harass, alarm or frighten the defendant.

Any further restriction on Galella's taking and selling pictures of defendant for news coverage is, however, improper and unwarranted by the evidence.

Likewise, we affirm the grant of injunctive relief to the government modified to prohibit any action interfering with Secret Service agents' protective duties. Galella thus may be enjoined from (a) entering the children's schools or play areas; (b) engaging in action calculated or

reasonably foreseen to place the children's safety or well being in jeopardy, or which would threaten or create physical injury; (c) taking any action which could reasonably be foreseen to harass, alarm, or frighten the children; and (d) from approaching within thirty (30) feet of the children. . . .

Timbers, J., dissented in part on the ground that deference should be accorded to the district court's determination of the sweep of injunctive relief. The dissent protested, for example, "a wholly unexplained and anomalous 84% reduction of the distance Galella is required to keep away from Mrs. Onassis (from 50 yards to 25 feet), and an equally implausible 87% reduction of the distance he is required to keep away from the children (from 75 yards to 30 feet)."

2. *Theoretical foundations for the right to privacy.* Most social situations are not as extreme as those in either *Nader* or *Galella*, but they still may involve some imbalance that does not work to the advantage of all, as when people, while unobserved, seek to snoop or overhear conversations of others. These tactics can also be applied against individuals on private property, when there is no direct personal intrusion. Thus the tort of invasion of privacy does not require a physical trespass on plaintiff's property but may be accomplished by eavesdropping near an open window or by overhearing conversations by means of a parabolic microphone. The argument against recognizing this tort starts from the position "no physical invasion, no tort," which still controls in the blocking of light cases. See *Fontainebleau, supra* Chapter 7 at 614. On privacy, however, the cases have consistently gone the other way. Blackstone himself condemned "eaves-droppers, or such as listen

p. 1047

under walls and windows," but he did so not only for what they did but also for "the slanderous and mischievous tales" they uttered. 4 Blackstone, *Commentaries on the Laws of England* 169 (1769). The more modern approach condemns the intrusion but downplays two elements in Blackstone's formulation: the physical entry and any subsequent defamatory publication. *Rhodes v. Graham*, 37 S.W.2d 46 (Ky. 1931), counts as a transitional case in which the action for invasion of privacy was allowed for phone conversations overheard by a technical trespass, the tapping of a telephone line. In *Roach v. Harper*, 105 S.E.2d 564 (W. Va. 1958), the court allowed an action for invasion of privacy when the defendant used a "hearing device" to overhear the plaintiff's private and confidential conversations in an apartment that he rented to her. In line with the case law trend, the modern dictionary definition excises all references to trespass in its definition of eavesdropping: "To listen, or try to listen, secretly, as to a private conversation."

Why the shift? Creating liability without trespass is best justified by asking whether the general security promoted by an expanded right works to the long-term advantage of all individuals governed by the newer rule. That norm is reflected in settings where people voluntarily congregate in close quarters, as in the anti-snooping norm in crowded restaurants. By extension, the prohibition against snooping reduces the need for individuals to take elaborate precautions to fence themselves off from their neighbors, and thus allows for the more intensive use of land in crowded areas.

The soundness of the privacy right against intrusion has generated longstanding controversy in connection with the Fourth Amendment's guarantee against "unreasonable searches and seizures." *Katz v. United States*, 389 U.S. 347, 353 (1967), rejected the government's argument that its tap on a public telephone

booth did not amount to a search or seizure because the electronic device did not commit a common law trespass because it “did not happen to penetrate the wall of the booth.” Subsequent Fourth Amendment cases have retreated from *Katz*’s broad personal privacy holding. For example, in *Smith v. Maryland*, 442 U.S. 735 (1979), the Court refused to apply *Katz* when the police, without a warrant, used a device known as a “pen register” to record the numbers dialed from a particular phone and the times they were dialed, because no phone conversations were recorded. Does the legitimate interest of privacy test allow a distinction between *Katz* and *Smith*?

3. *Privacy in the office.* After *Katz*, what are employees’ reasonable expectations of privacy in the workplace? In *O’Connor v. Ortega*, 480 U.S. 709, 717 (1987), the Supreme Court held, in a claim by a state hospital employee, that the search of his office by state hospital personnel without his knowledge or consent violated the Fourth Amendment. Although acknowledging that expectations of privacy in one’s office, desk, and files “may be reduced by virtue of actual office practices and procedures, or by legitimate regulation,” the Court held that, in this case, the employee had a reasonable expectation of privacy, given that he did not share his desk or file cabinets with others; nor did the hospital have any policy discouraging such personal use. Similarly, in *In re Asia Global Crossing, Ltd.*, 322 B.R. 247 (Bankr. S.D.N.Y. 2005), Bernstein, C.J., proposed this four-factor test

p. 1048

to elaborate on this privacy standard in the context of an employee’s use of the company email system to communicate with a third party about personal matters:

- (1) does the corporation maintain a policy banning personal or other objectionable use,
- (2) does the company monitor the use of the employee’s computer or e-mail,
- (3) do third parties have a right of access to the computer or e-mails, and
- (4) did the corporation notify the employee, or was the employee aware, of the use and monitoring policies?

What about even newer communication and social networking technologies? In *City of Ontario, Cal. v. Quon*, 560 U.S. 746 (2010), the Supreme Court declined to decide whether or not a government employee had an expectation of privacy with regard to personal text messages sent through a government-issued cell phone. Similar privacy disputes, particularly pertaining to an employee’s use of a company computer to access personal files and Gmail, Twitter, Facebook, and eBay accounts, raise new issues for courts. In *Biby v. Board of Regents*, 419 F.3d 845 (8th Cir. 2005), the court held that an employee did not have an expectation of privacy with regard to personal files downloaded to a company computer. In *In re CTLI, LLC*, 528 B.R. 359, 377-378 (Bankr. S.D. Tex. 2015), the bankruptcy court held that a bankrupt business’s social media accounts, including a Facebook “likes” page and Twitter account, were business rather than personal accounts and thus property of the company’s bankruptcy estate. Hence the court rejected the employee’s claim for privacy by treating the social media communications like employee messages on a work email account for which there is no individual privacy interest. In contrast, in *Pure Power Boot Camp v. Warrior Fitness Boot Camp*, 587 F. Supp. 2d 548 (S.D.N.Y. 2008), the court resisted a similar intrusion into an employee’s personal email account. Does it make sense for the result to turn on whether the employer’s intrusion stems from reading an employee’s personal files versus emails? How readily will courts be able to distinguish personal from business-related social media accounts and posts?

BORING v. GOOGLE INC.

362 Fed. Appx. 273 (3d Cir. 2010)

JORDAN, J.

Aaron C. Boring and Christine Boring appeal from an order of the United States District Court for the Western District of Pennsylvania dismissing their complaint under Rule 12(b)(6) of the Federal Rules of Civil Procedure. For the reasons that follow, we affirm in part and reverse in part.

I. Background

On April 2, 2008, the Borings commenced an action in the Court of Common Pleas of Allegheny County, Pennsylvania against Google, Inc., asserting claims for invasion of privacy, trespass, injunctive relief, negligence, and conversion. The

p. 1049

Borings sought compensatory, incidental, and consequential damages in excess of \$25,000 for each claim, plus punitive damages and attorney's fees.

The Borings' claims arise from Google's "Street View" program, a feature on Google Maps that offers free access on the Internet to panoramic, navigable views of streets in and around major cities across the United States. To create the Street View program, representatives of Google attach panoramic digital cameras to passenger cars and drive around cities photographing the areas along the street. According to Google, "[t]he scope of Street View is public roads." Google allows individuals to report and request the removal of inappropriate images that they find on Street View.

The Borings, who live on a private road in Pittsburgh, discovered that Google had taken "colored imagery of their residence, including the swimming pool, from a vehicle in their residence driveway months earlier without obtaining any privacy waiver or authorization." They allege that their road is clearly marked with a "Private Road, No Trespassing" sign, and they contend that, in driving up their road to take photographs for Street View and in making those photographs available to the public, Google "disregarded [their] privacy interest." . . .

[The district court granted Google's motion to dismiss all of the Borings' claims. With respect to the invasion of privacy claim, it held that "the Borings were unable to show that Google's conduct was highly offensive to a person of ordinary sensibilities." On trespass, the court held that "the Borings have not alleged facts sufficient to establish that they suffered any damages caused by the alleged trespass."]

II. Discussion

...

B. INVASION OF PRIVACY

Pennsylvania law recognizes four torts under the umbrella of invasion of privacy: “[1] unreasonable intrusion upon the seclusion of another; [2] appropriation of another’s name or likeness; [3] unreasonable publicity given to another’s private life; and [4] publicity that unreasonably places the other in a false light before the public.” . . .

i. Intrusion upon Seclusion

To state a claim for intrusion upon seclusion, plaintiffs must allege conduct demonstrating “an intentional intrusion upon the seclusion of their private concerns which was substantial and highly offensive to a reasonable person, and aver sufficient facts to establish that the information disclosed would have caused mental suffering, shame or humiliation to a person of ordinary sensibilities.” Publication is not an element of the claim, and thus we must examine the harm caused by the intrusion itself.

No person of ordinary sensibilities would be shamed, humiliated, or have suffered mentally as a result of a vehicle entering into his or her ungated driveway

p. 1050

and photographing the view from there. The Restatement cites knocking on the door of a private residence as an example of conduct that would not be highly offensive to a person of ordinary sensibilities. See Restatement (Second) of Torts, §652B cmt. d. The Borings’ claim is pinned to an arguably less intrusive event than a door knock. Indeed, the privacy allegedly intruded upon was the external view of the Borings’ house, garage, and pool—a view that would be seen by any person who entered onto their driveway, including a visitor or a delivery man. Thus, what really seems to be at the heart of the complaint is not Google’s fleeting presence in the driveway, but the photographic image captured at that time. The existence of that image, though, does not in itself rise to the level of an intrusion that could reasonably be called highly offensive.

Significantly, the Borings do not allege that they themselves were viewed inside their home, which is a relevant factor in analyzing intrusion upon seclusion claims.

The Borings suggest that the District Court erred in determining what would be highly offensive to a person of ordinary sensibilities at the pleading stage, but they do not cite to any authority for this proposition. Courts do in fact, decide the “highly offensive” issue as a matter of law at the pleading stage when appropriate. . . .

In sum, accepting the Borings’ allegations as true, their claim for intrusion upon seclusion fails as a matter of law, because the alleged conduct would not be highly offensive to a person of ordinary sensibilities.

[Based on the foregoing reasoning, the court also summarily dispatched the Borings’ claim of invasion of privacy based upon “Publicity Given to Private Life,” given that one element of that claim is that the publicity “would be highly offensive to a reasonable person.”]

C. TRESPASS

The District Court dismissed the Borings’ trespass claim, holding that trespass was not the proximate cause

of any compensatory damages sought in the complaint and that, while nominal damages are generally available in a trespass claim, the Borings did not seek nominal damages in their complaint. While the District Court's evident skepticism about the claim may be understandable, its decision to dismiss it under Rule 12(b)(6) was erroneous.

Trespass is a strict liability tort, "both exceptionally simple and exceptionally rigorous." Prosser on Torts at 63 (West, 4th ed. 1971). Under Pennsylvania law, it is defined as an "unprivileged, intentional intrusion upon land in possession of another." Though claiming not to have done so, it appears that the District Court effectively made damages an element of the claim, and that is problematic, since "[o]ne who intentionally enters land in the possession of another is subject to liability to the possessor for a trespass, although his presence on the land causes no harm to the land, its possessor, or to any thing or person in whose security the possessor has a legally protected interest." Restatement (Second) Torts §163.

Here, the Borings have alleged that Google entered upon their property without permission. If proven, that is a trespass, pure and simple. There is no

p. 1051

requirement in Pennsylvania law that damages be pled, either nominal or consequential. It was thus improper for the District Court to dismiss the trespass claim for failure to state a claim. Of course, it may well be that, when it comes to proving damages from the alleged trespass, the Borings are left to collect one dollar and whatever sense of vindication that may bring, but that is for another day. For now, it is enough to note that they "bear the burden of proving that the trespass was the legal cause, i.e., a substantial factor in bringing about actual harm or damage," if they want more than a dollar. . . .

[Affirmed dismissal of claims for invasion of privacy (as well as unjust enrichment, injunctive relief, and punitive damages). Reversed and remanded dismissal of trespass claim.]

NOTES

1. Privacy and the era of big data. To what extent can one's daily activities be tracked, recorded, and shared with others today? Google's response to the Borings' complaint notably argued that "[t]oday's satellite-image technology means that ... complete privacy does not exist." (Note that after several years of litigation on the trespass claim, Google agreed to pay the Borings a symbolic \$1 consent judgment.)

What if one rents a car equipped with GPS (global positioning system)? In *Turner v. American Car Rental, Inc.*, 884 A.2d 7 (Conn. App. Ct. 2005), Dranginis, J., held that "it was a factual determination for the jury to make as to whether the global positioning system in the vehicle and the tracking of the plaintiff's operation of that vehicle constituted an invasion of privacy." Dranginis, J., nonetheless noted the absence of "any authority that equipping a motor vehicle with a global positioning system violates the privacy of the vehicle's operator" or "any legal authority that the operator of a motor vehicle has an expectation of privacy on the public highway."

What about when the invasion of privacy happens exclusively online? The social networking website Facebook enables sharing of its users' personal information as follows:

Third-party websites can embed Facebook "like" buttons to let users share content on Facebook—for instance, CNN can embed "like" buttons on news articles that it publishes [online] to let users share content with their Facebook friends. To make the "like" button appear on the page, CNN embeds a small code snippet that Facebook provides. That code snippet causes the user's browser to send a background request to Facebook's servers. That request includes the URL of the page where the "like" button is embedded, as well as the contents of "cookies"—small text files—that Facebook has stored on that user's browser.

In *In re Facebook Internet Tracking Litigation*, 263 F. Supp. 3d 836 (N.D. Cal. 2017), plaintiffs alleged that Facebook violated their privacy by using its "like" buttons to track and collect detailed records of their private web browsing activity. *Davila, J.*, rebuffed plaintiffs' intrusion claim:

p. 1052

[W]ebsites routinely embed content from third-party servers in the form of videos, images, and other media, as well as through their use of analytics tools, advertising networks, code libraries and other utilities. Each tool transmits to third parties the same data that Plaintiffs claim is highly sensitive. Since these requests are part of routine internet functionality . . . the Court finds that they are not a "highly offensive" invasion of Plaintiffs' privacy interests.

Davila, J., cited approvingly *In re Google, Inc. Privacy Policy Litigation*, 58 F. Supp. 3d 968, 988 (N.D. Cal. 2014), which held that Google's collection and disclosure of users' data, including their browsing histories, "do not plausibly rise to the level of intrusion necessary to establish an intrusion claim" given the "high bar" for an intrusion "highly offensive to a reasonable person."

Moreover, in rejecting any "reasonable expectation of privacy in the URLs of the pages they visit," *Davila, J.*, relied on the fact that plaintiffs could have exercised self-help to safeguard their web browsing histories:

[A]s Facebook explained in its privacy policy, "[y]ou can remove or block cookies using the settings in your browser." Similarly, users can "take simple steps to block data transmissions from their browsers to third parties," such as "using their browsers in 'incognito' mode" or "install[ing] plugin browser enhancements." Facebook's intrusion could have been easily blocked, but Plaintiffs chose not to do so.

A different situation was presented in *In re Google Inc. Cookie Placement Consumer Privacy Litigation*, 806 F.3d 125 (3d Cir. 2015), where Google deliberately circumvented cookie-blocking settings in users' browsers, while claiming that it respected users' decisions to "[set] your browser to refuse all cookies." According to *Fuentes, J.*, such conduct "[c]haracterized by deceit and disregard . . . raises different issues than tracking or disclosure alone." On that basis, *Fuentes, J.*, found Google's conduct "highly offensive" or "an egregious breach of social norms" such that the plaintiffs had stated claims for intrusion upon seclusion.

2. Significance of corporate policy. Critical to the court's finding a "reasonable expectation of privacy" in *In re Google Inc. Cookie Placement* was that Google told its users that they could set their browser settings to block cookies. Other courts have similarly held that plaintiffs' reasonable expectations of privacy may be created by a company's statement or policy indicating that it would not collect or retain certain types of data. See, e.g., *In re Vizio, Inc.*, 238 F. Supp. 3d 1204 (C.D. Cal. 2017); *In re Nickelodeon Consumer Privacy Litig.*, 827 F.3d 262 (3d Cir. 2016). But where a company clearly discloses the types of data it collects and complies with its publicly stated policies (as in *In re Facebook Internet Tracking, supra*), courts have rejected the notion that plaintiffs have any reasonable expectation of privacy. Is compliance with published corporate policies the appropriate standard for determining whether an Internet company violates its consumers' privacy? Considering the ubiquity of online services such as email and Facebook, do the consumers who agree to those policies have reasonable alternatives?

3. The rise of statutory protections? California provides enhanced statutory protections to "giv[e] consumers an effective way to control their personal

p. 1053

information, thereby affording better protection for their own privacy and autonomy." California Consumer Privacy Act of 2018, *infra*.

California Consumer Privacy Act of 2018

§3. PURPOSE AND INTENT

In enacting this Act, it is the purpose and intent of the people of the State of California to further the constitutional right of privacy by giving consumers an effective way to control their personal information, thereby affording better protection for their own privacy and autonomy, by:

- (a) Giving California consumers the right to know what categories of personal information a business has collected about them and their children.
- (b) Giving California consumers the right to know whether a business has sold this personal information, or disclosed it for a business purpose, and to whom.
- (c) Requiring a business to disclose to a California consumer if it sells any of the consumer's personal information and allowing a consumer to tell the business to stop selling the consumer's personal information.
- (d) Preventing a business from denying, changing, or charging more for a service if a California consumer requests information about the business's collection or sale of the consumer's personal information, or refuses to allow the business to sell the consumer's personal information.
- (e) Requiring businesses to safeguard California consumers' personal information and holding them accountable if such information is compromised as a result of a security breach arising from the business's failure to take reasonable steps to protect the security of consumers' sensitive information.

A consumer can recover \$1,000 (or actual damages, whichever is greater) for each violation of the Act.

The California Act approaches, but is not as privacy protective as, the European Union General Regulation on Data Privacy (GDPR), which seeks to return control over personal data to citizens of the EU. Not only does the GDPR require data processors to clearly disclose any data collection practices they engage in, the “lawful basis and purpose” for the data collection, how long they will maintain the data, and whether they plan to share the data with third parties, the GDPR also prohibits companies from processing personal data unless they have the informed consent of the individual whose data is being collected. Consumers have the right to revoke consent at any time.

DESNICK v. AMERICAN BROADCASTING CO., INC.

44 F.3d 1345 (7th Cir. 1995)

POSNER, C.J. The plaintiffs—an ophthalmic clinic known as the “Desnick Eye Center” after its owner, Dr. Desnick, and two ophthalmic surgeons employed by the clinic, Glazer and Simon—appeal from the dismissal of their suit against the ABC television network, a producer of the ABC program *PrimeTime Live* named Entine, and the program’s star reporter, Donaldson. The suit is for trespass, defamation, and other torts arising out of the production and broadcast of a program segment of *PrimeTime Live* that was highly critical of the Desnick Eye Center. . . .

In March of 1993 Entine telephoned Dr. Desnick and told him that *PrimeTime Live* wanted to do a broadcast segment on large cataract practices. The Desnick Eye Center has 25 offices in four midwestern states and performs more than 10,000 cataract operations a year, mostly on elderly persons whose cataract surgery is paid for by Medicare. The complaint alleges—and in the posture of the case we must take the allegations to be true, though of course they may not be—that Entine told Desnick that the segment would not be about just one cataract practice, that it would not involve “ambush” interviews or “undercover” surveillance, and that it would be “fair and balanced.” Thus reassured, Desnick permitted an ABC crew to videotape the Desnick Eye Center’s main premises in Chicago, to film a cataract operation “live,” and to interview doctors, technicians, and patients. Desnick also gave Entine a videotape explaining the Desnick Eye Center’s services.

Unbeknownst to Desnick, Entine had dispatched persons equipped with concealed cameras to offices of the Desnick Eye Center in Wisconsin and Indiana. Posing as patients, these persons—seven in all—requested eye examinations. Plaintiffs Glazer and Simon are among the employees of the Desnick Eye Center who were secretly videotaped examining these “test patients.”

The program aired on June 10. Donaldson introduces the segment by saying, “We begin tonight with the story of a so-called ‘big cutter,’ Dr. James Desnick. . . . [I]n our undercover investigation of the big cutter you’ll meet tonight, we turned up evidence that he may also be a big charger, doing unnecessary cataract surgery for the money.” Brief interviews with four patients of the Desnick Eye Center follow. One of the patients is satisfied (“I was blessed”); the other three are not—one of them says, “If you got three eyes, he’ll get three eyes.” Donaldson then reports on the experiences of the seven test patients. The two who

were under 65 and thus not eligible for Medicare reimbursement were told they didn't need cataract surgery. Four of the other five were told they did. Glazer and Simon are shown recommending cataract surgery to them. Donaldson tells the viewer that *Prime-Time Live* has hired a professor of ophthalmology to examine the test patients who had been told they needed cataract surgery, and the professor tells the viewer that they didn't need it—with regard to one he says, “I think it would be near malpractice to do surgery on him.” Later in the segment he denies that this could just be an honest difference of opinion between professionals.

[The show also broadcasted an interview with an ophthalmic surgeon who turned down a job with Desnick because of his inability to screen patients; a

p. 1055

former marketing executive who noted that the firm took advantage of “people who had Alzheimer’s, and people who did not know what planet they were on”; former patients who had unsatisfactory experiences at the clinic; and a former employee who said that Dr. Desnick altered vision tests to make it appear that people needed cataract operations. The show then detailed how Desnick “rigged” a glare machine to persuade people that they had cataracts.]

The plaintiffs’ claims fall into two distinct classes. The first arises from the broadcast itself, the second from the means by which ABC and Entine obtained the information that they used in the broadcast. The first is a class of one. The broadcast is alleged to have defamed the three plaintiffs by charging that the glare machine is tampered with. [The court holds that the evidence, as presented, is sufficient to reach the jury on defamation.]

The second class of claims in this case concerns, as we said, the methods that the defendants used to create the broadcast segment. There are four such claims: that the defendants committed a trespass in insinuating the test patients into the Wisconsin and Indiana offices of the Desnick Eye Center, that they invaded the right of privacy of the Center and its doctors at those offices (specifically Glazer and Simon), that they violated federal and state statutes regulating electronic surveillance, and that they committed fraud by gaining access to the Chicago office by means of a false promise that they would present a “fair and balanced” picture of the Center’s operations and would not use “ambush” interviews or undercover surveillance.

To enter upon another’s land without consent is a trespass. The force of this rule has, it is true, been diluted somewhat by concepts of privilege and of implied consent. But there is no journalists’ privilege to trespass. And there can be no implied consent in any nonfictitious sense of the term when express consent is procured by a misrepresentation or a misleading omission. The Desnick Eye Center would not have agreed to the entry of the test patients into its offices had it known they wanted eye examinations only in order to gather material for a television exposé of the Center and that they were going to make secret videotapes of the examinations. Yet some cases, illustrated by *Martin v. Fidelity & Casualty Co.*, 421 So. 2d 109, 111 (Ala. 1982), deem consent effective even though it was procured by fraud. There must be *something* to this surprising result. Without it a restaurant critic could not conceal his identity when he ordered a meal, or a browser pretend to be interested in merchandise that he could not afford to buy. Dinner guests would be trespassers if they were false friends who never would have been invited had the host known their true

character, and a consumer who in an effort to bargain down an automobile dealer falsely claimed to be able to buy the same car elsewhere at a lower price would be a trespasser in the dealer's showroom. Some of these might be classified as privileged trespasses, designed to promote competition. Others might be thought justified by some kind of implied consent—the restaurant critic for example might point by way of analogy to the use of the "fair use" defense by book reviewers charged with copyright infringement and argue that the restaurant industry as a whole would be injured if restaurants could exclude critics. But most such efforts at rationalization would be little better than evasions. The fact is that consent to an entry is often given legal

p. 1056

effect even though the entrant has intentions that if known to the owner of the property would cause him for perfectly understandable and generally ethical or at least lawful reasons to revoke his consent.

The law's willingness to give effect to consent procured by fraud is not limited to the tort of trespass. The Restatement gives the example of a man who obtains consent to sexual intercourse by promising a woman \$100, yet (unbeknownst to her, of course) he pays her with a counterfeit bill and intended to do so from the start. The man is not guilty of battery, even though unconsented-to sexual intercourse is a battery. Restatement (Second) of Torts §892B, illustration 9, pp. 373-74 (1979). Yet we know that to conceal the fact that one has a venereal disease transforms "consensual" intercourse into battery. Seduction, standardly effected by false promises of love, is not rape; intercourse under the pretense of rendering medical or psychiatric treatment is, at least in most states. Trespass presents close parallels. If a homeowner opens his door to a purported meter reader who is in fact nothing of the sort—just a busybody curious about the interior of the home—the homeowner's consent to his entry is not a defense to a suit for trespass. And likewise if a competitor gained entry to a business firm's premises posing as a customer but in fact hoping to steal the firm's trade secrets. *Rockwell Graphic Systems, Inc. v. DEV Industries, Inc.*, 925 F.2d 174, 178 (7th Cir. 1991). . . .

How to distinguish the two classes of case—the seducer from the medical impersonator, the restaurant critic from the meter-reader impersonator? The answer can have nothing to do with fraud; there is fraud in all the cases. It has to do with the interest that the torts in question, battery and trespass, protect. The one protects the inviolability of the person, the other the inviolability of the person's property. The woman who is seduced wants to have sex with her seducer, and the restaurant owner wants to have customers. The woman who is victimized by the medical impersonator has no desire to have sex with her doctor; she wants medical treatment. And the homeowner victimized by the phony meter reader does not want strangers in his house unless they have authorized service functions. The dealer's objection to the customer who claims falsely to have a lower price from a competing dealer is not to the physical presence of the customer, but to the fraud that he is trying to perpetuate. The lines are not bright—they are not even inevitable. They are the traces of the old forms of action, which have resulted in a multitude of artificial distinctions in modern law. But that is nothing new.

There was no invasion in the present case of any of the specific interests that the tort of trespass seeks to protect. The test patients entered offices that were open to anyone expressing a desire for ophthalmic services and videotaped physicians engaged in professional, not personal, communications with strangers (the testers themselves). The activities of the offices were not disrupted. . . . Nor was there any "inva[sion

of] a person's private space," as in our hypothetical meter reader case, as in the famous case of *De May v. Roberts*, 46 Mich. 160, 9 N.W. 146 (Mich. 1881), . . . and as in *Dietemann v. Time, Inc.*, 449 F.2d 245 (9th Cir. 1971), on which the plaintiffs in our case rely. *Dietemann* involved a home. True, the portion invaded was an office, where the plaintiff performed quack healing of nonexistent ailments. The parallel to this case is plain enough, but there is a

p. 1057

difference. *Dietemann* was not in business, and did not advertise his services or charge for them. His quackery was private.

No embarrassingly intimate details of anybody's life were publicized in the present case. There was no eavesdropping on a private conversation; the testers recorded their own conversations with the Desnick Eye Center's physicians. There was no violation of the doctor-patient privilege. There was no theft, or intent to steal, trade secrets; no disruption of decorum, of peace and quiet; no noisy or distracting demonstrations. Had the testers been undercover FBI agents, there would have been no violation of the Fourth Amendment, because there would have been no invasion of a legally protected interest in property or privacy. "Testers" who pose as prospective home buyers in order to gather evidence of housing discrimination are not trespassers even if they are private persons not acting under color of law. The situation of the defendants' "testers" is analogous. Like testers seeking evidence of violation of anti-discrimination laws, the defendants' test patients gained entry into the plaintiffs' premises by misrepresenting their purposes (more precisely by a misleading omission to disclose those purposes). But the entry was not invasive in the sense of infringing the kind of interest of the plaintiffs that the law of trespass protects; it was not an interference with the ownership or possession of land. We need not consider what if any difference it would make if the plaintiffs had festooned the premises with signs forbidding the entry of testers or other snoops. Perhaps none, but that is an issue for another day.

What we have said largely disposes of two other claims—INFRINGEMENT OF THE RIGHT OF PRIVACY, AND ILLEGAL WIRETAPPING. The right of privacy embraces several distinct interests, but the only ones conceivably involved here are the closely related interests in concealing intimate personal facts and in preventing intrusion into legitimately private activities, such as phone conversations. . . .

Affirmed in part, reversed in part, and remanded.

NOTES

1. *Trespass by fraudulent entry.* In intrusion cases that involve an actual entry onto the plaintiff's land, the dispute sometimes boils down to whether the plaintiff's consent to entry has been vitiated by the defendant's fraud. In the early case of *De May v. Roberts*, 9 N.W. 146, 149 (Mich. 1881), the plaintiff was granted an action for invasion of privacy against an attending physician who brought a young unmarried man into the plaintiff's apartment to observe the physician delivering her baby.

In obtaining admission at such a time and under such circumstances without fully disclosing his

true character, both parties were guilty of deceit, and the wrong thus done entitles the injured party to recover the damages afterwards sustained, from shame and mortification upon discovering the true character of the defendants.

Is *Desnick* distinguishable? Does it matter that the restaurant critic sometimes publishes favorable reviews, while ABC will report nothing if they cannot uncover some scandal?

p. 1058

2. *Publication and fraudulent entry.* With *Desnick*, compare Dietemann v. Time, Inc., 449 F.2d 245, 249 (9th Cir. 1971), in which the plaintiff, “a disabled veteran with little education, was engaged in the practice of healing with clay, minerals, and herbs—as practiced, simply quackery.” As part of an effort to expose the practices of the plaintiff and those like him, two of defendant’s reporters for *Life* magazine, Mr. Ray and Mrs. Metcalf, hatched a scheme with the local district attorney’s office that allowed the pair to gain entry into the plaintiff’s home by falsely representing that they had been sent by a friend for treatment. By means of concealed equipment, Mrs. Metcalf transmitted the conversations between herself and the plaintiff to a parked car occupied by a *Life* employee and two government officials. Mr. Ray took secret pictures of the plaintiff, later used in the *Life* story, including one of the “plaintiff with his hand on the upper portion of Mrs. Metcalf’s breast while he was looking at some gadgets and holding what appeared to be a wand in his right hand.” Four weeks later, the plaintiff was arrested for practicing medicine without a license and, after the publication of the story, entered a plea of nolo contendere. Thereafter, he recovered \$1,000 in a tort action for the invasion of privacy, and the verdict was affirmed on appeal. “The First Amendment has never been construed to accord newsmen immunity from torts or crimes committed during the course of newsgathering. The First Amendment is not a license to trespass, to steal, or to intrude by electronic means into the precincts of another’s home or office.” Does it make a difference that the Desnick Clinics were open to the general public whereas Dietemann operated out of his home? Could Desnick have excluded the defendants if he had known their true purpose from the outset?

A similar damage suit for investigative reporting failed in Food Lion, Inc. v. Capital Cities/ABC, Inc., 194 F.3d 505 (4th Cir. 1999). The defendants, producers of the show *PrimeTime Live*, developed a scheme whereby two of their investigators, Susan Barnett and Lynne Litt, fraudulently obtained positions in the meat department of a Food Lion store. They used hidden cameras to take footage of its operations that was subsequently used in a hard-hitting broadcast about the grocery store’s dangerous health practices in a November 1992 episode of *PrimeTime Live*. A jury awarded over \$5.5 million in punitive damages against ABC Inc. and the broadcast’s executive and senior producers. The plaintiffs’ claims for trespass and invasion of privacy were ultimately rebuffed on the ground that the “publication damages,” namely, the substantial loss in business that followed the broadcast, could not be recovered given the First Amendment. As a matter of tort law, are these publication damages proximately caused by the initial trespass? For a criticism of *Desnick* and *Food Lion*, see Epstein, Privacy, Publication, and the First Amendment: The Dangers of First Amendment Exceptionalism, 52 Stan. L. Rev. 1003, 1020-1023 (2000).

Even plaintiffs who are not the targets of investigation have lost cases for intrusion upon seclusion based on the First Amendment protections granted to the press. In Howell v. New York Post Co., Inc., 612 N.E.2d 699 (N.Y. 1993), the plaintiff was a patient at the Four Winds Hospital, a private psychiatric hospital. Her

recovery that the hospitalization remain a secret from all but her immediate family.” A co-resident at the facility was Hedda Nussbaum, who had received massive publicity as the “adoptive” mother of six-year-old Lisa Steinberg, who had died of unrelenting child abuse. In September 1988, a *Post* photographer trespassed on the hospital grounds and used a telephoto lens to take pictures of a group of patients that included Nussbaum and the plaintiff. That evening the medical director of Four Winds pleaded with the *Post* not to run the picture. But the next day it appeared, showing a happy and recuperating Nussbaum in the company of friends, next to a picture of her bruised and disfigured face at the time of her arrest. The caption beneath the picture read:

The battered face above belongs to the Hedda Nussbaum people remember—the former live-in lover of Joel Steinberg. The serene woman in jeans at left is the same Hedda, strolling with a companion in the grounds of the upstate psychiatric center where her face and mind are healing from the terrible wounds Steinberg inflicted.

Although the plaintiff’s name was not used in the picture, her identity was easily discernible.

Kaye, C.J., wrote for a unanimous court and rejected both the claim for intentional infliction of emotional distress and for an invasion of privacy. She held that a real relationship between the public story and the inclusion of plaintiff in the picture blocked recognition of the privacy tort: “The visual impact would not have been the same had the *Post* cropped plaintiff out of the photograph, as she suggests was required.” She then dispatched *Galella* (*supra* Note 1 at 1045) by noting that the journalist’s trespassory conduct here did not “remotely approach” the required minimum, given that the picture was taken outdoors and from a distance.

The fortunes of war shifted yet again in *Sanders v. American Broadcasting Co., Inc.*, 978 P.2d 67, 77 (Cal. 1999), involving yet another *PrimeTime Live* broadcast. An ABC employee took a position as an employee of a telepsychic company and secretly videotaped her conversations with the plaintiff, another telepsychic. Even though these conversations were routinely witnessed by other employees, Werdegar, J., rejected the notion that privacy had “a binary, all-or-nothing characteristic,” and concluded that “in the workplace, as elsewhere, the reasonableness of a person’s expectation of visual and aural privacy depends not only on who might have been able to observe the subject interaction, but on the identity of the claimed intruder and the means of intrusion.” Accordingly “a person who lacks a reasonable expectation of complete privacy in a conversation because it could be seen and overheard by coworkers (but not the general public) may nevertheless have a claim for invasion of privacy by intrusion based on a television reporter’s covert videotaping of that conversation.” *Desnick* was distinguished on the ground that *Sanders* is concerned “with interactions between coworkers rather than between a proprietor and a customer.”

The California Supreme Court relied on *Sanders* in *Taus v. Loftus*, 151 P.3d 1185, 1216-1217 (Cal. 2007), where the plaintiff had, as “Jane Doe,” been the subject of previous stories indicating how she had suffered serious child abuse at

the hands of her mother. The defendant, Elizabeth Loftus, a prominent cognitive psychologist and skeptic of “repressed memory” cases, published two articles that mentioned the plaintiff by name and disputed the accuracy of the original accounts. George, J., first held that the defendant had not invaded the plaintiff’s privacy when she had discovered the plaintiff’s identity by piecing together information from public sources. But he further held that the defendant did invade the plaintiff’s privacy if, as alleged, she had secured an interview with the plaintiff’s former foster mother by falsely pretending to be working with the physician who was currently treating the plaintiff. Accordingly a violation of a person’s reasonable expectation of privacy could occur “when a third party—for example, a private investigator—obtains access to personal information about the person . . . by utilizing improper and unanticipated means, particularly when such information would not have been disclosed by the relative or friend absent the third party’s use of such means.” Should the action allow for damages for the publication of that information?

3. Receipt—and publication—of stolen information. In Pearson v. Dodd, 410 F.2d 701, 705-706, 708 (D.C. Cir. 1969), the defendants, columnists Drew Pearson and Jack Anderson, received illegally made photocopies of numerous confidential documents from the offices of the plaintiff, Senator Thomas Dodd of Connecticut. The material concerned plaintiff’s relationship to certain lobbyists for foreign interests, and the defendants used it to portray the plaintiff in an unflattering fashion. Wright, J., first noted that the plaintiff had not proved his charge that the defendants “had aided and abetted in the removal of the documents.” He then dismissed the action, drawing a distinction between the damages caused by obtaining and by publishing the information:

Of course, appellants did more than receive and peruse the copies of the documents taken from appellee’s files; they published excerpts from them in the national press. But in analyzing a claimed breach of privacy, injuries from intrusion and injuries from publication should be kept clearly separate. Where there is intrusion, the intruder should generally be liable whatever the content of what he learns. An eavesdropper to the marital bedroom may hear marital intimacies, or he may hear statements of fact or opinion of legitimate interest to the public; for purposes of liability that should make no difference. On the other hand, where the claim is that private information concerning plaintiff has been published, the question of whether that information is genuinely private or is of public interest should not turn on the manner in which it has been obtained. Of course, both forms of invasion may be combined in the same case.

In dismissing the action, Wright., J., noted that the material published was “of obvious public interest.” Judge Tamm, concurring, observed:

Some legal scholars will see in the majority opinion—as distinguished from its actual holding—an ironic aspect. Conduct for which a law enforcement officer would be soundly castigated is, by the phraseology of the majority opinion, found tolerable; conduct which, if engaged in by government agents would lead to the

suppression of evidence obtained by these means, is approved when used for the profit of the press. There is an anomaly lurking in this situation: the news media regard themselves as quasi-public institutions yet they demand immunity from the restraints which they vigorously demand

be placed on government. That which is regarded as mortal taint on information secured by any illegal conduct of government would appear from the majority opinion to be permissible as a technique or modus operandi for the journalist.

Could Anderson and Pearson have been sued under *Dietemann* for the damages caused by the publication in their columns if they or their agents had personally obtained the material in question?

Shortly afterward, in *New York Times Co. v. United States*, 403 U.S. 713 (1971) (the “Pentagon Papers” case), the Supreme Court upheld the right of the press to publish classified information that had been stolen from the government by a third party so long as it related to matters of great public concern—in that case the motivations and justifications for the Vietnam War. *New York Times* left open the question of whether a party that had obtained the information lawfully could be held liable for disclosing information that he knew or had reason to know had been obtained illegally in the first instance. That question arose in *Bartnicki v. Vopper*, 532 U.S. 514, 530-531, 534 (2001). The plaintiffs Bartnicki and Kane were union leaders in the midst of contentious negotiations with the local school board. During a lengthy cell phone call, Kane told Bartnicki that “if they’re [the Board] not gonna move for three percent, we’re gonna have to go to their, their homes. . . . To blow off their front porches.” An unknown person illegally intercepted the conversation, and then mailed a tape of the session to Yocum, the head of a local taxpayer’s organization that had opposed the union demands. After the union won a favorable settlement, Yocum handed the tape over to Vopper, who broadcast it on his public affairs talk show. Federal and state law make it a crime for any person to “intentionally disclose” the contents of any phone communication that he knows or has reason to know was obtained in violation of federal law. However, the plaintiff’s claim for invasion of privacy from the publication of the information failed because Vopper’s publication was held protected under the First Amendment. Justice Stevens wrote:

The normal method of deterring unlawful conduct is to impose an appropriate punishment on the person who engages in it. If the sanctions that presently attach to a violation of [the rule against illegal interceptions] do not provide sufficient deterrence, perhaps those sanctions should be made more severe. But it would be quite remarkable to hold that speech by a law-abiding possessor of the information can be suppressed in order to deter conduct by a non-law-abiding third party. . . .

In this case, privacy concerns give way when balanced against the interest in publishing matters of public importance. As Warren and Brandeis stated in their classic law review article: “The right of privacy does not prohibit any publication of matter which is of public or general interest.” One of the costs associated with participation in public affairs is an attendant loss of privacy.

Chief Justice Rehnquist’s dissent criticized the Court for speaking about “a matter of ‘public concern,’ an amorphous concept that the Court does not even attempt to define. But the Court’s decision diminishes, rather than enhances, the purposes of the First Amendment: chilling the speech of the millions of Americans who rely upon electronic technology to communicate each day.” Why shouldn’t Vopper be sued

successfully in tort for receiving goods known to be stolen?

SECTION D. PUBLIC DISCLOSURE OF EMBARRASSING PRIVATE FACTS

Restatement of the Law (Second) of Torts

§652D. PUBLICITY GIVEN TO PRIVATE LIFE

One who gives publicity to a matter concerning the private life of another is subject to liability to the other for invasion of his privacy, if the matter publicized is of a kind that

- (a) would be highly offensive to a reasonable person, and
- (b) is not of legitimate concern to the public.

Comment a. Publicity: The form of invasion of the right of privacy covered in this Section depends upon publicity given to the private life of the individual. “Publicity,” as it is used in this Section, differs from “publication,” as that term is used in §577 in connection with liability for defamation. “Publication,” in that sense, is a word of art, which includes any communication by the defendant to a third person. “Publicity,” on the other hand, means that the matter is made public, by communicating it to the public at large, or to so many persons that the matter must be regarded as substantially certain to become one of public knowledge. The difference is not one of the means of communication, which may be oral, written, or by any other means. It is one of a communication which reaches, or is sure to reach, the public. . . .

Comment b. Private Life: The rule stated in this Section applies only to publicity given to matters concerning the private, as distinguished from the public, life of the individual. There is no liability when the defendant merely gives further publicity to information about the plaintiff that is already public. Thus, there is no liability for giving publicity to facts about the plaintiff’s life that are matters of public record, such as the date of his birth, the fact of his marriage, his military record, the fact that he is admitted to the practice of medicine or is licensed to drive a taxicab, or the pleadings that he has filed in a lawsuit. On the other hand, if the record is one not open to public inspection, as in the case of income tax returns, it is not public, and there is an invasion of privacy when it is made so. . . .

SIDIS v. F-R PUBLISHING CORP.

113 F.2d 806 (2d Cir. 1940)

CLARK, J. William James Sidis was the unwilling subject of a brief biographical sketch and cartoon printed in The New Yorker weekly magazine for August 14, 1937. Further references were made to him in the issue of December 25, 1937, and in a newspaper advertisement announcing the August 14 issue. He

brought an action in the district court against the publisher, F-R Publishing Corporation. His complaint stated three "causes of action": The first alleged violation of his right of privacy as that right is recognized in California, Georgia, Kansas, Kentucky, and Missouri; the second charged infringement of the rights afforded him under §§50 and 51 of the N.Y. Civil Rights Law; the third claimed malicious libel under the laws of [nine states]. Defendant's motion to dismiss the first two "causes of action" was granted, and plaintiff has filed an appeal from the order of dismissal. . . .

William James Sidis was a famous child prodigy in 1910. His name and prowess were well known to newspaper readers of the period. At the age of eleven, he lectured to distinguished mathematicians on the subject of Four-Dimensional Bodies. When he was sixteen, he was graduated from Harvard College, amid considerable public attention. Since then, his name has appeared in the press only sporadically, and he has sought to live as unobtrusively as possible. Until the articles objected to appeared in *The New Yorker*, he had apparently succeeded in his endeavor to avoid the public gaze.

Among *The New Yorker*'s features are brief biographical sketches of current and past personalities. In the latter department, which appears haphazardly under the title "Where Are They Now?" the article on Sidis was printed with a subtitle "April Fool." The author describes his subject's early accomplishments in mathematics and the wide-spread attention he received, then recounts his general breakdown and the revulsion which Sidis thereafter felt for his former life of fame and study. The unfortunate prodigy is traced over the years that followed, through his attempts to conceal his identity, through his chosen career as an insignificant clerk who would not need to employ unusual mathematical talents, and through the bizarre ways in which his genius flowered, as in his enthusiasm for collecting streetcar transfers and in his proficiency with an adding machine. The article closes with an account of an interview with Sidis at his present lodgings, "a hall bedroom of Boston's shabby south end." The untidiness of his room, his curious laugh, his manner of speech, and other personal habits are commented upon at length, as is his present interest in the lore of the Okamakammessett Indians. The subtitle is explained by the closing sentence, quoting Sidis as saying "with a grin" that it was strange, "but, you know, I was born on April Fool's Day." Accompanying the biography is a small cartoon showing the genius of eleven years lecturing to a group of astounded professors.

It is not contended that any of the matter printed is untrue. Nor is the manner of the author unfriendly; Sidis today is described as having "a certain childlike charm." But the article is merciless in its dissection of intimate details of its

p. 1064

subject's personal life, and this in company with elaborate accounts of Sidis' passion for privacy and the pitiable lengths to which he has gone in order to avoid public scrutiny. The work possesses great reader interest, for it is both amusing and instructive; but it may be fairly described as a ruthless exposure of a once public character, who has since sought and has now been deprived of the seclusion of private life.

The article of December 25, 1937, was a biographical sketch of another former child prodigy, in the course of which William James Sidis and the recent account of him were mentioned. The advertisement published in the *New York World-Telegram* of August 13, 1937, read: "Out Today. Harvard Prodigy. Biography of the man who astonished Harvard at age 11. Where are they now? by J. L. Manley. Page 22. *The New Yorker*." .

..

All comment upon the right of privacy must stem from the famous article by Warren and Brandeis on The Right of [to] Privacy in 4 Harv. L. Rev. 193. [The court then quoted from those passages of the article set out *supra* at 1034.]

Warren and Brandeis realized that the interest of the individual in privacy must inevitably conflict with the interest of the public in news. Certain public figures, they conceded, such as holders of public office, must sacrifice their privacy and expose at least part of their lives to public scrutiny as the price of the powers they attain. But even public figures were not to be stripped bare. "In general, then, the matters of which the publication should be repressed may be described as those which concern the private life, habits, acts, and relations of an individual, and have no legitimate connection with his fitness for a public office. . . . Some things all men alike are entitled to keep from popular curiosity, whether in public life or not, while others are only private because the persons concerned have not assumed a position which makes their doings legitimate matters of public investigation."

It must be conceded that under the strict standards suggested by these authors plaintiff's right of privacy has been invaded. Sidis today is neither politician, public administrator, nor statesman. Even if he were, some of the personal details revealed were of the sort that Warren and Brandeis believed "all men alike are entitled to keep from popular curiosity."

But despite eminent opinion to the contrary, we are not yet disposed to afford to all of the intimate details of private life an absolute immunity from the prying of the press. Everyone will agree that at some point the public interest in obtaining information becomes dominant over the individual's desire for privacy. Warren and Brandeis were willing to lift the veil somewhat in the case of public officers. We would go further, though we are not yet prepared to say how far. At least we would permit limited scrutiny of the "private" life of any person who has achieved, or has had thrust upon him, the questionable and indefinable status of a "public figure." . . .

William James Sidis was once a public figure. As a child prodigy, he excited both admiration and curiosity. Of him great deeds were expected. In 1910, he was a person about whom the newspapers might display a legitimate intellectual interest, in the sense meant by Warren and Brandeis, as distinguished from a

p. 1065

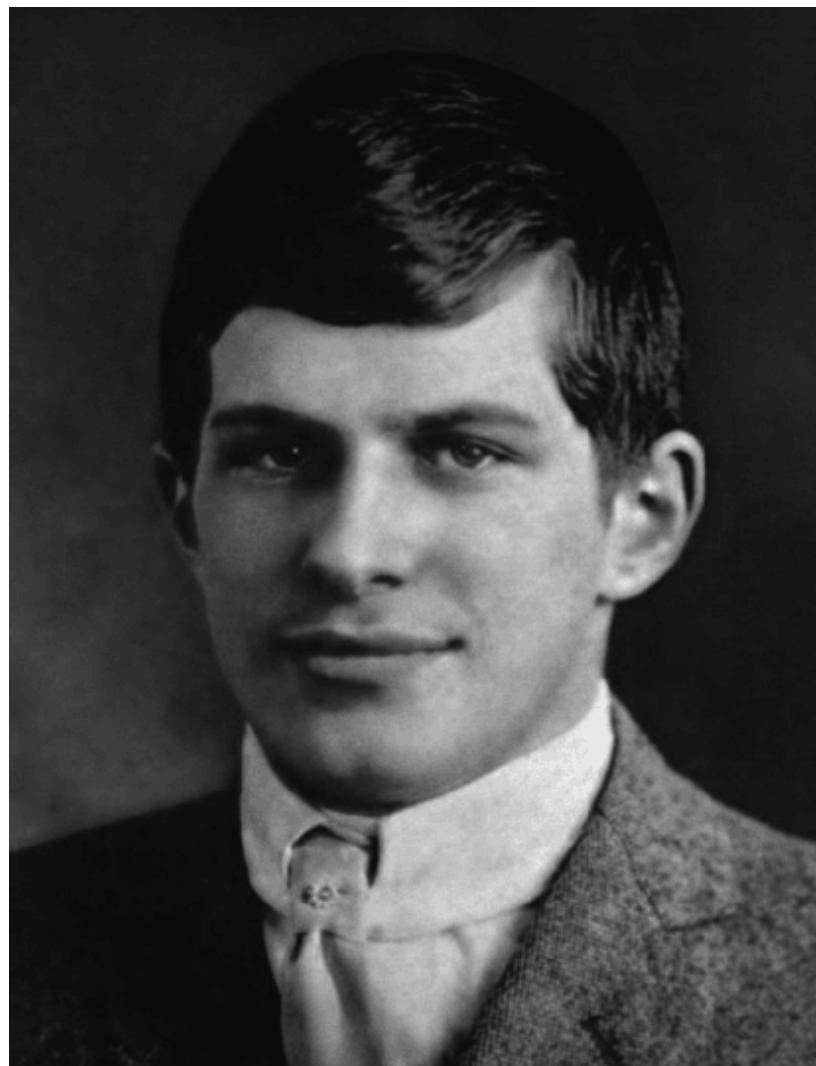

trivial and unseemly curiosity. But the precise motives of the press we regard as unimportant. And even if Sidis had loathed public attention at that time, we think his uncommon achievements and personality would have made the attention permissible. Since then Sidis has cloaked himself in obscurity, but his subsequent history, containing as it did the answer to the question of whether or not he had fulfilled his early promise, was still a matter of public concern. The article in The New Yorker sketched the life of an unusual personality, and it possessed considerable popular news interest.

We express no comment on whether or not the news worthiness of the matter printed will always constitute a complete defense. Revelations may be so intimate and so unwarranted in view of the victim's position as to outrage the community's notions of decency. But when focused upon public characters, truthful

comments upon dress, speech, habits, and the ordinary aspects of personality will usually not transgress this line. Regrettably or not, the misfortunes and frailties of neighbors and “public figures” are subjects of considerable interest and discussion to the rest of the population. And when such are the mores of the community, it would be unwise for a court to bar their expression in the newspapers, books, and magazines of the day.

Plaintiff in his first “cause of action” charged actual malice in the publication, and now claims that an order of dismissal was improper in the face of such an allegation. We cannot agree. If plaintiff’s right of privacy was not invaded by the article, the existence of actual malice in its publication would not change that result. Unless made so by statute, a truthful and therefore non-libelous statement will not become libelous when uttered maliciously. A similar rule should prevail on invasions of the right of privacy. “Personal ill-will is not an ingredient of the offence, any more than in an ordinary case of trespass to person or to property.” Warren and Brandeis. Nor does the malice give rise to an independent wrong based on an intentional invasion of the plaintiff’s interest in mental and emotional tranquility. This interest, however real, is one not yet protected by law.

If the article appearing in the issue of August 14, 1937, does not furnish grounds for action, then it is clear that the brief and incidental reference to it contained in the article of December 25, 1937, is not actionable.

William James Sidis in 1914

[The court then held that the plaintiff had no cause of action under §§50 and 51 of the N.Y. Civil Rights Law, *infra* at 1084, because the story was not done for commercial purposes.]

Affirmed.

NOTES

1. The painful past. On *Sidis* generally, see Karafiol, The Right to Privacy and the *Sidis* Case, 12 Ga. L. Rev. 513 (1978). Evidently *Sidis* did secure a settlement from the *New Yorker* in 1944, the year he died at age 46 of a cerebral hemorrhage. His IQ had been estimated “easily” at between 250 and 300 and, as an adult, he could master a new language in a day. Earlier decisions were more receptive to allowing claims about truthful revelations of past actions. *Melvin v. Reid*, 297 P. 91, 93 (Cal. App. 1931), allowed the action of a former prostitute who had been tried for murder and acquitted against defendants who had published a film about her past that had ruined her marriage and exposed her to “obloquy, contempt, and ridicule, causing her grievous mental and physical suffering.” A similar solicitude for privacy was shown in *Briscoe v. Reader’s Digest Association, Inc.*, 483 P.2d 34, 40 (Cal. 1971), when a rehabilitated criminal was allowed to sue for the publication of a similar story in *Reader’s Digest*, on the ground that while the facts of the incident fell within the public domain, the identification of the actor did not. Peters, J., distinguished *Sidis* by noting that the plaintiff had no relevant past public name recognition. But *Briscoe* fell to the general newsworthiness privilege when it was overruled in *Gates v. Discovery Communications, Inc.*, 101 P.3d 552 (Cal. 2004), as inconsistent with subsequent Supreme Court precedent, discussed *infra* at 1073.

2. The painful present. As might be expected, the newsworthiness privilege outlined in *Sidis* has undisputed clout in dealing with painful publication of present facts. In *Sipple v. Chronicle Publishing Co.*, 201 Cal. Rptr. 665, 670 (Ct. App. 1984), the plaintiff “grabbed or struck” the arm of Sarah Jane Moore as she attempted to shoot President Gerald Ford in September 1975, possibly saving the President’s life. Sipple received widespread publicity, including a column in the *San Francisco Chronicle* by Herb Caen that disclosed Sipple was gay. When members of Sipple’s immediate family read the column, they learned for the first time that Sipple was gay, and as a result, abandoned him. Sipple suffered mental anguish, embarrassment, and humiliation. Caldecott, P.J., affirmed the trial court’s grant of summary judgment to the defendant under the newsworthiness privilege, noting that so long as the information was widely known, its public release was justified because the

record shows that the publications were not motivated by a morbid and sensational prying into [Sipple’s] private life, but rather were prompted by legitimate political considerations, i.e., to dispel the false public opinion that gays were timid, weak and unheroic figures and to raise the

equally important political question whether the President of the United States entertained a discriminatory attitude or bias against a minority group such as homosexuals.

In *Melvin, Briscoe, and Sipple*, should it make a difference if the plaintiffs had lied to their families?

Sipple relied on *Virgil v. Time, Inc.*, 527 F.2d 1122, 1128-1129 (9th Cir. 1975). *Virgil* stated:

p. 1067

The privilege to publicize newsworthy matters is included in the definition of the tort set out in Restatement (Second) of Torts §652D. Liability may be imposed for an invasion of privacy only if “the matter publicized is of a kind which . . . is not of legitimate concern to the public.” While the Restatement does not so emphasize, we are satisfied that this provision is one of constitutional dimension delimiting the scope of the tort and that the extent of the privilege thus is controlled by federal rather than state law.

3. Public disclosure in the Internet age. A particularly vexing issue confronting courts is that of public disclosure torts arising from “revenge porn,” or nonconsensual pornography shared on the Internet. In *Patel v. Hussain*, 485 S.W.3d 153 (Tex. App. 2016), Patel, a jilted lover, uploaded to the Internet secretly recorded sexual videos of his former girlfriend Nadia, threatening her in text messages to “accept that this is never going to go away” and that she would “never live this down.” As is typical in “revenge porn,” Patel exploited the nature of Internet postings, which exist forever and circulate indefinitely: “The Internet is huge you will never find out where it’s posted,” and, “Can’t stop SOCIAL MEDIA!!” McNally, J., affirmed the jury’s award of \$500,000 in noneconomic damages for intrusion upon seclusion and public disclosure of private facts. She noted, moreover, that “the nature of the invasions of privacy here are particularly disturbing and shocking and should give rise to an inference of mental anguish resulting from the threats to Nadia’s reputation.”

Forty-six states, the District of Columbia, and one territory have recently enacted legislation making revenge porn a criminal or civil offense. Should plaintiffs also have a common law remedy against defendants who post explicit photos or videos without their consent?

HAYNES v. ALFRED A. KNOPF, INC.

8 F.3d 1222 (7th Cir. 1993)

POSNER, C.J. Luther Haynes and his wife, Dorothy Haynes nee Johnson, appeal from the dismissal on the defendants’ motion for summary judgment of their suit against Nicholas Lemann, the author of a highly praised, best-selling book of social and political history called *The Promised Land: The Great Black Migration and How It Changed America* (1991), and Alfred A. Knopf, Inc., the book’s publisher. The plaintiffs claim that the book libels Luther Haynes and invades both plaintiffs’ right of privacy. Federal jurisdiction is based on diversity, and the common law of Illinois is agreed to govern the substantive issues. The appeal presents difficult issues at the intersection of tort law and freedom of the press.

Jacob Lawrence, “The Migration Series,” Panel 1 (“During the World War there was a great migration North by Southern Negroes.”)

Source: Jacob Lawrence, *The Migration Series*, Panel 1 / The Jacob and Gwendolyn Knight Lawrence Foundation, Seattle / Artists Rights Society (ARS), New York

p. 1068

Between 1940 and 1970, five million blacks moved from impoverished rural areas and, after sojourns of shorter or greater length in the poor black districts of the cities, moved to middle-class areas. Others, despite the ballyhooed efforts of the federal government, particularly between 1964 and 1972, to erase poverty and racial discrimination, remained mired in what has come to be called the “urban ghetto.” *The Promised Land* is a history of the migration. It is not history as a professional historian, a demographer, or a social scientist would write it. Lemann is none of these. He is a journalist and has written a journalistic history, in which the focus is on individuals whether powerful or representative. In the former group are the politicians who invented, executed, or exploited the “Great Society” programs. In the latter are a handful of the actual migrants. Foremost among these is Ruby Lee Daniels. Her story is the spine of the book. We are introduced to her on page 7; we take leave of her on page 346, within a few pages of the end of the text of the book.

[Posner, C.J., details the history of Daniels’ life, starting from her early days in the 1940s as a sharecropper in Mississippi, through her migration to Chicago where she met and married Luther Haynes. The story describes his descent into drunkenness, adultery, bad temper, and financial irresponsibility throughout his marriage to Daniels. That marriage ended in divorce and thereafter Luther married another woman, Dorothy, with whom he lived a respectable life for 20 years. He now has a home, a steady job as a parking-lot attendant, and a position as deacon in his church.

Posner, C.J., first affirmed the dismissal of the defamation portions of the complaint on the ground that any deviations from the truth were too insubstantial to support an action for libel. He then addressed the privacy claims as follows.]

The branch of privacy law that the Hayneses invoke in their appeal is not concerned with, and is not a proper surrogate for legal doctrines that are concerned with, the accuracy of the private facts revealed. It is concerned with the propriety of stripping away the veil of privacy with which we cover the embarrassing, the shameful, the tabooed, truths about us. The revelations in the book are not about the intimate details of the Hayneses' life. They are about misconduct, in particular Luther's. (There is very little about Dorothy in the book, apart from the fact that she had had an affair with Luther while he was still married to Ruby and that they eventually became and have remained lawfully married.) The revelations are about his heavy drinking, his unstable employment, his adultery, his irresponsible and neglectful behavior toward his wife and children. So we must consider cases in which the right of privacy has been invoked as a shield against the revelation of previous misconduct.

[He then reviews *Melvin and Sidis* and notes that, like the protagonists in the earlier cases,] Luther Haynes did not aspire to be a representative figure in the great black migration from the South to the North. People who do not desire the limelight and do not deliberately choose a way of life or course of conduct calculated to thrust them into it nevertheless have no legal right to extinguish it if the experiences that have befallen them are newsworthy, even if they would prefer that those experiences be kept private. The possibility of an involuntary

p. 1069

loss of privacy is recognized in the modern formulations of this branch of the privacy tort, which require not only that the private facts publicized be such as would make a reasonable person deeply offended by such publicity but also that they be facts in which the public has no legitimate interest.

The two criteria, offensiveness and newsworthiness, are related. An individual, and more pertinently perhaps the community, is most offended by the publication of intimate personal facts when the community has no interest in them beyond the voyeuristic thrill of penetrating the wall of privacy that surrounds a stranger. The reader of a book about the black migration to the North would have no legitimate interest in the details of Luther Haynes's sex life; but no such details are disclosed. Such a reader does have a legitimate interest in the aspects of Luther's conduct that the book reveals. For one of Lemann's major themes is the transposition virtually intact of a sharecropper morality characterized by a family structure "matriarchal and elastic" and by an "extremely unstable" marriage bond to the slums of the northern cities, and the interaction, largely random and sometimes perverse, of that morality with governmental programs to alleviate poverty. Public aid policies discouraged Ruby and Luther from living together; public housing policies precipitated a marriage doomed to fail. No detail in the book claimed to invade the Hayneses' privacy is not germane to the story that the author wanted to tell, a story not only of legitimate but of transcendent public interest.

The Hayneses question whether the linkage between the author's theme and their private life really is organic. They point out that many social histories do not mention individuals at all, let alone by name. That is true. Much of social science, including social history, proceeds by abstraction, aggregation, and quantification rather than by case studies; the economist Robert Fogel has won a Nobel prize for his statistical studies of economic history, including, not wholly unrelated to the subject of Lemann's book, the history of Negro slavery in the United States. But it would be absurd to suggest that cliometric or other aggregative, impersonal methods of doing social history are the only proper way to go about it and

presumptuous to claim even that they are the best way. Lemann's book has been praised to the skies by distinguished scholars, among them black scholars covering a large portion of the ideological spectrum—Henry Louis Gates Jr., William Julius Wilson, and Patricia Williams. Lemann's methodology places the individual case history at center stage. If he cannot tell the story of Ruby Daniels without waivers from every person who she thinks did her wrong, he cannot write this book.

Well, argue the Hayneses, at least Lemann could have changed their names. But the use of pseudonyms would not have gotten Lemann and Knopf off the legal hook. The details of the Hayneses' lives recounted in the book would identify them unmistakably to anyone who has known the Hayneses well for a long time (members of their families, for example), or who knew them before they got married; and no more is required for liability either in defamation law or in privacy law. Lemann would have had to change some, perhaps many, of the details. But then he would no longer have been writing history. He would have been

p. 1070

writing fiction. The nonquantitative study of living persons would be abolished as a category of scholarship, to be replaced by the sociological novel. That is a genre with a distinguished history punctuated by famous names, such as Dickens, Zola, Stowe, Dreiser, Sinclair, Steinbeck, and Wolfe, but we do not think that the law of privacy makes it (or that the First Amendment would permit the law of privacy to make it) the exclusive format for a social history of living persons that tells their story rather than treating them as data points in a statistical study. . . .

The Promised Land does not afford the reader a titillating glimpse of tabooed activities. The tone is decorous and restrained. Painful though it is for the Hayneses to see a past they would rather forget brought into the public view, the public needs the information conveyed by the book, including the information about Luther and Dorothy Haynes, in order to evaluate the profound social and political questions that the book raises. Given the *Cox* decision, moreover, all the discreditable facts about the Hayneses that are contained in judicial records are beyond the power of tort law to conceal; and the disclosure of those facts alone would strip away the Hayneses' privacy as effectively as *The Promised Land* has done. (This case, it could be argued, has stripped them of their privacy, since their story is now part of a judicial record—the record of this case.) We do not think it is an answer that Lemann got his facts from Ruby Daniels rather than from judicial records. The courts got the facts from Ruby. We cannot see what difference it makes that Lemann went to the source.

[Summary judgment was proper under *Cox* because “on the basis of the evidence obtained in pretrial discovery no reasonable jury could render a verdict for the plaintiff. . . .”]

Affirmed.

NOTES

1. *The prosaic sources of newsworthiness.* Unlike *Sidis*, the history recounted in *Haynes* involves ordinary people whom the author chose to highlight, not those who are thrust into the public eye by their greatness

or misfortunes. The newsworthiness privilege attaches to both kinds of involuntary public figures. In *Shulman v. Group W Productions, Inc.*, 955 P.2d 469, 488 (Cal. 1998), Ruth and Wayne Shulman were trapped in their car when it went off the highway. They were rescued by a medical transport and helicopter crew. The event was recorded by a video camera operator hired by a television producer who later incorporated the footage into a documentary television show, *On Scene: Emergency Response*, covering the entire episode, which was aired without plaintiffs' consent. Werdegar, J., held that the newsworthiness privilege applied to portions of the broadcast because the automobile accident was a subject of

legitimate concern to much of the public, involving as it does a critical service that any member of the public may someday need. The story of Ruth's difficult extrication from the crashed car, the medical attention given her at the scene, and her evacuation by helicopter was of particular interest because it highlighted some of the challenges facing emergency workers dealing with serious accidents.

p. 1071

The more difficult question is whether Ruth's appearance and words as she was extricated from the overturned car, placed in the helicopter and transported to the hospital were of legitimate public concern. . . . [W]e conclude the disputed material was newsworthy as a matter of law. One of the dramatic and interesting aspects of the story as a whole is its focus on flight nurse Carnahan, who appears to be in charge of communications with other emergency workers, the hospital base and Ruth, and who leads the medical assistance to Ruth at the scene. Her work is portrayed as demanding and important and as involving a measure of personal risk (e.g. in crawling under the car to aid Ruth despite warnings that gasoline may be dripping from the car).

But while the newsworthiness privilege covered the accident, the plaintiffs' subsequent medical treatment raised two triable issues on intrusion upon seclusion. First, "whether both plaintiffs had an objectively reasonable expectation of privacy in the interior of the rescue helicopter, which served as an ambulance." "It is neither the custom nor the habit of our society that any member of the public at large or its media representatives may hitch a ride in an ambulance and ogle as paramedics care for an injured stranger." Second, "by placing a microphone on Carnahan's person, amplifying and recording what she said and heard, defendants may have listened in on conversations the parties could reasonably have expected to be private."

By contrast, in New York, a television series, *NY Med*, followed the medical staff and patients at New York Presbyterian Hospital. In one episode, Mark Chanko was filmed while being transported into the emergency room. His voice is heard, early in the segment, asking "Did you speak to my wife?" While in the hospital, Chanko suffered multiple cardiac arrests and died. More than a year later, his widow, while watching a recorded episode of the show, recognized her husband's voice as well as the doctors treating him. Having never consented to the taping of her husband's emergency room treatment, she sued ABC and two of the physicians. Her privacy claims were rebuffed by Mendez, J., on the ground that "Mr. Chanko's wife and family are not seen [in the segment], nor are they heard. . . ." *Chanko v. ABC, Inc.*, 2014 N.Y. Slip Op. 30116 (Sup. Ct. N.Y. Co. Jan. 15, 2014). In the wake of *Chanko*, "[t]he association that represents nearly all major New York city hospitals," the Greater New York Hospital Association, "has asked its

members not to allow patients to be filmed for entertainment purposes without their consent,” and “[b]ills are also moving through the New York State Legislature that would prohibit the broadcast of medical treatment without prior written consent.” Mueller, New York Hospitals Group Requests Ban on TV Filming, N.Y. Times, Aug. 13, 2015.

In *Veilleux v. National Broadcasting Co.*, 206 F.3d 92 (1st Cir. 2000), *Dateline NBC* ran an hour-long show about the long-distance trucking industry that focused on the dangers of fatigue in driving and featured the plaintiffs Veilleux and Kennedy. *Dateline NBC* revealed on its show that Kennedy failed a drug test. Campbell, J., rebuffed the plaintiffs’ claim for invasion of privacy noting that “Kennedy’s drug test results reasonably tend to illustrate the report’s newsworthy themes of interstate truck driving, highway safety and relevant government

p. 1072

regulation.” Citing *Haynes*, he concluded that “we follow other circuit courts that have permitted journalists to portray individuals’ personal circumstances in ways that reveal their identities where sufficiently related to a matter of public concern.” Has the newsworthiness privilege swallowed the tort, as Kalven claimed? Is all news now, by definition, fit to print (or air, or live stream)?

2. *Limits to newsworthiness?* Information is *not* considered to be of legitimate public concern “when the publicity ceases to be the giving of information to which the public is entitled, and becomes a morbid and sensational prying into private lives for its own sake, with which a reasonable member of the public, with decent standards, would say that he had no concern.” Restatement (Second) of Torts §652D, comment *h*. Drawing the protective line at “morbid and sensational prying” has proved to be difficult for courts.

In *Jackson v. Mayweather*, 10 Cal. App. 5th 1240 (2017), the notorious boxer Floyd Mayweather was sued by his ex-fiancée Shantel Jackson for private disclosure of public facts for his social media postings about the termination of Jackson’s pregnancy and its relationship to the couple’s separation. Mayweather argued that Jackson ‘had surrendered her right to privacy when she made herself newsworthy by virtue of her relationship with Mayweather’ and thus ‘the reason for the relationship’s demise was equally newsworthy.’ Perluss, P.J., held that Mayweather’s posts were covered by the broad newsworthiness privilege, reasoning that

at a time when entertainment news and celebrity gossip often seem to matter more than serious policy discussions, given Jackson’s high profile and voluntary disclosure on social media of many aspects of her personal life, the publication of those otherwise intimate facts must necessarily be considered newsworthy under the broad definition of that term.

He nonetheless drew the line at Mayweather’s publication of sonogram photographs of the twins Jackson had been carrying before her pregnancy terminated, finding that these—unlike the social media posts—fell outside the newsworthiness protection, given that “publishing those images served no legitimate public purpose, even when one includes entertainment news within the zone of protection.”

The particular sensitivity regarding photographic images was similarly at issue in *Judge v. Saltz Plastic Surgery, P.C.*, 367 P.3d 1006 (Utah 2016), where Himonas, J., was called upon to determine whether there

was a legitimate public interest in nude pre- and post-operative photographs of a woman who underwent plastic surgery based on the woman's participation in a news broadcast on the risks and benefits of plastic surgery or whether the inclusion of those photographs received from the doctor's office was "gratuitous or overly intrusive." He rejected summary judgment for the defendant, holding that "reasonable minds could differ on whether appearing on television to discuss cosmetic surgery gives rise to a legitimate public interest in viewing explicit photographic documentation of the results of the interviewee's surgery."

p. 1073

COX BROADCASTING CORP. v. COHN

420 U.S. 469 (1975)

WHITE, J. . . . The issue before us in this case is whether consistently with the First and Fourteenth Amendments a State may extend a cause of action for damages for invasion of privacy caused by the publication of the name of a deceased rape victim which was publicly revealed in connection with the prosecution of the crime.

In August 1971, appellee's 17-year-old daughter was the victim of a rape and did not survive the incident. Six youths were soon indicted for murder and rape. Although there was substantial press coverage of the crime and of subsequent developments, the identity of the victim was not disclosed pending trial, perhaps because of Ga. Code Ann. §26-9901, which makes it a misdemeanor to publish or broadcast the name or identity of a rape victim. In April 1972, some eight months later, the six defendants appeared in court. Five pled guilty to rape or attempted rape, the charge of murder having been dropped. The guilty pleas were accepted by the court, and the trial of the defendant pleading not guilty was set for a later date.

In the course of the proceedings that day, appellant Wassell, a reporter covering the incident for his employer, learned the name of the victim from an examination of the indictments which were made available for his inspection in the courtroom. That the name of the victim appears in the indictments and that the indictments were public records available for inspection are not disputed. Later that day, Wassell broadcast over the facilities of station WSB-TV, a television station owned by appellant Cox Broadcasting Corporation, a news report concerning the court proceedings. The report named the victim of the crime and was repeated the following day.

In May 1972, appellee brought an action for money damages against appellants, relying on §26-9901 and claiming that his right to privacy had been invaded by the television broadcasts giving the name of his deceased daughter. [Relying in part on *Briscoe*, the Georgia courts rejected Cox's claim of constitutional privilege and held that the plaintiff had stated a claim for invasion of privacy in the form of a tort of public disclosure of private facts, and left it to the jury whether the public disclosure of his daughter's name invaded his "zone of privacy."]

Georgia stoutly defends both §26-9901 and the State's common law privacy action challenged here. Its claims are not without force, for powerful arguments can be made, and have been made, that however it

may be ultimately defined, there *is* a zone of privacy surrounding every individual, a zone within which the State may protect him from intrusion by the press, with all its attendant publicity. [The Court then referred to Warren and Brandeis; Prosser; Time, Inc. v. Hill, *infra* at 1079; and Pavesich v. New England Life Insurance Co.]

These are impressive credentials for a right of privacy, but we should recognize that we do not have at issue here an action for the invasion of privacy involving the appropriation of one's name or photograph, a physical or other tangible

p. 1074

intrusion into a private area, or a publication of otherwise private information that is also false although perhaps not defamatory. The version of the privacy tort now before us—termed in Georgia “the tort of public disclosure,” is that in which the plaintiff claims the right to be free from unwanted publicity about his private affairs, which, although wholly true, would be offensive to a person of ordinary sensibilities. Because the gravamen of the claimed injury is the publication of information, whether true or not, the dissemination of which is embarrassing or otherwise painful to an individual, it is here that claims of privacy most directly confront the constitutional freedoms of speech and press. The face-off is apparent, and the appellants urge upon us the broad holding that the press may not be made criminally or civilly liable for publishing information that is neither false nor misleading but absolutely accurate, however damaging it may be to reputation or individual sensibilities.

[The Court notes that public officials and public figures must show actual malice to succeed in a defamation action under *New York Times v. Sullivan*, but it left unresolved] the question whether truthful publication of very private matters unrelated to public affairs could be constitutionally proscribed.

Those precedents, as well as other considerations, counsel similar caution here. In this sphere of collision between claims of privacy and those of the free press, the interests on both sides are plainly rooted in the traditions and significant concerns of our society. Rather than address the broader question whether truthful publications may ever be subjected to civil or criminal liability consistently with the First and Fourteenth Amendments, or to put it another way, whether the State may ever define and protect an area of privacy free from unwanted publicity in the press, it is appropriate to focus on the narrower interface between press and privacy that this case presents, namely, whether the State may impose sanctions on the accurate publication of the name of a rape victim obtained from public records—more specifically, from judicial records which are maintained in connection with a public prosecution and which themselves are open to public inspection. We are convinced that the State may not do so.

In the first place, in a society in which each individual has but limited time and resources with which to observe at first hand the operations of his government, he relies necessarily upon the press to bring him in convenient form the facts of those operations. Great responsibility is accordingly placed upon the news media to report fully and accurately the proceedings of government, and official records and documents open to the public are the basic data of governmental operations. Without the information provided by the press most of us and many of our representatives would be unable to vote intelligently or to register opinions on the administration of government generally. With respect to judicial proceedings in particular, the function of the press serves to guarantee the fairness of trials and to bring to bear the beneficial effects

of public scrutiny upon the administration of justice.

Appellee has claimed in this litigation that the efforts of the press have infringed his right to privacy by broadcasting to the world the fact that his daughter was a

p. 1075

rape victim. The commission of crime, prosecutions resulting from it, and judicial proceedings arising from the prosecutions, however, are without question events of legitimate concern to the public and consequently fall within the responsibility of the press to report the operations of government.

The special protected nature of accurate reports of judicial proceedings has repeatedly been recognized. . . .

[The Restatement provides that there is no liability when the information in dispute is contained in public records.] Thus even the prevailing law of invasion of privacy generally recognizes that the interests in privacy fade when the information involved already appears on the public record. The conclusion is compelling when viewed in terms of the First and Fourteenth Amendments and in light of the public interest in a vigorous press. The Georgia cause of action for invasion of privacy through public disclosure of the name of a rape victim imposes sanctions on pure expression—the content of a publication—and not conduct or a combination of speech and nonspeech elements that might otherwise be open to regulation or prohibition. The publication of truthful information available on the public record contains none of the indicia of those limited categories of expression, such as “fighting” words, which “are no essential part of any exposition of ideas, and are of such slight social value as a step to truth that any benefit that may be derived from them is clearly outweighed by the social interest in order and morality.” *Chaplinsky v. New Hampshire*, 315 U.S. 568, 572 (1942).

By placing the information in the public domain on official court records, the State must be presumed to have concluded that the public interest was thereby being served. Public records by their very nature are of interest to those concerned with the administration of government, and a public benefit is performed by the reporting of the true contents of the records by the media. The freedom of the press to publish that information appears to us to be of critical importance to our type of government in which the citizenry is the final judge of the proper conduct of public business. In preserving that form of government the First and Fourteenth Amendments command nothing less than that the States may not impose sanctions for the publication of truthful information contained in official court records open to public inspection.

We are reluctant to embark on a course that would make public records generally available to the media but forbid their publication if offensive to the sensibilities of the supposed reasonable man. Such a rule would make it very difficult for the press to inform their readers about the public business and yet stay within the law. The rule would invite timidity and self-censorship and very likely lead to the suppression of many items that would otherwise be put into print and that should be made available to the public. At the very least, the First and Fourteenth Amendments will not allow exposing the press to liability for truthfully publishing information released to the public in official court records. If there are privacy interests to be protected in judicial proceedings, the States must respond by means which avoid public documentation or other exposure of private information. Their political institutions must weigh the interests in privacy with the

interests of the public to know and of the press to publish.²⁶ Once true information is disclosed in public court documents open to public inspection, the press cannot be sanctioned for publishing it. In this instance as in others reliance must rest upon the judgment of those who decide what to publish or broadcast.

Appellant Wassell based his televised report upon notes taken during the court proceedings and obtained the name of the victim from the indictments handed to him at his request during a recess in the hearing. Appellee has not contended that the name was obtained in an improper fashion or that it was not on an official court document open to public inspection. Under these circumstances, the protection of freedom of the press provided by the First and Fourteenth Amendments bars the State of Georgia from making appellants' broadcast the basis of civil liability. . . .

Reversed.

[Justice Powell concurred separately in order to state his views solely on the meaning of *Gertz v. Robert Welch, Inc.*, which, he believed, constitutionally required that truth be an absolute defense in defamation actions brought by either public or private persons. Justice Rehnquist dissented on the ground that there had been no final judgment in the case from which an appeal could be taken to the Supreme Court.]

NOTES

1. Privacy and the public record. What kinds of official records are not public? Social Security numbers? In *Ostergren v. Cuccinelli*, 615 F.3d 263 (4th Cir. 2010), a privacy advocate published on her website land records containing unredacted Social Security numbers in order to encourage state reform. The court held that the First Amendment protected the publication. How should the Supreme Court decide the questions left unanswered in *Cox* footnote 26? Does *Cox* accord constitutional status to section 652D of the Second Restatement? What of the confidentiality of public records of adoption proceedings? In *Doe v. Sundquist*, 106 F.3d 702 (6th Cir. 1997), the court held that no constitutional right of privacy prevented Tennessee from passing a law that allowed adopted children access to previously confidential adoption records for the purpose of identifying their birth parents.

The Supreme Court has addressed the clash between the First Amendment and privacy interests in a number of cases since *Cox*. In *Oklahoma Publishing Co. v. District Court*, 430 U.S. 308, 311 (1977), the state court entered a pretrial order enjoining the publication of the name and picture of an 11-year-old boy charged with delinquency by second-degree murder for shooting a railroad switchman. The Court held under *Cox* that the ban violated the First Amendment.

No objection was made to the presence of the press in the courtroom or to the photographing of the juvenile as he left the courthouse. There is no evidence that petitioner acquired the information unlawfully or even without the State's implicit approval. The name and picture of

the juvenile here were “publicly revealed in connection with the prosecution of the crime,” much as the name of the rape victim in *Cox Broadcasting* was placed in the public domain.

Could reporters have been excluded from the court? See *Globe Newspaper Co. v. Superior Court*, 457 U.S. 596 (1982).

In *The Florida Star v. B.J.F.*, 491 U.S. 524, 533 (1989), the plaintiff had filed a report with the local sheriff’s department stating that she had been robbed and raped. The *Florida Star* obtained this report lawfully. Thereafter it published a short account of the rape using the plaintiff’s name in its “Police Reports” section in inadvertent violation of its own internal policy that barred the use of any rape victim’s name. In a jury trial, the plaintiff recovered \$75,000 in compensatory damages and \$25,000 in punitive damages for the violation of Fla. Stat. §794.03 (1987), rendering it unlawful to “print, publish, or broadcast . . . in any instrument of mass communication the name, address, or other identifying fact or information of the victim of any sexual offense. . . .”

The Supreme Court threw out the jury awards for both compensatory and punitive damages. The Court refused to adopt any categorical rule making it constitutionally protected to publish the name of a rape victim, only to deny recovery on a more limited ground: “[I]f a newspaper lawfully obtains truthful information about a matter of public significance then state officials may not constitutionally punish publication of the information, absent a need to further a state interest of the highest order.” The proper treatment for unlawfully obtained information was again left unsettled.

Justice White’s dissent stressed that as a result of publication, “B.J.F. received harassing phone calls, required mental health counseling, was forced to move from her home, and was even threatened with being raped again.” He distinguished his earlier opinion in *Cox* by noting that there the state did not undertake any effort to keep the information confidential, while in this instance the state did seek to keep the information quiet.

Note that one informal survey suggests that, in practice, over 90 percent of the newspapers in the country do not publish the names of rape victims. See *Jones, Rape Victim Is Still a Murky Issue for the Press*, N.Y. Times, June 25, 1989, §1, at 18. Does the general practice help the majority or the dissent?

What remains of the constitutional right to the privacy of highly personal information? According to Posner, J., in *Wolfe v. Schaefer*, 691 F.3d 782, 785 (7th Cir. 2010), “the modern Supreme Court’s expansive view of freedom of speech and of the press . . . casts doubt on *any* effort to limit the public disclosure of personal information, however private.” But as he explains:

The tension between informational privacy and free speech resides not only in the extravagant . . . modern conception of the scope of free speech but also in the fact that people often conceal personal information not out of regard for privacy as

such but as a means of advancing their personal interests by selective, which is to say tactical, disclosure of such information. . . . Tactically motivated concealment of embarrassing or

discreditable personal information can—often it is intended to—hide things in which the public has a legitimate interest.

Such was the case in *Wolfe*, where Posner, J., affirmed the dismissal of a privacy claim by a former candidate for state office who challenged his opponent's disclosure of investigations of his misconduct, holding that “[t]he fact that a candidate for public office is under investigation for legal and ethical violations is . . . a matter of substantial public interest.”

2. *Statutory response to Cox.* *Cox* provoked two modifications of the New York privacy statute. In 1979, the legislature adopted, and has since modified, N.Y. Civ. Rights Law §50-b (2019), which states:

The identity of any victim of a sex offense, . . . or of an offense involving the alleged transmission of the human immunodeficiency virus, shall be confidential. No report, paper, picture, photograph, court file or other documents, in the custody or possession of any public officer or employee, which identifies such a victim shall be made available for public inspection. No such public officer or employee shall disclose any portion of any police report, court file, or other document, which tends to identify such a victim except as provided in subdivision two of this section.

Subdivision 2 in turn allows access to this information only by obtaining a court order that “good cause exists for disclosure to that person.” Other interested parties may appear at the hearing. The statute indicates that any victim must give consent to any disclosure and makes it clear that the right does not operate for the benefit of the person charged with the sexual offense. A 1991 amendment to the statute, N.Y. Civ. Rights Law §50-c, creates a private right of action for damages suffered by “any person” injured by the disclosure. This section allows the court in its discretion to award reasonable attorney’s fees to the prevailing plaintiff. The statute does not apply to disclosures made by private persons who have no access to public records.

SECTION E. FALSE LIGHT

Restatement of the Law (Second) of Torts

§652E. PUBLICITY PLACING PERSON IN FALSE LIGHT

One who gives publicity to a matter concerning another that places the other before the public in a false light is subject to liability to the other for invasion of his privacy, if

(a) the false light in which the other was placed would be highly offensive to a reasonable person, and

(b) the actor had knowledge of or acted in reckless disregard as to the falsity of the publicized matter and the false light in which the other would be placed.

Caveat: The Institute takes no position on whether there are any circumstances under which recovery can be obtained under this Section if the actor did not know of or act with reckless disregard as to the falsity of the matter publicized and the false light in which the other would be placed but was negligent in regard to these matters.

Comment b. Relation to defamation: The interest protected by this Section is the interest of the individual in not being made to appear before the public in an objectionable false light or false position, or in other words, otherwise than as he is. In many cases to which the rule stated here applies, the publicity given to the plaintiff is defamatory, so that he would have an action for libel or slander under the rules stated in Chapter 24. In such a case the action for invasion of privacy will afford an alternative or additional remedy, and the plaintiff can proceed upon either theory, or both, although he can have but one recovery for a single instance of publicity. . . .

TIME, INC. v. HILL

385 U.S. 374 (1967)

BRENNAN, J. . . . The question in this case is whether appellant, publisher of *Life* magazine, was denied constitutional protections of speech and press by the application by the New York courts of §§50-51 of the New York Civil Rights Law to award appellee damages on allegations that *Life* falsely reported that a new play portrayed an experience suffered by appellee and his family.

[In September 1952, James Hill, his wife, and five Hill children were held hostage for 19 hours in their suburban Philadelphia home by three escaped convicts. The convicts released the Hill family untouched and unharmed, but the story made the front pages of the newspapers when the police, in a widely publicized encounter, subsequently killed two of the convicts and captured the third. Shortly after the incident, the Hills moved to Connecticut.]

In 1955 *Life* magazine, owned by defendant Time, Inc., published an article entitled “True Crime Inspires Tense Play” that told of a new Broadway thriller, *The Desperate Hours*. The article said that the experience of the Hill family, which had first been brought to attention in Joseph Hayes’ novel *The Desperate Hours*, was now being “re-enacted” in a new play based on the original book. The article said the play showed that the family “rose in heroism” in its time of crisis. The article was accompanied by pictures of scenes from the play, reenacted in the Hill’s suburban Philadelphia home. One showed a son being “roughed up” by a “brutish convict”; another, the “darling daughter” biting the hand of one of the convicts; and a third, of the father making a “brave try” to save his family.

p. 1080

Hill brought his action in the New York State Supreme Court under §§50 and 51 of the New York Civil Rights Law, [*infra* at 1084], alleging that the article was intended to, and in fact did, give the public the impression that the play was an accurate account of the experiences of the Hill family. Hill also alleged that the defendant knew that its article was “false and untrue.” The defendant answered that the article was “a subject of legitimate news interest,” that it was “a subject of general interest and of value and concern to the

public" at the time it was published, and that it was "published in good faith without any malice whatsoever. . . ." The trial judge denied defendant's motion to dismiss and the jury awarded plaintiff \$50,000 in actual and \$25,000 in punitive damages. . . .

[The New York Court of Appeals affirmed on the ground that defendant's "fictionalized" account of plaintiff's personal life, used in this unauthorized biography, was not protected by the newsworthiness defense.]

We hold that the constitutional protections for speech and press preclude the application of the New York statute to redress false reports of matters of public interest in the absence of proof that the defendant published the report with knowledge of its falsity or in reckless disregard of the truth.

The guarantees for speech and press are not the preserve of political expression or comment upon public affairs, essential as those are to healthy government. One need only pick up any newspaper or magazine to comprehend the vast range of published matter which exposes persons to public view, both private citizens and public officials. Exposure of the self to others in varying degrees is a concomitant of life in a civilized community. The risk of this exposure is an essential incident of life in a society which places a primary value on freedom of speech and of press. . . . We create a grave risk of serious impairment of the indispensable service of a free press in a free society if we saddle the press with the impossible burden of verifying to a certainty the facts associated in news articles with a person's name, picture or portrait, particularly as related to nondefamatory matter. Even negligence would be a most elusive standard, especially when the content of the speech itself affords no warning of prospective harm to another through falsity. A negligence test would place on the press the intolerable burden of guessing how a jury might assess the reasonableness of steps taken by it to verify the accuracy of every reference to a name, picture or portrait.

In this context, sanctions against either innocent or negligent misstatement would present a grave hazard of discouraging the press from exercising the constitutional guarantees. Those guarantees are not for the benefit of the press so much as for the benefit of all of us. A broadly defined freedom of the press assures the maintenance of our political system and an open society. Fear of large verdicts in damage suits for innocent or merely negligent misstatement, even fear of the expense involved in their defense, must inevitably cause publishers to "steer . . . wider of the unlawful zone," and thus "create the danger that the legitimate utterance will be penalized."

But the constitutional guarantees can tolerate sanctions against *calculated* falsehood without significant impairment of their essential function. We held in *New York Times* that calculated falsehood enjoyed no immunity in the case of

alleged defamation of a public official concerning his official conduct. Similarly, calculated falsehood should enjoy no immunity in the situation here presented us. . . .

Turning to the facts of the present case, the proofs reasonably would support either a jury finding of innocent or merely negligent misstatement by *Life*, or a finding that *Life* portrayed the play as re-enactment

of the Hill family's experience reckless of the truth or with actual knowledge that the portrayal was false. [Justice Brennan then reviewed the evidence in great detail.]

The appellant argues that the statute should be declared unconstitutional on its face if construed by the New York courts to impose liability without proof of knowing or reckless falsity. Such a declaration would not be warranted even if it were entirely clear that this had previously been the view of the New York courts. The New York Court of Appeals . . . has been assiduous in construing the statute to avoid invasion of the constitutional protections of speech and press. We, therefore, confidently expect that the New York courts will apply the statute consistently with the constitutional command. Any possible difference with us as to the thrust of the constitutional command is narrowly limited in this case to the failure of the trial judge to instruct the jury that a verdict of liability could be predicated only on a finding of knowing or reckless falsity in the publication of the *Life* article.

The judgment of the Court of Appeals is set aside and the case is remanded for further proceedings not inconsistent with this opinion.

It is so ordered.

[Justice Black, with whom Justice Douglas joined, concurred, but reiterated his view in *New York Times v. Sullivan* that the First Amendment imposed a total bar on these suits.]

DOUGLAS J., concurring. . . . The episode around which this book was written had been news of the day for some time. The most that can be said is that the novel, the play, and the magazine article revived that interest. A fictionalized treatment of the event is, in my view, as much in the public domain as would be a watercolor of the assassination of a public official. It seems to me irrelevant to talk of any right of privacy in this context. Here a private person is catapulted into the news by events over which he had no control. He and his activities are then in the public domain as fully as the matters at issue in *New York Times Co. v. Sullivan*. Such privacy as a person normally has ceases when his life has ceased to be private. . . .

[Harlan, J., concurring in part and dissenting in part, urged the adoption of a negligence standard, in part because of the inability of the Hills to use counterspeech to offset the errors found in the *Life* magazine account.]

MR. JUSTICE FORTAS, with whom THE CHIEF JUSTICE and MR. JUSTICE CLARK join, dissenting.

[The instructions given at the trial were] close enough to this Court's insistence upon "knowing or reckless falsity" as to render a reversal arbitrary and unjustified. If the defendant *altered* or *changed* the true facts so that the article as published was a *fictionalized* version, this, in my judgment, was a knowing or

reckless falsity. "Alteration" or "change" denotes a positive act—not a negligent or inadvertent happening. "Fictionalization" and "fiction" to the ordinary mind mean so departing from fact and reality as to be *deliberately* divorced from the fact—not merely in detail but in general and pervasive impact.

NOTES

1. *Time v. Hill today.* *Time v. Hill* (where, in arguments before the Supreme Court, Hill was represented by Richard Nixon) was decided just before the Supreme Court held in *Butts, supra* Chapter 11 at 1010, that the actual malice requirement applied to defamation suits brought by public figures against media defendants. Is there any reason to distinguish the false light from the defamation cases? The Court briefly reexamined *Time v. Hill* in *Cantrell v. Forest City Publishing Co.*, 419 U.S. 245, 250-251 (1974), when it upheld a verdict for plaintiff in a false-light case because the trial judge had properly instructed the jury that the plaintiff had the burden of showing that the defendant's story was written with knowledge of its falsity or with a reckless disregard of its truth. The plaintiff in *Cantrell* was a private person, but the Court chose not to reexamine *Time v. Hill* in light of *Gertz v. Welch, supra* at 1076, decided earlier in the same Term. Because the plaintiff had not objected to the jury instructions, the Court concluded that

this case presents no occasion to consider whether a State may constitutionally apply a more relaxed standard of liability for a publisher or broadcaster of false statements injurious to a private individual under a false-light theory of invasion of privacy, or whether the constitutional standard announced in *Time, Inc. v. Hill* applies to all false-light cases.

2. “*Publicity.*” Like the public disclosure tort, and unlike defamation, the false-light tort requires “publicity,” as defined in RST §652D comment *a*, see *supra* at 1062. “Publicity” is distinct from “publication” as used in defamation law; it does not suffice “to communicate a fact concerning the plaintiff’s private life to a single person or even to a small group of persons,” whereas “any publication in a newspaper or a magazine, even of small circulation, or in a handbill distributed to a large number of persons, or any broadcast over the radio, or statement made in an address to a large audience, is sufficient.” *Id.* Questions of fact may arise as to whether challenged statements were sufficiently publicized to support a false-light claim. For example, in *Doe v. Hagar*, 765 F.3d 855 (8th Cir. 2014), Sammy Hagar, the one-time lead singer of the band Van Halen, published his autobiography, entitled “Red: My Uncensored Life in Rock (*Red*).” In a passage in the book, he recounts a lurid story of a sexual rendezvous with “a former Playboy bunny from California” while on tour in Detroit and the aftermath when she claimed she was pregnant with Hagar’s child and pursued him for child support. Hagar wrote: “I knew it was not my baby. It was extortion.” More than 280,000 copies of Hagar’s book sold worldwide. Plaintiff Jane Doe brought claims of libel per se and false-light invasion of privacy, contending that “Hagar’s characterization of

her as a schemer and criminal is false.” According to Bright, J., “the widespread distribution of *Red* demonstrates that Hagar’s statements are widely available within the community of individuals that could recognize Doe as the subject of the statements, including Hagar’s associates, band members, and touring staff; those that Doe knew . . . while she was seeing Hagar; and Doe’s friends and acquaintances.” Bright, J., thus concluded that questions of fact remained with respect to the publicity element of the false-light claim and reversed the district court’s grant of summary judgment in favor of Hagar.

3. *False light in state courts.* Nothing in *Time* requires any state to adopt the false-light action in the first place, and many state courts have refused to recognize the tort. In *Lake v. Wal-Mart Stores, Inc.*, 582 N.W.2d 231, 235-236 (Minn. 1998), the court accepted the privacy torts of intrusion on seclusion,

commercial appropriation, and publication of private facts, but drew the line at false light:

False light is the most widely criticized of the four privacy torts and has been rejected by several jurisdictions. Most recently the Texas Supreme Court [in *Cain v. Hearst Corp.*, 878 S.W.2d 577 (Tex. 1994)] refused to recognize the tort of false light invasion of privacy because defamation encompasses most false light claims and false light “lacks many of the procedural limitations that accompany actions for defamation, thus unacceptably increasing the tension that already exists between free speech constitutional guarantees and tort law.” Citing “numerous procedural and substantive hurdles” under Texas statutory and common law that limit defamation actions, such as privileges for public meetings, good faith, and important public interest and mitigation factors, the court concluded that these restrictions “serve to safeguard the freedom of speech.” Thus to allow recovery under false light invasion of privacy, without such safeguards, would “unacceptably derogate constitutional free speech.” The court rejected the solution of some jurisdictions—application of the defamation restrictions to false light—finding instead that any benefit to protecting nondefamatory false speech was outweighed by the chilling effect of free speech.

. . . Most false light claims are actionable as defamation claims; because of the overlap with defamation and the other privacy torts, a case has rarely succeeded squarely on a false light claim.

Other states remain committed to the distinction. In *Godbehere v. Phoenix Newspapers, Inc.*, 783 P.2d 781, 786 (Ariz. 1989), the court held that the two torts redress different types of wrongful conduct, so that in some situations a jury could find the defendant’s publication of false information or innuendo, while not outrageous, satisfies the elements of false light. In *Welling v. Weinfeld*, 866 N.E.2d 1051, 1057 (Ohio 2007), the court expressed the dominant view by holding that liability for a false-light claim maintains the integrity of the right to privacy as a complement to the other right-to-privacy torts.

Compare Schwartz, Explaining and Justifying a Limited Tort of False Light Invasion of Privacy, 41 Case W. Res. L. Rev. 885, 898 (1991), with Zimmerman, False Light Invasion of Privacy: The Light That Failed, 64 N.Y.U. L. Rev. 364 (1989).

Should *Roberson, supra* at 1038, be treated as a false-light case?

SECTION F. COMMERCIAL APPROPRIATION OF PLAINTIFF’S NAME OR LIKENESS, OR THE RIGHT OF PUBLICITY

§50. RIGHT OF PRIVACY

A person, firm or corporation that uses for advertising purposes, or for the purposes of trade, the name, portrait or picture of any living person without having first obtained the written consent of such person, or if a minor of his or her parent or guardian, is guilty of a misdemeanor.

§51. ACTION FOR INJUNCTION AND FOR DAMAGES

Any person whose name, portrait, picture, or voice is used within this state for advertising purposes or for the purposes of trade without the written consent first obtained as above provided may maintain an equitable action in the supreme court of this state against the person, firm or corporation so using his name, portrait, picture or voice, to prevent and restrain the use thereof; and may also sue and recover damages for any injuries sustained by reason of such use and if the defendant shall have knowingly used such person's name, portrait, picture or voice in such manner as is forbidden or declared to be unlawful by section fifty of this article, the jury, in its discretion, may award exemplary damages. . . .

Restatement of the Law (Second) of Torts

§652C. APPROPRIATION OF NAME OR LIKENESS

One who appropriates to his own use or benefit the name or likeness of another is subject to liability to the other for invasion of his privacy.

Comment b. How invaded: The common form of invasion of privacy under the rule here stated is the appropriation and use of the plaintiff's name or likeness to advertise the defendant's business or product, or for some similar commercial purpose. Apart from statute, however, the rule stated is not limited to commercial appropriation. It applies also when the defendant makes use of the plaintiff's name or likeness for his own purposes and benefit, even though the use is not a commercial one, and even though the benefit sought to be obtained is not a pecuniary one. Statutes in some states have, however, limited the liability to commercial uses of the name or likeness.

p. 1085

Restatement of the Law (Third) of Unfair Competition

§46. APPROPRIATION OF THE COMMERCIAL VALUE OF PERSON'S IDENTITY: THE RIGHT OF PUBLICITY

One who appropriates the commercial value of a person's identity by using without consent the person's name, likeness, or other indicia of identity for purposes of trade is subject to liability for the relief appropriate under the rules stated in §§48 and 49 [governing injunctions and monetary relief, respectively].

In re NCAA Student-Athlete Name and Likeness Licensing Litigation

BYBEE, J. Video games are entitled to the full protections of the First Amendment, because “[l]ike the protected books, plays, and movies that preceded them, video games communicate ideas—and even social messages—through many familiar literary devices (such as characters, dialogue, plot, and music) and through features distinctive to the medium (such as the player’s interaction with the virtual world).” Such rights are not absolute, and states may recognize the right of publicity to a degree consistent with the First Amendment. *Zacchini v. Scripps-Howard Broad. Co.*, 433 U.S. 562, 574-75 (1977). In this case, we must balance the right of publicity of a former college football player against the asserted First Amendment right of a video game developer to use his likeness in its expressive works.

The district court concluded that the game developer, Electronic Arts (“EA”), had no First Amendment defense against the right-of-publicity claims of the football player, Samuel Keller. We affirm. Under the “transformative use” test developed by the California Supreme Court, EA’s use does not qualify for First Amendment protection as a matter of law because it literally recreates Keller in the very setting in which he has achieved renown. . . .

I

Samuel Keller was the starting quarterback for Arizona State University in 2005 before he transferred to the University of Nebraska, where he played during the 2007 season. EA is the producer of the *NCAA Football* series of video games, which allow users to control avatars representing college football players as those avatars participate in simulated games. In *NCAA Football*, EA seeks to replicate each school’s entire team as accurately as possible. Every real football player on each team included in the game has a corresponding avatar in the game with the player’s actual jersey number and virtually identical height, weight, build, skin tone, hair color, and home state. EA attempts to match any unique, highly identifiable playing behaviors by sending detailed questionnaires to team equipment

p. 1086

managers. Additionally, EA creates realistic virtual versions of actual stadiums; populates them with the virtual athletes, coaches, cheerleaders, and fans realistically rendered by EA’s graphic artists; and incorporates realistic sounds such as the crunch of the players’ pads and the roar of the crowd.

EA’s game differs from reality in that EA omits the players’ names on their jerseys and assigns each player a home town that is different from the actual player’s home town. However, users of the video game may upload rosters of names obtained from third parties so that the names do appear on the jerseys. In such cases, EA allows images from the game containing athletes’ real names to be posted on its website by users. Users can further alter reality by entering “Dynasty” mode, where the user assumes a head coach’s responsibilities for a college program for up to thirty seasons, including recruiting players from a randomly generated pool of high school athletes, or “Campus Legend” mode, where the user controls a virtual player from high school through college, making choices relating to practices, academics, and social life.

In the 2005 edition of the game, the virtual starting quarterback for Arizona State wears number 9, as did Keller, and has the same height, weight, skin tone, hair color, hair style, handedness, home state, play style (pocket passer), visor preference, facial features, and school year as Keller. In the 2008 edition, the virtual

quarterback for Nebraska has these same characteristics, though the jersey number does not match, presumably because Keller changed his number right before the season started.

Objecting to this use of his likeness, Keller filed a putative class-action complaint in the Northern District of California asserting, as relevant on appeal, that EA violated his right of publicity. . . .

II

. . .

A

The California Supreme Court formulated the transformative use defense in *Comedy III Productions, Inc. v. Gary Saderup, Inc.*, 21 P.3d 797 (Cal. 2001). The defense is “a balancing test between the First Amendment and the right of publicity based on whether the work in question adds significant creative elements so as to be transformed into something more than a mere celebrity likeness or imitation.” The California Supreme Court explained that “when a work contains significant transformative elements, it is not only especially worthy of First Amendment protection, but it is also less likely to interfere with the economic interest protected by the right of publicity.” . . .

Comedy III gives us at least five factors to consider in determining whether a work is sufficiently transformative to obtain First Amendment protection. First, if “the celebrity likeness is one of the ‘raw materials’ from which an original work is synthesized,” it is more likely to be transformative than if “the depiction or imitation of the celebrity is the very sum and substance of the work in question.”

p. 1087

Second, the work is protected if it is “primarily the defendant’s own expression”—as long as that expression is “something other than the likeness of the celebrity.” This factor requires an examination of whether a likely purchaser’s primary motivation is to buy a reproduction of the celebrity, or to buy the expressive work of that artist. Third, to avoid making judgments concerning “the quality of the artistic contribution,” a court should conduct an inquiry “more quantitative than qualitative” and ask “whether the literal and imitative or the creative elements predominate in the work.” Fourth, the California Supreme Court indicated that “a subsidiary inquiry” would be useful in close cases: whether “the marketability and economic value of the challenged work derive primarily from the fame of the celebrity depicted.” Lastly, the court indicated that “when an artist’s skill and talent is manifestly subordinated to the overall goal of creating a conventional portrait of a celebrity so as to commercially exploit his or her fame,” the work is not transformative.

[A discussion of prior California Supreme Court cases, including *Comedy III* and *Winter v. DC Comics*, is omitted.]

[W]e conclude that EA’s use of Keller’s likeness does not contain significant transformative elements such that EA is entitled to the defense as a matter of law. . . . EA is alleged to have replicated Keller’s physical characteristics in *NCAA Football*. . . . Here, . . . users manipulate the characters in the performance of the same activity for which they are known in real life—playing football in this case. . . . The context in which

the activity occurs is . . . realistic depictions of actual football stadiums in *NCAA Football*. As the district court found, Keller is represented as “what he was: the starting quarterback for Arizona State” and Nebraska, and “the game’s setting is identical to where the public found [Keller] during his collegiate career: on the football field.” . . .

Given that *NCAA Football* realistically portrays college football players in the context of college football games, the district court was correct in concluding that EA cannot prevail as a matter of law based on the transformative use defense. . . .

B

EA urges us to adopt for right-of-publicity claims the broader First Amendment defense that we have previously adopted in the context of false endorsement claims under the Lanham Act: the *Rogers* test.

Rogers v. Grimaldi[, 875 F.2d 994 (2d Cir. 1989),] is a landmark Second Circuit case balancing First Amendment rights against claims under the Lanham Act. The case involved a suit brought by the famous performer Ginger Rogers against the producers and distributors of *Ginger and Fred*, a movie about two fictional Italian cabaret performers who imitated Rogers and her frequent performing partner Fred Astaire. Rogers alleged both a violation of the Lanham Act for creating the false impression that she endorsed the film and infringement of her common law right of publicity.

The *Rogers* court recognized that “[m]ovies, plays, books, and songs are all indisputably works of artistic expression and deserve protection,” but that

p. 1088

“[t]he purchaser of a book, like the purchaser of a can of peas, has a right not to be misled as to the source of the product.” “Consumers of artistic works thus have a dual interest: They have an interest in not being misled and they also have an interest in enjoying the results of the author’s freedom of expression.” The *Rogers* court determined that titles of artistic or literary works were less likely to be misleading than “the names of ordinary commercial products,” and thus that Lanham Act protections applied with less rigor when considering titles of artistic or literary works than when considering ordinary products. The court concluded that “in general the Act should be construed to apply to artistic works only where the public interest in avoiding consumer confusion outweighs the public interest in free expression.” The court therefore held:

In the context of allegedly misleading titles using a celebrity’s name, that balance will normally not support application of the [Lanham] Act unless the title has no artistic relevance to the underlying work whatsoever, or, if it has some artistic relevance, unless the title explicitly misleads as to the source or the content of the work. . . .

In this case, EA argues that we should extend this test, created to evaluate Lanham Act claims, to apply to right-of-publicity claims because it is “less prone to misinterpretation” and “more protective of free expression” than the transformative use defense. Although we acknowledge that there is some overlap between the transformative use test formulated by the California Supreme Court and the *Rogers* test, we

disagree that the *Rogers* test should be imported wholesale for right-of-publicity claims. . . . As the history and development of the *Rogers* test makes clear, it was designed to protect consumers from the risk of consumer confusion—the hallmark element of a Lanham Act claim. The right of publicity, on the other hand, does not primarily seek to prevent consumer confusion. Rather, it primarily “protects a form of intellectual property [in one’s person] that society deems to have some social utility.” [*Comedy III*]. As the California Supreme Court has explained:

Often considerable money, time and energy are needed to develop one’s prominence in a particular field. Years of labor may be required before one’s skill, reputation, notoriety or virtues are sufficiently developed to permit an economic return through some medium of commercial promotion. For some, the investment may eventually create considerable commercial value in one’s identity.

The right of publicity protects the *celebrity*, not the *consumer*: Keller’s publicity claim is not founded on an allegation that consumers are being illegally misled into believing that he is endorsing EA or its products. Indeed, he would be hard-pressed to support such an allegation absent evidence that EA explicitly misled consumers into holding such a belief. Instead, Keller’s claim is that EA has appropriated, without permission and without providing compensation, his talent and years of hard work on the football field. The reasoning of *Rogers* and *Mattel* [Inc. v. MCA Records, Inc., 296 F.3d 894 (9th Cir. 2002) (following *Rogers*)—that artistic

p. 1089

and literary works should be protected unless they explicitly mislead consumers—is simply not responsive to Keller’s asserted interests here.

We recognize that *Rogers* also dealt with a right-of-publicity claim—one under Oregon law—and applied a modified version of its Lanham Act test in order to adapt to that particular context:

In light of the Oregon Court’s concern for the protection of free expression, . . . the right of publicity [would not] bar the use of a celebrity’s name in a movie title unless the title was “wholly unrelated” to the movie or was “simply a disguised commercial advertisement for the sale of goods or services.”

However, the *Rogers* court was faced with a situation in which the “Oregon Courts . . . [had] not determined the scope of the common law right of publicity in that state.” . . .

[W]e decline EA’s invitation to extend the *Rogers* test to right-of-publicity claims. . . .

[Affirmed.]

THOMAS, J., dissenting. . . . The majority confines its inquiry to how a single athlete’s likeness is represented in the video game, rather than examining the transformative and creative elements in the video game as a whole. In my view, this approach contradicts the holistic analysis required by the transformative use test. The salient question is whether the entire work is transformative, and whether the transformative

elements predominate, rather than whether an individual persona or image has been altered.

When EA's *NCAA Football* video game series is examined carefully, and put in proper context, I conclude that the creative and transformative elements of the games predominate over the commercial use of the likenesses of the athletes within the games.

A

The first step in conducting a balancing is to examine the creative work at issue. At its essence, EA's *NCAA Football* is a work of interactive historical fiction. Although the game changes from year to year, its most popular features predominately involve role-playing by the gamer. For example, a player can create a virtual image of himself as a potential college football player. The virtual player decides which position he would like to play, then participates in a series of "tryouts" or competes in an entire high school season to gauge his skill. Based on his performance, the virtual player is ranked and available to play at select colleges. The player chooses among the colleges, then assumes the role of a college football player. He also selects a major, the amount of time he wishes to spend on social activities, and practice—all of which may affect the virtual player's performance. He then plays his position on the college team. In some versions of the game, in another mode, the virtual player can engage in a competition for the Heisman Trophy. In another popular mode, the gamer becomes a virtual coach.

p. 1090

The coach scouts, recruits, and develops entirely fictional players for his team. The coach can then promote the team's evolution over decades of seasons.

The college teams that are supplied in the game do replicate the actual college teams for that season, including virtual athletes who bear the statistical and physical dimensions of the actual college athletes. But, unlike their professional football counterparts in the *Madden NFL* series, the NCAA football players in these games are not identified.

The gamers can also change their abilities, appearances, and physical characteristics at will. Keller's impressive physical likeness can be morphed by the gamer into an overweight and slow virtual athlete, with anemic passing ability. And the gamer can create new virtual players out of whole cloth. Players can change teams. The gamer could pit Sam Keller against himself, or a stronger or weaker version of himself, on a different team. Or the gamer could play the game endlessly without ever encountering Keller's avatar. In the simulated games, the gamer controls not only the conduct of the game, but the weather, crowd noise, mascots, and other environmental factors. Of course, one may play the game leaving the players unaltered, pitting team against team. But, in this context as well, the work is one of historic fiction. The gamer controls the teams, players, and games.

Applying the *Comedy III* considerations to *NCAA Football* in proper holistic context, the considerations favor First Amendment protection. The athletic likenesses are but one of the raw materials from which the broader game is constructed. The work, considered as a whole, is primarily one of EA's own expression. The creative and transformative elements predominate over the commercial use of likenesses. The marketability and economic value of the game comes from the creative elements within, not from the pure commercial exploitation of a celebrity image. The game is not a conventional portrait of a celebrity, but a

work consisting of many creative and transformative elements. . . .

B

Although one could leave the analysis with an examination of the transformative and creative aspects of the game, a true balancing requires an inquiry as to the other side of the scales: the publicity right at stake. Here, as well, the *NCAA Football* video game series can be distinguished from the traditional right of publicity cases, both from a quantitative and a qualitative perspective.

As a quantitative matter, *NCAA Football* is different from other right of publicity cases in the sheer number of virtual actors involved. Most right of publicity cases involve either one celebrity, or a finite and defined group of celebrities. . . .

In contrast, *NCAA Football* includes not just Sam Keller, but thousands of virtual actors. This consideration is of particular significance when we examine, as instructed by *Comedy III*, whether the source of the product marketability comes from creative elements or from pure exploitation of a celebrity image. There is not, at this stage of the litigation, any evidence as to the personal marketing power of Sam Keller, as distinguished from the appeal of the creative aspects of the product. Regardless, the sheer number of athletes involved inevitably diminish

p. 1091

the significance of the publicity right at issue. *Comedy III* involved literal depictions of the Three Stooges on lithographs and T-shirts. . . . The commercial image of the celebrities in [that] case was central to the production, and its contact with the consumer was immediate and unavoidable. In contrast, one could play *NCAA Football* thousands of times without ever encountering a particular avatar. In context of the collective, an individual's publicity right is relatively insignificant. Put another way, if an anonymous virtual player is tackled in an imaginary video game and no one notices, is there any right of publicity infringed at all? . . .

II

Given the proper application of the transformative use test, Keller is unlikely to prevail. The balance of interests falls squarely on the side of the First Amendment. The stakes are not small. The logical consequence of the majority view is that all realistic depictions of actual persons, no matter how incidental, are protected by a state law right of publicity regardless of the creative context. This logic jeopardizes the creative use of historic figures in motion pictures, books, and sound recordings. Absent the use of actual footage, the motion picture *Forrest Gump* might as well be just a box of chocolates. Without its historical characters, *Midnight in Paris* would be reduced to a pedestrian domestic squabble. The majority's holding that creative use of realistic images and personas does not satisfy the transformative use test cannot be reconciled with the many cases affording such works First Amendment protection. I respectfully disagree with this potentially dangerous and out-of-context interpretation of the transformative use test.

NOTES

1. EA ultimately settled the right to publicity claims for \$40 million, and the NCAA settled with its players for \$20 million. At the time, NCAA student-athletes were contractually barred from receiving any compensation other than scholarships for their participation in athletics. NCAA bylaws even require student-athletes to contractually relinquish their right of publicity to the member schools and to the NCAA as a condition to participation in sports. Hinds, Comment, The One-Sided Games of the NCAA: How *In Re NCAA Student-Athlete* Levels the Playing Field, 35 Loy. L.A. Ent. L. Rev. 95, 116 (2015), thus concludes that the Ninth Circuit “correctly rejected the First Amendment defenses that would have given EA a blanket license to continue to profit off of the backs of the athletes.” But did the court nonetheless engage in a “deliberate avoidance of the issue” of the NCAA waivers, with the likely outcome of generating “future lawsuits for the courts to decide”?

In 2019, California enacted the Fair Pay to Play Act, which allows student-athletes to make endorsement deals. See Blinder, N.C.A.A. Athletes Could Be Paid Under New California Law, N.Y. Times, Oct. 1, 2019. Shortly thereafter, the NCAA voted to change their bylaws to allow student-athletes to profit from their names and likenesses. See Setty & Young, The NCAA Will Allow Athletes to Profit from Their Name, Image and Likeness in a Major Shift for the Organization, CNBC, Oct. 29, 2019.

p. 1092

2. *Transformative and expressive uses*. The California Supreme Court adopted the “transformative use” test in *Comedy III Productions, Inc. v. Gary Saderup, Inc.*, 21 P.3d 797, 808 (Cal. 2001) (cited in *In re NCAA*). There, the court enjoined the defendant from selling T-shirts that featured a precise rendition of the well-known comedy act The Three Stooges. Invoking an explicit balancing of interests, the court reasoned:

When artistic expression takes the form of a literal depiction or imitation of a celebrity for commercial gain, directly trespassing on the right of publicity without adding significant expression beyond that trespass, the state law interest in protecting the fruits of artistic labor outweighs the expressive interests of the imitative artist. . . . On the other hand, when a work contains significant transformative elements, it is not only especially worthy of First Amendment protection, but it is also less likely to interfere with the economic interest protected by the right of publicity. . . . [W]orks of parody or other distortions of the celebrity figure are not, from the celebrity fan’s viewpoint, good substitutes for conventional depictions of the celebrity and therefore do not generally threaten markets for celebrity memorabilia that the right of publicity is designed to protect.

Should it make any difference that *Comedy III*, like most right of publicity cases, involved only a small number (three) of celebrities, whereas *In re NCAA* involves “thousands of virtual actors”?

In re NCAA is in line with the core right of publicity cases that prohibit firms from marketing pictures of professional athletes without their permission even when the images are not being used to sell any separate product.

But what if the athletes’ images are made subject to parody by the imposition of some additional creative element? In *Cardtoons v. Major League Baseball Players Association*, 95 F.3d 959, 971 (10th Cir. 1996),

the defendant produced “parody trading cards featuring caricatures of major league baseball players,” which contained some humorous commentary on the players as well as information about such matters as salary and playing careers on the back. (Having San Francisco Giants star Barry Bonds “on your team is like having money in the bank.”) Tacha, J., rejected the request of the Major League Baseball Players Association (MLBPA) to enjoin their sale, holding that the First Amendment protected their publication. After distinguishing *White v. Samsung*, 971 F.2d 1395 (9th Cir. 1992), Tacha, J., wrote:

MLBPA maintains that there are many ways that Cardtoons could parody the institution of baseball that would not require use of player names and likenesses. Cardtoons could, for example, use generic images of baseball players to poke fun at the game. Second, MLBPA contends that Cardtoons could use recognizable players in a format other than trading cards, such as a newspaper or magazine, without infringing on its right of publicity. MLBPA argues that these alternative means of communication are adequate and, therefore, that we may uphold its property rights without seriously infringing upon Cardtoons’ right to free expression. . . .

In this case, Cardtoons’ expression requires use of player identities because, in addition to parodying the institution of baseball, the cards also lampoon individual players. Further, Cardtoons’ use of the trading card format is an essential component of the parody because baseball cards have traditionally been used to celebrate baseball players and their accomplishment.

p. 1093

By contrast, in *Doe a/k/a Twist v. TCI Cablevision*, 110 S.W.3d 363 (Mo. 2003), Limbaugh, J., rejected the “transformative use” test in favor of the “predominant use” test where speech is both expressive and commercial. Anthony Twist, a.k.a. Tony Twist, a former professional hockey player in the National Hockey League, brought a misappropriation claim against the creators, publishers, and marketers of *Spawn*, a comic book that contained a villainous character sharing his name. Twist presented evidence that “in marketing *Spawn* products, [defendants] directly targeted hockey fans—Twist’s primary fan base—by producing and licensing *Spawn* logo hockey pucks, hockey jerseys and toy zambonis.” Limbaugh, J., held that “the use and identity of Twist’s name has become predominantly a ploy to sell comic books and related products rather than an artistic or literary expression.” Thus “free speech must give way to the right of publicity.” Twist was awarded \$15 million in damages, which was affirmed on remand. *Doe v. McFarlane*, 207 S.W.3d 52, 75-76 (Mo. Ct. App. 2006).

That same tension between the right of publicity and the First Amendment was also evident in *Parks v. LaFace Records*, 329 F.3d 437 (6th Cir. 2003). The court held that the plaintiff, Rosa Parks, whose act of defiance precipitated the Montgomery Bus Boycott of 1956, raised at least a jury question on whether the defendant record company had misappropriated her name by making it the title of a hit single, “Rosa Parks,” which contained some lewd lyrics that earned it a Parental Advisory warning. The defendants argued that the title of the song was designed to evoke the “symbolic” image of what it means to go to the back of the bus. On remand the question was whether the title of the song was “wholly unrelated” to the content of the song, so that it could be regarded as a “disguised commercial advertisement,” or chosen “solely to attract attention” to the work. How does this case come out under the transformative use test of *In*

re NCAA? Is Thomas, J., right to worry that *In re NCAA* “jeopardizes the creative use of historic figures in motion pictures, books, and sound recordings”?

3. *Zacchini and the reportage of public events.* *Zacchini* was the first and only right of publicity case decided by the Supreme Court. *Zacchini* was an entertainer who performed a 15-second “human cannonball” act whereby he was shot by a cannon into a net 200 feet away. A reporter videotaped the entire act and broadcast it on a nightly news program. *Zacchini* sued the broadcasting station, alleging that it “showed and commercialized the film of his act without his consent” and that such conduct was an “unlawful appropriation of plaintiff’s professional property.” White, J., held: “Wherever the line in particular situations is to be drawn between media reports that are protected and those that are not, we are quite sure that the First and Fourteenth Amendments do not immunize the media when they broadcast a performer’s entire act without his consent.” He emphasized that

[t]he broadcast of a film of [Zacchini’s] entire act poses a substantial threat to the economic value of that performance. . . . [T]his act is the product of petitioner’s own talents and energy, the end result of much time, effort, and expense. Much of its economic value lies in the “right of exclusive control over publicity given to his

p. 1094

performance”; if the public can see the act free on television, it will be less likely to pay to see it at the fair.

Moreover, White, J., continued, “[I]t is important to note that neither the public nor [the broadcast station] will be deprived of the benefit of [Zacchini’s] performance as long as his commercial stake in his act is appropriately recognized.”

Note that *Zacchini* could not have sued for copyright infringement for the broadcast, because he had not, as the federal copyright law requires, “fixed” his act in some tangible medium of expression, as by filming it himself. The copyright law, however, also contains a “fair use” exception, “for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, and research,” which are not regarded as infringements of copyright. See Copyright Act, 17 U.S.C. §107 (2012). Should *Zacchini* have been decided on analogous “fair use” principles? If so, could the rebroadcast of the entire act be justified? For a discussion of the copyright analogies, see Baird, Note, Human Cannonballs and the First Amendment: *Zacchini v. Scripps-Howard Broadcasting Co.*, 30 Stan. L. Rev. 1185 (1978). See Chapter 14, Note, *infra*, at 1209.

Right to publicity cases, both before and after *Zacchini*, focus on whether the use of a person’s name and identity is “expressive”—in which case it is protected by the First Amendment—or “commercial”—in which case typically it is not. At the first pole, courts have uniformly held that the right of publicity does not prohibit newspapers, whether or not operated for profit, from using anyone’s name or likeness in an ordinary news story. In *Tropeano v. Atlantic Monthly Co.*, 400 N.E.2d 847, 851 (Mass. 1980), the defendant published a picture of the plaintiff in connection with its story “After the Sexual Revolution,” without identifying her by name or discussing her. The court held that its publication did not amount to an appropriation of her likeness for advertisement and purposes of trade under Massachusetts law, but was

simply part of a “sociological commentary.” “The fact that the defendant is engaged in the business of publishing the Atlantic Monthly magazine for profit does not by itself transform the incidental publication of the plaintiff’s picture into an appropriation for advertising or trade purposes.” Indeed, if it did, all news stories would be fair game for the right of publicity. Similarly, in *Express One International, Inc. v. Steinbeck*, 53 S.W.3d 895 (Tex. App. 2001), the court refused to apply the appropriation doctrine when the defendant posted critical comments about union supporters on Express One’s Internet bulletin board. The defendant “Steinbeck intended to impugn Express One’s reputation, rather than appropriate it,” so that defamation was the proper remedy if any was available at all.

Closer to the line perhaps is *Felsher v. University of Evansville*, 755 N.E.2d 589 (Ind. 2001), where the court held that the tort of misappropriation did not protect corporate entities because the various comments to the Restatement (such as the descendibility of the action at death) applied only to ordinary individuals. Although an invasion of seclusion does not seem to cover a corporate entity, is there any reason why the appropriation or publicity tort should not apply to corporations?

Nor does the outcome change when historical events are fictionalized in public broadcasts. In *Tyne v. Time Warner Entertainment Co.*, 901 So. 2d 802 (Fla. 2005), the plaintiffs were survivors of the crewmembers of the *Andrea Gail* who perished in the 1991 storm that formed the basis of Sebastian Junger’s best-selling book, *The Perfect Storm*. The defendants in this case made and distributed a fictionalized version of the book, labeled as such, without asking for the permission of any of the survivors, or paying them for the use of the historical material. The survivors did not sue under a false-light theory even though some of the scenes cast the decedents in a negative light, but they did sue for commercial misappropriation under Fla. Stat. §540.08 (2000). The Florida Supreme Court recognized that one of the defendants’ purposes in this case was to make money, but rebuffed the claim holding that “the term ‘commercial purpose’ as used in section 540.08(1) does not apply to publications, including motion pictures, that do not directly promote a product or service.” In its view, any broader application of the statute ran into serious difficulties under the First Amendment. Although not in these words, the broad newsworthiness privilege available in other branches of privacy law covers these misappropriation cases as well.

4. Pure commercial appropriation. At the opposite extreme, defendants receive no protection for acts of pure commercial appropriation. In *Abdul-Jabbar v. General Motors Corp.*, 85 F.3d 407 (9th Cir. 1996), the court held that the publicity right protected Abdul-Jabbar’s exclusive right to the use of his prior name, Lew Alcindor, under which he played while in college at U.C.L.A. The court reasoned that the tort protected not only the plaintiff’s name but also his identity. In *White v. Samsung*, the plaintiff Vanna White, the popular hostess of the TV show *Wheel of Fortune*, sued Samsung when it used an image of a robot similar to Vanna White in an advertisement to promote its videocassette recorders. The ad depicted the robot, dressed in a wig, gown, and jewelry that Deutsch, Samsung’s ad agency and codefendant, had consciously selected to resemble White’s hair and dress. The robot was posed next to a game board that was instantly recognizable as the *Wheel of Fortune* game show set, in a stance for which White was famous. The caption of the ad read: “Longest-running game show. 2012 A.D.” The court allowed the action even though the robot did not amount to an appropriation of her name or likeness under the California Civil Code, holding that the common law right of publicity “does not require that appropriations of identity be accomplished through

particular means to be actionable.” The court agreed with such decisions as *Midler v. Ford Motor Co.*, 849 F.2d 460 (9th Cir. 1988), in which a “sound-alike’s” performance of a song that had made Bette Midler famous was found actionable, and *Carson v. Here’s Johnny Portable Toilets, Inc.*, 698 F.2d 831 (6th Cir. 1983), where the defendants improperly used the distinctive Carson introduction, “Here’s Johnny,” to market a line of portable toilets. The decision in *White* provoked a sharp dissent from Kozinski, J.:

Saddam Hussein wants to keep advertisers from using his picture in unflattering contexts. Clint Eastwood doesn’t want tabloids to write about him. Rudolf Valentino’s heirs want to control his film biography. The Girl Scouts don’t want

p. 1096

their image soiled by association with certain activities. George Lucas wants to keep Strategic Defense Initiative fans from calling it “Star Wars.” Pepsico doesn’t want singers to use the word “Pepsi” in their songs. Guy Lombardo wants an exclusive property right to ads that show big bands playing on New Year’s Eve. Uri Geller thinks he should be paid for ads showing psychics bending metal through telekinesis. Paul Prudhomme, that household name, thinks the same about ads featuring corpulent bearded chefs. And scads of copyright holders see purple when their creations are made fun of.

Something very dangerous is going on here. Private property, including intellectual property, is essential to our way of life. It provides an incentive for investment and innovation; it stimulates the flourishing of our culture; it protects the moral entitlements of people to the fruits of their labors. But reducing too much to private property can be bad medicine. Private land, for instance, is far more useful if separated from other private land by public streets, roads and highways. Public parks, utility rights-of-way and sewers reduce the amount of land in private hands, but vastly enhance the value of the property that remains.

In light of subsequent decisions like *In re NCAA*, is Kozinski, J., correct about the overexpansion of intellectual property rights in this area?

N.Y. Civ. Rights Law §§50, 51, *supra* at 1084, further narrows the scope of the protectable interest in name or likeness. In *Burck v. Mars, Inc.*, 571 F. Supp. 2d 446 (S.D.N.Y. 2008), the court held that a candy manufacturer’s creation and display of a cartoon character dressed in a street entertainer’s signature costume, “the Naked Cowboy,” did not amount to the use of the entertainer’s “portrait or picture,” as required to establish a violation of the New York law. The manufacturer used neither an actual photograph nor picture nor a recognizable likeness or representation of the entertainer, but only evoked certain aspects of the fictional character he created.

5. *The first sale doctrine.* The close affinity between the common law right of publicity and traditional forms of intellectual property, such as copyrights and patents, is revealed in the first sale doctrine. In *Allison v. Vintage Sports Plaques*, 136 F.3d 1443, 1448-1449 (11th Cir. 1998), the plaintiff’s late husband, a well-known race car driver, had assigned to Maxx Race Cards the right to “manufacture and market trading cards bearing his likeness in exchange for a royalty of 18% of sales receipts.” The defendant purchased trading cards bearing the image of plaintiff’s husband from manufacturers and distributors, which it

mounted in a plaque bearing the name of the featured player or team. The defendant did not copy or alter the cards in any way. The so-called first sale doctrine in the law of patents and copyrights provides that the holder of an intellectual property right has no further right to control its subsequent resale or further disposition once it is placed in the market. Kravitch, J., held that this doctrine barred plaintiff's claim for violation of the right of publicity:

[A]ccepting appellants' argument would have profoundly negative effects on numerous industries and would grant a monopoly to celebrities over their identities that would upset the delicate "balance between the interests of the celebrity

p. 1097

and those of the public." *White*, 989 F.2d at 1515 (Kozinski, J., dissenting). . . . Indeed, a decision by this court not to apply the first-sale doctrine to right of publicity actions would render tortious the resale of sports trading cards and memorabilia and thus would have a profound effect on the market for trading cards, which now supports a multi-billion dollar industry. Such a holding presumably also would prevent, for example, framing a magazine advertisement that bears the image of a celebrity and reselling it as a collector's item, reselling an empty cereal box that bears a celebrity's endorsement, or even reselling a used poster promoting a professional sports team. Refusing to apply the first-sale doctrine to the right of publicity also presumably would prevent a child from selling to his friend a baseball card that he had purchased, a consequence that undoubtedly would be contrary to the policies supporting that right.

A holding that the first-sale doctrine does limit the right of publicity, on the other hand, would not eliminate a celebrity's control over the use of her name or image; the right of publicity protects against unauthorized use of an image, and a celebrity would continue to enjoy the right to license the use of her image *in the first instance*—and thus enjoy the power to determine when, or if, her image will be distributed.

Note that the first sale doctrine need not necessarily reduce the plaintiff's total receipts. The royalty charge for the initial use could reflect both present and future users of the object sold. The single lump sum thus displaces a series of smaller payments that would be, to say the least, difficult to collect.

FACTORS ETC., INC. v. PRO ARTS, INC.

579 F.2d 215 (2d Cir. 1978)

[The plaintiff in this action had received from Boxcars, Inc.—a corporation controlled by the late Elvis Presley and his business partner, Colonel Tom Parker—an exclusive license to commercially exploit the name and likeness of Elvis Presley. Factors Etc. had paid Boxcars \$100,000 for the license against a guarantee of \$150,000. Immediately upon learning of Presley's death, Pro Arts purchased the copyright of a Presley photograph from a staff reporter of the *Atlanta (Georgia) Journal*, which it published on a poster three days later. Above the picture were the words "IN MEMORY" and below it were the dates "1935-1977." Among the many purchasers of the posters was the New York codefendant, Stop and Shop

Companies. Factors Etc. demanded in writing that Pro Arts cease marketing the poster and threatened suit if it did not. Pro Arts responded by filing a declaratory judgment action in the Northern District of Ohio. Factors Etc. brought suit in the Southern District of New York. The issue on appeal was whether the New York district court had properly issued a preliminary injunction against Pro Arts.]

INGRAHAM, J. . . . The injunction restrained Pro Arts during the pendency of the action from manufacturing, selling or distributing (1) any more copies of the poster labeled "IN MEMORY . . . 1935-1977," (2) any other posters, reproductions or copies containing any likeness of Elvis Presley, and (3) utilizing for commercial profit in any manner or form the name or likeness of Elvis Presley. The

p. 1098

order also denied Pro Arts' motion to dismiss, stay or transfer. Pro Arts has duly perfected this interlocutory appeal from the order. . . .

On appeal, Pro Arts alleges two errors of law on the part of the trial court. According to Pro Arts, the trial court erred first in concluding that the right of publicity could survive the death of the celebrity. Second, Pro Arts argues that even if the right did so survive, Pro Arts was privileged, as a matter of law, in printing and distributing its "memorial poster" of Presley, because the poster celebrated a newsworthy event.

The first issue, the duration of the so-called "right of publicity," is one of state law, more specifically the law of the State of New York. Because of the dearth of New York case law in this area, however, we have sought assistance from federal court decisions interpreting and applying New York law, as well as decisions from courts of other states.

[The court then relied on *Zacchini* and the excerpt from the Kalven article quoted therein to establish that the right of publicity is designed to protect the plaintiff's right of commercial exploitation and thus is sharply distinguishable from the other forms of privacy, which, in contrast, are designed "to minimize the intrusion or publication" of damaging information. It also noted that *Haelan Laboratories, Inc. v. Tops Chewing Gum, Inc.*, 202 F.2d 866 (2d Cir. 1953), recognized that the right of publicity was transferable by its owner.]

There can be no doubt that Elvis Presley assigned to Boxcar a valid property right, the exclusive authority to print, publish and distribute his name and likeness. In so doing, he carved out a separate intangible property right for himself, the right to a certain percentage of the royalties which would be realized by Boxcar upon exploitation of Presley's likeness and name. The identification of this exclusive right belonging to Boxcar as a transferable property right compels the conclusion that the right survives Presley's death. The death of Presley, who was merely the beneficiary of an income interest in Boxcar's exclusive right, should not in itself extinguish Boxcar's property right. Instead, the income interest, continually produced from Boxcar's exclusive right of commercial exploitation, should inure to Presley's estate at death like any other intangible property right. To hold that the right did not survive Presley's death, would be to grant competitors of Factors, such as Pro Arts, a windfall in the form of profits from the use of Presley's name and likeness. At the same time, the exclusive right purchased by Factors and the financial benefits accruing to the celebrity's heirs would be rendered virtually worthless. . . .

Pro Arts' final argument is that even if Factors possesses the exclusive right to distribute Presley memorabilia, this right does not prevent Pro Arts from publishing what it terms a "memorial poster" commemorating a newsworthy event. In support of this argument, Pro Arts cites *Paulsen v. Personality Posters, Inc.*, 299 N.Y.S.2d 501 (Sup. Ct. 1968), a case arising out of the bogus presidential candidacy of the television comedian Pat Paulsen. Paulsen sued defendant for publishing and distributing a poster of Paulsen with the legend "FOR PRESIDENT." The court refused to enjoin sale of the poster because Paulsen's choice of the political arena for satire made him "newsworthy" in the First Amendment

p. 1099

sense. We cannot accept Pro Arts' contention that the legend "IN MEMORY . . ." placed its poster in the same category as one picturing a presidential candidate, albeit a mock candidate. We hold, therefore, that Pro Arts' poster of Presley was not privileged as celebrating a newsworthy event. . . .

Affirmed.

NOTES

1. Commercial life after death? With *Pro Arts*, compare *Memphis Development Foundation v. Factors Etc., Inc.*, 616 F.2d 956, 958-960 (6th Cir. 1980). The Development Foundation offered an eight-inch statuette of Elvis Presley to persons who contributed \$25.00 to the Foundation. The Foundation instituted a declaratory judgment action to establish that Factors' license did not preclude its distribution of the statue. Factors counterclaimed for damages and injunctive relief. In holding that the right of publicity did not survive the death of the actor, the court took issue with *Pro Arts* by examining some of the fundamental principles underlying private property and a market economy:

Recognition of a post-mortem right of publicity would vindicate two possible interests: the encouragement of effort and creativity, and the hopes and expectations of the decedent and those with whom he contracts that they are creating a valuable capital asset. Although fame and stardom may be ends in themselves, they are normally by-products of one's activities and personal attributes, as well as luck and promotion. The basic motivations are the desire to achieve success or excellence in a chosen field, the desire to contribute to the happiness or improvement of one's fellows and the desire to receive the psychic and financial rewards of achievement. . . .

On the other hand, there are strong reasons for declining to recognize the inheritability of the right. A whole set of practical problems of judicial line-drawing would arise should the courts recognize such an inheritable right. How long would the "property" interest last? In perpetuity? For a term of years? Is the right of publicity taxable? At what point does the right collide with the right of free expression guaranteed by the First Amendment? Does the right apply to elected officials and military heroes whose fame was gained on the public payroll, as well as to movie stars, singers and athletes? Does the right cover posters or engraved likenesses of, for example, Farrah Fawcett Majors or Mahatma Gandhi, kitchen utensils ("Revere Ware"), insurance ("John

Hancock”), electric utilities (“Edison”), a football stadium (“RFK”), a pastry (“Napoleon”), or the innumerable urban subdivisions and apartment complexes named after famous people? Our legal system normally does not pass on to heirs other similar personal attributes even though the attributes may be shared during life by others or have some commercial value. Titles, offices and reputation are not inheritable. Neither are trust or distrust and friendship or enmity descendible. An employment contract during life does not create the right for heirs to take over the job. Fame falls in the same category as reputation; it is an attribute from which others may benefit but may not own.

The law of defamation, designed to protect against the destruction of reputation including the loss of earning capacity associated with it, provides an analogy. There is no right of action for defamation after death. . . .

p. 1100

There is no indication that changing the traditional common law rule against allowing heirs the exclusive control of the commercial use of their ancestor’s name will increase the efficiency or productivity of our economic system. It does not seem reasonable to expect that such a change would enlarge the stock or quality of the goods, services, artistic creativity, information, invention or entertainment available. Nor will it enhance the fairness of our political and economic system. It seems fairer and more efficient for the commercial, aesthetic, and political use of the name, memory and image of the famous to be open to all rather than to be monopolized by a few. An equal distribution of the opportunity to use the name of the dead seems preferable. The memory, name and pictures of famous individuals should be regarded as a common asset to be shared, an economic opportunity available in the free market system.

The statuettes at issue in MDF v. Factors Etc., Inc. were eight-inch pewter replicas of this bronze statue of Elvis, for which MDF was trying to raise funds at the time. The statue, originally outdoors in downtown Memphis, has since been moved to the Memphis Welcome Center.

After *Memphis Development* decided that the right was not inheritable, the Second Circuit abandoned its earlier decision by giving “conclusive” effect “to a rule by a court of appeals [the Sixth Circuit] deciding the law of a state within its circuit.” *Factors Etc., Inc. v. Pro Arts, Inc.*, 652 F.2d 278 (2d Cir. 1981). Why aren’t the descendible interests just those that are protected during life by the right of publicity? Should statutory compromises be allowed? See Indiana Code §32-36-1-8(a) (2020): “A person may not use an aspect of a personality’s right of publicity for a commercial purpose during the personality’s lifetime or for one hundred (100) years after the date of the personality’s death, without having obtained previous written consent from a [designated] person.” On the descendibility question, see generally Felcher & Rubin, *Privacy, Publicity, and Portrayal of Real People by the Media*, 88 Yale L.J. 1577 (1979).

Source: World History Archive / Alamy

2. *Exploitation only after death?* Should the right of publicity descend if it had not been utilized during the lifetime of the original creator? The California Supreme Court answered that question in the negative in *Lugosi v. Universal Pictures*, 603 P.2d 425 (Cal. 1979). The decedent had not taken any steps while alive to exploit his famous Dracula image, developed in his movie roles

p. 1101

for the defendant. The defendant thereafter licensed a number of other businesses to make an impressive assortment of clothes, trinkets, and memorabilia that utilized the Dracula image. The California court refused to allow Lugosi’s heirs to enjoin the sales. The legislature responded to *Lugosi* by adoption of Cal. Civ. Code §3344.1(b), which provides: “The rights recognized under this section are property rights, freely transferable, in whole or in part, by contract or by means of trust or testamentary documents. . . .”

In Cairns v. Franklin Mint Co., 24 F. Supp. 2d 1013 (C.D. Cal. 1998), the court refused to apply that statute for the benefit of plaintiffs, trustees of the Princess Diana Memorial Fund, who brought suit to prevent the use of her name or likeness in conjunction with the sale of Princess Diana memorabilia because Great Britain, whose law applied in the case, does not recognize a descendible right of publicity.

3. Corporations and the right of publicity. Should corporations be able to assert the right of publicity? In Doggett v. Travis Law Firm, P.C., 555 S.W.3d 127 (Tex. App. 2018), the Travis Law Firm sued a former contract attorney who continued to use the firm's name and letterhead in his practice after he left the firm for invasion of privacy by appropriation of name or likeness. Lloyd, J., reversed the jury's award of \$24,279 in damages on the ground that “[n]o Texas authority has recognized a corporation's right to privacy.” While squarely rejecting the appropriation claim as a species of invasion of privacy, however, Lloyd, J., left open the possibility that such a claim could be brought within the scope of unfair competition law. See *infra* Chapter 14 at 1204 (discussion of INS v. AP). What does this suggest about the underlying interest protected by the privacy torts? Does it make sense?

Notes

²⁶ We mean to imply nothing about any constitutional questions which might arise from a state policy not allowing access by the public and press to various kinds of official records, such as records of juvenile-court proceedings.

Pasley v. Freeman

Vulcan Metals Co. v. Simmons Manufacturing Co.

Swinton v. Whitinsville Savings Bank

Laidlaw v. Organ

Edgington v. Fitzmaurice

BV Nederlandse Industrie Van Eiproducten v. Rembrandt Enterprises, Inc.

Laborers Local 17 Health and Benefit Fund v. Philip Morris, Inc.

Section C. Negligent Misrepresentation

Ultramarine Corp. v. Touche

SECTION A. INTRODUCTION

All civil societies prohibit at least two forms of harmful conduct—aggression and deceit. Sometimes the two are very much intertwined: The assailant who feints before he throws a blow combines both wrongs in a single act. Even with accidental harms, force and misrepresentation often work in tandem. Thus a misrepresentation forms one link in the chain of causation when physical injuries are attributable to latent defects in the defendant's premises or products, which appear to be safe but are not. Similarly, informed consent suits against physicians and duty to warn cases against product manufacturers arise from, if not express misrepresentations, then inadequate disclosures where a duty to speak exists. Finally, misrepresentations can play a critical role in the law of defamation, when a defendant's false statement leads a third party to avoid interacting with the plaintiff.

But oddly enough, none of these scenarios are addressed by the traditional tort of misrepresentation, which limits itself to cases where a plaintiff claims *economic*, namely *pecuniary or commercial*, loss because she acted, to her detriment, in reliance on the defendant's misrepresentation. See RTT: LEH §9. Typical situations covered by the tort of misrepresentation include entering into a losing contract or making cash advances in reliance upon the defendant's false statements. Usually the plaintiff is required to show not only that she was misled by the defendant's misstatements, but also that the defendant knew that his statements were false, or at least that he was indifferent to their truth or falsity. See RTT: LEH §10.

Restatement of the Law (Third) of Torts: Liability for Economic Harm

§9. FRAUD

One who fraudulently makes a material misrepresentation of fact, opinion, intention, or law, for the purpose of inducing another to act or refrain from acting, is subject to liability for economic loss caused by the other's justifiable reliance on the misrepresentation.

§10. SCIENTER

A misrepresentation is fraudulent if the maker of it

- (a) knows or believes that the matter is not as he represents it to be,
- (b) knows that he does not have the confidence in the accuracy of his representation that he states or implies, or
- (c) knows that he does not have the basis for the representation that he states or implies.

The first section of the following materials is devoted to the law of fraud, and the second to the law of negligent misrepresentation.

SECTION B. FRAUD

PASLEY v. FREEMAN

100 Eng. Rep. 450 (K.B. 1789)

[The plaintiffs were merchants who asked the defendant about the financial condition of John Christopher Falch before selling Falch a large amount of goods on credit. Plaintiffs alleged that the defendant "did wrongfully and deceitfully encourage and persuade the said John Pasley and Edward, to sell and deliver to the said John Christopher Falch divers other goods, wares and merchandizes, to wit, 16 other bags of cochineal of great value, to wit, of the value of [about £2,634] upon trust and credit; and did for that purpose then and there falsely, deceitfully, and fraudulently, assert and affirm to the said John Pasley and Edward, that the said John Christopher then and there was a person safely to be trusted and given credit in that respect." The plaintiffs further alleged that they sold the goods on credit, but that Falch, as the defendant had known all along, was a bad credit risk, wholly unable to pay for the goods; in fact he paid for no part of them. The plaintiffs sued the defendant to recover from him the value of the goods sold and delivered to Falch. Verdict for the plaintiffs.]

The Court took time to consider of this matter, and now delivered their opinions seriatim.

GROSE, J. [finding for the defendant] Upon the face of this count in the declaration, no privity of contract is stated between the parties. No consideration arises to the defendant; and he is in no situation in which the law considers him in any trust, or in which it demands from him any account of the credit of Falch. He appears not to be interested in any transaction between the plaintiffs and Falch, nor to have colluded with them; but he knowingly asserted a falsehood, by saying that Falch might be safely entrusted with the goods, and given credit to, for the purpose of inducing the plaintiffs to trust him with them, by which the plaintiffs lost the value of the goods. . . . It is admitted, that the action is new in point of precedent: but it is insisted that the law recognises principles on which it may be supported. The principle on which it is contended to lie is, that wherever deceit or falsehood is practised to the detriment of another, the law will give redress. . . . When this was first argued at the Bar, on the motion for a new trial, I confess I thought it reasonable that the action should lie: but, on looking into the old books for cases in which the old action of deceit has been maintained upon the false affirmation of the defendant, I have changed my opinion. . . . I have not met with any case of an action upon a false affirmation, except against a party to a contract, and where there is a promise, either express or implied, that the fact is true, which is misrepresented: and no other case has been cited at the Bar. Then if no such case has ever existed, it furnishes a strong objection against the action, which is brought for the first time for a supposed injury, which has been daily committed for centuries past: . . . A variety of cases may be put: suppose a man recommends an estate to another, as knowing it to be of greater value than it is; when the purchaser has bought it, he discovers the defect, and sells the estate for less than he gave; why may not an action be brought for the loss upon any principle that will support this action? And yet such an action has never been attempted. Or, suppose a person present at the sale of an horse asserts that he was his horse, and that he knows him to be sound and sure-footed, when in fact the horse is neither the one nor the other; according to the principle contended for by the plaintiffs, an action lies against the person present as well as the seller; and the purchaser has two securities. And even in this very case, if the action lies, the plaintiffs will stand in a peculiarly fortunate predicament, for then they will have the responsibility both of Falch and the defendant. And they will be in a better situation than they would have been if, in the conversation that passed between them and the defendant, instead of asserting that Falch might safely be trusted, the defendant had said, "If he do not pay for the goods, I will": for then undoubtedly an action would not have lain against the defendant. . . . The misrepresentation stated in the declaration is respecting the credit of Falch; the defendant asserted that the plaintiffs might safely give him credit: but credit to which a man is entitled is matter of judgment and opinion, on which different men might form different opinions, and upon which the plaintiffs might form their own; to mislead which no fact to prove the good credit of Falch is falsely asserted. It seems to me therefore that any assertion relative to credit, especially where the party making it has no interest, nor is in any collusion with the person respecting whose credit the assertion is made, is . . . not an assertion of a fact peculiarly in

p. 1106

the knowledge of the defendant. Whether Falch deserved credit depended on the opinion of many; for credit exists on the good opinion of many. Respecting this, the plaintiffs might have inquired of others, who knew as much as the defendant; it was their fault that they did not, and they have suffered damage by their own laches. It was owing to their own gross negligence that they gave credence to the assertion of the defendant, without taking pains to satisfy themselves that that assertion was founded in fact, as in the case of Bayly v. Merrel. I am therefore of opinion, that this action is as novel in principle as it is in precedent, that it is against the principles to be collected from analogous cases, and consequently that it cannot be maintained.

BULLER, J. [finding for the plaintiff] The foundation of this action is fraud and deceit in the defendant,

and damage to the plaintiffs. And the question is, whether an action thus founded can be sustained in a Court of Law? Fraud without damage, or damage without fraud, gives no cause of action; but where these two concur, an action lies. But it is contended, that this was a bare naked lie; that, as no collusion with Falch is charged, it does not amount to a fraud: and, if there were any fraud, the nature of it is not stated. And it was supposed by the counsel who originally made the motion, that no action could be maintained, unless the defendant, who made this false assertion, had an interest in so doing. I agree that an action cannot be supported for telling a bare naked lie; but that I define to be, saying a thing which is false, knowing or not knowing it to be so, and without any design to injure, cheat, or deceive, another person. Every deceit comprehends a lie; but a deceit is more than a lie on account of the view with which it is practised, it's being coupled with some dealing, and the injury which it is calculated to occasion, and does occasion, to another person. Deceit is a very extensive head in the law; and it will be proper to take a short view of some of the cases which have existed on the subject, to see how far the Courts have gone, and what are the principles upon which they have decided. [Buller, J., reviewed the precedents and concluded that proof of collusion or conspiracy was not necessary to make out an action for deceit.] Some general arguments were urged at the Bar, to shew that mischiefs and inconveniences would arise if this action were sustained; for if a man, who is asked a question respecting another's responsibility, hesitate, or is silent, he blasts the character of the tradesman: and if he say that he is insolvent, he may not be able to prove it. But let us see what is contended for: it is nothing less than that a man may assert that which he knows to be false, and thereby do an everlasting injury to his neighbour, and yet not be answerable for it. This is as repugnant to law as it is to morality. Then it is said, that the plaintiffs had no right to ask the question of the defendant. But I do not agree in that; for the plaintiffs had an interest in knowing what the credit of Falch was. It was not the inquiry of idle curiosity, but it was to govern a very extensive concern. The defendant undoubtedly had his option to give an answer to the question, or not: but if he gave none, or said he did not know, it is impossible for any Court of Justice to adopt the possible inferences of a suspicious mind as a ground for grave judgment. All that is required of a person in the defendant's situation is, that he shall give no answer, or that if he do, he shall answer according to the truth as far as he knows. . . .

p. 1107

If the answer import insolvency, it is not necessary that the defendant should be able to prove that insolvency to a jury; for the law protects a man [from a suit for defamation] in giving that answer, if he does it in confidence and without malice. No action can be maintained against him for giving such an answer unless express malice can be proved. From the circumstance of the law giving that protection, it seems to follow, as a necessary consequence, that the law not only gives sanction to the question, but requires that, if it be answered at all, it shall be answered honestly. . . .

ASHHURST, J. [finding for the plaintiff] . . . For the gist of the action is the injury done to the plaintiff, and not whether the defendant meant to be a gainer by it: what is it to the plaintiff whether the defendant was or was not to gain by it; the injury to him is the same. And it should seem that it ought more emphatically to lie against him, as the malice is more diabolical, if he had not the temptation of gain. For the same reason, it cannot be necessary that the defendant should collude with one who has an interest. But if collusion were necessary, there seems all the reason in the world to suppose both interest and collusion from the nature of the act; for it is to be hoped that there is not to be found a disposition so diabolical as to prompt any man to injure another without benefiting himself. . . . Another argument which has been made use of is, that this is a new case, and that there is no precedent of such an action. Where cases are new in their principle, there I admit that it is necessary to have recourse to legislative interposition in order to remedy the grievance: but

where the case is only new in the instance, and the only question is upon the application of a principle recognized in the law to such new case, it will be just as competent to Courts of Justice to apply the principle to any case which may arise two centuries hence as it was two centuries ago; if it were not, we ought to blot out of our law books one fourth part of the cases that are to be found in them. . . .

LORD KENYON, C.J. [finding for the plaintiff] . . . There are many situations in life, and particularly in the commercial world, where a man cannot by any diligence inform himself of the degree of credit which ought to be given to the persons with whom he deals; in which cases he must apply to those whose sources of intelligence enable them to give that information. The law of prudence leads him to apply to them, and the law of morality ought to induce them to give the information required. In the case of *Bulstrode* the carrier might have weighed the goods himself: but in this case the plaintiffs had no means of knowing the state of Falch's credit but by an application to his neighbours. . . . Then it was contended here that the action cannot be maintained for telling a naked lie: but that proposition is to be taken sub modo. If, indeed, no injury is occasioned by the lie, it is not actionable: but if it be attended with a damage, it then becomes the subject of an action. . . . But in this case the two grounds of the action concur: here are both the *damnum et injuria*. The plaintiffs applied to the defendant telling him that they were going to deal with Falch, and desiring to be informed of his credit, when the defendant fraudulently, and knowing it to be otherwise, and with a design to deceive the plaintiffs, made the false affirmation which is stated on the record, by which they sustained a considerable damage. Then can a doubt

p. 1108

be entertained for a moment but that this is injurious to the plaintiffs? If this be not an injury, I do not know how to define the word. . . . It is admitted that the defendant's conduct was highly immoral, and detrimental to society. I am of the opinion that the action is maintainable on the grounds of deceit in the defendant, and injury and loss to the plaintiffs.

[Judgment for the plaintiff affirmed.]

NOTES

1. *The birth of an action.* What impact on commercial life if *Pasley v. Freeman* had been decided the other way? Would Grose, J., the lone dissenter, have allowed the action if the plaintiff had paid the defendant for the information? Note that the early reception to *Pasley* was not always favorable. In *Evans v. Bicknell*, 31 Eng. Rep. 998, 1003 (Ch. 1801), Lord Eldon, stressing the difficulty of proof when the plaintiff's "stout assertion" is met with the defendant's "positive denial," thought that the protection of the Statute of Frauds was needed. Should the action be allowed if there is testimony of a third-party witness who heard the exchange?

2. *An action for deceit.* Under *Pasley*, the action for deceit requires, as its name suggests, proof of deliberate lying. During the nineteenth century, courts from time to time sought to expand deceit to reach a defendant guilty only of "legal fraud" or "fraud in law"—i.e., a false statement of fact made without having any reasonable grounds for believing his statement to be true—in practice a form of negligence liability.

The debate over whether deceit covered negligent misrepresentations came to a head in the famous case of *Derry v. Peek*, 14 App. Cas. 337, 374, 375-376 (H.L.E. 1889). The defendants were directors of a corporation who issued a prospectus in which they claimed a special act of Parliament gave them “the right to use steam or mechanical motive power, instead of horses” to run their trams along public ways, which would give the corporation substantial financial advantage. The plaintiff invested in shares of the company on the faith of the representations, which proved false, as the corporation was entitled to use mechanical power only on a limited portion of its tracks. After the company liquidated, the plaintiff sued the directors for deceit to recover the value of his original investment. The trial judge dismissed the plaintiff’s cause of action, which was subsequently allowed by the Court of Appeal. Cotton, L.J., equated speaking “recklessly, or without care whether it is true or false” with speaking “without any reasonable ground for believing it to be true.” *Peek v. Derry*, [1887] 37 Ch. 541, 566. That decision, in turn, was reversed in the House of Lords. Lord Herschell assailed Cotton’s suggestion that negligence and recklessness are “convertible expressions”: “To make a statement careless whether it be true or false, and therefore without any real belief in its truth, appears to me to be an essentially different thing from making, through want of care, a false statement, which is nevertheless honestly believed to be true.” Lord Herschell summarized the law:

I think the authorities establish the following propositions: First, in order to sustain an action of deceit, there must be proof of fraud, and nothing short of that

p. 1109

will suffice. Secondly, fraud is proved when it is shewn that a false representation has been made (1) knowingly, or (2) without belief in its truth, or (3) recklessly, careless whether it be true or false. Although I have treated the second and third as distinct cases, I think the third is but an instance of the second, for one who makes a statement under such circumstances can have no real belief in the truth of what he states. To prevent a false statement [from] being fraudulent, there must, I think, always be an honest belief in its truth. And this probably covers the whole ground, for one who knowingly alleges that which is false, has obviously no such honest belief. Thirdly, if fraud be proved, the motive of the person guilty of it is immaterial. It matters not that there was no intention to cheat or injure the person to whom the statement was made.

He added that “if I thought that a person making a false statement had shut his eyes to the facts, or purposely abstained from inquiring into them, I should hold that honest belief was absent and that he was just as fraudulent as if he had knowingly stated that which was false.” Nonetheless, on the evidence he concluded that charges of fraud could not be sustained, only to express his misgivings about letting the defendant off scot-free on the ground that “those who put before the public a prospectus to induce them to embark their money in a commercial enterprise ought to be vigilant to see that it contains such representations only as are in strict accordance with fact. . . .” Parliament responded to this invitation with the Director’s Liability Act, 1890, 53 & 54 Vict. ch. 64, which provides in part that a director or promoter of a corporation will be held liable for damages to purchasers of stocks and bonds unless the director or promoter can show that “he had reasonable ground to believe,” and at all material times did believe, his statements to be true. The statute also contained special rules governing the liability of directors for statements in the prospectus that reflected the opinion of experts in the venture or the state of the public record. What is the appropriate standard of liability in these cases? How could the defendants in *Derry* not have known of the limitations in their charter?

3. Fraud and recklessness generally. *Derry* remains extremely influential in American courts in defining the appropriate scope of fraud. In *Neurosurgery & Spine Surgery, S.C. v. Goldman*, 790 N.E.2d 925, 933 (Ill. App. 2003), the court relied heavily on *Derry* when it “decline[d] to extend the tort of fraudulent misrepresentation to encompass noncommercial and nonfinancial dealings between parties.” In other cases, courts have been careful not to blur the line between fraud and negligence. Thus in *In re Acosta*, 406 F.3d 367, 372 (5th Cir. 2005), the question was whether a creditor’s claim was nondischargeable in bankruptcy on the ground that the debtor had fraudulently failed to disclose two prior liens on the debtor’s property. *Vance, J.*, held that the fraud was not established.

An intent to deceive may be inferred from “reckless disregard for the truth or falsity of a statement combined with the sheer magnitude of the resultant misrepresentation.” Nevertheless, an honest belief, even if unreasonable, that a representation is true and that the speaker has information to justify it does not amount to an intent to deceive. Thus, a “dumb but honest” defendant does not have scienter.

p. 1110

Nonetheless, recklessness can be found in those cases in which a defendant holds himself out as possessing a level of expertise that he in fact lacks. Thus in *Skowronski v. Sachs*, 818 N.E.2d 635 (Mass. App. Ct. 2004), a jeweler certified an inferior diamond as a stone of a higher grade when he had no knowledge of the proper procedures required of an expert in that area. The court found that the misrepresentations were reckless, and hence fraudulent, when the defendant did not disclose his want of expertise.

4. Securities fraud today. The problem of fraud continues to be an active source of litigation in a wide variety of transactions in established securities markets. See The Securities and Exchange Act of 1934, 15 U.S.C. §§78a-78mm (2012). Section 10(b), 15 U.S.C. §78j(b), provides that it shall be unlawful “[t]o use or employ, in connection with the purchase or sale of any security . . . any manipulative or deceptive device or contrivance in contravention of such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors.” Pursuant to the statute, the SEC published Rule 10b-5, 17 C.F.R. §240.10b-5 (2016):

EMPLOYMENT OF MANIPULATIVE AND DECEPTIVE DEVICES

It shall be unlawful for any person, directly or indirectly, by the use of any means or instrumentality of interstate commerce, or of the mails or of any facility of any national securities exchange,

- (a) To employ any device, scheme, or artifice to defraud,
- (b) To make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading, or
- (c) To engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any person, in connection with the purchase or sale of any

security.

In *Ernst & Ernst v. Hochfelder*, 425 U.S. 185, 199 (1976), a reprise of *Derry*, the Supreme Court was asked to hold that negligent misrepresentations were actionable under Rule 10b-5, because the effects were the same “regardless of whether the conduct is negligent or intentional.” The Court rejected the invitation, noting that as a matter of ordinary English the SEC’s argument

simply ignores the use of the words “manipulative,” “device,” and “contrivance”—terms that make unmistakable a Congressional intent to proscribe a type of conduct quite different from negligence. Use of the word “manipulative” is especially significant. It is and was virtually a term of art when used in connection with securities markets. It connotes intentional or willful conduct designed to deceive or defraud investors by controlling or artificially affecting the price of securities.

Ernst & Ernst left open the question, decided in the affirmative in *Derry*, whether recklessness should be equated with fraud in the context of securities

p. 1111

transactions. Every circuit court to consider the matter has held that reckless conduct meets the scienter requirement under the Securities Act, although they differ in the level of recklessness required. For one recent illustration, see *Public Employees’ Retirement Association v. Deloitte & Touche LLP*, 551 F.3d 305, 314 (4th Cir. 2009). In that case, Wilkinson, J., applied a stringent standard of recklessness in a suit against Deloitte & Touche (D&T) as outside auditor for the Dutch firm Royal Ahold and its subsidiary, U.S. Foodservice (USF), arising from Deloitte & Touche’s alleged failure to take into account certain business agreements and complex side agreements in evaluating Ahold’s consolidated return.

In order to establish a strong inference of scienter, plaintiffs must do more than merely demonstrate that defendants should or could have done more. They must demonstrate that the Deloittes were either knowingly complicit in the fraud, or so reckless in their duties as to be oblivious to malfeasance that was readily apparent. The inference we find most compelling based on the evidence in the record is not that the defendants were knowingly complicit or reckless, but that they were deceived by their client’s repeated lies and artifices. Perhaps their failure to demand more evidence of consolidation was improper under accounting guidelines, but that is not the standard, which “requires more than a misapplication of accounting principles.”

The Supreme Court has yet to rule on whether recklessness constitutes a species of fraud. See *Tellabs, Inc. v. Makro Issues & Rights, Ltd.*, 551 U.S. 308 (2007), cited in *D&T*, a securities fraud case brought against Tellabs and its chief executive officer that failed to reach the question. See also *Matrixx Initiatives, Inc. v. Siracusano*, 563 U.S. 27, 48 (2011), where the Court skirted the issue “[b]ecause Matrixx does not challenge the Court of Appeals’ holding that the scienter requirement may be satisfied by a showing of ‘deliberate recklessness.’” However it seems highly unlikely that the Court will deviate from the overwhelming consensus in the circuit courts that recklessness does suffice.

5. *The Private Securities Litigation Reform Act of 1995*. *Tellabs* resolved a hotly disputed pleading issue under the PSLRA that, in an effort to curb what were regarded as abusive class actions, requires the plaintiff to “specify each statement alleged to have been misleading, [and] the reason or reasons why the statement is misleading.” Further, in dealing with the defendant’s state of mind, the PSLRA imposes two related requirements: First, “if an allegation regarding the statement or omission is made on information and belief, the complaint shall state with particularity all facts on which that belief is formed,” and, second, the complaint must “state with particularity facts giving rise to a strong inference that the defendant acted with the required state of mind.” 15 U.S.C. §78a (2012).

Ginsburg, J., held that “the inference of scienter must be more than merely plausible or reasonable—it must be cogent and at least as compelling as any opposing inference of nonfraudulent intent.” She then added that the proper inquiry “is whether *all* of the facts alleged, taken collectively, give rise to a strong inference of scienter, not whether any individual allegation, scrutinized in isolation meets that standard.”

p. 1112

Sotomayor, J., offered some additional guidance on *Tellabs*’ “holistic” approach in *Matrixx Initiatives, supra* Note 4. Investors brought a 10(b)-5 class action against a pharmaceutical company based on the company’s alleged failure to disclose reports of a possible link between one of its products, a cold remedy, and loss of smell, rendering statements made by Matrixx misleading. The complaint alleged that Matrixx “was sufficiently concerned about the information it received . . . that it hired a consultant to review the product” and

[m]ost significantly, Matrixx issued a press release that suggested that studies had confirmed that [its cold remedy product] does not cause anosmia [loss of smell] when, in fact, it had not conducted any studies relating to anosmia and the scientific evidence at that time, according to the panel of scientists, was insufficient to determine whether [the product] did or did not cause anosmia.

The Court, affirming the Ninth Circuit, held that the scienter allegations when “‘taken collectively’ give rise to a ‘cogent and compelling’ inference that Matrixx elected not to disclose the reports of adverse events not because it believed they were meaningless but because it understood their likely effect on the market.” Does *Matrixx* relax the *Tellabs* standard, such that more plaintiffs should be able to withstand a motion to dismiss? What effect, if any, will it have on settlement negotiations in securities fraud cases?

VULCAN METALS CO. v. SIMMONS MANUFACTURING CO.

248 F. 853 (2d Cir. 1918)

[The defendant, Simmons Manufacturing, sold to the plaintiff, Vulcan Manufacturing Co., all of its patents, tools, dies, and equipment for the manufacture of vacuum cleaners, together with all machines and parts then on hand. During the sales negotiations, Simmons’ agents made two categories of representations to Albert Freeman, a promoter of the Vulcan Corporation. The first group included “commendations of the cleanliness, economy, and efficiency of the machine”; that it was superior to rival methods of cleaning,

such as "beating and brushing"; that it was so simple that a child of six could use it; that it was durable and long lasting; and that it promised its users perfect satisfaction, if properly adjusted. The second class of representations stated that the defendant "[c]ompany had not sold the machine, or made any attempt to sell it; that they had not shown it to any one; that it had never been on the market, and that no one outside the company officials and the men in the factory knew anything about it." To explain why defendant had been keeping these superior machines under wraps, its agent stated that, although 15,000 units were on hand, "it would be a mistake for them to attempt to sell these along with their ordinary line, which was furniture."

The plaintiff's action for deceit alleged that the purchase was made in reliance on these representations, but that "the machines and patents were totally inefficient and unmarketable." Simmons counterclaimed on the notes that Vulcan signed for part of the purchase price; Freeman had signed as a guarantor on

p. 1113

the notes. The district court directed a verdict for Simmons on both the original action and the counterclaim, finding that Vulcan had not proved any actionable fraud. The record showed that the machines, when exploited by Vulcan, were of little value and that "their manufacture was discontinued by that company not very long after they had undertaken it." There was also evidence that defendant's agents had made several efforts to sell the machines, which had proved unsuccessful because the machines could not create the vacuum necessary for their operation.]

L. HAND, J. [after stating the facts as above]. The first question is of the misrepresentations touching the quality and powers of the patented machine. These were general commendations, or, in so far as they included any specific facts, were not disproved; e.g., that the cleaner would produce 18 inches of vacuum with 25 pounds water pressure. They raise, therefore, the question of law how far general "puffing" or "dealers' talk" can be the basis of an action for deceit.

The conceded exception in such cases has generally rested upon the distinction between "opinion" and "fact"; but that distinction has not escaped the criticism it deserves. An opinion is a fact, and it may be a very relevant fact; the expression of an opinion is the assertion of a belief, and any rule which condones the expression of a consciously false opinion condones a consciously false statement of fact. When the parties are so situated that the buyer may reasonably rely upon the expression of the seller's opinion, it is no excuse to give a false one. And so it makes much difference whether the parties stand "on an equality." For example, we should treat very differently the expressed opinion of a chemist to a layman about the properties of a composition from the same opinion between chemist and chemist, when the buyer had full opportunity to examine. The reason of the rule lies, we think, in this: There are some kinds of talk which no sensible man takes seriously, and if he does he suffers from his credulity. If we were all scrupulously honest, it would not be so; but, as it is, neither party usually believes what the seller says about his own opinions, and each knows it. Such statements, like the claims of campaign managers before election, are rather designed to allay the suspicion which would attend their absence than to be understood as having any relation to objective truth. It is quite true that they induce a compliant temper in the buyer, but it is by a much more subtle process than through the acceptance of his claims for his wares.

So far as concerns statements of value, the rule is pretty well fixed against the buyer. . . .

In the case at bar, since the buyer was allowed full opportunity to examine the cleaner and to test it out, we put the parties upon an equality. It seems to us that general statements as to what the cleaner would do, even though consciously false, were not of a kind to be taken literally by the buyer. As between manufacturer and customer, it may not be so; but this was the case of taking over a business, after ample chance to investigate. Such a buyer, who the seller rightly expects will undertake an independent and adequate inquiry into the actual merits of what he gets, has no right to treat as material in his determination statements like these. The standard of honesty permitted by the rule may not be the

p. 1114

best; but, as Holmes, J., says in *Deming v. Darling*, 20 N.E. 107 (Mass. 1889), the chance that the higgling preparatory to a bargain may be afterwards translated into assurances of quality may perhaps be a set-off to the actual wrong allowed by the rule as it stands. We therefore think that the District Court was right in disregarding all these misrepresentations.

As respects the representation that the cleaners had never been put upon the market or offered for sale, the rule does not apply; nor can we agree that such representations could not have been material to Freeman's decision to accept the contract. The actual test of experience in their sale might well be of critical consequence in his decision to buy the business, and the jury would certainly have the right to accept his statement that his reliance upon these representations was determinative of his final decision. We believe that the facts as disclosed by the depositions of the Western witnesses were sufficient to carry to the jury the question whether those statements were false. It is quite true, as the District Judge said, that the number of sales was small, perhaps not 60 in all; but they were scattered in various parts of the Mountain and Pacific States, and the jury might conclude that they were enough to contradict the detailed statements of Simmons that the machines had been kept off the market altogether. . . .

The next question is as to whether any such misrepresentations were conclusively cured by the recital in the contract of purchase as follows:

The party of the first part [the Simmons Company] has been engaged in the manufacture of a certain type of vacuum cleaning machines, and the parties of the first and second part [the National Suction Cleaner Company] have been engaged in the sale thereof.

We all agree that an adequate retraction of the false statement before Freeman executed the contract would be a defense. Whether this be regarded as terminating the consequences of the original wrong, or as a correction of it, is of little importance. Further, we agree that, even if Freeman had in fact never learned of the retraction, it would serve, if given under such circumstances as justified the utterer in supposing that he would. For example, a letter actually delivered into his hands containing nothing but a retraction would be a defense, though it abundantly appeared that he had never read it. His loss might still be the consequence, and the reasonable consequence, but for the letter, of the original fraud; but the writer would have gone as far as necessary to correct that fraud, and we should not be disposed to hold it as an insurer that its correction should be effective. Judge Ward and I, however, do not think that such a recital in such a place was certain to catch the eye of the reader, and that therefore neither was the defendant's duty of retraction inevitably discharged, nor, what is nearly the same thing, did the defendant show beyond question that Freeman actually saw it. . . .

It results from the foregoing that the judgment [for the defendant] in the action for deceit must be reversed. In the action [by Simmons] upon the notes the judgment upon the notes will be affirmed, because the Vulcan Metals Company, Incorporated, did not make any offer to return the machines, tools, and

p. 1115

patents, which were not shown to be without any value, and consequently it was in no position to rescind.

[The dissent argued that the plaintiff should be “presumed to know what [the contract] means and says,” and thus barred from suit.]

NOTES

1. Puffing. Why don’t the provisions of the express purchase contract allocate all risk associated with the overall sale to the buyer? If Simmons had offered to return all the materials that it had received, could it have recovered the purchase price in full even if the value of the invention had declined in the interim? As noted in *Vulcan Metals*, Holmes, J., gave wide latitude for puffing in *Deming v. Darling*, 20 N.E. 107, 108-109 (Mass. 1889). The plaintiff purchased a railroad bond from the defendant’s agent, who claimed that a railroad mortgage served as good security for the bond such that “the bond was of the very best and safest, and was an A No. 1 Bond.” The jury was instructed to find for the defendant if the statement was made in good faith, but not if otherwise. On appeal from the plaintiff’s verdict, Justice Holmes refused to treat as false the defendant’s “vague commendations of his wares” that did not contain false statements of facts. In his view, “[t]he rule of law is hardly to be regretted, when it is considered how easily and insensibly words of hope or expectation are converted by an interested memory into statements of quality and value when the expectation has been disappointed.” Is this risk identified by Holmes present in the case at hand?

Nonetheless, there are clear limits to the puffing doctrine. In *Smith v. Land and House Property Corporation*, 28 Ch. D. 7 (C.A. 1884), the plaintiffs offered a hotel for sale, stating that it was let to “Mr. Frederick Fleck (a most desirable tenant).” Before the contract of sale could be signed, Fleck went into bankruptcy after he made several late payments on the lease. The defendant refused to complete the transaction on the ground that the statement about Fleck was a misrepresentation. The plaintiffs sought specific performance, claiming that their remark was “a mere expression of opinion.” Bowen, L.J., sided with the defendants and held they were excused from consummating the transaction:

If the facts are not equally known to both sides, then a statement of opinion by the one who knows the facts best involves very often a statement of a material fact, for he impliedly states that he knows facts which justify his opinion. Now a landlord knows the relations between himself and his tenant; other persons either do not know them at all or do not know them equally well, and if the landlord says that he considers that the relations between himself and his tenant are satisfactory, he really avers that the facts peculiarly within his knowledge are such to render that opinion reasonable. Now are the statements here statements which involve such a representation of material fact? They are statements on a subject as to which *prima facie* the

vendors know everything and the purchasers nothing. The vendors state that the property is let to a most desirable tenant, what does that mean? I agree that it is not a guarantee that the tenant will go on paying his rent, but it is to my mind a guarantee of a different sort, and amounts at least to an assertion that

p. 1116

nothing has occurred in the relations between the landlords and the tenant which can be considered to make the tenant an unsatisfactory one. That is an assertion of a specific fact. . . . In my opinion a tenant who had paid his last quarter's rent by driblets under pressure must be regarded as an undesirable tenant.

Smith was relied on in connection with securities fraud in *Omnicare, infra* at 1133, Note 3. Is there any reason why the context of securities fraud should render general fraud principles inapplicable?

2. *Misrepresentations of law.* At common law, the dominant rule once provided that the action for deceit did not lie for misrepresentations of law. One reason was that legal rules were generally matters of public record to which the plaintiff and defendant had equal access. Alternatively the plaintiff could confirm those representations from an independent source if she desired. That rule has not, in general, been applied when a lawyer misrepresents the law to a lay adversary on the ground that it would be "unconscionable." Thus in *Sainsbury v. Pennsylvania Greyhound Lines*, 183 P.2d 548, 550 (4th Cir. 1950), the court invalidated a settlement where that settlement had been procured by a lawyer for a bus company who provided a serviceman, injured and in a hospital, a false statement of the relevant law.

The older rule has also been relaxed so as to allow fraud actions for "mixed" statements of fact and law. In *National Conversion Corp. v. Cedar Building Corp.*, 246 N.E.2d 351, 355 (N.Y. 1969), the plaintiff tenant entered into a five-year lease with the defendant landlord after the landlord had represented in the lease that the zoning allowed the plaintiff to conduct the business of converting restaurant garbage into fertilizer. The representations were false, and the plaintiff was allowed to recover both the rentals paid prior to the rescission and the costs of the installation and removal of its equipment. Breitel, J., specifically rejected the defendant's claim that its misrepresentations were not actionable:

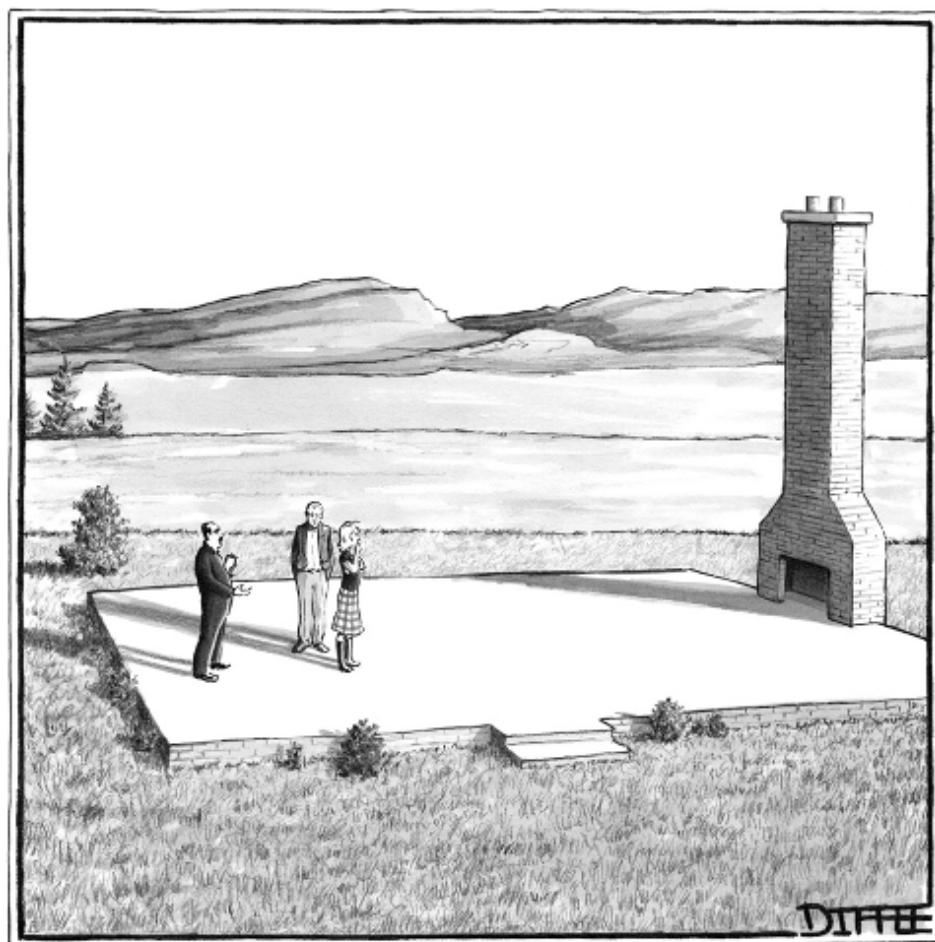

The statements in this case, both before the execution of the lease, and in the body of the lease, exemplify ideally an instance in which the statements are not intended or understood merely as an expression of opinion. Landlords said they knew the premises were in an unrestricted district. This meant that they knew as a fact, that the zoning resolution did not restrict the use of the particular premises, and tenant so understood it. When coupled with the further fact that tenant's lawyer was persuaded not to verify the status of the premises on the landlords' representation, it is equally clear that tenant understood the statement to be one of fact, namely, what the zoning resolution provided by description, map, and requirements as to the area in question. The misrepresented fact, if it is at all necessary to find misrepresented facts, was what the zoning resolution contained by way of description, map, and requirements, hardly opinions as to the law albeit matters to be found in a law.

SWINTON v. WHITINSVILLE SAVINGS BANK

QUA, J. The declaration alleges that on or about September 12, 1938, the defendant sold the plaintiff a house in Newton to be occupied by the plaintiff

p. 1117

and his family as a dwelling; that at the time of the sale the house "was infested with termites, an insect that is most dangerous and destructive to buildings"; that the defendant knew the house was so infested; that the plaintiff could not readily observe this condition upon inspection; that, "knowing the internal destruction that these insects were creating in said house," the defendant falsely and fraudulently concealed from the plaintiff its true condition; that the plaintiff at the time of his purchase had no knowledge of the termites, exercised due care thereafter, and learned of them about August 30, 1940; and that, because of the destruction that was being done and the dangerous condition that was being created by the termites, the plaintiff was put to great expense for repairs and for the installation of termite control in order to prevent the loss and destruction of said house.

"You've got termites."

Source: Matthew Diffee / The New Yorker Collection / The Cartoon Bank

There is no allegation of any false statement or representation, or of the uttering of a half truth which may be tantamount to a falsehood. There is no intimation that the defendant by any means prevented the plaintiff

from acquiring information as to the condition of the house. There is nothing to show any fiduciary relation between the parties, or that the plaintiff stood in a position of confidence toward or dependence upon the defendant. So far as appears the parties made a business deal at arm's length. The charge is concealment and nothing more; and it is concealment in the simple sense of mere failure to reveal, with nothing to show any peculiar duty to speak. The characterization of the concealment as false and fraudulent of course adds nothing in the absence of further allegations of fact.

If this defendant is liable on this declaration every seller is liable who fails to disclose any nonapparent defect known to him in the subject of the sale which materially reduces its value and which the buyer fails to discover. Similarly it would seem that every buyer would be liable who fails to disclose any nonapparent virtue known to him in the subject of the purchase which materially enhances its value and of which the seller is ignorant. See *Goodwin v. Agassiz*, 186 N.E. 659 (Mass. 1933). The law has not yet, we believe, reached the point of imposing upon the frailties of human nature a standard so idealistic as this. That the particular case here stated by the plaintiff possesses a certain appeal to the moral sense is scarcely to be denied. Probably the reason is to be found in the facts that the infestation of buildings by termites has not been common in Massachusetts and constitutes a concealed risk against which buyers are off their guard. But the

p. 1118

law cannot provide special rules for termites and can hardly attempt to determine liability according to the varying probabilities of the existence and discovery of different possible defects in the subjects of trade.

[Affirmed.]

NOTES

1. *Latent defects: Liability for nondisclosure by a seller?* In *Swinton*, the topic of termites was treated as one of pure silence, but add the representation "you're sure to love the house" and the case is instantly closer to a misrepresentation.

What if the defendant had plastered over the parts of the woodwork where termites were present? Could the action for concealment properly lie, even for Qua, J.? Other cases have held that actions by the defendant to cover up some defect count as fraud, even in the absence of words to that effect. Thus in *Croyle v. Moses*, 90 Pa. 250 (1879), the defendant committed fraud when he hitched up his horse short in order to conceal the fact that the animal was "a cribber and a windsucker." Likewise, *Osborn v. Gene Teague Chevrolet Co.*, 459 P.2d 988 (Or. 1969), sustained the plaintiff's verdict in a fraud case in which the defendant used car dealer had set back the odometer from 100,000 to 62,000 miles, without making any verbal misrepresentations.

The no-duty rule in *Swinton* has eroded over time. *Obde v. Schlemeyer*, 353 P.2d 672, 674-675 (Wash. 1960), another termite case, rejected *Swinton*, reasoning:

Where there are concealed defects in demised premises, dangerous to the property, health, or life of the tenant, which defects are known to the landlord when the lease is made, but unknown to the tenant, and which a careful examination on his part would not disclose, it is the landlord's duty to disclose them.

In addition, RTT: LEH §13 qualifies its general rule of nondisclosure with duties to disclose "material information" where "the actor knows that the other party to a transaction is mistaken about a basic assumption behind it, and that the other party, because of the relationship between them, the customs of the trade, or other circumstances, would reasonably expect disclosure of what the actor knows." Do these qualifications on the general rule of nondisclosure reflect a hidden pro-defendant bias in RTT: LEH §13?

Restatement of the Law (Third) of Torts: Liability for Economic Harm

§13. DUTIES TO DISCLOSE; TACIT MISREPRESENTATION

A failure to disclose material information may result in liability if the actor has a duty to speak. Such a duty exists where

(a) the actor has made a prior statement and knows that it will likely mislead another if not amended, even if it was not misleading when made; or

p. 1119

(b) the actor is in a fiduciary or confidential relationship with another that obliges the actor to make disclosures; or

(c) the actor knows that the other party to a transaction is mistaken about a basic assumption behind it, and that the other party, because of the relationship between them, the customs of the trade, or other circumstances, would reasonably expect disclosure of what the actor knows.

Illustration 8. Buyer purchases a house from Seller. Buyer then discovers serious defects in the foundation that Seller did not disclose. The court finds that Seller knew of the defects before the sale, knew they would be of great importance to Buyer, and knew they were not discoverable by the use of reasonable care; Buyer had obtained a customary and competent inspection, and the defects were not found. Seller is subject to liability to Buyer for fraud.

Illustration 11. Buyer purchases house from Seller, then discovers that its driveway encroaches on a neighbor's property. The court finds that Seller knew of the encroachment and did not disclose it to Buyer. The court also finds, however, that the encroachment could have been discovered by a survey or by inspection of public records, neither of which Buyer performed. Seller had no obligation to disclose the encroachment to Buyer and is not liable for fraud. Other rights and remedies may be available to Buyer by statute.

Comment d. Superior knowledge: . . . In Illustration 8, denying recovery would give future buyers an incentive to invest in more expensive inspections that would rarely be worth the cost. It is more efficient to

require the seller to reveal what he knows in the sales contract. In Illustration 11, by contrast, requiring each side to inform itself of the facts—or even just requiring the buyer to put direct questions to the seller—is not unduly burdensome, and is consistent with the commercial customs that govern real-estate transactions.

What evidence of community norms might be relevant to whether disclosure is required? If the standard contract for a home purchase contains an explicit warranty by the seller that a house is free of termites or other latent defects, is disclosure required when that contract is not used? What other devices might be used to address this recurrent risk? Note that it is common practice today for buyers to hire inspectors to do a comprehensive home inspection after signing the contract but before closing the deal. In general, the contract sales price is modified to take into account the costs of repairing the defects the inspection disclosed.

A tricky permutation involves conditions external to the property sold, to which neither the general rules of the Restatement nor home inspections apply, but where it is still necessary to decide whether the seller must inform the buyer or whether the buyer must make independent inquiries. Statutory interventions are common. Thus the New Jersey legislature enacted the New Residential

p. 1120

Construction Off-Site Conditions Disclosure Act, which mandates the disclosure of the availability of information regarding off-site conditions that might affect the value of residential real estate and provides immunity from tort actions where such disclosure is made. In New Jersey, sellers act at their peril if they deviate from the language of the statutorily mandated disclosures. In *Cohen v. W.B. Associates, Inc.*, 882 A.2d 456 (N.J. Super. Ct. Law Div. 2005), after giving notice of the availability of lists disclosing off-site conditions (as mandated by statute), the sellers added a paragraph describing one of the lists as referring to “property . . . formally used as, or . . . currently used as, . . . Campo De Marlboro” while neglecting to mention that “Campo De Marlboro” was “a minimum security prison operated by the New Jersey Department of Corrections.” The purchasers were allowed to pursue common law fraud and misrepresentation claims against the sellers, who relinquished statutory immunity by making representations beyond those required by statute. Perri, J.S.C., explained that otherwise the statute’s purpose—“to eliminate any ambiguity in the seller’s obligation and to insure that buyers are unequivocally aware of their obligation of due diligence”—would be undermined.

2. Partial disclosures. Even when there is no general duty to speak, partial disclosures are not allowed: “[O]ne who voluntarily elects to make a partial disclosure is deemed to have assumed a duty to tell the whole truth, i.e., to make full disclosure, even though the speaker was under no duty to make the partial disclosure in the first place.” *Union Pac. Res. Grp., Inc. v. Rhone-Poulenc, Inc.*, 247 F.3d 574, 584 (5th Cir. 2001). See also RST §551(2)(b); RTT: LEH §9(c), illus. 4. That principle was applied in *Gresh v. Waste Services of America, Inc.*, 311 Fed. Appx. 766 (6th Cir. 2009). Gresh, a vice president of Waste Services of America (WSA) on an at-will employment basis, had conducted extensive negotiations with company principals Skaggs and Dalton, who wanted to buy out his option to purchase 5 percent of the shares in the company, so as to allow its orderly sale to third parties. The two sides had major disagreements on price, with the company first offering \$250,000, and later \$315,000, and Gresh insisting that his option was worth more. Before the deal could be consummated, however, WSA sold all of its assets to a third party, Liberty, effectively rendering Gresh’s options worthless. Sutton, J., first held that WSA did not owe any fiduciary

duties of disclosure to an at-will employee, but nonetheless held that at least one count of fraudulent misrepresentation should go to the jury given that Dalton had made false representations to him.

In many respects, it is true, WSA dealt fairly with Gresh: Skaggs told him at the June 22 meeting that he was going to sell WSA, he offered a price for the option, and every contract that WSA sent to Gresh offering him a buyout of his option referred to the fact that WSA had been discussing the sale of some or all of the corporation's assets. . . [But at a key moment] WSA falsely led Gresh to believe that a sale of the corporation was not imminent and that he could safely continue to negotiate the buyout of his option without fear of losing everything. Some businesses, we appreciate, wield sharp elbows, and sometimes there is nothing the courts can do

p. 1121

about it except to invoke the timeless (and frequently ignored) warning of caveat emptor. But when Gresh, an option holder, asked about the status of Skaggs' plans to sell WSA, the common-law duty of good faith required WSA either to be straight with Gresh or to say nothing at all. By telling Gresh that a sale was not imminent WSA deprived Gresh of the benefit for which he bargained: the chance to exercise his option while it was worth something.

What result if the information that is supplied by one party at one time becomes obsolete with the passage of time? The general position indicates that the defendant who has led the plaintiff to believe in a certain state of affairs is under a duty to update that information to correct any earlier misimpressions, even if he makes no additional representations. See RST §551(2)(c); RTT: LEH §13(a). But there are clear limits on any such duty. In *Hord v. Environmental Research Institute of Michigan*, 617 N.W.2d 543 (Mich. 2000), the court held that an accurate 1991 operating summary of a firm's prospects did not generate an implicit duty to update the information when conditions changed thereafter. The court denied that "plaintiff had a right to rely on the 1991 summary as an accurate picture of the company's performance in fiscal year 1992, without some additional inquiry or affirmative representation by defendant."

Hord was relied on by the Sixth Circuit in *MacDonald v. Thomas M. Cooley Law Sch.*, 724 F.3d 654, 663, 664 (6th Cir. 2013), to grant the law school's motion to dismiss a fraud claim filed by graduates claiming that the school misrepresented its graduate employment statistics. According to Martin, J., "the graduates' reliance on the 'percentage of graduates employed' statistic to mean 'percentage of graduates employed in full-time legal positions' was not reasonable." He thus held that "a plaintiff's subjective misunderstanding of information that is not objectively false or misleading cannot mean that a defendant has committed the tort of fraudulent misrepresentation." Is there any presentation by law schools of such employment statistics that would be out of bounds?

LAIDLAW v. ORGAN

15 U.S. 178 (1817)

[The plaintiff Organ was a New Orleans tobacco merchant. He had learned from a friend that peace had been concluded between the British and American forces fighting in the War of 1812. Before the information was made public, Organ contracted to purchase a large order of tobacco from defendant

Laidlaw. Before the sale was completed, Laidlaw had asked the plaintiff whether he knew of any information that would affect the price of the tobacco; from the record it is unclear whether the plaintiff had made any reply, or if so, what he had said. When the peace was announced, the price of tobacco rose between 30 and 50 percent, owing to the end of the British blockade, which allowed for shipment to points outside the United States. Laidlaw, who had delivered the tobacco to Organ, repossessed it by force. Organ brought suit for damages for the loss of the tobacco. The key question in the case was whether their prior agreement,

p. 1122

pursuant to which the tobacco was transferred, was vitiated by fraud or nondisclosure. The jury found that Organ was entitled to receive the tobacco, whereupon Laidlaw appealed. After extensive argument Marshall, C.J., issued a brief opinion.]

MARSHALL, C.J. The question in this case is, whether the intelligence of extrinsic circumstances, which might influence the price of the commodity, and which was exclusively within the knowledge of the vendee, ought to have been communicated by him to the vendor? The court is of opinion that he was not bound to communicate it. It would be difficult to circumscribe the contrary doctrine within proper limits, where the means of intelligence are equally accessible to both parties. But at the same time, each party must take care not to say or do any thing tending to impose upon the other. The court thinks that the absolute instruction of the judge [to find for the plaintiff Organ] was erroneous, and that the question, whether any imposition was practised by the vendee upon the vendor ought to have been submitted to the jury. For these reasons the judgment must be reversed, and the cause remanded to the district court of Louisiana, with directions to award a *venire facias de novo* [new trial].

NOTES

1. *Latent virtue: Liability for nondisclosure by a buyer?* Unlike the latent defect cases, a *buyer* who acquires superior information about the subject matter of the contract may refrain from disclosing a material fact relating to its value to the seller. The situation can occur in contexts far removed from the stock market. Thus the proprietor of a secondhand music store may sell a Stradivarius violin for a trifling price to a violin expert who happens to wander into the premises. Generally the buyer is under no duty to disclose, even though the price would surely be higher if the seller knew the violin's pedigree. See RST §551, comment *k*, illus. 6. As RTT §13, comment *d* elaborates: "Better information is a legitimate advantage at the bargaining table, and the law encourages its acquisition," with a caveat in the limited circumstances where a party has "a legitimate reason to rely on an adversary to supply the information."

An analogous problem often arises with land purchases. Generally the purchaser of farmland need not disclose that he is buying it because he believes that it contains oil. Similarly the land developer who takes an option on farmland in trying to assemble a large parcel of land from several buyers for a major real estate development is normally under no duty to disclose the purpose of his venture, and may even act, or hire others to act for him, in a manner calculated to persuade his seller that he is in fact only interested in the farmland for its own sake. In *Guaranty Safe Deposit & Trust Co. v. Liebold*, 56 A. 951, 953 (Pa. 1904),

the option in question had been procured by the trust company to provide a site for a steel mill. The court held that the trust company had no duty to disclose.

In this commercial age options are daily procured by those in possession of information from which they expect to profit, simply because those from whom the

p. 1123

options are sought are ignorant of it. When the prospective seller knows as much as the prospective buyer, options can rarely, if ever, be procured, and the rule that counsel for appellant would have us apply would practically abolish them. The prospective buyer seeks an option instead of at once entering into a contract for the purchase of land, because, no matter what information he may possess exclusively, he is unwilling to act upon it until it becomes a certainty. In the meantime, on the contingency of its becoming so, he makes his contingent bargain to purchase. This is fair in law and in morals. If the appellee concealed anything it was his duty to disclose, or said anything to mislead or deceive the appellant, this rule, of course, would not apply; but they dealt at arm's length, as men always do under such circumstances, each trying to make what was supposed to be the best bargain for himself at the time.

The court then noted that its conclusion was especially apt because Liebold had increased his asking price for the land in response to a "rumor" that a large manufacturing company was contemplating setting up business in town.

2. *An economic account of nondisclosure.* The legal consequences of nondisclosure between the parties often can be clarified by an agreement between them. A purchaser can always ask a seller point blank if the premises are infested with termites; a seller can always ask a buyer if he believes oil lies under the seller's farmland or whether the land is slated for industrial development. If the party so asked responds with a falsehood, the ordinary rules of fraud apply; and if he refuses to answer the direct question, the other party is on notice and can act accordingly. Within this environment, the law helps devise a set of default rules to govern in the absence of any explicit agreement. One notable effort to find a coherent set of principles to govern nondisclosure cases is found in Kronman, *Mistake, Disclosure, Information, and the Law of Contracts*, 7 J. Legal Stud. 1, 9 (1978):

Where nondisclosure is permitted (or put differently, where the knowledgeable party's contract rights are enforced despite his failure to disclose a known mistake), the knowledge involved is typically the product of a costly search. A rule permitting nondisclosure is the only effective way of providing an incentive to invest in the production of such knowledge. By contrast, in the cases requiring disclosure, and in those excusing a unilaterally mistaken promisor because the other party knew or had reason to know of his error, the knowledgeable party's special information is typically not the fruit of a deliberate search. Although information of this sort is socially useful as well, a disclosure requirement will not cause a sharp reduction in the amount of such information which is actually produced. If one takes into account the investment costs incurred in the deliberate production of information, the two apparently divergent lines of cases described above may both be seen as conforming (roughly) to the principle of efficiency, which requires that the risk of a unilateral mistake be placed on the most effective risk-preventer.

Kronman applies his analysis to most of the cases set out above. How good is the fit?

EDGINGTON v. FITZMAURICE

29 Ch. 459 (1885)

[The plaintiff advanced £1,500 for debentures — long-term, fixed-rate financial instruments secured against a company's assets — of a company of which the defendants were directors and officers. In the circular distributed to raise the funds, the defendants announced that they had acquired a valuable property that was “subject to the half yearly payment of £500 in redemption of a mortgage of which £21,500 is outstanding.” Elsewhere in the prospectus the defendants stated they would use the moneys raised “to complete . . . alterations and additions to the buildings, and to purchase their own horses and vans,” and “to further develop the arrangements at present existing for the direct supply of cheap fish from the coast.”

The statements in the prospectus were alleged to be misrepresentations on the following grounds:

1. That the prospectus was so framed as to lead to the belief that the debentures would be a charge on the property of the company.
2. That the prospectus omitted to refer to a second mortgage for £5,000 to Messrs. Hores and Pattisson which had been made on the 10th of August, 1880.
3. That the prospectus stated that the property was subject to the half-yearly payment of £500 in redemption of the mortgage for £21,500, but omitted to state that on the 5th of April 1884, the whole balance of the mortgage that would then be due, namely, £18,000, might be at once called in.
4. That the real object of the issue of debentures was to pay off pressing liabilities of the company and not to complete the buildings or to purchase horses and vans or to develop the business of the company.

At trial, Denman, J., found for the plaintiffs. The defendants appealed.]

BOWEN, L.J. This is an action for deceit, in which the Plaintiff complains that he was induced to take certain debentures by the misrepresentations of the Defendants, and that he sustained damage thereby. The loss which the Plaintiff sustained is not disputed. In order to sustain his action he must first prove that there was a statement as to facts which was false; and secondly, that it was false to the knowledge of the Defendants, or that they made it not caring whether it was true or false. For it is immaterial whether they made the statement knowing it to be untrue, or recklessly, without caring whether it was true or not, because to make a statement recklessly for the purpose of influencing another person is dishonest. It is also clear that it is wholly immaterial with what object the lie is told. That is laid down in Lord Blackburn's judgment in *Smith v. Chadwick*[, 9 App. Cas. 187 (H.L.E. 1884)], but it is material that the defendant should intend that it should be relied on by the person to whom he makes it. But, lastly, when you have proved that the statement was false, you must further shew that the plaintiff has acted upon it and has

sustained damage by so doing: you must shew that the statement was either the sole cause of the plaintiff's act, or materially contributed to his so acting. . . .

p. 1125

The alleged misrepresentations were three. [Bowen, L.J., then concludes that there is insufficient evidence of fraudulent misrepresentation for the first two allegations, dealing with the question of whether the lender could call in the mortgage payments at once, and further that the property in question did not serve as security of another loan. Bowen thought these were material representations but did not think that they were made dishonestly.]

[W]hen we come to the third alleged misstatement I feel that the Plaintiff's case is made out. I mean the statement of the objects for which the money was to be raised. These were stated to be to complete the alterations and additions to the buildings, to purchase horses and vans, and to develop the supply of fish. A mere suggestion of possible purposes to which a portion of the money might be applied would not have formed a basis for an action of deceit. There must be a misstatement of an existing fact: but the state of a man's mind is as much a fact as the state of his digestion. It is true that it is very difficult to prove what the state of a man's mind at a particular time is, but if it can be ascertained it is as much a fact as anything else. A misrepresentation as to the state of a man's mind is, therefore, a misstatement of fact. Having applied as careful consideration to the evidence as I could, I have reluctantly come to the conclusion that the true objects of the Defendants in raising the money were not those stated in the circular. . . .

Then the question remains—Did this misstatement contribute to induce the Plaintiff to advance his money. Mr. Davey's argument has not convinced me that they did not. He contended that the Plaintiff admits that he would not have taken the debentures unless he had thought they would give him a charge on the property, and therefore he was induced to take them by his own mistake, and the misstatement in the circular was not material. But such misstatement was material if it was actively present to his mind when he decided to advance his money. The real question is, what was the state of the Plaintiff's mind, and if his mind was disturbed by the misstatement of the Defendants, and such disturbance was in part the cause of what he did, the mere fact of his also making a mistake himself could make no difference. It resolves itself into a mere question of fact. I have felt some difficulty about the pleadings, because in the statement of claim this point is not clearly put forward, and I had some doubt whether this contention as to the third misstatement was not an afterthought. But the balance of my judgment is weighed down by the probability of the case. What is the first question which a man asks when he advances money? It is, what is it wanted for? Therefore I think that the statement is material, and that the Plaintiff would be unlike the rest of his race if he was not influenced by the statement of the objects for which the loan was required. The learned Judge in the Court below came to the conclusion that the misstatement did influence him, and I think he came to a right conclusion.

NOTE

Causation in fraud cases. Will a defendant in a fraud case have a good causal defense if the plaintiff knew

of the falsity at the time the statement was made? If the plaintiff had the means to learn of the falsity of the defendant's statements?

p. 1126

In litigating fraud cases, the best defense is often a good offense. One tactic is for the defendant to insist that the plaintiff, far from being deceived, is only a disgruntled investor trying to recoup an unfortunate business investment out of the defendant's hide. Alternatively the defendant might portray the plaintiff as fraudulent in his relations with third parties, say, persons for whom the plaintiff received a finder's fee for persuading them to invest with the defendant. Complex webs of human interactions lead to protracted battles over causation in an effort to understand the interaction of various oral and written statements, sometimes formal and sometimes not, the meaning of which becomes ambiguous with the passage of time.

In *Edgington* and most fraud cases, the plaintiff seeks to recover for the lost value of the investment or purchase made, to the extent that this is attributable to the defendant's fraud, which in turn must be distinguished from declines in the value attributable to other sources, such as changes in general economic conditions or area-specific government regulations. See RST §549. Note that section 549(2) is rarely invoked. In loan cases like *Pasley* and *Edgington*, the expectation and reliance interests are often the same, as the creditor wants to recover the amount owed, with interest. The expectation measure gives the plaintiff the benefit of her deal, which is repayment with interest. The reliance measure puts the plaintiff back in the position she held before the transaction, which in financial cases also involves repayment with interest. In sales contexts, however, the two measures can diverge, as the profit from the deal can exceed the amount invested plus interest. One fraud case that gave the plaintiff the benefit of the bargain was *Selman v. Shirley*, 85 P.2d 384 (Or. 1938), in which the buyers of land were not only entitled to recoup the purchase price paid, but also to the increment in value they would have enjoyed if the land had contained, as represented, 4,000 cords of wood, worth \$2,000, and had been crossed by a stream that supplied enough water to irrigate ten acres.

Restatement of the Law (Second) of Torts

§549. MEASURE OF DAMAGES FOR FRAUDULENT MISREPRESENTATION

(1) The recipient of a fraudulent misrepresentation is entitled to recover as damages in an action of deceit against the maker the pecuniary loss to him of which the misrepresentation is a legal cause, including

- (a) the difference between the value of what he has received in the transaction and its purchase price or other value given for it; and
- (b) pecuniary loss suffered otherwise as a consequence of the recipient's reliance upon the misrepresentation.

(2) The recipient of a fraudulent misrepresentation in a business transaction is also entitled to recover additional damages sufficient

to give him the benefit of his contract with the maker, if these damages are proved with reasonable certainty.

p. 1127

BV NEDERLANDSE INDUSTRIE VAN EIPRODUKTEN v. REMBRANDT ENTERPRISES, INC.

[2019] EWCA Civ 596

LORD JUSTICE LONGMORE

. . . The first main issue [on appeal] relates to the requirement of inducement in a case of fraudulent misrepresentation. The questions that arise on this first issue are:

1. whether the normal requirement for rescission in misrepresentation cases that the representee must prove that he was induced to enter the relevant contract by the misrepresentation made by the representor is any different if the representation was made fraudulently (rather than innocently or negligently); more particularly whether the onus is on the representee to prove he was induced or on the representor to show that the representee was not so induced;
2. whether what is to be proved is (1) that the representee would not have made the relevant contract if the misrepresentation had not been made; or (2) that the representation played a part/no part of the decision to make the contract; or (3) that the representee might not have made the contract or; indeed, (4) that he would have wished to consider his position without being able to say at trial what it is that he would have done; and
3. whether, on the primary findings of fact of the judge, the right to rescind for misrepresentation was made out. . . .

All this arises in the context of the avian flu epidemic which struck the United States in April 2015. It was disastrous for United States' suppliers of egg products. Rembrandt Enterprises, Inc. ("Rembrandt") was one such supplier and had to destroy over 50% of its own birds. It also had to find a new source of supply of egg products in order to honour its own commitments. It found a supplier based in the Netherlands, BV Nederlandse Industrie van Eiproducten ("NIVE"), with which on 13th May 2015 it made a contract to buy 4200 metric tons of dry whole egg, dry yolk and dry white over a two year period for prices of €6.15, €4.15 and €14.90 per kilogram respectively, provided that its procedures in the Netherlands satisfied the US regulatory authorities for supervision of the egg business. The authorities gave the required approval on 1st June 2015.

Before that happened, however, NIVE emailed Rembrandt on 21st May 2015 saying that there would be unanticipated extra regulatory costs and that the prices would have to be increased and on 12th June 2015 NIVE proposed a €2.50

per kilogram increase in the price "after thorough calculation." After some negotiation, Rembrandt requested a breakdown of the extra costs and on 22nd June 2015 NIVE sent Rembrandt a cost calculation of €.59 per kilogram. Two days later Rembrandt agreed the price increase; on 25th June a new contract was made in materially the same terms as the original contract save that all the prices had been increased by €2.50 per kilogram.

Shipments began on 6th September 2015. Later that month NIVE informed Rembrandt that some of the egg white powder would be supplied by its sister company Henningsen van den Burg (“Henningsen”) whose plant had also been approved by the US regulatory authorities; on 30th October 2015 NIVE explained that the amount of that product being supplied by Henningsen was about 50%.

At about this time the price of egg products began to fall from the heights achieved at the time of the avian flu outbreak. Rembrandt’s solicitors in due course wrote to NIVE alleging that NIVE was failing to comply with US inspection requirements and suspending Rembrandt’s continued performance of the two year contract. On 30th March 2016 NIVE began proceedings for loss of profit on the sales that would have taken place but for such suspension of performance. That claim included loss of profit on the total amount to be supplied and so included loss of profit in respect of the product supplied by Henningsen as well as in respect of NIVE’s own product.

Rembrandt defended the proceedings not merely on the basis that, in breach of contractual warranty, the product did not comply with US regulations but also on the basis that the second contract had been procured by NIVE’s fraudulent misrepresentation that the increased sale price was calculated by reference only to the extra costs incurred as a result of compliance with US regulations, whereas in truth the increased price included an element of profit as well as the increase in cost. . . .

The Judgment

He [the judge] . . . held that the agreed increase in the sale price included an element of profit and that the representations made in the emails of 12th June 2015 (that the extra €2.50 was reached “after thorough calculation”) and 22nd June 2015 (that the calculation of €2.59 was a “cost calculation”) were false representations deliberately made and that Rembrandt believed the increase to be a genuine estimate of additional cost. They thus constituted fraudulent misrepresentations. He held that in law there was a presumption that Rembrandt relied on the representations and that it was for NIVE to prove that the second contract would have been made even if there had been no fraudulent misrepresentation. That NIVE could not do. The fact that Mr David Rettig, the chief executive officer of Rembrandt could not answer the question “what would Rembrandt have done” if it had known that the increased figure included an element of profit was nothing to the point. This gives rise to the first main ground of appeal.

* * *

Before considering the law, it is necessary to set out the primary facts found by the judge relevant to the question whether NIVE’s misrepresentation induced the second contract. These are set out by the judge as follows:

p. 1129

By 24th June 2015 Rembrandt had accepted the requested price increase of EUR 2.50 per kg. It appears that the decision was taken by Mr. Rettig. He gave evidence, which was not challenged, that he took the decision. He said his reasons for doing so were threefold. First, given the shortage of eggs in the US market he wished to secure product quickly to secure an advantage

over competitors. Second, despite the requested increase in price, the pricing remained “viable.” In particular the dried egg white price remained lower than the Urner Barry market price. Third, he had no reason to believe that the costs put forward by NIVE were not genuine and although they appeared higher than Rembrandt’s own costs he thought they would be much the same for all Netherlands producers. Mr. Rettig also said in his witness statement that had he known that the stated costs were not NIVE’s real costs of complying with US regulations but contained a very significant element of profit he would have viewed the situation very differently.

It was suggested to Mr. Rettig in cross-examination that he was very anxious to get dried egg product from NIVE and that he “didn’t really have anywhere else to go.” He said that was not true; what was imported from NIVE “was less than 15% of our overall imports.” He said “if we didn’t end up with NIVE, we could find other suppliers, whether with Spain, Italy, Latvia, the other countries that produced.” . . . He was asked what he would have done had he been told that 2.50 was not a real number, that the additional costs could be between 1.50 and 2.50 but that NIVE were insistent on getting an extra 2.50 per kg. He replied: “I don’t know. It’s hypothetical. I can’t answer.” It was suggested to him that Rembrandt was sufficiently desperate for the eggs that he would have agreed to the demand. Mr.Rettig replied: “Oh my gosh. After this testimony, I mean, we had 30 other countries we were working with. We were interested in an early solution. I’ll stand by my previous testimony.”

It is tolerably clear from this that the incidence of burden of proof may be important. If the onus of proving that the fraudulent misrepresentation induced Rembrandt to make the second contract is on Rembrandt (as it would be for non-fraudulent misrepresentations), Rembrandt’s claim to rescission may fail. If on the other hand, the onus is on NIVE to prove that Rembrandt would have made the second contract even if they had known that NIVE was fraudulently representing that the increased price was solely due to increases in cost and contained no element of profit, Rembrandt’s claim to rescission should “probably” succeed. I say “probably” because Mr Guy Morpuss QC for NIVE had a secondary argument that the only onus on NIVE had been discharged by virtue of the fact that Mr Rettig could not say what Rembrandt would have done if it had known the true facts.

It is also important to know what has to be proved by the party who has the onus of proof. Is it that the representee would/would not have acted differently but for the misrepresentation? Or is it that the representation played a part (or influenced) the decision of the representee? Or is it sufficient that the representee might/might not have acted differently?

It is surprising that these are still controversial questions in English law especially since the test for inducement in cases of innocent or negligent representation appears to be settled in the form that the representee has the burden of

showing inducement in the sense that he has to show he would not have entered into the relevant contract had the representation not been made.

Although, as far as fraud (and particularly rescission for fraud) is concerned, the test for inducement appears to be controversial, both Mr Gavin Kealey QC for Rembrandt and Mr Morpuss for NIVE submitted

that the test was settled in Victorian times and that, if subsequent cases were inconsistent with the Victorian ones, the law had taken a wrong turn.

The judge decided the case on the basis that the burden of proof was on NIVE to show that, if the representation had not been made, Rembrandt would still have made the second contract. He said:

... “The conclusion I have reached is that, whilst Mr Rettig might have agreed to the requested price increase, NIVE cannot show that he would have agreed to the requested price increase. The fraudulent misrepresentation as to the additional costs of complying with the US regulations was made for the very purpose of persuading Rembrandt to agree the requested price increase. That end was achieved. Very strong evidence is required to rebut the presumption or inference of inducement in such a case. Whilst there is evidence that Mr Rettig, on behalf of Rembrandt, might have agreed to the requested price increase had the misrepresentation not been made I do not consider that that evidence has the clarity and cogency necessary to enable to enable NIVE to persuade the court that Mr Rettig would in fact have agreed to the requested price increase even if the misrepresentation had not been made.”

[Longmore, L.J., then provides an extensive analysis of the Victorian cases—including *Derry v Peek*, *Pasley v Freeman*, and *Edgington v Fitzmaurice*—on inducement in cases of fraudulent misrepresentation.]

In the light of these authorities it seems to me that the law at the end of the nineteenth century had assimilated the requirement of inducement in the tort of deceit and in actions for rescission for fraudulent misrepresentation and could be stated as being that the representee had to prove he had been materially “influenced” by the representations in the sense that it was “actively present to his mind” to use Bowen LJ’s phrase [in *Edgington v Fitzmaurice*]; that, whereas there is a presumption that a statement, likely to induce a representee to enter into a contract, did so induce him, that is merely a presumption of fact which is to be taken into account along with all the evidence. There was no requirement as a matter of law, that the representee should state in terms that he would not have made the contract but for the misrepresentation but the absence of such a statement was part of the overall evidential picture from which the judge had to ascertain whether there was inducement or not. The fact that there were other reasons (besides the representation) for the claimant to have made the contract did not mean that he was not induced by the representation made. . . .

[The court then reviewed other cases of duress and deceit and held that under] the principle set out in *Edgington v Fitzmaurice* that the representee only has to show that the representation was “a cause” of his entering the relevant contract. . . .

It seems to me, therefore, that overall the modern authorities do not add much to the conclusions that I drew from the Victorian authorities . . . above. . . .

There remains the question whether, if it be the case that the burden of proof is on the representee to show that he was induced (albeit with the help of the presumption which is very difficult to rebut), it is sufficient

for him to show that he might have acted differently. . . .

I have already pointed out the ambiguity in the word “might”. . . . If it means no more than being actively present in the mind of the representee to repeat the phrase of Bowen LJ, it is perhaps a convenient shorthand. But if it means that the court cannot make up its mind on inducement and therefore decides as a matter of law to give the representee the benefit of the doubt, it is not a helpful concept because that would be contrary to the law as I conceive it to be, . . . which requires the representee to prove inducement albeit with the assistance of a presumption that “will be very difficult to rebut.” To some extent this is a matter of terminology but terminology can be important in some cases. . . .

I turn then to consider whether that presumption was rebutted on the facts of the present case. The judge held that it was not and this court must necessarily be reluctant to differ from the judge on what is essentially a question of fact. . . . [The court then held that evidence was unclear whether Mr Rettig would have acceded to the price increase even without the misrepresentation. Accordingly, like the appellate court in *Edgington*, he declined to set aside the decision of Teare, J., below and thus rejected this appeal.]

NOTES

1. Materiality in fraud cases. The reliance interest tends to dominate fraud cases. Proving the reliance interest forces courts to choose either an objective or subjective standard of evaluation to decide whether the plaintiff’s reliance was in fact “justifiable.” At one extreme, the simple fact of the plaintiff’s reliance could be sufficient to complete the causal chain. Perhaps out of a fear of feigned suits, however, most courts impose an additional objective requirement that the plaintiff’s reliance is justifiable only if the defendant’s misrepresentation is of a “material” fact. See RST §538; RTT: LEH §9, comment *d*.

Restatement of the Law (Second) of Torts

§538. MATERIALITY OF MISREPRESENTATION

(1) Reliance upon a fraudulent misrepresentation is not justifiable unless the matter misrepresented is material.

(2) The matter is material if

(a) a reasonable man would attach importance to its existence or nonexistence in determining his choice of action in the transaction in question; or

(b) the maker of the representation knows or has reason to know that its recipient regards or is likely to regard the matter

as important in determining his choice of action, although a reasonable man would not so regard it.

Restatement of the Law (Third) of Torts: Liability for Economic Harm

§9. FRAUD

Comment d. Materiality: Liability for fraud attaches only to misrepresentations that are material. A misrepresentation is material if a reasonable person would give weight to it in deciding whether to enter into the relevant transaction, or if the defendant knew that the plaintiff would give it weight (whether reasonably or not). The question, in effect, is whether the defendant knew or should have known that the misrepresentation would matter to the plaintiff. . . . This element of the tort is most likely to be important when one party to a negotiation makes false statements to the other about a matter collateral to the immediate subject of the bargain. . . . The materiality requirement also excludes liability for statements amounting to “puffery”—that is, a seller’s broad and predictably exaggerated statements about the quality of an item, as distinct from particular claims of fact. (Claims based on such statements may be dismissed, in the alternative, for want of justifiable reliance.)

2. *Materiality in securities cases.* The relationship between materiality and reliance has been much debated in securities cases. Under the securities law, the plaintiff must prove material falsehood but not fraud. In *TSC Industries, Inc. v. Northway, Inc.*, 512 F.2d 324, 330 (7th Cir. 1975), which involved a complex joint proxy statement, the Seventh Circuit stated that statements and omissions were material as a matter of law if they touched on “all facts which a reasonable stockholder *might* consider important.” The Supreme Court, concerned that this lax standard might lead to endless disclosures of trivial facts, stated the applicable standard more narrowly: “An omitted fact is material if there is a substantial likelihood that a reasonable shareholder would consider it important in deciding how to vote.” *TSC Indus., Inc. v. Northway, Inc.*, 426 U.S. 438, 449 (1976). Which standard better conforms to the Restatement’s account of materiality? Is the same set of rules on materiality applicable to omissions as to positive misstatements?

In *Basic Inc. v. Levinson*, 485 U.S. 224, 238, 239 (1988), the Supreme Court held that the definition of materiality in *TSC Industries* also applied to actions brought under Rule 10b-5, governing actions for fraud with respect to the purchase or sale of securities. Basic’s president publicly announced that “management was unaware” of any reason for extensive trading in its stock, after it had been approached by a larger company seeking to acquire it. The Court rejected Basic’s argument that its statements were proper as long as the parties had not

p. 1133

entered into an “agreement-in-principle” for the acquisition. It wrote: “No particular event or factor short of closing the transaction need be either necessary or sufficient by itself to render merger discussions material.” Rather, “materiality ‘will depend at any given time upon a balancing of both the indicated probability that the event will occur and the anticipated magnitude of the event in the light of the totality of the company activities,’” which could include “board resolutions, instructions to investment bankers, and actual negotiations between principals or their intermediaries.” The Court remanded the case for further consideration under its standard.

The Supreme Court revisited this issue in its lengthy opinion in *Omnicare, Inc. v. Laborers District Council Construction Industry Pension Fund*, 575 U.S. 175 (2015), which deals with registration statements filed

with the Securities and Exchange Commission. Section 11, 15 U.S.C. §77k(a), states:

In case any part of the registration statement, when such part became effective, contained an untrue statement of a material fact or omitted to state a material fact required to be stated therein or necessary to make the statements therein not misleading, any person acquiring such security . . . [may] sue.

In connection with a new public offering of common stock, Omnicare stated generally that:

We believe our contract arrangements with other healthcare providers, our pharmaceutical suppliers and our pharmacy practices are in compliance with applicable federal and state laws. .

. . .

We believe that our contracts with pharmaceutical manufacturers are legally and economically valid arrangements that bring value to the healthcare system and the patients that we serve.

Both statements were accompanied by caveats. On the first, Omnicare “mentioned several state-initiated ‘enforcement actions against pharmaceutical manufacturers for offering payments to pharmacies that dispensed their products’”; it then cautioned that the laws relating to that practice might “be interpreted in the future in a manner inconsistent with our interpretation and application.” *Id.* On the second, “Omnicare noted that the Federal Government had expressed ‘significant concerns’ about some manufacturers’ rebates to pharmacies and warned that business might suffer ‘if these price concessions were no longer provided.’”

The plaintiffs sued for violation of section 11, claiming that defendant’s representations were “materially false” because the federal government later conducted an investigation against Omnicare for violation of its anti-kickback laws. In a lengthy opinion, Kagan, J., asked two questions—“one focusing on what the statement says and the other on what it leaves out.” The first issue examined the relationship between statement of fact and opinion. The second dealt with the relevance of any omission.

On the first question, she concluded that the defendants were entitled to some protection to the extent of their good-faith belief in their own statements,

p. 1134

so that liability could not be established solely by showing that a statement of opinion turned out to be false. By “the same token every such statement explicitly affirms one fact: that the speaker actually holds the stated belief.” Kagan, J., then held that the two quoted sentences “are pure statements of opinion.” On the second issue, she thought the question was closer because a bald statement of opinion becomes actionable “if a registration statement omits material facts about the issuer’s inquiry into or knowledge concerning a statement of opinion, and if those facts conflict with what a reasonable investor would take from the statement itself, then §11’s omissions clause creates liability.” She stressed that the test here raised the same principles found in the Restatement of Torts §539, which in turn relied on Bowen’s, L.J., opinion in *Smith v. Land and House Property Corp.*, [1884] 28 Ch. 7, 15. There, Bowen states that when “the facts are not equally known to both sides, then a statement of opinion by the one who knows the facts best . . . impliedly states that [the speaker] knows facts which justify his opinion.” Is it ever possible to escape the

common rules on misrepresentation in securities cases?

How do the principles announced in *Omnicare* apply to actionable omissions? In *Affiliated Ute Citizens v. United States*, 406 U.S. 128, 153-154 (1972), the Ute Distribution Corporation issued shares in its corporate assets to “mixed-blood” descendants of the Ute Tribes. The articles of incorporation required that any mixed-blood shareholder wanting to sell shares to outsiders had to first offer these shares to tribal members but could sell to outsiders if no tribe member were prepared to accept the offer. Employees of the First Security Bank purchased shares from mixed-blood shareholders without disclosing to them that the price they offered was below that which they could receive by selling the shares in outside markets. Blackmun, J., refused to deny liability on the ground that the tribe members could not establish causation.

Under the circumstances of this case, involving primarily a failure to disclose, positive proof of reliance is not a prerequisite to recovery. All that is necessary is that the facts withheld be material in the sense that a reasonable investor might have considered them important in making this decision. This obligation to disclose and this withholding of a material fact establish the requisite element of causation in fact.

Compare the factual circumstances of *Omnicare* with those in *Affiliated Ute*. In the latter, the information at issue is clearly material because defendants had perfect knowledge of the legal rules governing the sales of the shares in question. In contrast, knowledge of background information is irrelevant in finding the defendants liable for material omissions in *Omnicare*.

3. *Insider trading*. The use of undisclosed information plays a central role whenever corporate insiders, typically directors, key officers, or major shareholders, purchase common stock from outsiders. In *Goodwin v. Agassiz*, 186 N.E. 659, 661 (Mass. 1933), the defendants were directors of a corporation that purchased shares over the Boston Exchange from the plaintiff, himself an experienced trader

p. 1135

who had kept records of his own transactions in the company’s stock. The plaintiff sought to rescind the sale or obtain other appropriate relief on the ground that the defendants did not disclose that they had received reports from a geologist that indicated that certain properties owned by the corporation might contain valuable mineral deposits. The court barred the plaintiff’s legal claim because he “made no inquiries of the defendant or of other officers of the company.”

Fiduciary obligations of directors ought not to be made so onerous that men of experience and ability will be deterred from accepting such office. Law in its sanctions is not coextensive with morality. It cannot take to put all parties to every contract on an equality as to knowledge, experience, skill and shrewdness. It cannot undertake to relieve against hard bargains made between competent parties without fraud. On the other hand, directors cannot rightly be allowed to indulge with impunity in practices which do violence to prevailing standards of upright business men. Therefore, where a director personally seeks a stockholder for the purpose of buying his shares without making disclosure of material facts within his peculiar knowledge and not within reach of the stockholder, the transaction will be closely scrutinized and relief may be granted in appropriate instances.

What might these instances be? Should the share purchase in *Goodwin* be judged by the same rules applicable to latent defects in real estate?

Today, the federal regulation of insider trading under Rule 10b-5 of the Securities and Exchange Acts, *supra* at 1110, Note 4, has been read to require directors to make public disclosures before they trade on inside information. See, e.g., SEC v. Texas Gulf Sulfur Co., 401 F.2d 833 (2d Cir. 1968), another famous case involving mineral deposits. Under *Goodwin*, should it make a difference if other transactions between unrelated parties took place on the day that the plaintiff sold to the defendants? Should the rule be different if the insider sells his shares or sells short because he has undisclosed information about the firm's negative prospects? In principle, should the corporate charter be allowed to stipulate that insiders may trade without disclosure on the organized exchange? There is a huge amount of literature on insider trading; see, e.g., Carlton & Fischel, *The Regulation of Insider Trading*, 35 Stan. L. Rev. 857 (1983), who argue that the corporate charter should be allowed to determine whether, and if so, how much, insider trading should be allowed so long as its terms are fully disclosed. Would most new companies think it desirable to place restrictions on insider trading to maximize the sale price of stock at the initial offering?

Aggressive criminal prosecutions for insider trading against "tippees"—persons who directly or indirectly obtain undisclosed information from insiders—were rebuffed in *United States v. Newman*, 773 F.3d 438 (2d Cir. 2014), by the Second Circuit, which oversees financial activity in New York City, on two grounds. First, the government did not allege a sufficient direct personal benefit to the insider who released the information to analysts. Second, the information in question was commingled with other information and passed through three or four different parties before it was used by traders, so that it was unclear that the defendants "knew that they were trading on information obtained from insiders in violation of those insiders' fiduciary duties."

p. 1136

In *Salman v. United States*, 137 S. Ct. 420 (2016), the Supreme Court abrogated the *Newman* decision's direct personal benefit requirement. *Salman*, the defendant tipper, provided his brother with material nonpublic information. Despite the lack of a clear pecuniary benefit to the tipper in exchange for the information, the Court found the defendant liable for insider trading. However, it remains unclear whether the *Salman* decision only applies in cases where the tipper and tippee are relatives, and the transaction provides no indirect benefits for the firm, which was arguably the case in *Newman* where the material information was released by the company's own representatives in order to increase overall share value. For discussion, see Epstein, *Returning to the Common-Law Principles of Insider Trading After Newman v. United States*, 125 Yale L.J. 1482 (2016).

4. *Loss causation in fraud on the market cases.* In all misrepresentations, the plaintiff must show "loss causation," or some causal link between the alleged falsehoods and the plaintiff's economic loss. Strictly construed, requiring strict proof of the traditional reliance element in deceit cases would block the action. Should plaintiffs be able to overcome that barrier by showing that the defendant's false statements led to systematic market movements adverse to the interest of the plaintiffs? In *Basic*, *supra* at 1032, Note 2, the Supreme Court approved using the "fraud on the market" theory in federal securities cases:

The fraud on the market theory is based on the hypothesis that, in an open and developed securities market, the price of a company's stock is determined by the available material information regarding the company and its business. . . . Misleading statements will therefore defraud purchasers of stock even if the purchasers do not directly rely on the misstatements. . . . The causal connection between the defendants' fraud and the plaintiffs' purchase of stock in such a case is no less significant than in a case of direct reliance on misrepresentations.

Basic then held that the fraud on the market theory created a "rebuttable presumption of reliance." "Requiring proof of individualized reliance from each member of the proposed plaintiff class effectively would have prevented respondents from proceeding with a class action, since the individual issues then would have overwhelmed the common ones." The Court therefore concluded that although individual proof of reliance might be appropriate in the "face-to-face transactions contemplated by early fraud cases," it was inappropriate for transactions in mass markets.

White, J., wrote a skeptical dissent: "But with no staff economists, no experts schooled in the 'efficient-capital-market hypothesis,' no ability to test the validity of empirical market studies, we are not well equipped to embrace novel constructions of a statute based on contemporary microeconomic theory." See generally Fischel, Use of Modern Finance Theory in Securities Fraud Cases, 38 Bus. Law. 1 (1982). On efficient markets generally, see Gilson & Kraakman, The Mechanisms of Market Efficiency, 70 Va. L. Rev. 549 (1984).

Proof of loss causation in securities actions is now regulated by the PSLRA, 15 U.S.C. §78u-4(b)(4), as follows:

p. 1137

- (4) Loss causation. In any private action arising under this title, the plaintiff shall have the burden of proving that the act or omission of the defendant alleged to violate this title caused the loss for which the plaintiff seeks to recover damages.

This provision was instrumental in the Supreme Court's decision in *Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336, 343-344 (2005), which refused the plaintiff's invitation to state a securities claim simply by alleging in the complaint and subsequently establishing that "the price" of the security "on the date of purchase was inflated because of the misrepresentation," without accounting for any circumstances between purchase and sale.

[I]f, say, the purchaser sells the shares quickly before the relevant truth begins to leak out, the misrepresentation will not have led to any loss. If the purchaser sells later after the truth makes its way into the marketplace, an initially inflated purchase price *might* mean a later loss. But that is far from inevitably so. When the purchaser subsequently resells such shares, even at a lower price, that lower price may reflect, not the earlier misrepresentation, but changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions, or other events, which taken separately or together account for some or all of that lower price.

The fraud on the market theory received a boost from the Supreme Court in *Erica P. John Fund, Inc. v. Halliburton Co.*, 563 U.S. 804, 813 (2011). In overturning the decisions below, a unanimous Court held that the fraud on the market theory of *Basic* and *Dura* did not require representative plaintiffs to prove loss causation in order to obtain class certification in a private securities fraud case. The plaintiffs' complaint alleged that, in order to inflate its stock price, the defendant had deliberately underestimated its liability for potential asbestos claims and overstated its anticipated benefits from a construction contract and potential merger. Roberts, C.J., explained that the lower court's insistence on proof of loss causation

contravenes *Basic*'s fundamental premise—that an investor presumptively relies on a misrepresentation so long as it was reflected in the market price at the time of his transaction. The fact that a subsequent loss may have been caused by factors other than the revelation of a misrepresentation has nothing to do with whether an investor relied on the misrepresentation in the first place, either directly or presumptively through the fraud-on-the-market theory. Loss causation has no logical connection to the facts necessary to establish the efficient market predicate to the fraud-on-the-market theory.

Subsequently in *Amgen, Inc. v. Connecticut Retirement Plans and Trust Funds*, 568 U.S. 455 (2013), a divided Supreme Court extended *Halliburton* by holding that certification of the plaintiff class could take place even before any proof by the plaintiff of the materiality or any statements or omissions about Amgen's statements on the safety or efficacy of its two "flagship drugs."

5. Damages under the fraud on the market theory. Under the fraud on the market theory, how should damages be computed? Take a simple case in which a company places false statements in its prospectus in order to increase the price it can obtain for a new offering of its publicly traded stock. If a person both buys and sells shares in the firm before the fraud is unmasked, ordinarily he should not recover damages. The extra money paid to purchase the shares is roughly offset by the extra money obtained on sale. But if an open-market purchase is made before the fraud is discovered, and the sale is made after the market breaks, then the downward adjustment in the share price (measurable, with difficulty, by statistical techniques) sets the level of the damages suffered by these share purchasers.

Using the fraud on the market approach makes it appear that all other market participants have suffered at the hands of the defendant. In many cases, however, many ignorant buyers or sellers *profit* incidentally from the defendant's fraud. Consider a person who already owns stock in a company that launches a new issue of stock with fraudulent statements that inflate the value of both its new shares and the existing shares. The owner might dispose of the shares before the fraud is revealed, thereby obtaining a higher price than if the fraud had never been committed. The buyer of those shares will in turn suffer losses once the fraud has been revealed. The gains and losses of buyer and seller will roughly net out. The fraud on the market theory, however, charges the buyer's losses to the issuer while ignoring the seller's gains. The theory, therefore, in principle, overdeters fraud by overstating the *social* losses that it causes. One possible escape is to set damages equal to the *gains* that the fraudulent defendant obtained from the fraud. Yet even these gains may be hard to measure, and, in some cases like *Basic*, appear to be nonexistent. On these damages problems, see Fischel, *supra* Note 4, 38 Bus. Law. at 16-17.

LABORERS LOCAL 17 HEALTH AND BENEFIT FUND v. PHILIP MORRIS, INC.

191 F.3d 229 (2d Cir. 1999)

CARDAMONE, J. [Plaintiffs' funds were organized under the Employee Retirement Income Security Act of 1974 (ERISA) to provide health care to their union members. These funds claimed that they were the victims of tobacco industry fraud on its patients, which induced those patients to overconsume cigarettes and therefore to increase plaintiffs' costs of providing health care under its plans to participants that suffered from illnesses related to cigarette smoking.

Among the causes of action pleaded were those alleging Racketeer Influenced and Corrupt Organizations Act (RICO) violations and common law fraud, both of which were held to present the same requirement for proof of proximate causation. Later in its opinion, the court said: "These [RICO] principles also apply in general terms to the fraud and special duty causes of action asserted by plaintiffs under New York common law."]

p. 1139

The complaint seeks past and future damages to recover for "money expended . . . to provide medical treatment to [plaintiffs'] participants and beneficiaries who have suffered and are suffering from tobacco-related illnesses." As interpreted by the district court, the complaint also seeks damages inflicted on the Funds' infrastructure independent of the harm suffered by plan participants. These latter damages, alleged to be separate and wholly distinct from participants' medical costs, consist of losses suffered due to the Funds' inability to control costs, to promote the use of safer alternative products, and to establish programs to educate their participants not to use tobacco products.

Ordinarily, plaintiffs' right to sue for damages would be subrogated to the rights of those individual smokers for whom they provided health care benefits. In other words, plaintiffs would stand in the shoes of the injured participants and recoup damages from defendants, as tortfeasors, only to the extent defendants were liable to the participants themselves. But the Funds have not asserted such a subrogation action in this complaint. Instead, they have sued in their own right for the money spent for plan participants and [for infrastructure losses].

Discussion

Proximate Cause

The first certified question we are called upon to answer raises a question of proximate cause, namely, whether the chain of causation linking defendants' alleged wrongdoing to plaintiffs' alleged injuries is too remote to permit recovery as a matter of law. We begin by analyzing this subject in the context of plaintiffs' RICO claims.

I. Proximate Cause as an Element of Standing Under RICO

The RICO provision for civil actions states

Any person injured in his business or property by reason of a violation of section 1962 of this chapter may sue therefor in any appropriate United States district court and shall recover threefold the damages he sustains and the cost of the suit, including a reasonable attorney's fee.

18 U.S.C. §1964(c) (2012). In *Holmes* [v. Securities Investor Protection Corp., 503 U.S. 258, 268 (1992)], the Supreme Court stated that a plaintiff's standing to sue under RICO requires "a showing that the defendant's violation not only was a 'but for' cause of his injury, but was the proximate cause as well." To determine in a given case whether proximate cause is present, common law principles are applied.

A. *The concept in general.* In everyday terms, the concept [of proximate cause] might be explained as follows: Because the consequences of an act go endlessly forward in time and its causes stretch back to the dawn of human history, proximate cause is used essentially as a legal tool for limiting a wrongdoer's liability only to those harms that have a reasonable connection to his actions. The law

p. 1140

has wisely determined that it is futile to trace the consequences of a wrongdoer's actions to their ultimate end, if end there is.

B. *Direct injury as a requirement of proximate cause.* Over the passage of time, however, courts have somewhat clarified the definition of proximate cause by identifying several traditional common law principles limiting liability whose application, in aggregate, formulates the proximate cause analysis. As noted in *Holmes*, "'proximate cause' [is used] to label generically the judicial tools used to limit a person's responsibility for the consequences of that person's own acts.'" . . .

Among these "judicial tools," one notion traditionally included in the concept of proximate causation is the requirement that there be "some direct relation between the injury asserted and the injurious conduct alleged." For this reason, "a plaintiff who complain[s] of harm flowing merely from the misfortunes visited upon a third person by the defendant's acts [is] generally said to stand at too remote a distance to recover."

C. *Applying the direct injury test to instant case.* Ultimately, however, whether plaintiffs' injuries are labeled as "infrastructure harm" or "harm to financial stability," their damages are entirely derivative of the harm suffered by plan participants as a result of using tobacco products. Without injury to the individual smokers, the Funds would not have incurred any increased costs in the form of the payment of benefits, nor would they have experienced the difficulties of cost prediction and control that constituted the crux of their infrastructure harms. Being purely contingent on harm to third parties, these injuries are indirect. Consequently, because defendants' alleged misconduct did not proximately cause the injuries alleged, plaintiffs lack standing to bring RICO claims against defendants.

II. Policy Considerations

Further, this conclusion is consistent with the three policy factors addressed by *Holmes*, which buttress the principle that plaintiffs with indirect injuries lack standing to sue under RICO. "First, the less direct an injury is, the more difficult it becomes to ascertain the amount of a plaintiff's damages attributable to the violation, as distinct from other, independent, factors." . . . It will be virtually impossible for plaintiffs to

prove with any certainty: (1) the effect any smoking cessation programs or incentives would have had on the number of smokers among the plan beneficiaries; (2) the countereffect that the tobacco companies' direct fraud would have had on the smokers, despite the best efforts of the Funds; and (3) other reasons why individual smokers would continue smoking, even after having been informed of the dangers of smoking and having been offered smoking cessation programs. On a fundamental level, these difficulties of proving damages stem from the agency of the individual smokers in deciding whether, and how frequently, to smoke. In this light, the direct injury test can be seen as wisely limiting standing to sue to those situations where the chain of causation

p. 1141

leading to damages is not complicated by the intervening agency of third parties (here, the smokers) from whom the plaintiffs' injuries derive.

These concerns become particularly pointed in a case, like the present one, where the injuries are alleged to derive not simply from defendants' affirmative misconduct but also from plaintiffs' fraudulently induced inaction. That is, it is often easier to ascertain the damages that flow from actual, affirmative conduct, than to speculate what damages arose from a party's failure to act. In the latter situation, as in the case at hand, it becomes difficult to distinguish among the multitude of factors that might have affected the damages. Here, for example, plaintiffs' alleged damages might have derived from inefficiencies in the Funds' own management, as well as from non-smoking related health problems suffered by the smokers, and it would be the sheerest sort of speculation to determine how these damages might have been lessened had the Funds adopted the measures defendants allegedly induced them not to adopt.

The complexity of these calculations makes the ultimate question of damages suffered by the Funds virtually impossible to determine. Indeed, this case seems to present precisely the type of large, complicated damages claims that *Holmes* . . . sought to avoid. Moreover, for us to rule otherwise could lead to a potential explosion in the scope of tort liability, which, while perhaps well-intentioned, is a subject best left to the legislature.

The second policy factor addressed in *Holmes* focuses on the possibility that "recognizing claims of the indirectly injured would force courts to adopt complicated rules apportioning damages among plaintiffs removed at different levels of injury from the violative acts, to obviate the risk of multiple recoveries." [The court then finds that the New York rules on collateral benefits do not eliminate the need to coordinate multiple payments.]

In the third policy factor discussed by *Holmes*, the Supreme Court concluded that the need to grapple with the problems of calculating and apportioning damages was unjustified where "directly injured victims can generally be counted on to vindicate the law as private attorneys general, without any of the problems attendant upon suits by plaintiffs injured more remotely." The Funds correctly note that these RICO causes of action could not be asserted by the smokers or by the Funds in a subrogation action because the RICO statute requires an injury to "business or property," whereas the smokers' injuries are personal in nature. Hence, the Funds conclude there are no more directly injured "private attorneys general" who could vindicate the law for these alleged RICO violations. The district court also found that because individual smokers would not be able to bring a RICO action, the harms alleged in plaintiffs' complaint would go

unremedied were the Funds' action not allowed to continue.

Yet, to the contrary, our holding that plaintiffs lack standing under RICO need not bring about the result plaintiffs fear. The Funds may still bring a subrogation action to recover the medical costs paid out for the individual smokers, and the smokers themselves have sufficient independent incentive to pursue their own causes of action for such additional types of injuries as pain and suffering.

p. 1142

III. Is a Defendant's Specific Intent to Harm a Plaintiff an Exception to the Direct-Injury Rule?

Plaintiffs aver that even if their claims fail the direct injury test, they should still have standing to sue because an exception to this rule exists where the defendants specifically intend to harm plaintiffs.

[The court then reviews the relevant cases.] As such, these decisions regarding specific intent do not support the proposition that an indirect injury is actionable where the injury was specifically intended by the defendant. In other words, an allegation of specific intent does not overcome the requirement that there must be a direct injury to maintain this action.

IV. Common Law Fraud and Special Duty Claims

[After an examination of the New York cases, the court concludes that] analogous principles to those that doomed plaintiffs' RICO causes of action also bar plaintiffs' common law fraud and special duty actions. . .

Accordingly, we hereby reverse the district court's March 25, 1998 order with respect to causes of action I and II (the RICO claims), V (the fraud claim), and VI (the special duty claim). The case is remanded to the district court with directions to dismiss plaintiffs' complaint.

NOTES

1. Causation and privity in fraud cases. *Laborers Local 17* shows vividly how common law fraud actions often surface in modern contexts, namely, as virtual duplicates of federal RICO claims. The need to limit a defendant's liability for its words is generally greater than it is for deeds because, in our modern era, the number of persons who can claim to have relied on a defendant's public statements is potentially infinite. That said, how clear is the line between direct and indirect causation in fraud cases? If that dichotomy is no longer tenable, what is an appropriate doctrinal substitute? Should the analysis be affected by the fact that individual smokers have largely failed in their common law actions to recover damages from tobacco companies? Whatever its merits, *Laborers Local 17* has been followed in at least seven other circuits that have considered the issue. See, e.g., Serv. Emps. Int'l Union Health & Welfare Fund v. Philip Morris, Inc., 249 F.3d 1068, 1072 n.2 (D.C. Cir. 2001).

In *Holmes*, relied on in *Laborers Local 17*, the defendants were alleged to have engaged in stock manipulation whereby, from 1964 to 1981, they made unduly optimistic statements about the performance of six companies in order to drive up those companies' values. From time to time, the defendants traded in the stock of these companies to create the appearance of a liquid market. Several brokers and dealers purchased substantial quantities of the manipulated stocks with their own funds, only to lose the value of their investment when the fraud was uncovered. The Securities Investor Protection Corporation (SIPC) then had to pay \$13 million to cover the losses suffered by

p. 1143

clients when these brokerage houses failed. The Supreme Court held that the action by SIPC was barred on the ground that the damages were too remote. Should the customers of the failed houses be allowed to sue for their losses? If not, where is the break in the causal chain? Is there sufficient protection here because the brokerage houses could have sued for their own losses in the fraud? Do the brokerage houses have an incentive to sue after the failure of SIPC's case?

The issue of proximate cause arose again in *Lexmark International, Inc. v. Static Control Components*, 572 U.S. 118 (2014), which involved liability under the Lanham Act, which provides that any person who makes a "false or misleading representation . . . in a commercial advertisement or promotion . . . shall be liable in a civil action by any person who believes that he or she is or is likely to be damaged by such act." 15 U.S.C. §1125(a). Lexmark manufactured refillable toner cartridges. In order to secure the return of these cartridges, it offered its customers a "Prebate," "which enabled customers to purchase new toner cartridges at a 20-percent discount if they would agree to return the cartridge to Lexmark once it was empty." To secure that return, it inserted a computer chip in the cartridge that would disable it once the ink ran out. Static Control devised its own microchip that mimicked the behavior of Lexmark's chip and thus allowed Lexmark customers to come to Static Control for refilling. Lexmark brought suit for copyright infringement. Static Control counterclaimed for a violation of the misrepresentation provision of the Lanham Act. It first claimed that Lexmark had purposely misled end users by claiming that they were "legally bound" by the prebate terms to return the cartridges to Lexmark, and second, that they had purposely misled other companies in the cartridge business by claiming that "it was illegal to use Static Control's products to refurbish those cartridges." Scalia, J., relying on both *Dura* and *Holmes*, held that these allegations stated a cause of action under the Lanham Act, even though Lexmark was not a direct competitor of Static Control.

First, Static Control alleged that Lexmark disparaged its business and products by asserting that Static Control's business was illegal. . . . When a defendant harms a plaintiff's reputation by casting aspersions on its business, the plaintiff's injury flows directly from the audience's belief in the disparaging statements. Courts have therefore afforded relief under §1125(a) not only where a defendant denigrates a plaintiff's product by name, but also where the defendant damages the product's reputation by, for example, equating it with an inferior product. . . .

The District Court emphasized that Lexmark and Static Control are not direct competitors. But when a party claims reputational injury from disparagement, competition is not required for proximate cause; and that is true even if the defendant's aim was to harm its immediate competitors, and the plaintiff merely suffered collateral damage. Consider two rival carmakers

who purchase airbags for their cars from different third-party manufacturers. If the first carmaker, hoping to divert sales from the second, falsely proclaims that the airbags used by the second carmaker are defective, both the second carmaker and its airbag supplier may suffer reputational injury, and their sales may decline as a result. In those circumstances,

p. 1144

there is no reason to regard either party's injury as derivative of the other's; each is directly and independently harmed by the attack on its merchandise.

The Lanham Act also deals with cases in which the defendant seeks to "confuse" its products with those of the plaintiff, on which see *infra* Chapter 14.

2. *Contributory negligence in fraud cases.* In *Seeger v. Odell*, 115 P.2d 977, 980 (Cal. 1941), Traynor, J., noted: "Negligence on the part of the plaintiff in failing to discover the falsity of a statement is no defense when the misrepresentation was intentional rather than negligent." In *Teamsters Local 282 Pension Trust Fund v. Angelos*, 762 F.2d 522, 528 (7th Cir. 1985), Easterbrook, J., explained the rule in holding that the failure of a pension trustee to investigate did not relieve the defendant of liability for securities fraud.

Securities law seeks to impose on issuers duties to disclose, the better to obviate the need for buyers to investigate. The buyer's investigation of things already known to the seller is a wasteful duplication of effort. If the securities laws worked perfectly there would be little need for investigation; sellers would disclose to the buyers and the market the information necessary for informed trading. Because some frauds will not be caught, and because people cannot interpret information flawlessly, this mechanism cannot work perfectly. This failure makes investigations by investors necessary and creates incentives for sellers to hire certifiers (such as auditors and investment bankers) to verify sellers' statements. But such investigations and other devices are distinctly second-best solutions to legal and practical problems, and we will not establish a legal rule under which investors must resort to the costly self-help approach of investigation on pain of losing the protection of the principal legal safeguard, the rule against fraud.

This is just another way to state the common law rule that contributory negligence is not a defense to an intentional or reckless tort.

SECTION C. NEGLIGENT MISREPRESENTATION

ULTRAMARES CORP. v. TOUCHE

174 N.E. 441 (N.Y. 1931)

CARDOZO, C.J. The action is in tort for damages suffered through the misrepresentations of accountants, the first cause of action being for misrepresentations that were merely negligent and the second for misrepresentations charged to have been fraudulent.

In January, 1924, the defendants, a firm of public accountants, were employed by Fred Stern & Co., Inc., to prepare and certify a balance sheet exhibiting the condition of its business as of December 31, 1923. They had been employed at the end of each of the three years preceding to render a like service. Fred Stern & Co., Inc., which was in substance Stern himself, was engaged in the importation and sale of rubber. To finance its operations, it required extensive credit and

p. 1145

borrowed large sums of money from banks and other lenders. All this was known to the defendants. The defendants knew also that in the usual course of business the balance sheet when certified would be exhibited by the Stern Company to banks, creditors, stockholders, purchasers, or sellers, according to the needs of the occasion, as the basis of financial dealings. Accordingly, when the balance sheet was made up, the defendants supplied the Stern company with thirty-two copies certified with serial numbers as counterpart originals. Nothing was said as to the persons to whom these counterparts would be shown or the extent or number of the transactions in which they would be used. In particular there was no mention of the plaintiff, a corporation doing business chiefly as a factor, which till then had never made advances to the Stern Company, though it had sold it merchandise in small amounts. The range of the transactions in which a certificate of audit might be expected to play a part was as indefinite and wide as the possibilities of the business that was mirrored in the summary.

By February 26, 1924, the audit was finished and the balance sheet made up. It stated assets in the sum of \$2,550,671.88 and liabilities other than capital and surplus in the sum of \$1,479,956.62, thus showing a net worth of \$1,070,715.26. Attached to the balance sheet was a certificate as follows:

TOUCHE, NIVEN & CO.

Public Accountants

Eighty Maiden Lane

New York

February 26, 1924

Certificate of Auditors

We have examined the accounts of Fred Stern & Co., Inc., for the year ending December 31, 1923, and hereby certify that the annexed balance sheet is in accordance therewith and with the information and explanations given us. We further certify that, subject to provision for federal taxes on income, the said statement, in our opinion, presents a true and correct view of the financial condition of Fred Stern & Co., Inc., as at December 31, 1923.

Touche, Niven & Co.

[Cardozo, C.J., noted that the accountant's statement was wrong in all material respects. Stern & Co. was in fact insolvent at the time the balance sheet was prepared, and the defendant auditors had been taken in by false statements of income and expenses prepared by Stern's officers. After an extensive review of the evidence, Cardozo, C.J., concluded that a skilled auditor would have followed up various leads and detected the fraud perpetrated by Stern & Co.'s chief officers. On the faith of the balance sheet certified by the defendant, the plaintiff, as part of its factoring business, advanced various sums to Stern & Co. throughout most of 1924. Stern & Co. collapsed in January 1925, leaving the plaintiff with a host of unpaid loans, both unsecured and inadequately secured. In November 1926,

p. 1146

the plaintiffs sued the defendants for both negligence and fraud. The trial judge refused to allow the fraud count to go to the jury. The jury, however, found the defendant negligent and awarded the plaintiff some \$187,500. The trial judge, who had reserved judgment on the sufficiency of the negligence claim, entered a judgment for the defendant on the ground that the plaintiff's claim for negligent misrepresentation did not state a cause of action. That decision was reversed by the appellate division. Cardozo, C.J., noted that the finding of negligence was supported by the evidence. "The reckoning was not wrong upon the evidence before us, if duty be assumed."]

We are brought to the question of duty, its origin and measure.

Sir George Alexander Touche, one of the founders of Touche, Niven & Co., which is now a major consulting firm known as Deloitte

Source: Wikimedia Commons

The defendants owed to their employer a duty imposed by law to make their certificate without fraud, and a duty growing out of contract to make it with the care and caution proper to their calling. Fraud includes the pretense of knowledge when knowledge there is none. To creditors and investors to whom the employer exhibited the certificate, the defendants owed a like duty to make it without fraud, since there was notice in the circumstances of its making that the employer did not intend to keep it to himself. A different question develops when we ask whether they owed a duty to these to make it without negligence. If liability for negligence exists, a thoughtless slip or blunder, the failure to detect a theft or forgery beneath the cover of deceptive entries, may expose accountants to a liability in an indeterminate amount for an indeterminate time to an indeterminate class. The hazards of a business conducted on these terms are so extreme as to enkindle doubt whether a flaw may not exist in the implication of a duty that exposes to these consequences. We put aside for the moment any statement in the certificate which involves the representation of a fact as true to the knowledge of the auditors. If such a statement was made, whether believed to be true or not, the defendants are liable for deceit in the event that it was false. The plaintiff does not need the invention of novel doctrine to help it out in such conditions. The case was submitted to

the jury and the verdict was returned upon the theory that even in the absence of a misstatement of a fact there is a liability also for erroneous opinion. The expression of an opinion is to be subject to a warranty implied by law. What, then, is the warranty, as yet unformulated, to be? Is it merely that the opinion is honestly conceived and that the preliminary inquiry has been honestly pursued, that a halt has not been made without a genuine belief that the search has been reasonably adequate to bring disclosure of the truth? Or does it go farther and

p. 1147

involve the assumption of a liability for any blunder or inattention that could fairly be spoken of as negligence if the controversy were one between accountant and employer for breach of a contract to render services for pay?

The assault upon the citadel of privity is proceeding in these days apace. How far the inroads shall extend is now a favorite subject of juridical discussion. . . . In the field of the law of contract there has been a gradual widening of the doctrine of Lawrence v. Fox (20 N.Y. 268 (1859)), until today the beneficiary of a promise, clearly designated as such, is seldom left without a remedy (Seaver v. Ransom[, 120 N.E. 639 (N.Y. 1918)]). Even in that field, however, the remedy is narrower where the beneficiaries of the promise are indeterminate or general. Something more must then appear than an intention that the promise shall redound to the benefit of the public or to that of a class of indefinite extension. The promise must be such as to "bespeak the assumption of a duty to make reparation directly to the individual members of the public if the benefit is lost" (Moch Co. v. Rensselaer Water Co). In the field of the law of torts a manufacturer who is negligent in the manufacture of a chattel in circumstances pointing to an unreasonable risk of serious bodily harm to those using it thereafter may be liable for negligence though privity is lacking between manufacturer and user (MacPherson v. Buick Motor Co., 217 N.Y. 382 (1916); American Law Institute, Restatement of the Law of Torts, §262). A force or instrument of harm having been launched with potentialities of danger manifest to the eye of prudence, the one who launches it is under a duty to keep it within bounds (*Moch*). Even so, the question is still open whether the potentialities of danger that will charge with liability are confined to harm to the person, or include injury to property. In either view, however, what is released or set in motion is a physical force. We are now asked to say that a like liability attaches to the circulation of a thought or a release of the explosive power resident in words.

Three cases in this court are said by the plaintiff to have committed us to the doctrine that words, written or oral, if negligently published with the expectation that the reader or listener will transmit them to another, will lay a basis for liability though privity be lacking. These are Glanzer v. Shepard (233 N.Y. 236 (1922)); International Products Co. v. Erie R.R. Co[, 155 N.E. 662 (N.Y. 1927)], and Doyle v. Chatham & Phenix Nat. Bank[, 171 N.E. 574 (N.Y. 1930)].

In Glanzer v. Shepard the seller of beans requested the defendants, public weighers, to make return of the weight and furnish the buyer with a copy. This the defendants did. Their return, which was made out in duplicate, one copy to the seller and the other to the buyer, recites that it was made by order of the former for the use of the latter. The buyer paid the seller on the faith of the certificate which turned out to be erroneous. We held that the weighers were liable at the suit of the buyer for the moneys overpaid. Here was something more than the rendition of a service in the expectation that the one who ordered the certificate would use it thereafter in the operations of his business as occasion might require. Here was a case where

the transmission of the certificate to another was not merely one possibility among many, but the “end and aim of the transaction,” as certain and immediate and deliberately willed as if a husband were to order

p. 1148

a gown to be delivered to his wife, or a telegraph company, contracting with the sender of a message, were to telegraph it wrongly to the damage of the person expected to receive it. The intimacy of the resulting nexus is attested by the fact that after stating the case in terms of legal duty, we went on to point out that viewing it as a phase or extension of Lawrence v. Fox, or Seaver v. Ransom, we could reach the same result by stating it in terms of contract. The bond was so close as to approach that of privity, if not completely one with it. Not so in the case at hand. No one would be likely to urge that there was a contractual relation, or even one approaching it, at the root of any duty that was owing from the defendants now before us to the indeterminate class of persons who, presently or in the future, might deal with the Stern company in reliance on the audit. In a word, the service rendered by the defendant in Glanzer v. Shepard was primarily for the information of a third person, in effect, if not in name, a party to the contract, and only incidentally for that of the formal promisee. In the case at hand, the service was primarily for the benefit of the Stern company, a convenient instrumentality for use in the development of the business, and only incidentally or collaterally for the use of those to whom Stern and his associates might exhibit it thereafter. Foresight of these possibilities may charge with liability for fraud. The conclusion does not follow that it will charge with liability for negligence.

[A discussion of International Products Co. v. Erie R.R. and Doyle v. Chatham & Phenix National Bank is omitted.]

From the foregoing analysis the conclusion is, we think, inevitable that nothing in our previous decisions commits us to a holding of liability for negligence in the circumstances of the case at hand, and that such liability, if recognized, will be an extension of the principle of those decisions to different conditions, even if more or less analogous. The question then is whether such an extension shall be made.

The extension, if made, will so expand the field of liability for negligent speech as to make it nearly, if not quite, coterminous with that of liability for fraud. Again and again, in decisions of this court, the bounds of this latter liability have been set up, with futility the fate of every endeavor to dislodge them. *Scienter* has been declared to be an indispensable element except where the representation has been put forward as true of one's own knowledge, or in circumstances where the expression of opinion was a dishonorable pretense. . . . Even an opinion, especially an opinion by an expert, may be found to be fraudulent if the grounds supporting it are so flimsy as to lead to the conclusion that there was no genuine belief back of it. Further than that this court has never gone. Directors of corporations have been acquitted of liability for deceit though they have been lax in investigation and negligent in speech. This has not meant, to be sure, that negligence may not be evidence from which a trier of the facts may draw an inference of fraud (*Derry v. Peek*, [L.R.] 14 A.C. 337) but merely that if that inference is rejected, or, in the light of all the circumstances, is found to be unreasonable, negligence alone is not a substitute for fraud. . . . A change [from fraud to negligence] so revolutionary, if expedient, must be wrought by legislation. . . .

Liability for negligence if adjudged in this case will extend to many callings other than an auditor's. Lawyers who certify their opinion as to the validity of

municipal or corporate bonds with knowledge that the opinion will be brought to the notice of the public, will become liable to the investors, if they have overlooked a statute or a decision, to the same extent as if the controversy were one between client and adviser. Title companies insuring titles to a tract of land, with knowledge that at an approaching auction the fact that they have insured will be stated to the bidders, will become liable to purchasers who may wish the benefit of a policy without payment of a premium. These illustrations may seem to be extreme, but they go little, if any, farther than we are invited to go now. Negligence, moreover, will have one standard when viewed in relation to the employer, and another and at times a stricter standard when viewed in relation to the public. Explanations that might seem plausible, omissions that might be reasonable, if the duty is confined to the employer, conducting a business that presumably at least is not a fraud upon his creditors, might wear another aspect if an independent duty to be suspicious even of one's principal is owing to investors. "Every one making a promise having the quality of a contract will be under a duty to the promisee by virtue of the promise, but under another duty, apart from contract, to an indefinite number of potential beneficiaries when performance has begun. The assumption of one relation will mean the involuntary assumption of a series of new relations, inescapably hooked together." (*Moch.*) "The law does not spread its protection so far." (Robins Dry Dock & Repair Co. v. Flint, 275 U.S. 303 (1927)).

Our holding does not emancipate accountants from the consequences of fraud. It does not relieve them if their audit has been so negligent as to justify a finding that they had no genuine belief in its adequacy, for this again is fraud. It does no more than say that if less than this is proved, if there has been neither reckless misstatement nor insincere profession of an opinion, but only honest blunder, the ensuing liability for negligence is one that is bounded by the contract, and is to be enforced between the parties by whom the contract has been made. We doubt whether the average business man receiving a certificate without paying for it and receiving it merely as one among a multitude of possible investors, would look for anything more.

(2) The second cause of action is yet to be considered.

The defendants certified as a fact, true to their own knowledge, that the balance sheet was in accordance with the books of account. If their statement was false, they are not to be exonerated because they believed it to be true. We think the triers of the facts might hold it to be false.

[The court reviewed the evidence on the second cause of action and noted that accountants are to be judged by a strict standard of construction "when certifying to an agreement between the audit and the entries" as the defendants did here. The court also concluded that the defendants could not protect themselves against a charge that they did not detect the fictitious invoices "by invoking a practice known as that of testing and sampling," on the ground that it was "plainly insufficient" to determine whether there were in fact any accounts at all. The court concluded that the defendants could not escape liability because they had "delegated the performance of this work to agents of their own selection."]

Plaintiff's first cause of action was dismissed; a new trial was granted on plaintiff's second cause of action.]

NOTES

1. *Liability for negligent misrepresentation.* *Ultramares* is still the leading American common law decision on liability for negligent misrepresentation. Does its invocation of the privity limitation make more sense here than it does in the products liability cases? The waterworks cases? If the defendants had been told to mail a copy of their certified statement directly to the plaintiff for use in its lending operations, could the plaintiff have recovered in negligence? Does *Ultramares* imply that only third parties who pay for the preparation of the report can sue for its negligent preparation? Could the plaintiff recover under a third-party beneficiary theory? Could the accountant limit liability for negligence by contract? For fraud?

In New York, *Ultramares* was extensively reexamined in *White v. Guarente*, 372 N.E.2d 315, 318-319 (N.Y. 1977). There the court held that the plaintiff, a limited partnership specializing in trading and hedging marketable securities, stated a negligent misrepresentation cause of action against the defendant Arthur Andersen & Co. The partnership had retained the accounting firm to audit the activities of its general partners who had improperly withdrawn their own funds from the firm. Andersen negligently missed these withdrawals. Unlike the situation in *Ultramares*, the suit did not expose Andersen to liability to “the extensive and indeterminable investing public-at-large,” but “rather to a known group possessed of vested rights, marked by a definable limit and made up of certain components.” Andersen “must have been aware that a limited partner would necessarily rely on or make use of the audit and tax returns of the partnership, or at least constituents of them, in order to properly prepare his or her own tax returns.” Were the limited partners in privity with the defendants, because the partnership hired the defendants to do the audit? In *Credit Alliance Corp. v. Arthur Andersen & Co.*, 483 N.E.2d 110 (N.Y. 1985), Jasen, J., reiterated that liability for negligent misrepresentation under *Ultramares* depended on whether the defendants supplied the report for a particular purpose to “a known party or parties” of whom the defendants were aware, but relaxed the strict *Ultramares* privity requirement to extend to relationships “sufficiently approaching privity.”

The Second Restatement of Torts §552 limits liability for negligent misrepresentation to, at most, individuals who are members “of a limited group of persons for whose benefit and guidance” the information is supplied, provided that there is reliance on that information in that transaction, or “in a substantially similar transaction.” RTT: LEH §5 adopts this position with small changes. The Second Restatement position has been adopted in numerous recent cases, including *Ellis v. Grant Thornton LLP*, 530 F.3d 280 (4th Cir. 2008), in which plaintiff, the president of a bank, sued an accounting firm retained by the bank for negligent misrepresentations (both oral and made in the audit report) concerning the financial condition of the bank. The plaintiff alleged that he relied on

p. 1151

defendant’s representations of the bank’s solid financial condition in deciding to accept employment as bank president. The audit report plainly stated: “This report is intended for the information and use of the [bank] and its regulatory agencies and should not be used by third parties for any other purpose.” *Id.* at 285. Reversing the district court’s award of nearly \$2.5 million in damages following a bench trial on the negligent misrepresentation claim, Hamilton, J., held that plaintiff had not satisfied the elements of RST §552 given that the accounting firm “was not aware . . . that its audit was being performed for the benefit of potential employees of [the bank].” And further: “A person as sophisticated and experienced in the banking

business as [plaintiff] is, he knew he could not justifiably rely on [the accountant's] statements when the report itself stated otherwise.” *Id.* at 292.

2. *From privity to foreseeability and back.* The narrow liability rule in *Ultramare*s received a chillier reception in *H. Rosenblum, Inc. v. Adler*, 461 A.2d 138, 145, 149, 153 (N.J. 1983). There the defendant accounting firm, Touche Ross & Co., was sued for negligent misrepresentation for failing to ferret out the fraud that Giant Stores Corporation had perpetrated against the plaintiffs, who, under a merger agreement, accepted worthless Giant stock in exchange for shares of their own private corporations. The trial judge dismissed the negligent misrepresentation claim against Touche Ross & Co., but the New Jersey Supreme Court remanded the case for trial. Schreiber, J., first noted the tension between Cardozo’s opinions in *MacPherson* and *Ultramare*s, and then insisted that privity should not be a barrier to misrepresentation claims any more than claims arising from physical injury. Relying on RST §552, Schreiber, J., concluded: “Generally, within the outer limits fixed by the court as a matter of law, the reasonably foreseeable consequences of the negligent act define the duty and should be actionable.”

Reasoning that the “auditor’s function has expanded from that of a watchdog for management to an independent evaluator of the adequacy and fairness of financial statements issued by management to stockholders, creditors, and others,” Schreiber, J., continued:

When the independent auditor furnishes an opinion with no limitation in the certificate as to whom the company may disseminate the financial statements, he has a duty to all those whom that auditor should reasonably foresee as recipients from the company of the statements for its proper business purposes, provided that the recipients rely on the statements pursuant to those business purposes. The principle that we have adopted applies by its terms only to those foreseeable users who receive the audited statements from the business entity for a proper business purpose to influence a business decision of the user, the audit having been made for that business entity. Thus, for example, an institutional investor or portfolio manager who does not obtain audited statements from the company would not come within the stated principle. Nor would stockholders who purchased the stock after a negligent audit be covered in the absence of demonstrating the necessary conditions precedent. Those and similar cases beyond the stated rule are not before us and we express no opinion with respect to such situations.

p. 1152

These expansionist tendencies of accountants’ liability were in turn checked, at least in part, in *Bily v. Arthur Young & Co.*, 834 P.2d 745, 767 (Cal. 1992), which rejected the “foreseeability” test of *Rosenblum* on the ground that it could impose “a potential liability far out of proportion to its fault,” and held that sophisticated investors could have purchased, if they chose, protection from the auditor by contract. Fearing the contraction of necessary auditing services, the court followed RST §552 and restricted potential liability to a narrow class of persons, who, although not clients, “are specifically intended beneficiaries of the audit report who are known to the auditor and for whose benefit it renders the audit report.”

A convenient summary of the various lines of authority is found in *Ellis, supra* at 1150, Note 1, at 287-288. Hamilton, J., noted that four lines of authority had developed to resolve an accountant’s liability to third

parties for negligent misrepresentation:

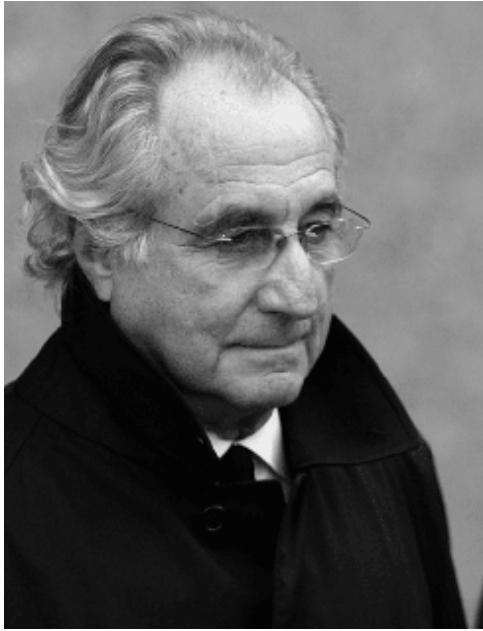

The first of these approaches was announced in [*Ultramare*], which held that negligence actions were only permitted by parties in privity of contract or in a situation so close as to approach that of privity. The second approach was also developed by the New York Court of Appeals, which slightly modified the *Ultramare Corp.* approach in 1985 [in *Credit Alliance*]. The third approach is set forth in §552 of the Restatement (Second) of Torts. Under this approach, a person or limited class of persons who the auditor can foresee as parties who will (and do) rely upon financial statements are allowed to recover. The fourth approach is the reasonably foreseeable approach, which permits all parties who are reasonably foreseeable recipients of financial statements for business purposes to recover as long as they rely on the statements for these business purposes [citing *Rosenblum*].

In the absence of direct dealings—what *Credit Alliance* called “linking conduct” between the auditor and non-client—plaintiffs have had little luck in their suits against accountants. In *CRT Investments Ltd. v. BDO Seidman, LLP*, 925 N.Y.S.2d 439, 441 (App. Div. 2011), the plaintiffs were investors in a Cayman Island hedge fund who sued their accountants in negligence when their investment turned sour. A short per curiam decision held:

The complaint fails to plead a factual basis for inferring that BDO Seidman did anything more than perform the routine business of auditing. Where, as here, direct contact between the accountant and the plaintiff is minimal or nonexistent, the plaintiff cannot recover for the accountant’s alleged negligence. The fact that plaintiffs were entitled to and received a copy of the audited financial statements, or that BDO Seidman knew that the investors would rely upon the information contained in the financial statements, does not establish the requisite linking conduct. BDO Seidman’s work in the course of the audit was performed pursuant to professional standards applicable in the context of any audit, and was not undertaken pursuant to any specific duty owed to plaintiffs. Therefore, plaintiffs cannot establish the direct nexus necessary to give them a claim against BDO Seidman for negligent misrepresentation.

p. 1153

Exhibit 13.1 The Biggest Ponzi Scheme in History

Source: Brendan McDermid / Reuters

The judgment in *CRT Investments* was part of the tremendous fallout following the collapse of a \$65 billion fraud perpetrated by disgraced financier Bernard L. Madoff. After pleading guilty to orchestrating, as the *New York Times* put it, the “largest, longest, and most widespread Ponzi scheme in history,” Chin, J., of the Federal District Court for the Southern District of New York sentenced Madoff to 150 years’ imprisonment, the maximum allowable sentence for the crimes to which he pled guilty.

Madoff’s victims ranged from modest investors—many of whom lost their life savings—to major financial and cultural institutions. The generous returns they believed they were getting from investing with Madoff evaporated almost overnight once the scheme was exposed.

3. *Causation in negligent misrepresentation cases.* The element of causation is just as critical in cases of negligent misrepresentations as it is in cases of fraudulent misrepresentation. Indeed the area exhibits many of the complexities found in physical harm cases. In *Oregon Steel Mills, Inc. v. Coopers & Lybrand, LLP*, 83 P.3d 322, 330 (Or. 2004), the defendant accountants negligently and incorrectly prepared consolidated financial statements, which delayed the public offering of the plaintiff’s shares by two months, from April to June 1996, when the shares sold for \$2.50 less per share than they would have on the earlier date. Balmer, J., granted summary judgment to the defendant on the issue of causation. He noted first that these losses in market value were in principle distinguishable from the reputational losses that might have impaired the plaintiff to raise additional funds in capital markets. Instead he held that interventions by unrelated market forces did not count as “a reasonably foreseeable result of defendant’s wrongful conduct.” His analysis parallels that for cases of delay in the delivery of nonperishable goods or the receipt of a building permit because of a negligent application. In all of these cases, it is in a sense foreseeable that the value of the plaintiff’s project could either go up or down with equal probability. But in the absence of special circumstances (such as the sale of perishable goods), the only systematic loss is the *interest* on the

amount receivable attributable to the delay. Stated otherwise, in some cases the delay will work to the *advantage* of the plaintiff by allowing for a later sale in a rising market. So long as securities markets are efficiently priced, the defendant is overpenalized if forced to pay for the downturns in value so long as the plaintiff is entitled to pocket any (foreseeable) gains from any interim upturn in value. The interest payment leaves the plaintiff indifferent with respect to time, assuming that the additional costs of completing the new issue are borne

p. 1154

by the negligent defendant. For the comparable role of coincidence in physical injury cases, see *Berry v. Sugar Notch Borough, supra* at 420.

4. Contracting out of liability for negligent misrepresentation. Should negligent misrepresentation cases even be treated as tort cases? In *Hedley, Byrne & Co. Ltd. v. Heller & Partners Ltd.*, [1964] App. Cas. 465, 526 [H.L. 1963], Hedley, Byrne was a firm of advertising agents that extended over £15,000 of credit to a firm called Easipower. It made this loan only after obtaining a credit report on Easipower from Heller, who allegedly negligently overstated Easipower's creditworthiness. Lord Devlin concluded that in principle it made no difference "whether financial loss is caused through physical injury or whether it is caused directly."

If irrespective of contract, a doctor negligently advises a patient that he can safely pursue his occupation and he cannot and the patient's health suffers and he loses his livelihood, the patient has a remedy. But if the doctor negligently advises him that he cannot safely pursue his occupation when in fact he can and he loses his livelihood, there is said to be no remedy. Unless, of course, the patient was a private patient and the doctor accepted half a guinea for his trouble: then the patient can recover all. I am bound to say, my Lords, that I think this to be nonsense. . . . It arises, if it is the law, simply out of a refusal to make sense. The line is not drawn on any intelligible principle. It just happens to be the line which those who have been driven from the extreme assertion that negligent statements in the absence of contractual or fiduciary duty give no cause of action have in the course of their retreat so far reached.

Lord Devlin nonetheless ruled for the defendant on the strength of its disclaimer. "A man cannot be said voluntarily to be undertaking a responsibility if at the very moment when he is said to be accepting it he declares that in fact he is not."

Once disclaimers are regarded as effective, what presumption should govern negligence liability in their absence? Goldberg, Accountable Accountants: Is Third-Party Liability Necessary?, 17 J. Legal Stud. 295, 300-301 (1988), defended *Ultramarines* on the ground that the default rule should be one of no liability:

If it turned out that it was appropriate that accountants should compensate third parties for their negligence, it would not be very difficult to have them assume the liability by contract rather than by having it imposed by tort. Third parties could receive explicit assurance in the form of a warranty, guarantee, bond, or a similar device. Even without explicit liability, the negligent accounting firm would suffer the consequences of poor performance in the form of a decline in the value of its "brand name." Since it is probably true that accountants are not very good

guarantors, I would guess that accountants would rarely agree to compensate third parties. But it is crucial to recognize that it is unnecessary for courts or legislatures to guess. It is sufficient for them to allow the parties to resolve the problem by contract.

For a defense of the expanded liability of accountants, see Weiner, *Common Law Liability of the Certified Public Accountant for Negligent Misrepresentation*,

p. 1155

20 San Diego L. Rev. 233 (1983). See also Bishop, *Negligent Misrepresentation Through Economists' Eyes*, 96 Law Q. Rev. 360 (1980).

5. Modern securities law and the indeterminate class. The specter of *Ultramare*s haunts modern securities law in which vast potential liability for material nondisclosures, as well as misstatements, is a daily fact of life. Who should be entitled to sue under the securities laws for their financial losses? Section 10(b) of the Securities Exchange Act, *supra* at 1110, Note 4, proscribes fraud “in connection with the purchase or sale of securities.” In *Blue Chip Stamps v. Manor Drug Stores*, 421 U.S. 723, 747-748 (1975), the plaintiffs alleged that they did not purchase shares of the defendant’s stock because the defendants had made false and misleading negative statements about its value. The Supreme Court held that only actual purchasers and sellers of stocks could sue under section 10(b). The Court feared that the plaintiffs’ proposed rule would admit an enormous class of potential plaintiffs into court, place heavy strains on the system of discovery, and require defendants to litigate against plaintiffs whose claims were wholly hypothetical. In explicit reliance on *Ultramare*s, the Court concluded:

[W]hile much of the development of the law of deceit has been the elimination of artificial barriers to recovery on just claims, we are not the first court to express concern that the inexorable broadening of the class of plaintiff who may sue in this area of the law will ultimately result in more harm than good.

Does this conclusion answer Lord Devlin’s concern that there is no sensible distinction between financial loss and physical injury cases? If both *Ultramare*s and *Goodwin v. Agassiz* are sound law, is there any reason for a special regime of securities fraud law?

CHAPTER 14

Economic Harms

Section A. Introduction

Section B. Inducement of Breach of Contract

Lumley v. Gye

Asahi Kasei Pharma Corp. v. Actelion Ltd.

Section C. Intentional Interference with Prospective Advantage

Tarleton v. M'Gawley

Section D. Negligent Interference with Economic Relationships

People Express Airlines, Inc. v. Consolidated Rail Corp.

Southern California Gas Co. v. Superior Court of Los Angeles County

Section E. Unfair Competition

Mogul Steamship Co. v. McGregor, Gow & Co.

International News Service v. Associated Press

The National Basketball Association v. Motorola, Inc.

Barclays Capital Inc. v. Theflyonthewall.com

Ely-Norris Safe Co. v. Mosler Safe Co.

Mosler Safe Co. v. Ely-Norris Safe Co.

SECTION A. INTRODUCTION

This chapter addresses when and how tort law protects economic interests from interference. This theme is not new; its broad outlines have previously been addressed in certain specific contexts. Recovery for economic losses in the wake of property damage or bodily injury is ordinarily available in tort, whether the underlying claim involves negligence, strict liability, or an intentional wrong. Economic interests receive still more explicit protection when the plaintiff seeks a remedy for trade disparagement, covered in Chapter 11; interference with the right of publicity, covered in Chapter 12; or for the pecuniary losses attributable to misrepresentation, the subject of Chapter 13.

This chapter extends that analysis by considering three separate instances of economic harms to strangers. Section B examines the extent to which the law protects contractual relationships by supplying a contracting party not only contractual remedies against a promisor in breach, but also tort remedies against a third party who has induced, or threatens to induce, the contractual breach. Section C considers the protection afforded, not to existing contracts, but to potential business relationships with third parties the defendant has disrupted not only by words but by the use of force. Plaintiffs in such cases can recover only

in tort, if at all, having never achieved a contract and therefore, in turn, a contractual remedy. Section D offers a glimpse at the common law protection of intellectual property, with some discussion of the overlap between the common law rules and the statutory regimes that today regulate patents, copyrights, trade secrets, trade names, and trademarks. The common law principles concerning protection of this valuable information are key to understanding the ever-growing and changing statutory regimes.

p. 1158

Courts tread carefully when asked to impose liability for purely economic harms. Their reluctance stems from two sources: First, as with emotional distress and negligent misrepresentation, courts fear that generalized protection of economic interests against any diminution in value will spawn endless lawsuits and administrative nightmares. The second fear is that the principle of “unfair competition,” if incautiously expanded, will destroy ordinary business competition and the social prosperity and innovation it provides. That being said, composers, inventors, and authors will expend the energy to create only if they know their creations will be protected from potential infringers, copiers, and other pirates. With tangible property, a clear prohibition against trespass can adequately protect the fruits of individual labor. But with intellectual property, that simple device is not available, and a more complex legal regime is required. Courts must balance these conflicting goals. Their task is made all the more challenging by the inherent complexities of the creative processes and the expanded possibilities for infringement in our technology-driven age. In this arena, common law remedies often fall short, and labor, antitrust, patent, copyright, trade name, and trademark statutes assume ever greater importance.

SECTION B. INDUCEMENT OF BREACH OF CONTRACT

Exhibit 14.1 Edward III and the Pestilence

The Statute of Labourers was enacted in the wake of the Black Plague of 1348-1349. Most likely caused by a potent bubonic plague carried by infected fleas traveling on rats via Asian trade routes, the Black Plague devastated England. It is estimated that the initial spread of infection, plus periodic outbreaks over the next 30 years, decreased the population of England by 30 to 50 percent. Given the minimal contemporaneous understanding of contagion and pathology, many sincerely believed the world was coming to an end. The desolation created an urgent need to replace deceased workers, particularly crop harvesters. Early orders of Edward III mandating work at pre-plague wages made way for Parliament to pass the Statute of Labourers, an unprecedented foray by the government into the realm of labor and employment.

The Statute of Labourers (1351)

3 Ed. III 1351

. . . Because a great part of the people and especially of the, workmen and servants has now died in that pestilence [the Black Plague], some, seeing the straits of the masters and the scarcity of servants, are not willing to serve unless

p. 1159

they receive excessive wages, and others, rather than through labour to gain their living, prefer to beg in idleness: We . . . have seen fit to ordain: that every man and woman of our kingdom of England, of whatever condition, whether bond or free, who is able bodied and below the age of sixty years, not living from trade nor carrying on a fixed craft, nor having of his own the means of living, or land of his own with regard to the cultivation of which he might occupy himself, and not serving another, if he, considering his station, be sought after to serve in a suitable service, he shall be bound to serve him who has seen fit so to seek after him; and he shall take only the wages liveries, meed or salary which, in the places where he sought to serve, were accustomed to be paid in the twentieth year of our reign of England, or the five or six common years next preceding. Provided, that in thus retaining their service, the lords are preferred before others of their bondsmen or their land tenants. . . .

And if a reaper or mower, or other workman or servant, of whatever standing or condition he be, who is retained in the service of any one, do depart from the said service before the end of the term agreed, without permission or reasonable cause, he shall undergo the penalty of imprisonment, and let no one, under the same penalty, presume to receive or retain such a one in his service.

LUMLEY v. GYE

118 Eng. Rep. 749 (K.B. 1853)

The 1st count of the declaration stated that plaintiff was lessee and manager of the Queen's Theatre, for performing operas for gain to him; and that he had contracted and agreed with Johanna Wagner to perform in the theatre for a certain time, with a condition, amongst others, that she should not sing nor use her talents elsewhere during the term without plaintiff's consent in writing: Yet defendant, knowing the premises, and maliciously intending to injure plaintiff as lessee and manager of the theatre, whilst the agreement with Wagner was in force,

p. 1160

and before the expiration of the term, enticed and procured Wagner to refuse to perform: by means of which enticement and procurement of defendant, Wagner wrongfully refused to perform, and did not perform during the term.

Exhibit 14.2 Johanna Wagner

Johanna Wagner (1828-1894) was a great mezzo-soprano and a niece of the composer Richard Wagner. The dispute in Lumley v. Gye arose at the height of her fame. In the companion case of Lumley v. Wagner, Ms. Wagner (Notes 1, 6) was enjoined from singing for the defendant but not ordered to sing for the plaintiff. In the aftermath of the dispute, Ms. Wagner returned home without singing for either company. But in 1856 she returned to England to sing for Lumley, and was regarded so highly that Queen Victoria, departing from her usual rule, went to the opera house to hear her sing. After her singing career ended, she became a noted voice instructor.

Count 2, for enticing and procuring Johanna Wagner to continue to refuse to perform during the term, after the order of Vice Chancellor Parker, affirmed by Lord St. Leonards, restraining her from performing at a

theatre of defendants.

Count 3. That Johanna Wagner had been and was hired by plaintiff to sing and perform at his theatre for a certain time, as the dramatic artiste of plaintiff, for reward to her, and had become and was such dramatic artiste of plaintiff at his theatre: Yet defendant, well knowing &c., maliciously enticed and procured her, then being such dramatic artiste, to depart from the said employment.

In each count special damage was alleged.

CROMPTON, J. . . . It was said, in support of the demurrer, that it did not appear in the declaration that the relation of master and servant ever subsisted between the plaintiff and Miss Wagner; that Miss Wagner was not averred, especially in the two first counts, to have entered upon the service of the plaintiff; and that the engagement of a theatrical performer, even if the performer has entered upon the duties, is not of such a nature as to make the performer a servant, within the rule of law which gives an action to the master for the wrongful enticing away of his servant. And it was laid down broadly, as a general proposition of law, that no action will lie for procuring a person to break a contract, although such procuring is with a malicious intention and causes great and immediate injury. And the law as to enticing servants was said to be contrary to the general rule and principle of law, and to be anomalous, and probably to have had its origin from the state of society when serfdom existed, and to be founded upon, or upon the equity of, the Statute of Labourers[, 25 Ed. 3 (1349)]. It was said that it would be dangerous to hold that an action was maintainable for persuading a third party to break a contract, unless some boundary or limits could be pointed out; and that the remedy for enticing away servants was confined to cases where the relation of master and servant, in a strict sense, subsisted between the parties; and that, in all other cases of contract, the only remedy was against the party breaking the contract.

Whatever may have been the origin or foundation of the law as to enticing of servants, and whether it be, as contended by the plaintiff, an instance and branch of a wider rule, or whether it be, as contended by the defendant, an anomaly and an exception from the general rule of law on such subjects, it must now be considered clear law that a person who wrongfully and maliciously, or, which is the same thing, with notice, interrupts the relation subsisting between master and servant by procuring the servant to depart from the master's service, or by harbouring and keeping him as servant after he has quitted it and during the time stipulated for as the period of service, whereby the master is injured, commits a wrongful act for which he is responsible at law. I think that the rule applies wherever the wrongful interruption operates to prevent the service during the time for which the parties have contracted that the service shall continue: and I think that the relation of master and servant subsists, sufficiently for the purpose of such action,

during the time for which there is in existence a binding contract of hiring and service between the parties; and I think that it is a fanciful and technical and unjust distinction to say that the not having actually entered into the service, or that the service not actually continuing, can make any difference. The wrong and injury are surely the same, whether the wrong doer entices away the gardener, who has hired himself for a year, the night before he is to go to his work, or after he has planted the first cabbage on the first morning of his service; and I should be sorry to support a distinction so unjust, and so repugnant to common sense, unless bound to do so by some rule or authority of law plainly shewing that such distinction exists. The

proposition of the defendant, that there must be a service actually subsisting, seems to be inconsistent with the authorities that shew these actions to be maintainable for receiving or harbouring servants after they have left the actual service of the master. . . .

[Crompton, J., then reviewed earlier cases.]

. . . It appears to me that Miss Wagner had contracted to do work for the plaintiff within the meaning of this rule; and I think that, where a party has contracted to give his personal services for a certain time to another, the parties are in the relation of employer and employed, or master and servant, within the meaning of this rule. And I see no reason for narrowing such a rule; but I should rather, if necessary, apply such a remedy to a case "new in its instance, but" "not new in the reason and principle of it," that is, to a case where the wrong and damage are strictly analogous to the wrong and damage in a well recognised class of cases. In deciding this case on the narrower ground, I wish by no means to be considered as deciding that the larger ground taken by Mr. Cowling is not tenable, or as saying that in no case except that of master and servant is an action maintainable for *maliciously* inducing another to break a contract to the injury of the person with whom such contract has been made. It does not appear to me to be a sound answer, to say that the act in such cases is the act of the party who breaks the contract; for that reason would apply in the acknowledged case of master and servant. Nor is it an answer, to say that there is a remedy against the contractor, and that the party relies on the contract; for, besides that reason also applying to the case of master and servant, the action on the contract and the action against the malicious wrong-doer may be for a different matter; and the damages occasioned by such malicious injury might be calculated on a very different principle from the amount of the debt which might be the only sum recoverable on the contract. Suppose a trader, *with a malicious intent to ruin a rival trader*, goes to a banker or other party who owes money to his rival, and begs him not to pay the money which he owes him, and by that means ruins or greatly prejudices the party: I am by no means prepared to say that an action could not be maintained, and that damages, beyond the amount of the debt if the injury were great, or much less than such amount if the injury were less serious, might not be recovered. . . . In this class of cases it must be assumed that it is the malicious act of the defendant, and that malicious act only, which causes the servant or contractor not to perform the work or contract which he would otherwise have done. The servant or contractor may be utterly unable to pay anything like the amount of the damage

p. 1162

sustained entirely from the wrongful act of the defendant: and it would seem unjust, and contrary to the general principles of law, if such wrongdoer were not responsible for the damage caused by his wrongful and malicious act. . . .

Without however deciding any such more general question, I think that we are justified in applying the principle of action for enticing away servants to a case where the defendant *maliciously procures* a party, who is under a valid contract to give her exclusive personal services to the plaintiff for a specified period, to refuse to give such services *during the period for which she had so contracted*, whereby the plaintiff was injured.

I think, therefore, that our judgment should be for the plaintiff.

[The concurring opinions of Erle and Wightman, JJ., are omitted.]

COLERIDGE, J. [dissenting]. . . . In order to maintain this action, one of two propositions must be maintained; either that an action will lie against any one by whose persuasions one party to a contract is induced to break it to the damage of the other party, or that the action, for seducing a servant from the master or persuading one who has contracted for service from entering into the employ, is of so wide application as to embrace the case of one in the position and profession of Johanna Wagner. After much consideration and enquiry I am of the opinion that neither of these propositions is true; and they are both of them so important, and, if established by judicial decision, will lead to consequences so general, that, though I regret the necessity, I must not abstain from entering into remarks of some length in support of my view of the law.

It may simplify what I have to say, if I first state what are the conclusions which I seek to establish. They are these: that in respect of breach of contract the general rule of our law is to confine its remedies by action to the contracting parties, and to damages directly and proximately consequential on the act of him who is sued; that, as between master and servant, there is an admitted exception, that this exception dates from the Statute of Labourers, 23 Edw. III, and both on principle and according to authority is limited by it. If I am right in these positions, the conclusion will be for the defendant, because enough appears on this record to show, as to the first, that he, and, as to the second, that Johanna Wagner, is not within the limits so drawn.

First then, that the remedy for breach of contract is by the general rule of our law confined to the contracting parties. . . . There would be such a manifest absurdity in attempting to trace up the act of a free agent breaking a contract to all the advisers who may have influenced his mind, more or less honestly, more or less powerfully, and to make them responsible civilly for the consequences of what after all is his own act, and for the whole of the hurtful consequences of which the law makes him directly and fully responsible, that I believe it will never be contended for seriously. . . . [W]hen you apply the term of effectual persuasion to the breach of a contract, it has obviously a different meaning [from cases where a master orders a trespass by a servant]; the persuader has not broken and could not break the contract, for he had never entered into any; he cannot be sued upon the contract; and yet it is the breach of the contract only that is the cause of damage. Neither can it be said that in breaking the contract the contractor is the

p. 1163

agent of him who procures him to do so; it is still his own act; he is principal in so doing, and is the only principal. This answer may seem technical; but it really goes to the root of the matter. It shows that the procurer has not done the hurtful act; what he has done is too remote from the damage to make him answerable for it. [After discussing certain precedents, Judge Coleridge continued:] None of this reasoning applies to the case of a breach of contract: if it does, I should be glad to know how any treatise on the law of contract could be complete without a chapter on this head, or how it happens that we have no decisions upon it. Certainly no subject could well be more fruitful or important; important contracts are more commonly broken with than without persuaders or procurers, and these often responsible persons when the principals may not be so. I am aware that with respect to an action on the case the argument *prima facie* impressionis is sometimes of no weight. If the circumstances under which the action would be brought have not before arisen, or are of rare occurrence, it will be of none, or only of inconsiderable weight; but, if the circumstances have been common, if there has been frequently occasion for the action, I apprehend it is

important to find that the action has yet never been tried. Now we find a plentiful supply both of text and decision in the case of seduction of servants: and what inference does this lead to, contrasted with the silence of the books and the absence of decisions on the case of breach of ordinary contracts? . . . To draw a line between advice, persuasion, enticement and procurement is practically impossible in a court of justice; who shall say how much of a free agent's resolution flows from the interference of other minds, or the independent resolution of his own? This is a matter for the casuist rather than the jurist; still less is it for the juryman. Again, why draw the line between bad and good faith? If advice given mala fide, and loss sustained, entitle me to damages, why, though the advice be given honestly, but under wrong information, with a loss sustained, am I not entitled to them. According to all legal analogies, the bona fides of him who, by a conscious wilful act, directly injures me will not relieve him from the obligation to compensate me in damages for my loss. Again, where several persons happen to persuade to the same effect, and in the result the party persuaded acts upon the advice, how is it to be determined against whom the action may be brought, whether they are to be sued jointly or severally, in what proportions damages are to be recovered? .

. . .

I conclude then that this action cannot be maintained because: 1st. Merely to induce or procure a free contracting party to break his covenant, whether done maliciously or not, to the damage of another, for the reasons I have stated, is not actionable; 2d. That the law with regard to seduction of servants from their master's employ, in breach of their contract, is an exception, the origin of which is known, and that that exception does not reach the case of a theatrical performer. . . .

NOTES

1. *Protection of contractual interests under Lumley v. Gye.* The original Statute of Labourers was passed shortly after the height of the Black Plague, which started

p. 1164

in 1346 in central Asia and moved through virtually all of Europe, resulting in an estimated death toll of between 75 million and 200 million people by its end in 1353. The law sought to protect government-mandated contracts from interference with third parties. Could it also be construed to protect voluntary arrangements, and, if so, which? Note that Lumley v. Gye involved a personal services contract with a party of unique operatic skills, a far cry from the reapers and mowers listed in the statute. Typically there is little reason to protect ordinary contracts at competitive wages from third-party interference, because of the ease of hiring a replacement for the lost worker, whom few will have an incentive to lure away in any event.

The situation was quite the opposite with the uniquely talented Ms. Wagner, who was sued directly for breach of contract in Lumley v. Wagner, 42 Eng. Rep. 687, 693 (Ch. 1852), the companion case to Lumley v. Gye, in which Lumley enjoined Wagner from singing elsewhere in a manner inconsistent with the efficient breach theory:

Wherever this Court has not proper jurisdiction to enforce specific performance, it operates to bind men's consciences, as far as they can be bound, to a true and literal performance of their

agreements; and it will not suffer them to depart from their contracts at their pleasure, leaving the party with whom they have contracted to the mere chance of any damages which a jury may give. . . . The effect, too, of the injunction in restraining J. Wagner from singing elsewhere may, in the event of an action being brought against her by the Plaintiff, prevent any such amount of vindictive damages being given against her as a jury might probably be inclined to give if she carried her talents and exercised them at the rival theatre: the injunction may also, as I have said, tend to the fulfilment of her engagement; though, in continuing the injunction, I disclaim doing indirectly what I cannot do directly.

Why no decree ordering Wagner to sing?

2. *Inducement of breach of contract in labor disputes.* The protection afforded in *Lumley* is also critical to certain contractual arrangements where an employee does possess distinctive attributes or information. In *Bowen v. Hall*, 6 Q.B.D. 333 (1881), *Lumley v. Gye* was applied to the contract of an employee brickmaker who had knowledge of a secret glazing process and who was induced to breach a definite five-year contract of employment with the plaintiff. The court held that malice was the gist of the tort and noted that although “mere persuasion” was not actionable, “if the persuasion be used for the indirect purpose of injuring the plaintiff, or of benefiting the defendant at the expense of the plaintiff, it is a malicious act.” How does this definition of malice differ from the “notice” referred to by Crompton, J., in *Lumley*? Shortly thereafter, in *Temperton v. Russell*, [1893] 1 Q.B. 715, inducement of breach of contract was held to reach interference with an ordinary contract for the sale of goods, here in the context of a labor dispute. On the early history and expansion of the action, see Note, *Tortious Interference with Contractual Relations in the Nineteenth Century: The Transformation of Property, Contract, and Tort*, 93 Harv. L. Rev. 1510 (1980).

p. 1165

Perhaps the most controversial application of the tort of inducement of breach of contract stemmed from its use as a weapon of business in labor disputes. In the leading American case, *Hitchman Coal & Coke Co. v. Mitchell*, 245 U.S. 229 (1917), the defendants were employees of the Mineworkers Union who had induced the miners at the plaintiff’s mine to stay on the job after they had agreed to join the union on some future request. The miners were held in breach of their “yellow-dog” contract between the employer and the workers whereby the miners, working under a contract at will, agreed not to join a union while remaining in the plaintiff’s employ. In this context, injunctive relief could be valuable when one party, the union, may induce many parties, the employees, to act in breach of contract. In *Lumley*, the only reason given for the second tort action was that its tortious basis could result in greater damages against Gye than he could have gotten from Wagner. But in *Hitchman Coal*, the injunction against the union was sought because the plaintiff could not easily maintain multiple damage actions against dozens of employees who could have quit in unison. The injunctive relief was able to stop in its tracks the union efforts to close mines.

It is for just this reason that *Hitchman* was repudiated in the labor context, first in 1932 by the Norris-LaGuardia Act, 29 U.S.C. §§101-115 (2012), which prohibited the enforcement of yellow-dog contracts in federal courts, *id.* §103, and thereafter in 1935 by the National Labor Relations Act, 29 U.S.C. §§151-169 (2012), which made it an “unfair labor practice” to discriminate against employees because of their participation in union activities, 29 U.S.C. §158(a)(3). For an early defense of the statute, see Magruder, A

Half Century of Legal Influence upon the Development of Collective Bargaining, 50 Harv. L. Rev. 1071 (1937); for a defense of the common law regime, see Epstein, A Common Law for Labor Relations: A Critique of the New Deal Labor Legislation, 92 Yale L.J. 1357, 1370-1375 (1983). See also Epstein, Labor Unions: Saviors or Scourges?, 41 Cap. U. L. Rev. 1 (2013), and Becker, Labor Law—The Law of a Balanced Society: A Reply to Professor Epstein, 41 Cap. U. L. Rev. 35 (2013). Becker was a member of the National Labor Relations Board and is now co-General Counsel of the AFL-CIO.

3. *Contracts covered by the tort.* In *Lumley*, the plaintiff's contract afforded him an undeniable cause of action against Wagner. Should the defendant's inducement be actionable when there is some infirmity in the underlying contract? For example, the action in general will not lie for gambling contracts that violate public policy. Yet the tort action is available for inducing nonperformance of contracts with lesser infirmities. Thus ample authority allows the inducement action even if the contract between the plaintiff and the third party is voidable (say, because a child is underage) or unenforceable (say, because of the statute of limitations or the Statute of Frauds). See RST §766. “[S]ince men usually honor their promises no matter what flaws a lawyer can find, the offender should not be heard to say that the contract he meddled with could not have been enforced.” *Harris v. Perl*, 197 A.2d 359, 363 (N.J. 1964).

In some contexts, the defendant's conduct is actionable even if the contract between the plaintiff and the defendant is terminable at the will of either party.

p. 1166

See, e.g., *Walker v. Cronin*, 107 Mass. 555 (1871). That general statement is clearly true to the extent that one of the parties is induced to breach some other covenant contained in the underlying contract: In *Walker*, the employee refused to return tools and materials to the employer upon leaving employment terminable at will. But it is highly unlikely that the doctrine applies when the employee's conduct is *not* in breach of contract, as when he simply leaves the plaintiff for higher wages offered elsewhere. Nor can at-will employees sue for interference with contract when displaced by new workers who sign on for lower wages. Indeed today “the general rule in the District of Columbia [and elsewhere] is that an at-will employment agreement cannot form the basis of a claim of tortious interference with contractual relations.” *Metz v. BAE Sys. Tech. Sols. & Servs. Inc.*, 774 F.3d 18, 23-24 (D.C. Cir. 2014).

In modern times, the tort is most often employed to enjoin competition by workers who join new firms in violation of a covenant not to compete with their former employer. These contracts themselves are scrutinized for potentially anticompetitive effects. But when properly used to protect customer lists or other property of the employee's original firm, an action lies against the new employer who takes advantage of the situation:

[A] new employer need not actively induce an employee to quit her job. Nor must a new employer even have knowledge of the covenant in the employee's previous contract, when it hires her, in order to incur liability for tortious interference with that covenant. Rather, the central question is whether, upon learning of the restrictive covenant that binds its new employee, the new employer nevertheless “engages the employee to work for him in an activity that would mean violation of the contract not to compete.”

Fowler v. Printers II, Inc., 598 A.2d 794, 804 (Md. App. 1991) (quoting RST §768, comment *i*). Note that the inducement of breach of contract case does not require that the defendant use illegal means to disrupt the plaintiff's contractual relationships with its employees. See CRST Van Expedited, Inc. v. Werner Enterprises, Inc., 479 F.3d 1099 (9th Cir. 2007); Redfearn v. Trader Joe's Co., 20 Cal. App. 5th 989 (Ct. App. 2018). In industries like computer software development, in which labor turnover is high, does it work to the long-term advantage of all firms to allow workers to switch jobs freely save in exceptional circumstances? For evidence that it might, see Gilson, *The Legal Infrastructure of High Technology Industrial Districts: Silicon Valley, Route 128, and Covenants Not to Compete*, 74 N.Y.U. L. Rev. 575, 578 (1999), who suggests that the economic success of Silicon Valley stems in part from the "employee-knowledge spillover" between firms that California's prohibition against covenants not to compete helps to create.

In some specialized situations, inducing the termination of even an at-will business arrangement can create liability. In *Albert v. Loksen*, 239 F.3d 256, 276 (2d Cir. 2001), the defendant supervisor made false and defamatory statements about Albert (a hospital physicist) to the chief administrator of the hospital's radiology department in order to procure Albert's termination. The court held that it was

p. 1167

a triable issue of fact whether the supervisor employee acted with "common-law or actual malice" that was "motivated by a desire to undermine Albert's threats to report safety violations and other misconduct." *Sack, J.*, allowed the plaintiff's action notwithstanding his at-will employment arrangement:

An at-will employee may maintain a tortious interference claim, however, in "certain limited situations." To do so, he or she must establish that a "third party used wrongful means to effect the termination such as fraud, misrepresentation, or threats, that the means used violated a duty owed by the defendant to the plaintiff, or that the defendant acted with malice."

4. Basis of liability for inducement of breach of contract. The Second Restatement of Torts §766 provides that "[o]ne who intentionally and improperly interferes with the performance of a contract" is subject to tortious liability provided that "the actor must have knowledge of the contract with which he is interfering." RST §766, comment *i*. Even then, notice of the existing relationship, while necessary, may not be sufficient to constitute the tort, given that the interference with the relationship must also be "improper" in some way.

On any view, liability for inducement thus stands on a different footing from liability for ordinary physical damage to person and property. One explanation for the difference is offered in Epstein, *Inducement of Breach of Contract as a Problem of Ostensible Ownership*, 16 J. Legal Stud. 1, 24 (1987), which argues that the notice system tracks the rules used when a bailee sells the bailed goods to a third party without the permission of the owner. The buyer with knowledge of the bailor's interest is treated as a purchaser in bad faith from whom the true owner can recover the goods. However the claim of the true owner is often denied when the bailee looks like the "ostensible owner" to the rest of the world because the third party is now a purchaser in good faith. "The tort of inducement of breach of contract is designed to protect contracts for the sale of labor by preventing others from subsequently acquiring that labor for themselves, once they know it has been committed to another. It is a restriction against double-dealing." Accordingly the plaintiff may only maintain the action for inducement of breach of contract against one who *knows* of the existence

of the contract, as the words “with notice” in *Lumley v. Gye* imply. With personal service contracts, moreover, actual notice is typically required because the recordation systems in use for land and certain valuable chattels (airplanes, cars) are not available. When celebrities are involved, therefore, the best protection may be to publicly announce the signing of a contract in order to place the world on notice of the existence of the contract, without, however, revealing any confidential terms.

An alternative view holds that *inducement* of breach of contract requires “the conjunction of notice, persuasion by the offer of better terms, and receipt of benefits by Inducer.” BeVier, Reconsidering Inducement, 76 Va. L. Rev. 877, 885 n.25 (1990). How often will breaches take place if the inducer does not offer better terms, or at least better long-term prospects? What if the defendant induces breach for the benefit of a third party?

p. 1168

5. Privileged inducements. As with other torts, the party that induces a breach of contract may well have some privilege, analogous to those in necessity and defamation cases, for committing a *prima facie* wrong. The Second Restatement gets at this notion by restricting liability for those actions that are done “improperly” based on a balance of motives and interests of the two parties. RST §767, comment *b*. Thus interference has been held privileged when done in order to further public morals. For example, in *Brimelow v. Casson* [1924] 1 Ch. 302, the privilege was upheld when the plaintiff was alleged to have employed chorus girls on such unfavorable terms that they had to resort to prostitution to earn enough money to live.

One privilege of great practical importance generally allows the officer or lawyer of a firm to advise the firm to breach an existing contract. The officer or lawyer is not treated as an independent third party acting for economic advantage, but as acting pursuant to a “confidential arrangement” between the parties. See, e.g., *Imperial Ice Co. v. Rossier*, 112 P.2d 631 (Cal. 1941). The privilege, however, is not absolute, as Andreasen, J., observed in *Jones v. Lake Park Care Center, Inc.*, 569 N.W.2d 369, 377 (Iowa 1997):

When acting as an agent within the scope of the qualified privilege, there can be no tortious interference because only two parties exist; the corporation and the contracting party. However, when an officer or director acts beyond the scope of their qualified privilege, they are no longer acting as agents of the corporation and can be personally liable for their acts.

Jones applied this principle in a terminated employee’s suit for intentionally interfering with an employment contract against the husband and wife couple who were the sole shareholders of a small day care center. Andreasen, J., agreed with the lower court’s finding that the dismissal was for “improper reasons.” Does any dismissal after bad blood fall within this exception?

6. The theory of efficient breach. One notable attack on the doctrine of *Lumley v. Gye* rests on the principle that the tort of inducement of breach of contract may be misplaced because breach of contract itself may create social wealth by increasing overall consumer satisfaction. See Perlman, Interference with Contract and Other Economic Expectancies: A Clash of Tort and Contract Doctrine, 49 U. Chi. L. Rev. 61 (1982).

Perlman's argument hearkens back to Holmes' famous aphorism: "The only universal consequence of a legally binding promise is that the law makes the promisor pay damages if the promised event does not come to pass." Holmes, *The Common Law* 301 (1881). In modern terms, the breach of contract is said to be "efficient" whenever it allows the promisor to shift his resources to a higher-valued use. The logic runs as follows: The innocent party is left as well off by an award of damages equal to the benefits provided under the contract; the promisor is left better off, having purchased his freedom; therefore the net social welfare is increased. The theory of "efficient breach" thus holds that a promisor should always be allowed to extricate himself unilaterally from a bargain if he is

p. 1169

prepared to pay the proper social price, which equals only expectation damages. Accordingly inducement of breach of contract should not be made tortious lest it undermine the incentives of contractual parties not to breach contracts when it is efficient to do so. Perlman concludes, therefore, that the action should be allowed only when the defendant has used unlawful and independently tortious means, chiefly force or fraud, to induce the breach.

The soundness of the efficient breach argument depends at least in part on the ability of the expectation damages to leave a promisee indifferent between performance and breach. But if the contract damages do not reflect the full range of objective and subjective losses, the plaintiff's recovery, net of litigation costs, could well leave the innocent promisee worse off. See Epstein, *supra* Note 4, at 37-40; Friedmann, *The Efficient Breach Fallacy*, 18 J. Legal Stud. 1 (1989), which argues that the costs of untangling expectation damages may well exceed the costs needed to negotiate a release from the original contract.

Expectation damages, moreover, are not universally regarded as the gold standard of contract remedies. Specific performance is generally allowed in real estate transactions (and other cases involving "unique" goods) and, even with personal service contracts, a promisee may enjoin the promisor from undertaking employment inconsistent with previous contractual obligations. See McChesney, *Tortious Interference with Contract Versus "Efficient" Breach: Theory and Empirical Evidence*, 28 J. Legal Stud. 131, 185 (1999), for an exhaustive examination of the case law, concluding that "most of the legal rules relevant to inducement are consistent with the property-based model of interference," and not with the efficient breach theory, including of course the injunction issued in *Lumley v. Wagner*. In contemporary litigation, the tort has far broader implications in modern technological industries.

ASAHI KASEI PHARMA CORP. v. ACTELION LTD.

222 Cal. App. 4th 945 (2014)

BRUINIERS, J.

Asahi Kasei Pharma Corporation (Asahi) is a Japanese corporation which develops and markets pharmaceutical products and medical devices. One of its products is Fasudil, a drug which Asahi sought to market in the United States (U.S.) for treatment of pulmonary arterial hypertension (PAH). In order to obtain regulatory approvals for Fasudil, and to develop and commercialize it in North America and Europe, Asahi entered

into a licensing and development agreement (the License Agreement) with CoTherix, Inc. (CoTherix), a California-based biopharmaceutical company focused on developing and commercializing products for the treatment of cardiovascular disease. Appellant Actelion Ltd. is a Swiss pharmaceutical company that markets a PAH treatment drug, bosentan (under the trade name Tracleer), and holds the dominant share of the relevant market. Actelion Ltd., through a subsidiary, acquired all of the stock of CoTherix, and concurrently notified Asahi that CoTherix would discontinue development of Fasudil for “business and commercial reasons.”

Headquarters of Actelion, near Basel, Switzerland

Source: Fabrice Coffrini / AFP / Getty Images.

[Asahi sued Actelion and three Actelion executives in California state court, alleging, *inter alia*, intentional interference with contract and interference with Asahi’s prospective economic advantage. The jury found that all defendants acted “with malice, oppression or fraud,” and awarded nearly \$550 million in compensatory damages and \$30 million in punitive damages.]

[W]e address the scope of liability for tortious interference with a contract by a nonparty to the contract, and we affirm the judgment in favor of Asahi. . . .

I. BACKGROUND AND PROCEDURAL HISTORY

. . . Studies indicated that Fasudil had the potential to promote healing of blood vessel lesions and limit the scarring associated with PAH.

Development of Fasudil for new medical uses was commercially attractive to Asahi if it could be done expeditiously. To recoup investment, a drug must be developed sufficiently early in its patent life to ensure

an adequate period of market exclusivity after receipt of regulatory approval and before generic competition arrives. . . .

In order to gain regulatory approvals necessary for new medical uses of Fasudil, Asahi entered into the License Agreement with CoTherix on June 23, 2006. . . . Under the terms of the License Agreement, CoTherix agreed to obtain U.S. and European regulatory approvals for Fasudil to treat certain diseases, and to develop and commercialize it in those markets. . . . Asahi considered CoTherix's ability to move quickly in clinical development of Fasudil to be particularly important to preservation of Fasudil's market exclusivity before facing generic competition.

Actelion Ltd. has, since December 2001, marketed Tracleer, an endothelin receptor antagonist and oral PAH drug that has been approved by the Food and Drug Administration (FDA) for use in the U.S. Tracleer is what is known in the pharmaceutical industry as a "blockbuster" drug, generating over \$1 billion in revenue annually, and Actelion has held the dominant share of the relevant market. In 2006, 98 percent of Actelion's U.S. revenues were dependent upon Tracleer sales.

At trial, Asahi presented evidence that Actelion acquired CoTherix specifically because it saw Fasudil as a significant threat to its market dominance with Tracleer and that Defendants used unlawful means to stop the development

p. 1171

of Fasudil, thereby interfering with the License Agreement. Specifically, Asahi argued that Defendants used extortion and fraud to "painstakingly kill[]" Fasudil as a competitive product.

. . . In July 2006, a director of business development for Actelion Pharmaceuticals Ltd., Carina Spaans, referenced CoTherix, Fasudil and another company in her notes, with the following comment: "Buying both companies will leave the market for Tracleer free for Actelion." Negotiation of an acquisition of CoTherix began in August. . . . On November 19, 2006, Actelion U.S. Holding Company and CoTherix signed an agreement and plan of merger, which was publicly announced the following day.

Beginning November 20, 2006, Asahi repeatedly sought assurances from CoTherix and Actelion that Fasudil development would continue after the proposed merger. . . . Despite Actelion's knowledge that failure to provide assurances might constitute material breach of the License Agreement, no assurances were provided. In mid-December, Asahi requested a videoconference with Actelion . . . [during which Asahi was assured]: "Actelion does not have an intention to make any delay of [F]asudil development." On January 3, 2007, CoTherix, after conferring with Actelion, told Asahi: "[W]e continue to honor our agreement to move [F]asudil forward. Please note that I have no power to compel Actelion to provide you with the response you desire."

. . . On January 9, Actelion acquired all of the stock of CoTherix and concurrently notified Asahi that it was discontinuing development of Fasudil for "business and commercial reasons." . . .

THE LITIGATION BELOW

Asahi first initiated the ICC Arbitration proceeding, against CoTherix only, claiming breach of contract. Among other damages, Asahi claimed the value of development work CoTherix failed to perform through June 2009 and development-based milestone payments. On December 15, 2009, the arbitrators awarded Asahi over \$91 million.

[Asahi then sued Actelion and its executives in California state court, alleging, *inter alia*, “intentional interference with the license agreement” and “wrongful interference with Asahi’s prospective economic advantage in the ‘continued development of Fasudil.’”]

THE TRIAL

In January 2011, the matter proceeded to jury trial against the Defendants. On April 29, the jury returned a unanimous liability verdict against the Defendants, awarding \$358.95 million for [lost profits]; \$187.4 million for lost development costs; \$450,000 for regulatory maintenance costs; and \$75,000 for the cost of an investigator-sponsored study. . . . The jury also unanimously found the Defendants acted with “malice, oppression or fraud.”

In the punitive damage phase of trial, the jury awarded damages against the Individual Defendants only [totaling \$30 million]. . . .

II. DISCUSSION

A. TORTIOUS INTERFERENCE WITH THE LICENSE AGREEMENT

“To recover in tort for intentional interference with the performance of a contract, a plaintiff must prove: (1) a valid contract between plaintiff and another party; (2) defendant’s knowledge of the contract; (3) defendant’s intentional acts designed to induce a breach or disruption of the contractual relationship; (4) actual breach or disruption of the contractual relationship; and (5) resulting damage. In this way, the ‘expectation that the parties will honor the terms of the contract is protected against officious intermeddlers.’”

. . . Actelion contends that it cannot be liable for tortious interference with the License Agreement because “[t]he tort duty not to interfere with [a] contract falls only on strangers—interlopers who have no legitimate interest in the scope or course of the contract’s performance.” Specifically, they argue: “As a matter of law, [the underlying policy of the tort of intentional interference with contract—preventing outsiders who have no legitimate social or economic interest in the contract from interfering with the expectations of contracting parties—] precludes imposition of liability against Actelion for terminating development of [F]asudil, because that act took place after consummation of the [a]cquisition [of CoTherix], at which time Actelion was not a stranger to CoTherix’s agreement with Asahi.” The Individual Defendants join in this argument and maintain: “By the same token, the [I]ndividual [D]efendants—as high-level executives of Actelion—were not strangers to the [License] Agreement, but instead were responsible for determining how Actelion, standing in the shoes of CoTherix, would deal with that agreement.”

Asahi counters that California law nevertheless recognizes that corporate owners, officers and directors may be liable for interfering with corporate contracts, and that claims of privilege or justification are defenses that must be pleaded and proved. And to prevail on such defenses, Defendants must show that they did not “use improper means.”

1. Jury Instructions on Wrongful Interference with the License Agreement

The jury was instructed on the elements of a cause of action for wrongful interference with contract. The court declined to give a special jury instruction, proposed by Actelion, that would have directed that the jury could not hold Actelion liable for inducing CoTherix to breach the License Agreement after the acquisition on January 9, 2007, because at that time Actelion had a direct interest in the contractual relationship between CoTherix and Asahi.

... [T]he jury was instructed: “A person cannot be liable for interference with that person’s own contract, if that person was a party to the contract at the time of the interference.” And the trial court instructed the jury on the justification defense: [A] defendant [is] not liable for intentional interference with contract if that defendant’s conduct was justified, but that “[t]he affirmative defense of justification does not apply if the particular Defendant used unlawful

p. 1173

means to interfere with the [License Agreement]. . . . ‘Unlawful means’ includes intentional misrepresentation, concealment, and extortion.” Having been so instructed, the jury nonetheless found that all Defendants intentionally interfered with the License Agreement. . . .

3. Analysis

Defendants contend that, after January 9, 2007, they could not be liable for interfering with the License Agreement because “Actelion had a ‘legitimate . . . economic interest in the contractual relationship.’” [The court then discusses *Applied Equipment Corp. v. Litton Saudi Arabia Ltd.*, 869 P.2d 454 (Cal. 1994), where the California Supreme Court held that “*a contracting party* cannot be held liable in tort for conspiracy to interfere with its own contract” in order to uphold “vital and established distinctions between contract and tort theories of liability.” “The tort duty not to interfere with the contract falls only on strangers —interlopers who have no legitimate interest in the scope or course of the contract’s performance.”]

Defendants do not contend that they were parties to the License Agreement after January 9, 2007. . . . Instead, Actelion contends that *Applied Equipment* should be read broadly so as to limit liability for intentional interference to complete “strangers” to the contract, not simply nonparties to the contract. . . .

Defendants urge this court to take the *Applied Equipment* court’s language . . . to mean a noncontracting party who also has no interest in the contract. But the California courts have not recognized a corporate owner’s absolute privilege to interfere with its subsidiary’s contract. [Discussion of California cases omitted.]

. . . “A stranger,” as used in *Applied Equipment*, means one who is not a party to the contract or an agent of a party to the contract. . . . Actelion, by virtue of its ownership interest, is not automatically immune from

liability for tortious interference with the License Agreement.

Defendants misplace their reliance on *Mintz* [v. Blue Cross of California, 172 Cal. App. 4th 1594, 1604 (2009).] . . . *Mintz* is distinguishable from this case in that the party charged with interference was specifically authorized to act as agent of a party to the contract. Defendants point to no evidence in the record establishing that Actelion was authorized to act as CoTherix's agent with respect to the License Agreement.

Nor are we persuaded by Defendants' reliance on *Kasparian v. County of Los Angeles*, 38 Cal. App. 4th 242 (1995). . . . The *Kasparian* court followed *Applied Equipment* and extended its holding to the tort of interference with prospective economic relations. The court concluded that the partnership could not be held liable, as a matter of law, for such a tort because “[i]t can only be asserted against a stranger to the relationship.” However, without any discussion, the court also included the individual partner defendants within that holding. To the extent *Kasparian* implicitly holds that the owners of a business entity are automatically deemed to be exempt from interference liability because their economic interest means they are not “strangers,” we disagree. . . .

p. 1174

We hold that the jury was properly instructed on the elements of wrongful interference with contract and properly charged with considering whether Defendants “used unlawful means to interfere with the [License Agreement].” So instructed, the jury found that each of the Defendants intentionally interfered with the License Agreement. . . .

4. Liability of the Individual Defendants

[Bruiniers, J., held that the individual defendants, as “officers” or “directors” of Actelion, had “actively participated in the tortious conduct” and thus could be held personally liable for an intentional economic tort. He also rejected the Actelion executives’ claim of “manager’s privilege”—namely their right to protect their principal’s interests by counseling breach of a contract with a third party on the ground that “[t]he manager’s privilege does not exempt a manager from liability when he or she tortiously interferes with a contract or relationship between third parties.”]

[Affirmed.]

NOTES

1. *Sins of subsidiary visited upon parent company.* *Asahi* holds that a parent company that acquires a subsidiary party to a contract qualifies under California law as a “stranger” or “interloper” to the agreement, subject to liability for tortious interference with a contract. Does Actelion have a legitimate economic interest in the licensing agreement? Why does the court insist nonetheless that it remains a “stranger” as a nonparty to the contract?

2. “*Tortifying*” ordinary contract actions? Actelion argued to the California Supreme Court (which denied review in March 2014) that “[b]y ‘tortifying’ ordinary contract actions, the decision below threatens to discourage businesses from investing in California, for it places corporations and their executives at risk of crippling tort damages—magnified by the prospect of punitive damages—whenever a subsidiary incurs contract liability.” Recall that Asahi won \$91 million against Actelion in arbitration. By subsequently suing in tort, Asahi opened the door to punitive damages and won one of the largest damages verdicts in California’s history. “Tech giants and other corporations that have grown by serial acquisition fear the Actelion precedent could expose them—at least in California—to open-ended liability over licensing disputes involving the smaller new-technology companies they are wont to gobble up like so many cocktail nuts.” Barrett, An Obscure Pharma Lawsuit Puts California’s Tech Titans on Edge, Bloomberg (Mar. 13, 2014, 10:46 AM), <http://www.bloomberg.com/bw/articles/2014-03-12/an-obscure-pharma-lawsuit-puts-californias-tech-titans-on-edge>. While the intentional interference tort protects contractual stability, does it do so at the expense of other significant economic concerns? What are the likely ramifications of imposing tort liability for competitive business practices and commercial dealings? Should courts limit liability for tortious interference in order to preserve the distinction between contract and tort?

p. 1175

3. *Calculating prospective lost profits.* Recovery for lost profits generally requires “reasonable certainty” but “not absolute certainty.” The *Asahi* court distinguished “established” businesses whose lost profits “may be ascertained with reasonable certainty from the past volume of business and other provable data relevant to the probable future sales” from “unestablished” ones whose profits are too “uncertain, contingent and speculative.” The court conceded that “this case does not fit neatly into the established business versus new business paradigm.” An added wrinkle—regulatory approval by the FDA and EMEA (European Medicines Agency) was a prerequisite to selling the to-be-developed Fasudil drug. In fact, according to *Nature*, the probability of success for a drug at Fasudil’s stage (entering Phase II) is roughly 15 percent. What result if Actelion only stopped its work on the project when it thought it would not get FDA approval? Should Asahi be required to find another development partner after Actelion cancelled the deal?

4. *A victory for drug development?* As part of its recitation of the “background and procedural history,” the *Asahi* court refers to Actelion’s market dominance and its efforts to eliminate a competitor drug. Asahi had brought an antitrust claim, which the court previously dismissed. Did the court look to tort as an alternative remedy to guard against anticompetitive actions?

SECTION C. INTENTIONAL INTERFERENCE WITH PROSPECTIVE ADVANTAGE

TARLETON v. M’GAWLEY

170 Eng. Rep. 153 (K.B. 1793)

This was a special action on the case. The declaration stated that the plaintiffs were possessed and owners of a certain ship called the *Tarleton*, which at the time of committing the grievance was lying at Calabar on

the coast of Africa, under the command of Fairweather. That the ship had been fitted out at Liverpool with goods proper for trading with the natives of that coast for slaves and other goods. That also before the [sic] committing the grievance Fairweather had sent a smaller vessel called the *Bannister* with a crew on board, under the command of one Thomas Smith, and loaded with goods proper for trading with the natives, to another part of the said coast called Cameroon, to trade with the natives there. That while the last-mentioned ship was lying off Cameroon, a canoe with some natives on board came to the same for the purpose of establishing a trade, and went back to the shore, of which defendant had notice. And that he well knowing the premises, but contriving and maliciously intending to hinder and deter the natives from trading with the said Thomas Smith, for the benefit of the plaintiffs, with force and arms, fired from a certain ship called the *Othello*, of which he was master and commander, a certain cannon loaded with gunpowder and shot at the said canoe, and killed one of the natives on board the same. Whereby the natives of the said coast were deterred and hindered from trading with the said T. Smith for the benefit, &c. and plaintiffs lost their trade.

p. 1176

The plaintiffs called Thomas Smith, who proved the facts stated in the declaration; and further, that the defendant had declared the natives owed him a debt, and that he would not suffer any ship to trade with them until that was paid; in pursuance of which declaration he committed the act complained of by the plaintiffs. On his cross-examination he admitted that by the custom of that coast no Europeans can trade until a certain duty has been paid to the king of the country for his licence, and that no such duty had been paid, or licence obtained by the captain of the plaintiff's vessel.

Law, for the defendant, contended that the plaintiffs being engaged in a trade which by the law of that country was illicit, could not support an action for an interruption of such illicit commerce, and compared this case to an action brought for interrupting a plaintiff in his endeavours to smuggle goods into this country, or alarming the owner of a house which the plaintiff was about to break into. He also objected that this act of the defendant amounted to a felony, and therefore could not be made the ground of a civil action, but he did not lay much stress on this objection.

LORD kENYON. This action is brought by the plaintiffs to recover a satisfaction for a civil injury which they have sustained. The injury complained of is, that by the improper conduct of the defendant the natives were prevented from trading with the plaintiffs. The whole of the case is stated on the record, and if the parties desire it, the opinion of the Court may hereafter be taken whether it will support an action. I am of opinion it will. This case has been likened to cases which it does not at all resemble. It has been said that a person engaged in a trade violating the law of the country cannot support an action against another for hindering him in that illegal traffick. That I entirely accede to, but it does not apply to this case. This is a foreign law; the act of trading is not itself immoral, and a *jus positivum* is not binding on foreigners. The king of the country and not the defendant should have executed that law. Had this been an accidental thing, no action could have been maintained, but it is proved that the defendant had expressed an intention not to permit any to trade, until a debt due from the natives to himself was satisfied. If there was any Court in that country to which he could have applied for justice he might have done so, but he had no right to take the law into his own hands.

The plaintiffs had a verdict, and the parties agreed to refer the damages to arbitration.

Note [in original Report].—In the beginning of the cause the plaintiffs' counsel proposed asking the witnesses whether some of the negroes did not assign their fear of the defendant as a reason for not trading with the plaintiffs, but Lord Kenyon said that no declaration of the negroes could be received in evidence.

NOTES

1. *Interference with prospective advantage versus inducement of breach of contract.* The protection afforded the plaintiff in *Tarleton* is both narrower and broader than that granted in *Lumley v. Gye*. It is narrower in that prospective advantage is protected only against interference by means that are unlawful in themselves, in this case the use of force against the natives. But it is broader in that it protects

p. 1177

not only the promisee who may have claims against the promisor under an existing contract, but also the promisee who might not have a viable contract-based claim (for instance because the contract is terminable at will). The cause of action also protects a party who was never able to form a contract in the first place. Why allow this separate cause of action when the plaintiff's potential customers are protected by a wide array of other tort claims? In evaluating the plaintiff's case in *Tarleton*, should it make a difference whether the customers suffer physical injury or only the loss of a bargain? One frequent justification for the result in *Tarleton* is that the trader's suit helps vindicate the economic interests of potential customers who might be reluctant to incur heavy litigation costs to recover for small economic losses, especially if their interests are numerous and diffuse.

2. *Unlawful means and prospective advantage.* While the facts in *Tarleton* are both novel and dramatic, its underlying principle has a long common law lineage. In *Keeble v. Hickeringill*, 103 Eng. Rep. 1127, 1128 (Q.B. 1706) (reported K.B. 1809), the plaintiff used decoy ducks to attract wild fowl to his meadow for the purpose of capturing and selling them. The defendant, who operated a rival duck decoy of his own in the neighborhood, repeatedly discharged guns nearby, driving away the ducks that landed in the plaintiff's meadow. In affirming a verdict for plaintiff, Holt, C.J., said:

[I]f Mr. Hickeringill had set up another decoy on his own ground near the plaintiff, no action would lie because he had as much liberty to make and use a decoy as the plaintiff. . . . One schoolmaster sets up a new school to the damage of an antient school, and thereby the scholars are allured from the old school to come to his new. (The action was held there not to lie.) But suppose Mr. Hickeringill should lie in the way with his guns, and fright the boys from going to school, and their parents would not let them go thither; sure the schoolmaster might have an action for the loss of his scholars.

Holt's brief remarks about the "antient school" contain this bellwether principle of the law: The maxim "prior in time is higher in right" used to establish title to land and chattels has no application to competitive injury. The incumbent may enjoy a "first mover" advantage, but gets no legal protection against the

subsequent entrant so long as the second player does not resort to illegal means. Indeed, one reason why interference with trade proved crucial in *Keeble* was that the plaintiff did not gain possession of the ducks solely because they alighted on his pond but instead because the plaintiff had set up decoys to trap them. The theory of trade interference worked, moreover, solely because the defendant was the plaintiff's "direct competitor." What result if the defendant shot his guns to kill and capture the ducks, knowing he might frighten them away? Or if defendant is a modern animal rights activist determined to protect all wildlife from needless slaughter? What other means unlawful in themselves are sufficient to support the plaintiff's action? In *Evenson v. Spaulding*, 150 F. 517, 522 (9th Cir. 1907), the plaintiffs were Iowa manufacturers of high-class buggies and wagons who sold their product in the state of Washington through salesmen and agents. The defendants were employees of an association of Washington buggy manufacturers; they dogged the plaintiffs' salesmen whenever they tried to sell their

p. 1178

wagons and buggies to local customers, usually on a public highway. The court recognized that the defendants had the right to compete with the plaintiffs for sales to local customers, but held that the defendants' conduct, and their "policy of molestation," exceeded the permissible limits of competition, "by breaking in on conversations, making false representations as to the nature of the appellees' goods . . . and other offensive acts."

In *Reeves v. Hanlon*, 95 P.3d 513, 515, 516 (Cal. 2004), Hanlon and Greene left Reeves' immigration firm "without notice or warning," after which it was alleged that they "improperly persuaded plaintiffs' employees to join H&G, personally solicited plaintiffs' clients to discharge plaintiffs and to instead obtain services from H&G, misappropriated plaintiffs' trade secrets, destroyed computer files and data, and withheld plaintiffs' property, including a corporate car." Baxter, J., held that

inducing the termination of an at-will employment relation may be actionable under the standard applicable to claims for intentional interference with prospective economic advantage. Accordingly, to recover for a defendant's interference with an at-will employment relation, a plaintiff must plead and prove that the defendant engaged in an independently wrongful act—i.e., an act "proscribed by some constitutional, statutory, regulatory, common law, or other determinable legal standard."

SECTION D. NEGLIGENT INTERFERENCE WITH ECONOMIC RELATIONSHIPS

PEOPLE EXPRESS AIRLINES, INC. v. CONSOLIDATED RAIL CORP.

495 A.2d 107 (N.J. 1985)

HANDLER, J. This appeal presents a question that has not previously been directly considered: whether a defendant's negligent conduct that interferes with a plaintiff's business resulting in purely economic losses, unaccompanied by property damage or personal injury, is compensable in tort. The appeal poses this issue in the context of the defendants' alleged negligence that caused a dangerous chemical to escape from a

railway tank car, resulting in the evacuation from the surrounding area of persons whose safety and health were threatened. The plaintiff, a commercial airline, was forced to evacuate its premises and suffered an interruption of its business operations with resultant economic losses.

I

On July 22, 1981, a fire began in the Port Newark freight yard of defendant Consolidated Rail Corporation (Conrail) when ethylene oxide manufactured by defendant BASF Wyandotte Company (BASF) escaped from a tank car, punctured during a “coupling” operation with another rail car, and ignited. The tank car was owned by defendant Union Tank Car Company (Union Car) and was leased to defendant BASF.

p. 1179

The plaintiff asserted at oral argument that at least some of the defendants were aware from prior experiences that ethylene oxide is a highly volatile substance; further, that emergency response plans in case of an accident had been prepared. When the fire occurred that gave rise to this lawsuit, some of the defendants’ consultants helped determine how much of the surrounding area to evacuate. The municipal authorities then evacuated the area within a one-mile radius surrounding the fire to lessen the risk to persons within the area should the burning tank car explode. The evacuation area included the adjacent North Terminal building of Newark International Airport, where plaintiff People Express Airlines’ (People Express) business operations are based. Although the feared explosion never occurred, People Express employees were prohibited from using the North Terminal for twelve hours.

People Express airplanes dating from the 1980s, when the company was based in Newark, New Jersey. The company sold its fleet to Continental Airlines in 1987. Information source: History of People Express, AvStop.com, <http://avstop.com/history/historyofairlines/peopleexpress.htm>

Image source: Scott McKiernan / ZUMA Wire / zumapress.com / Alamy Live News

The plaintiff contends that it suffered business-interruption losses as a result of the evacuation. These losses consist of cancelled scheduled flights and lost reservations because employees were unable to answer the telephones to accept bookings; also, certain fixed operating expenses allocable to the evacuation time period were incurred and paid despite the fact that plaintiff's offices were closed. No physical damage to airline property and no personal injury occurred as a result of the fire.

According to People Express' original complaint, each defendant acted negligently and these acts of negligence proximately caused the plaintiff's harm. An amended complaint alleged additional counts of nuisance and strict liability based on the defendants' undertaking an abnormally dangerous activity, as well as defective manufacture or design of the tank car, causes of action with which we are not concerned here. . .

..

II

The single characteristic that distinguishes parties in negligence suits whose claims for economic losses have been regularly denied by American and English courts from those who have recovered economic losses is, with respect to the successful claimants, the fortuitous occurrence of physical harm or property damage, however slight. It is well-accepted that a defendant who negligently injures a plaintiff or his property may be liable for all proximately caused harm, including economic losses. Nevertheless, a virtually *per se* rule barring recovery for economic loss unless the negligent conduct also caused physical harm has evolved throughout this century, based, in part, on *Robins Dry Dock & Repair Co. v. Flint*, 275 U.S. 303 (1927) and *Cattle v. Stockton Waterworks Co.*, 10 Q.B. 453 (1875).

p. 1180

This has occurred although neither case created a rule absolutely disallowing recovery in such circumstances. See, e.g., *Stevenson v. East Ohio Gas Co.*, 73 N.E.2d 200 (Ohio Ct. App. 1946) (employee who was prohibited from working at his plant, which was closed due to conflagration begun by negligent rupture of stored liquified natural gas at nearby utility, could not recover lost wages); *Byrd v. English*, 43 S.E. 419 (Ga. 1903) (plaintiff who owned printing plant could not recover lost profits when defendant negligently damaged utility's electrical conduits that supplied power to the plant); see also Restatement (Second) of Torts §766C (1979) (positing rule of nonrecovery for purely economic losses absent physical harm). But see *In re Kinsman Transit Co.*, 388 F.2d 821, 824 (2d Cir. 1968) (after rejecting an inflexible rule of nonrecovery, court applied traditional proximate cause analysis to claim for purely economic losses).

The reasons that have been advanced to explain the divergent results for litigants seeking economic losses are varied. Some courts have viewed the general rule against recovery as necessary to limit damages to reasonably foreseeable consequences of negligent conduct. This concern in a given case is often manifested as an issue of causation and has led to the requirement of physical harm as an element of proximate cause. In this context, the physical harm requirement functions as part of the definition of the causal relationship between the defendant's negligent act and the plaintiff's economic damages; it acts as a convenient clamp on otherwise boundless liability. The physical harm rule also reflects certain deep-seated concerns that underlie courts' denial of recovery for purely economic losses occasioned by a defendant's negligence. These concerns include the fear of fraudulent claims, mass litigation, and limitless liability, or liability out of proportion to the defendant's fault. . . .

The troublesome concern reflected in cases denying recovery for negligently-caused economic loss is the alleged potential for infinite liability, or liability out of all proportion to the defendant's fault. This objection is also not confined to negligently-caused economic injury. The same objection has been asserted and, ultimately, rejected by this Court and others in allowing recovery for other forms of negligent torts, see *H. Rosenblum, Inc. v. Adler*, 461 A.2d 138 (N.J. 1983), and in the creation of the doctrine of strict liability for defective products, see *Feldman v. Lederle Laboratories*, 479 A.2d 374 (N.J. 1984); *Henningsen v. Bloomfield Motors, Inc.*, 161 A.2d 69 (N.J. 1960), and ultrahazardous activities, see *Dep't of Envtl. Protection v. Ventron Corp.*, 468 A.2d 150 (N.J. 1983). The answer to the allegation of unchecked liability is not the judicial obstruction of a fairly grounded claim for redress. Rather, it must be a more sedulous application of traditional concepts of duty and proximate causation to the facts of each case.

It is understandable that courts, fearing that if even one deserving plaintiff suffering purely economic loss were allowed to recover, all such plaintiffs could recover, have anchored their rulings to the physical harm requirement. While the rationale is understandable, it supports only a limitation on, not a denial of, liability. The physical harm requirement capriciously showers compensation along the path of physical destruction, regardless of the status or circumstances of individual claimants. Purely economic losses are borne by innocent victims,

p. 1181

who may not be able to absorb their losses. In the end, the challenge is to fashion a rule that limits liability but permits adjudication of meritorious claims. The asserted inability to fix crystalline formulae for recovery on the differing facts of future cases simply does not justify the wholesale rejection of recovery in all cases.

Further, judicial reluctance to allow recovery for purely economic losses is discordant with contemporary tort doctrine [with its twin objectives of legal redress for victims and deterrence of future harms by others].

A

Judicial discomfiture with the rule of nonrecovery for purely economic loss throughout the last several decades has led to numerous exceptions in the general rule. Although the rationalizations for these exceptions differ among courts and cases, two common threads run throughout the exceptions. The first is that the element of foreseeability emerges as a more appropriate analytical standard to determine the question of liability than a *per se* prohibitory rule. The second is that the extent to which the defendant knew or should have known the particular consequences of his negligence, including the economic loss of a particularly foreseeable plaintiff, is dispositive of the issues of duty and fault.

One group of exceptions is based on the "special relationship" between the tortfeasor and the individual or business deprived of economic expectations. [The court then refers to liability for negligent misrepresentation under *Rosenblum, supra* Chapter 13, Note 2, at 1151.]

Courts have found it fair and just in all of these exceptional cases to impose liability on defendants who, by virtue of their special activities, professional training or other unique preparation for their work, had particular knowledge or reason to know that others, such as the intended beneficiaries of wills or the purchasers of stock who were expected to rely on the company's financial statement in the prospectus

(*Rosenblum*), would be economically harmed by negligent conduct. In this group of cases, even though the particular plaintiff was not always foreseeable, the particular class of plaintiffs was foreseeable as was the particular type of injury.

A very solid exception allowing recovery for economic losses has also been created in cases akin to private actions for public nuisance. Where a plaintiff's business is based in part upon the exercise of a public right, the plaintiff has been able to recover purely economic losses caused by a defendant's negligence [citing *Union Oil Co. v. Oppen*, 501 F.2d 558 (9th Cir. 1974) (fishermen making known commercial use of public waters may recover economic losses due to defendant's oil spill)]. . . .

These exceptions expose the hopeless artificiality of the *per se* rule against recovery for purely economic losses. When the plaintiffs are reasonably foreseeable, the injury is directly and proximately caused by defendant's negligence, and liability can be limited fairly, courts have endeavored to create exceptions to allow recovery. The scope and number of exceptions, while independently justified on various grounds, have nonetheless created lasting doubt as to the wisdom of the *per se* rule of nonrecovery for purely economic losses. Indeed, it has been fashionable for commentators to state that the rule has been giving way for nearly fifty years, although the cases have not always kept pace with the hypothesis. . . .

p. 1182

We hold therefore that a defendant owes a duty of care to take reasonable measures to avoid the risk of causing economic damages, aside from physical injury, to particular plaintiffs or plaintiffs comprising an identifiable class with respect to whom defendant knows or has reason to know are likely to suffer such damages from its conduct. A defendant failing to adhere to this duty of care may be found liable for such economic damages proximately caused by its breach of duty.

We stress that an identifiable class of plaintiffs is not simply a foreseeable class of plaintiffs. For example, members of the general public, or invitees such as sales and service persons at a particular plaintiff's business premises, or persons travelling on a highway near the scene of a negligently-caused accident, such as the one at bar, who are delayed in the conduct of their affairs and suffer varied economic losses, are certainly a foreseeable class of plaintiffs. Yet their presence within the area would be fortuitous, and the particular type of economic injury that could be suffered by such persons would be hopelessly unpredictable and not realistically foreseeable. Thus, the class itself would not be sufficiently ascertainable. An identifiable class of plaintiffs must be particularly foreseeable in terms of the type of persons or entities comprising the class, the certainty or predictability of their presence, the approximate numbers of those in the class, as well as the type of economic expectations disrupted.

B

Liability depends not only on the breach of a standard of care but also on a proximate causal relationship between the breach of the duty of care and resultant losses. The standard of particular foreseeability may be successfully employed to determine whether the economic injury was proximately caused, i.e., whether the particular harm that occurred is compensable, just as it informs the question whether a duty exists. . . .

We conclude therefore that a defendant who has breached his duty of care to avoid the risk of economic injury to particularly foreseeable plaintiffs may be held liable for actual economic losses that are proximately caused by its breach of duty. In this context, those economic losses are recoverable as damages when they are the natural and probable consequence of a defendant's negligence in the sense that they are reasonably to be anticipated in view of defendant's capacity to have foreseen that the particular plaintiff or identifiable class of plaintiffs is demonstrably within the risk created by defendant's negligence.

III

We are satisfied that our holding today is fully applicable to the facts that we have considered on this appeal. Plaintiff has set forth a cause of action under our decision, and it is entitled to have the matter proceed to a plenary trial. Among the facts that persuade us that a cause of action has been established is the close proximity of the North Terminal and People Express Airlines to the Conrail freight yard; the obvious nature of the plaintiff's operations and particular foreseeability of economic losses resulting from an accident and evacuation; the defendants' actual or constructive knowledge of the volatile properties of

p. 1183

ethylene oxide; and the existence of an emergency response plan prepared by some of the defendants (alluded to in the course of oral argument), which apparently called for the nearby area to be evacuated to avoid the risk of harm in case of an explosion. We do not mean to suggest by our recitation of these facts that actual knowledge of the eventual economic losses is necessary to the cause of action; rather, particular foreseeability will suffice. The plaintiff still faces a difficult task in proving damages, particularly lost profits, to the degree of certainty required in other negligence cases. The trial court's examination of these proofs must be exacting to ensure that damages recovered are those reasonably to have been anticipated in view of the defendants' capacity to have foreseen that this particular plaintiff was within the risk created by their negligence.

We appreciate that there will arise many similar cases that cannot be resolved by our decision today. The cause of action we recognize, however, is one that most appropriately should be allowed to evolve on a case-by-case basis in the context of actual adjudications. We perceive no reason, however, why our decision today should be applied only prospectively. Our holdings are well grounded in traditional tort principles and flow from well-established exceptional cases that are philosophically compatible with this decision.

Accordingly, the judgment of the Appellate Division is modified, and, as modified, affirmed. The case is remanded for proceedings consistent with this opinion.

NOTES

1. Tort recovery for economic loss between non-contracting parties. As *People Express* indicates, the common law judges historically have been reluctant to allow any recovery for pure economic losses attributable only to the defendant's negligence. Most notably, in *Byrd v. English*, 43 S.E. 419, 420 (Ga. 1903), the defendant's negligent excavation severed the power lines, owned by the electric company, that supplied the power to the plaintiff's plant. The plaintiff's cause of action was denied on grounds

reminiscent of *Winterbottom v. Wright*, *supra* Chapter 8 at 671:

According to this petition, the damage done by them was to the property of the Georgia Electric Light Company, which was under contract to furnish to the plaintiff electric power, and the resulting damage done to the plaintiff was that it was rendered impossible for that company to comply with its contract. If the plaintiff can recover of these defendants upon this cause of action, then a customer of his, who was injured by the delay occasioned by the stopping of his work, could also recover from them; and one who had been damaged through his delay could in turn hold them liable; and so on without limit to the number of persons who might recover on account of the injury done to the property of the company owning the conduits. To state such a proposition is to demonstrate its absurdity. The plaintiff is suing on account of an alleged tort by reason of which he was deprived of a supply of electric power with which to operate his printing establishment. What was his right to that power supply? Solely the right given him by virtue of his contract with the Georgia Electric Light Company, and with that contract the defendants are not even remotely connected. If, under the terms of his contract, he is precluded from recovering from the electric light company, that is a matter between themselves for

p. 1184

which the defendants certainly can not be held responsible. They are, of course, liable to the company for any wrong that may have been done it, and the damages recoverable on that account might well be held to include any sums which the company was compelled to pay in damages to its customers; but the customers themselves can not go against the defendants to recover on their own account for the injury done the company.

Similarly, in *Cattle v. Stockton Waterworks Co.*, [1875] 10 Q.B. 453, 457, the defendant waterworks company had negligently constructed and maintained its pipes on the land of one Knight. The plaintiff had been hired for a fixed reward to build a tunnel on Knight's land and incurred increased costs when the water from the defendant's leaky pipes flooded his operations. Blackburn, J., conceded that Knight could have recovered damage for the increased cost of the completion if he had constructed the tunnel himself, but he denied that this plaintiff could recover for those same costs. He argued that if the action were allowed

we should establish an authority for saying that, in such a case as that of *Fletcher v. Rylands* the defendant would be liable, not only to an action by the owner of the drowned mine, and by such of his workmen as had their tools or clothes destroyed, but also to an action by every workman and person employed in the mine, who in consequence of its stoppage made less wages than he otherwise would have done.

He then distinguished *Lumley v. Gye*, noting that it was limited to "malicious" actions by the defendant. Does the distinction hold if "malice" in *Lumley* is coterminous with "notice"?

A narrow view of recovery for economic loss was also taken in *Robins Dry Dock & Repair Co. v. Flint*, 275 U.S. 303, 308-309 (1927). The plaintiffs hired a boat on a time charter with the third-party owner. The terms of the time charter called for the boat to be docked for maintenance and repair once every six months, with payments of money on the charter suspended until the boat was returned to service. While the boat

was in the defendant's docks, the defendant negligently damaged the propeller, thereby causing the plaintiffs to lose the use of the boat for a two-week period while the necessary repairs were made. The defendant undertook repair of the boat in ignorance of the time charter or its terms. The accident took place in August 1917, shortly after the United States entered World War I, so the time charter gave the plaintiff highly favorable rates. In an earlier action arising out of the same incident, the plaintiff was not allowed to recover the lost value of his charter from the boat owner on a contract theory: The owner had discharged its obligation by selecting a competent independent contractor for the repairs, *The Bjornefjord*, 271 F. 682 (2d Cir. 1921). In *Flint v. Robins Dry Dock & Repair Co.*, 13 F.2d 3, 5 (2d Cir. 1926), the Second Circuit awarded recovery to the plaintiff in tort. Mack, J., reasoned:

Clearly, the result reached involves no injustice to respondent. Its liability for its tortious act is for the actual damage done to the combined interests in the ship. The measure of the total recovery is the market value of the loss of the use. If there had been no charter, the entire loss would have been sustained by the owner; therefore he could have recovered that amount himself. The wrongdoer has no

p. 1185

interest in and should not benefit because of the contractual obligations of the shipowner to the charterer, or the absence of any liability of the owner to the charterer for respondent's negligence. This nonliability of the owner is neither a test nor a measure of the wrongdoer's liability, for, though the owner be not directly liable to the charterer, he may nevertheless be liable over to him as a trustee for so much of the recovery from the wrongdoer as exceeds his own personal loss.

Holmes, J., writing for a unanimous Supreme Court, reversed the Second Circuit and dismissed the plaintiff-respondent's cause of action:

The question is whether the respondents [charterers] have an interest protected by the law against unintended injuries inflicted upon the vessel by third persons who know nothing of the charter. If they have, it must be worked out through their contract relations with the owners, not on the postulate that they have a right *in rem* against the ship.

Of course the contract of the petitioner [Dry Dock Company] with the owners imposed no immediate obligation upon the petitioner to third persons, as we already have said, and whether the petitioner performed it promptly or with negligent delay was the business of the owners and of nobody else. But as there was a tortious damage to a chattel it is sought to connect the claim of the respondents with that in some way. The damage was material to them only as it caused the delay in making the repairs, and that delay would be a wrong to no one except for the petitioner's contract with the owners. The injury to the propeller was no wrong to the respondents but only to those to whom it belonged. But suppose that the respondent's loss flowed directly from that source. Their loss arose only through their contract with the owners—and while intentionally to bring about a breach of contract may give rise to a cause of action, no authority need be cited to show that, as a general rule, at least, a tort to the person or property of one man does not make the tortfeasor liable to another merely because the injured person was

under a contract with that other, unknown to the doer of the wrong. The law does not spread its protection so far.

Robins Dry Dock & Repair Co. v. Flint, 275 U.S. 303, 308-309 (1927).

Can Judge Mack's position be sustained if the contract between the charterer and the owner precludes recovery of lost profits attributable to the negligence of the owner? Can Justice Holmes' position be sustained if that contract allows expectation damages? For an argument that Holmes' rule is defensible so long as the charter arrangement is ignored, whether the rentals move up or down, see Goldberg, Recovery for Pure Economic Loss in Tort: Another Look at *Robins Dry Dock v. Flint*, 20 J. Legal Stud. 249 (1991). In essence, the losses suffered in those cases when charter prices move up are offset by the windfall that is gained when the charterer is released from a losing contract by the wrongful act of a third party. The Holmes position remains the majority view today. See Nautilus Marine, Inc. v. Niemela, 170 F.3d 1195, 1197 (9th Cir. 1999), in which the court rebuffed the plaintiff's effort to escape *Robins* by pleading the defendant's recklessness. "The line between recklessness and negligence is sufficiently indistinct that extensive litigation would be likely to ensue before *Robins Dry Dock* could be applied in any case." Is it?

p. 1186

With *Robins*, contrast *J'Aire Corp. v. Gregory*, 598 P.2d 60, 64 (Cal. 1979), in which the plaintiff restaurant could not open for business because the defendant contractor failed to complete work on the heating and air conditioning system on premises owned by a third party and leased in part to plaintiff. The question before the court was "whether a contractor who undertakes construction work pursuant to a contract with the owner of premises may be held liable in tort for business losses suffered by a lessee when the contractor negligently fails to complete the project with due diligence." The court answered the question in the affirmative for much the same reasons adopted in *People Express*.

[T]his court finds that respondent [defendant] had a duty to complete construction in a manner that would have avoided unnecessary injury to appellant's business, even though the construction contract was with the owner of a building rather than with appellant, the tenant. It is settled that a contractor owes a duty to avoid injury to the person or property of third parties. As appellant points out, injury to a tenant's business can often result in greater hardship than damage to a tenant's person or property. Where the risk of harm is foreseeable, as it was in the present case, the injury to the plaintiff's economic interests should not go uncompensated merely because it was unaccompanied by any injury to his person or property.

Should the tenant in *J'Aire* be limited to an action against its landlord? After *J'Aire*, should construction companies insert clauses into their standard contracts that either require landlords to obtain waivers from actual or prospective tenants against the construction company or call on the landlord to indemnify the construction company for its expenses or losses? That strategy is not, however, open in cases such as *People Express*, in which the plaintiff and the defendant are total strangers. If the release of dangerous chemicals is a strict liability action, why require proof of negligence for recovery of economic loss in *People Express*? And why adopt more stringent tests of foresight? Are the results in any of these cases defensible under *People Express*?

2. An economic analysis of economic losses. Finding a theoretical justification for disallowing recovery for pure economic loss at common law has not been easy. The defendant is by hypothesis negligent; the plaintiff's harm is typically foreseeable, even if the precise identity of the plaintiff is not; rarely do any intervening acts or events sever the causal connection; and typically there are no affirmative defenses based on the plaintiff's misconduct. Why then the denial?

Apart from the administrative concerns, the law and economics literature has offered two explanations for the dominant legal rule. Bishop, Economic Loss in Tort, 2 Oxford J. Legal Stud. 1 (1982), suggests that the economic losses to the plaintiffs do not represent social losses because whatever business is lost by the plaintiff is picked up by some rival firm whose "excess capacity" can meet the increased demand. That argument is vulnerable on two separate grounds. First, some social loss always remains because the substitute performance is more costly than that originally contemplated—otherwise, the plaintiff would not have obtained the business in the first place. Second, the unprotected plaintiff will take excessive precautions to avoid losses that are far more costly than the substitute precautions open to the negligent defendant.

p. 1187

An alternative explanation for the rule, suggested in Rizzo, A Theory of Economic Loss in the Law of Torts, 11 J. Legal Stud. 281 (1982), is to reduce the number of potential suits by "channeling" tort liability through a small class of plaintiffs, typically those who have suffered physical injury. The property owner who recovers losses can reimburse the contractors and others for their increased costs of completion under contract, as may have been intimated, for example, in both *Cattle v. Stockton Waterworks*, *supra*, and *Robins Dry Dock & Repair Co. v. Flint*, *supra* at 1184.

Some support for this position comes from the application of the traditional privity limitation, which is intended to prevent the proliferation of possible plaintiffs in both *Byrd* and *Cattle*. That same issue arises in both regulatory and antitrust contexts, where the same privity limitation reasserts itself. Thus in *Southern Pacific Co. v. Darnell-Taenzer Lumber Co.*, 245 U.S. 531, 533-534 (1918), Justice Holmes held that a shipper could recover an overcharge from a regulated railroad even though it had itself recovered some of the excess costs from the shipper. "The general tendency of the law, in regard to damages at least, is not to go beyond the first step. As it does not attribute remote consequences to a defendant so it holds him liable if proximately the plaintiff has suffered a loss." The corollary to this position is that the remote purchaser cannot recover for the same loss precisely because the immediate purchaser is entitled to recover the full loss without offset. See generally *Illinois Brick v. Illinois*, 431 U.S. 720 (1977). Note that the privity limitation couples strong deterrence with economic efficiency.

SOUTHERN CALIFORNIA GAS CO. v. SUPERIOR COURT OF LOS ANGELES COUNTY

441 P.3d 881 (Cal. 2019)

CUELLAR, J. This case concerns a massive, months-long leak from a natural gas storage facility located just outside Los Angeles. . . . [T]he accident severely harmed the economy of a nearby suburb. We must decide if local businesses—none of which allege they suffered personal injury or property damage—may

recover in negligence for income lost because of the leak. Our decision turns on whether the entity that allegedly caused the leak had a tort duty to guard against what we and other courts have termed “purely economic losses.” . . .

I.

Near the northwestern corner of Los Angeles lies Porter Ranch, a residential neighborhood home to some 30,000 people. Southern California Gas Company (SoCalGas) stores vast amounts of natural gas in an underground facility [the “Aliso Facility”] in the hills surrounding the community. . . .

In October 2015, a leak happened—and people noticed. An uncontrolled flow of natural gas from the Aliso Facility coated nearby neighborhoods in an oily mist. At its peak, the leak released some 55 tons of natural gas every hour. Porter Ranch residents reported unpleasant odors, headaches, dizziness, and respiratory problems. In addition to those symptoms, students at local schools complained of nosebleeds and vomiting.

p. 1188

That November, the Los Angeles County health department directed SoCalGas to establish a relocation program available to Porter Ranch residents who lived within a five-mile radius of the leak site. . . . About 15,000 people were relocated in total, scattering to locations dozens—and in some cases hundreds—of miles away. . . .

Plaintiffs are Porter Ranch area businesses seeking to represent a class of “[a]ll persons and entities conducting business within five miles of the Facility from October 23, 2015 to [the] present.” They allege that SoCalGas’s negligence caused the leak. The resulting relocation of many Porter Ranch residents devastated the local economy: by depriving local businesses of customers, the environmental disaster cost local businesses considerable earnings. . . .

SoCalGas demurred, arguing that Plaintiffs’ negligence claims failed as a matter of law because Plaintiffs were seeking to recover for purely economic losses. Overruling the demurrer, the trial court explained that companies “must face the full cost of accidents” they create, or else “they will underinvest in precautions.”.

..

[The Court of Appeal reversed the trial court.]

II.

. . . The issue here is whether SoCalGas—separate from other legal and practical reasons it had to prevent injury of any kind to the public—had a tort duty to guard against negligently causing what we and others have called “purely economic loss[es].” . . . [W]e conclude it had no tort duty to guard against purely economic losses.

In California, the “general rule” is that people owe a duty of care to avoid causing harm to others and that they are thus usually liable for injuries their negligence inflicts. . . . [W]e have frequently begun our analysis by presuming a duty of care. But we have not universally done so. A case in point is liability in

negligence for purely economic losses, which is “the exception, not the rule” under our precedents. . . .

The primary exception to the general rule of no recovery for negligently inflicted purely economic losses is where the plaintiff and the defendant have a “special relationship” [citing *J'Aire, supra* at 1186]. What we mean by special relationship is that the plaintiff was an intended beneficiary of a particular transaction but was harmed by the defendant’s negligence in carrying it out. . . .

Concerned about line-drawing problems and potentially overwhelming liability, courts across the country have rejected recovery for purely economic losses stemming from man-made calamity. Take the New York Court of Appeals’ decision in *532 Madison*. There, part of a 39 story office tower collapsed, shutting down more than a dozen bustling blocks of midtown Manhattan for several weeks. Among the plaintiffs in *532 Madison* were local businesses who alleged that would-be customers “were unable to gain access to their stores” due to the disaster, forcing the plaintiffs to shut down for an extended period of time. They sued on behalf of themselves and “all other business entities” operating within the affected city blocks.

p. 1189

The plaintiffs in *532 Madison* sought compensation for the income they lost from the tower collapse. The New York Court of Appeals responded by declining to hold “that a landowner owes a duty to protect an entire urban neighborhood against purely economic losses.” It instead “limit[ed] the scope of defendants’ duty to those who ha[d], as a result of th[e] [collapse], suffered personal injury or property damage.” The court explained that this limitation provided “a principled basis for reasonably apportioning liability” that was necessary to prevent potentially crushing liability to “an indeterminate group in the affected areas” who could prove “financial losses directly traceable to the” collapse. Adopting that rule, the court added, was what “historically courts ha[d] done” with similar negligence claims. [The court then discusses several cases that rejected recovery for purely economic losses.]

Against all these decisions, only the New Jersey Supreme Court’s opinion in *People Express Airlines, Inc.* [see *supra* at 1178] cuts definitively the other way. . . . Yet decades after the demise of the airline that gave the case its name, *People Express* remains “a lonely outpost.”

The allegations before us underscore the ineluctable difficulty associated with imposing a duty to guard against purely economic losses in negligence cases like this one. It may be possible to quantify the profits any one business lost because of an industrial accident, but imposing such a duty would nevertheless create line-drawing problems across—quite literally—space and time. . . . We lack clear spatial bounds within which to cabin claims like those asserted here.

This case does not involve a so-called special relationship under our precedents. Plaintiffs concede—as they must—that their only relevant ties to SoCalGas are having the misfortune of operating near the Aliso Facility. Accordingly, they propose to limit the class they seek to represent based on geographic proximity alone. Putative class members here are businesses operating “in the area within five miles” of the leak, a space which Plaintiffs characterize as “the precise area from which residents were evacuated.” . . .

We see no workable way to limit geographically who may recover purely economic losses. Without one,

the dangers of indeterminate liability, over-deterrence, and endless litigation are at their apex. Nor do we see a viable way to limit temporally what purely economic losses could be recovered here. . . . True: we could conceivably cabin recovery for purely economic losses to those suffered during the disaster alone. Or we could allow recovery only for such losses suffered during a business closure, not merely for systemic hits to economic demand. Yet upon closer inspection, the alluring simplicity of both approaches quickly proves to be a mirage. . . .

. . . [W]e recognize Plaintiffs' concern that SoCalGas's alleged negligent behavior will go insufficiently deterred if we deny recovery here. But SoCalGas is not getting off scot free. At oral argument, the company represented that some 50,000 claimants have alleged in other litigation that they suffered property damage caused by the leak—several hundred of whom are local businesses. It further informed us, and we have no reason to doubt, that the company has spent some \$450 million on remedial measures and agreed to pay another \$120 million as

p. 1190

part of a settlement with local authorities. SoCalGas, operating in a heavily regulated domain, also remains under investigation—and may face further consequences in the future.

III.

Risks from industrial accidents raise grave concerns for society, and we have no doubt the accident precipitating this case caused significant hardships. To compensate those harmed and to deter those who do the harming, our society assigns tort law a pivotal role. But that does not mean society's interests are best served by extending its scope indefinitely. Meaningful limits on tort liability, along with the incentives they set, are crucial to the functioning of our economy and of our courts. Where such limits leave gaps in our social fabric, tort does not stand alone: insurance also compensates, regulation also deters. And where gaps persist, the Legislature can act.

The better part of a century has passed since then-Judge Cardozo warned that permitting recovery in negligence for purely economic losses can threaten indeterminacy-cubed: "liability in an indeterminate amount for an indeterminate time to an indeterminate class." (*Ultramares Corp. v. Touche* [*supra* at 1144]). Courts across the country have since heeded that warning, by and large denying recovery in negligence cases like this one even though purely economic losses inflict real pain. That prevailing rule of no recovery is, like society itself, imperfect. Yet nearly everyone follows a rule that few (if any) entirely like. California does, too.

[Affirmed.]

NOTES

1. *Rejection of People Express and an economic loss rule for stranger cases?* Cuellar, J., declines to follow *People Express* and notes the near unanimous repudiation of the decision by the courts. In *532 Madison Avenue Gourmet Foods, Inc. v. Finlandia Center, Inc.*, 750 N.E.2d 1097 (N.Y. 2001), Chief Judge Kaye

both rejects and distinguishes *People Express*. Kaye, C.J., suggests that the plaintiffs could not meet its “particular foreseeability” standard, where “the presence of members of the public, or invitees at a particular plaintiff’s business, or persons traveling nearby, while foreseeable, is nevertheless fortuitous.” Could a channeling rationale explain the different outcomes in *532 Madison Ave.* and *People Express*?

RTT: LEH §7 embraces the holding and rationale of *532 Madison Ave.* Consistently it rejects *People Express* as a “[c]ontrary position . . . taken only occasionally in the case law.” RTT: LEH §7, comment *a*. The Restatement offers these justifications for its rule: (1) “economic losses can proliferate long after the physical forces at work in an accident have spent themselves”; (2) “[r]ecognizing claims for those sorts of losses would greatly increase the number, complexity, and expense of potential lawsuits”; (3) “recognition of such claims would also result in liabilities that are indeterminate and out of proportion to the culpability of the defendant”; and (4) “victims of economic injury often can protect themselves effectively by means other than a tort suit [including “first-party insurance against their losses” or “recover[y] in contract”]. RTT: LEH §7, comment *b*.

Exhibit 14.3 Judith Smith Kaye

Judith Smith Kaye (1938-2016) was the first woman and longest-serving chief judge to sit on the New York Court of Appeals, the state’s highest court. Governor Mario Cuomo first appointed her to the bench in 1983, and she became chief judge in 1993 after her predecessor, Sol Wachtler, was forced to resign amidst scandal. A graduate of Barnard College and New York University School of Law, Chief Judge Kaye made her mark on criminal law, New York state constitutional law, and the legal rules surrounding attorney practice. Her state constitutional jurisprudence was characterized by a more expansive interpretation of individual rights relative to the U.S. jurisprudence. As chief judge, she also oversaw the entire New York state court system, spearheading initiatives to modernize the courts and championing access to justice for the citizens of New York. Kaye joined the firm Skadden, Arps, Slate, Meagher & Flom LLP after retiring from the Court of Appeals in 2009.

The Restatement acknowledges the tradeoffs at play here:

Denying claims by rule undeniably works a hardship on plaintiffs with claims that fall outside the policies that make the rule attractive—claims that do not lend themselves to solution by contract . . . or that present no problems of indeterminacy. But a rule against recovery has other advantages: predictability, clarity, and economy of application for courts, lawyers, and those attempting to plan their affairs and anticipate their liabilities.

Id. Should this rule be sensitive to the magnitude of these economic losses? Follow a rule that allows only the first tier of aggrieved parties (the businesses, but not their customers and employees) to sue for their losses?

2. *Public nuisance and “special damages.”* According to the Third Restatement, “[p]rivate liability for creation of a public nuisance is an exception to the rule of §7, which ordinarily prevents a plaintiff from recovering for economic loss caused by damage to property that the plaintiff does not own.” To what extent does a public nuisance claim provide an end-run around the economic loss rule? See *supra* Chapter 7, Section E.2, Public Nuisance. In *532 Madison Ave.*, Kaye, C.J., dismissed plaintiffs’ public nuisance claims for “substantial interference with the exercise of a common right of the public.” Kaye, C.J., concluded that plaintiffs could not demonstrate the requisite “special injury beyond that suffered by the community at large” given that “every person who maintained a business, profession or residence in the heavily populated areas of Times Square and Madison Avenue was exposed to similar economic loss during the closure periods.” What result in *Southern California Gas Co.* if the gas leak had resulted in a loss of customers for

only a single business? The traditional requirement of special damages for

p. 1192

public nuisance was intended to exclude large numbers of small claims by achieving the appropriate deterrence through direct administrative actions. In these cases, with large numbers of large claims, will the defendants have incentives to take due care if only subject to administrative fines that constitute a small fraction of the economic losses attributable to their actions? Should it make a difference if these plaintiffs carried business interruption insurance?

Restatement of the Law (Third) of Torts: Liability for Economic Harm

§7. ECONOMIC LOSS FROM INJURY TO A THIRD PERSON OR TO PROPERTY NOT BELONGING TO THE CLAIMANT

Except as provided elsewhere in this Restatement, a claimant cannot recover for economic loss caused by

- (a) unintentional injury to another person; or
- (b) unintentional injury to property in which the claimant has no proprietary interest.

§8. PUBLIC NUISANCE RESULTING IN ECONOMIC LOSS

An actor whose wrongful conduct harms or obstructs a public resource or public property is subject to liability for resulting economic loss if the claimant's losses are distinct in kind from those suffered by members of the affected community in general.

3. *Commercial fishermen's exception?* Union Oil Co. v. Oppen, 501 F.2d 558 (9th Cir. 1974), cited in *People Express*, *supra* at 1181, entertained negligence and public nuisance claims by commercial fisherman who sued Union Oil for the loss of catch attributable to its pollution of the Santa Barbara Channel. The court adopted an economic approach that required it "to fix the identity of the party who can avoid the costs most cheaply. Once fixed, this determination then controls liability." See, e.g., Calabresi, *The Cost of Accidents* 69-73 (1970). If the cheapest cost avoider cannot be determined, who is the "party who can best correct any error in allocation, if such there be, by acquiring the activity to which the party has been made liable"? Sneed, J., suggested that on this second criterion, "there is no contest—the defendants' capacity is superior." How is the buyout possible if the class of fisherman constantly shifts in its composition? Note the parallel to the farmer's difficulty in bargaining with ranchers under an open-range regime.

One complication in *Oppen* involves ownership of the fish. "The plaintiffs who do not own the fish cannot complain if the Union Oil company captures them. As they cannot complain of capture, they cannot complain of destruction after capture. As they cannot complain of destruction after capture, they cannot complain of destruction before capture." Epstein, *Nuisance Law: Corrective Justice and Its Utilitarian Constraints*, 8 J. Legal Stud. 49, 52 (1979). This position overlooks, however, the problem of the common pool—i.e., that resources not subject to

p. 1193

private ownership will be destroyed or consumed too rapidly. Since the fish are unowned, any individual

actor motivated by self-interest will not take into account the social losses that premature capture and destruction work on the common pool. See generally Sweeney, Tollison & Willett, Market Failure, the Common-Pool Problem, and Ocean Resource Exploitation, 17 J.L. & Econ. 179 (1974). *Oppen* fills the gap by providing the tort action to the nonowners who suffer disproportionate impact. In *Pruitt v. Allied Chemical Corp.*, 523 F. Supp. 975 (E.D. Va. 1981), the district court allowed the suits of the commercial fishermen and the marina, boat, tackle, and bait shop owners who were damaged by the spillage of kepone into the James River and the Chesapeake Bay. However, it denied the actions of the various seafood wholesalers, retailers, and distributors who purchased and marketed the seafood of the commercial fishermen whose harm was deemed “insufficiently direct.” It also refused to allow actions by employees of the various groups named. Is this consistent with *Darnell-Taenzer* and *Illinois Brick*?

Similarly, in *In re Exxon Valdez*, 104 F.3d 1196, 1198 (9th Cir. 1997), stemming from the massive oil spill from the Exxon Valdez oil tanker, the court allowed the plaintiff class of Alaska natives to recover economic damage from loss of fishing resources, but refused to permit their claim for “cultural damage” to their “subsistence way of life.” The Exxon Valdez oil spill prompted Congress to address the legal barriers to recovery to anyone other than commercial fisherman by enacting a comprehensive scheme for economic recovery in the wake of an oil spill. The Oil Pollution Act of 1990, 33 U.S.C. §2702 et seq. (2012), altered the common law landscape by allowing any claimant who suffered economic losses to pursue a claim against a “responsible party.” It was against the backdrop of the Oil Pollution Act that BP p.l.c. funded the Court Supervised Settlement Program as part of a class action settlement of the consolidated multidistrict litigation arising from the Deepwater Horizon oil spill in the Gulf of Mexico, and then later reached a classwide punitive damages settlement with Halliburton, one of BP’s codefendants. See Sharkey, The BP Oil Spill Settlements, Classwide Punitive Damages, and Societal Deterrence, 64 DePaul L. Rev. 681 (2015).

4. *Hi-tech public nuisances: Modified seed.* In *In re Starlink Corn Products Liability Litigation*, 212 F. Supp. 2d 828, 848 (N.D. Ill. 2002), the defendant Aventis genetically modified a corn seed that produced a protein known as Cry9C that proved toxic to certain insects. The product received only a limited registration from the EPA for use in animal feed, ethanol production, and seed increase, but not for human consumption. The EPA also required certain safeguards to prevent cross-pollination with non-Starlink corn plants. The plaintiffs, commercial corn farmers, sued claiming defendant’s crop contaminated the entire U.S. corn supply. Moran, J., relied on the fishery cases to justify the plaintiffs’ public nuisance claim for contamination of their crops. “Here, plaintiffs are commercial corn farmers. While the general public has a right to safe food, plaintiffs depend on the integrity of the corn supply for their livelihood.” Should the action be allowed in the absence of any EPA statute if the market differentiates between the two kinds of corn?

In contrast, the public nuisance claim failed in *Sample v. Monsanto Co.*, 283 F. Supp. 2d 1088 (E.D. Mo. 2003), for plaintiffs whose crops were not contaminated, where the harm claimed was loss of sales to the European Union, which

boycottd all American corn and soy given its opposition to genetically modified organisms. Finally, *In re Genetically Modified Rice Litigation*, 666 F. Supp. 2d 1004 (E.D. Mo. 2009), dismissed public nuisance

claims that rice growers brought against Bayer Crop Sciences on the ground that trace amounts of its LLRICE 601 genetically modified rice had been detected in the U.S. long-grain rice supply, which in turn had adverse effects on the market for rice. Perry, J., denied the public nuisance action stating: “There is no evidence in the record showing the sort of public harm or negative effect on the entire community that public nuisance law was developed to remedy. The majority of the cases cited by plaintiffs involve private nuisance claims, not public nuisance claims.” She further held that a private nuisance claim could lie if it were established that defendant’s product was “in fact, dangerous to the health and safety of a considerable number of persons.”

5. An economic loss rule for contracting parties. RTT: LEH §3, *Preclusion of Tort Liability Arising from Contract (Economic Loss Rule)*, provides that “there is no liability in tort for economic loss caused by negligence in the performance or negotiation of a contract between the parties.” Instead of drafting the rule to encompass a general lack of duty to avoid economic harm, the Restatement instead drew the line closer by limiting it to contracting parties, as adopted by a majority of courts. RTT: LEH §3, comment *a*. The Restatement justifies this rule as follows:

The rule of this Section serves several purposes. When a dispute arises, the rule protects the bargain the parties have made against disruption by a tort suit. Seen from an earlier point in the life of a transaction, the rule allows parties to make dependable allocations of financial risk without fear that tort law will be used to undo them later. Viewed in the long run, the rule prevents the erosion of contract doctrines by the use of tort law to work around them. The rule also reduces the confusion that can result when a party brings suit on the same facts under contract and tort theories that are largely redundant in practical effect. . . .

RTT: LEH §3, comment *b*. Some jurisdictions have adopted the economic loss rule for contracting parties grounded in deference to contract, but refuse to extend it to third-party and stranger cases. For example, *Sullivan v. Pulte Home Corp.*, 306 P.3d 1, 3 (Ariz. 2013), held that while the economic loss rule between contracting parties served “to encourage the private ordering of economic relationships, protect the expectations of contracting parties, ensure the adequacy of contractual remedies, and promote accident-deterrence and loss-spreading,” those rationales did not extend to non-contracting parties.

The Restatement extends the economic loss rule to likewise foreclose claims of negligent misrepresentation “made in the course of negotiating or performing a contract between the parties”—RTT: LEH §5(5)—a restriction not part of RST §552, see *supra* Chapter 13, Note 1, at 1150. Some jurisdictions extended the rationale to third-party cases. See, e.g., *LAN/STV v. Martin K. Eby Constr. Co.*, 435 S.W.3d 234 (Tex. 2014), where a construction contractor, Eby, under contract with the transit authority, DART, to build a light-rail extension in Dallas, sued the plan’s architect for negligent misrepresentation. The Texas Supreme Court, noting that jurisdictions were split on extending the economic loss rule to non-contracting parties, nevertheless reasoned:

We think it beyond argument that one participant on a construction project cannot recover from another—setting aside the architect for the moment—for economic loss caused by negligence.

If the roofing subcontractor could recover from the foundation subcontractor damages for extra costs incurred or business lost due to the latter's negligent delay of construction, the risk of liability to everyone on the project would be magnified and indeterminate. . . .

Id. at 236. Can construction companies allocate their losses more efficiently through contract with the owner of the project?

SECTION E. UNFAIR COMPETITION

MOGUL STEAMSHIP CO. v. MCGREGOR, GOW & CO.

23 Q.B.D. 598 (1889), affirmed [1892] A.C. 25

BOWEN, L.J. We are presented in this case with an apparent conflict or antinomy between two rights that are equally regarded by the law—the right of the plaintiffs to be protected in the legitimate exercise of their trade, and the right of the defendants to carry on their business as seems best to them, provided they commit no wrong to others. The plaintiffs complain that the defendants have crossed the line which the common law permits; and inasmuch as, for the purposes of the present case, we are to assume some possible damage to the plaintiffs, the real question to be decided is whether, on such an assumption, the defendants in the conduct of their commercial affairs have done anything that is unjustifiable in law. The defendants are a number of shipowners who formed themselves into a league or conference for the purpose of ultimately keeping in their own hands the control of the tea carriage from certain Chinese ports, and for the purpose of driving the plaintiffs and other competitors from the field. In order to succeed in this object, and to discourage the plaintiffs' vessels from resorting to those ports, the defendants during the "tea harvest" of 1885 combined to offer to the local shippers very low freights, with a view of generally reducing or "smashing" rates, and thus rendering it unprofitable for the plaintiffs to send their ships thither. They offered, moreover, a rebate of 5 per cent. to all local shippers and agents who would deal exclusively with vessels belonging to the Conference, and any agent who broke the condition was to forfeit the entire rebate on all shipments made on behalf of any and every one of his principals during the whole year—a forfeiture of rebate or allowance which was denominated as "penal" by the plaintiffs' counsel. It must, however, be taken as established that the rebate was one which the defendants need never have allowed at all to their customers. It must also be taken that the defendants had no personal ill-will to the plaintiffs, nor any desire to harm them except such as is involved in the wish and intention to discourage by such measures the plaintiffs from sending rival vessels to such ports. . . . It is to be observed with regard to all these acts of which complaint is made that they were acts that in themselves could not be said to be illegal unless made so by the object with which, or the combination in the course of which, they were done;

and that in reality what is complained of is the pursuing of trade competition to a length which the plaintiffs consider oppressive and prejudicial to themselves. We were invited by the plaintiffs' counsel to accept the position from which their argument started—that an action will lie if a man maliciously and wrongfully conducts himself so as to injure another in that other's trade. Obscurity resides in the language used to state this proposition. The terms "maliciously," "wrongfully," and "injure" are words all of which have accurate meanings, well known to the law, but which also have a popular and less precise signification, into which it

is necessary to see that the argument does not imperceptibly slide. An intent to "injure" in strictness means more than an intent to harm. It connotes an intent to do wrongful harm. "Maliciously," in like manner, means and implies an intention to do an act which is wrongful, to the detriment of another. The term "wrongful" imports in its turn the infringement of some right. The ambiguous proposition to which we were invited by the plaintiffs' counsel still, therefore, leaves unsolved the question of what, as between the plaintiffs and defendants, are the rights of trade. For the purpose of clearness, I desire, as far as possible, to avoid terms in their popular use so slippery, and to translate them into less fallacious language wherever possible.

Charles Synge Christopher Bowen, Baron Bowen (1835-1894), as caricatured in *Vanity Fair* in 1892 Bowen was a graduate of Balliol College, where he excelled in the classics. He was called to the bar at Lincoln's Inn in 1861. After early disappointments he became a distinguished barrister who was called to the bench in 1879, but made his mark on the Court of Appeal in 1882, where many of his judgments, including *Edgington v.*

Fitzmaurice, *supra* Chapter 13 at 1124, The Moorcock, and Carlill v. Carbolic Smoke Ball Co., are still regarded as classics of the legal literature. He was appointed to the House of Lords, but died before in 1894 just as his service began.

... Now, intentionally to do that which is calculated in the ordinary course of events to damage, and which does, in fact, damage another in that other person's property or trade, is actionable if done without just cause or excuse. Such intentional action when done without just cause or excuse is what the law calls a malicious wrong. . . .

... The acts of the defendants which are complained of here were intentional and were also calculated, no doubt, to do the plaintiffs damage in their trade. But in order to see whether they were wrongful we have still to discuss the question whether they were done without any just cause or excuse. Such just cause or excuse the defendants on their side assert to be found in their own positive right (subject to certain limitations) to carry on their own trade freely in the mode and manner that best suits them, and which they think best calculated to secure their own advantage.

What, then, are the limitations which the law imposes on a trader in the conduct of his business as between himself and other traders? There seem to be no burdens or restrictions in law upon a trader which arise

p. 1197

merely from the fact that he is a trader, and which are not equally laid on all other subjects of the Crown. His right to trade freely is a right which the law recognises and encourages, but it is one which places him at no special disadvantage as compared with others. No man, whether trader or not, can, however, justify damaging another in his commercial business by fraud or misrepresentation. Intimidation, obstruction, and molestation are forbidden; so is the intentional procurement of a violation of individual rights, contractual or other, assuming always that there is no just cause for it. The intentional driving away of customers by shew of violence: Tarleton v. M'Gawley; the obstruction of actors on stage by preconcerted hissing: Clifford v. Brandon[, 170 Eng. Rep. 1183 (N.P. 1809)]; the disturbance of wild fowl in decoys by the firing of guns: Keeble v. Hickeringill[, 103 Eng. Rep. 1127 (Q.B. 1706)]; the impeding or threatening servants or workmen: Garret v. Taylor[, 79 Eng. Rep. 485 (K.B. 1620)]; the inducing persons under personal contracts to break their contracts: Bowen v. Hall; Lumley v. Gye; all are instances of such forbidden acts. But the defendants have been guilty of none of these acts. They have done nothing more against the plaintiffs than pursue to the bitter end a war of competition waged in the interest of their own trade. To the argument that a competition so pursued ceases to have a just cause or excuse when there is ill-will or a personal intention to harm, it is sufficient to reply (as I have already pointed out) that there was here no personal intention to do any other or greater harm to the plaintiffs than such as was necessarily involved in the desire to attract to the defendants' ships the entire tea freights of the ports, a portion of which would otherwise have fallen to the plaintiffs' share. I can find no authority for the doctrine that such a commercial motive deprives of "just cause or excuse" acts done in the course of trade which would but for such a motive be justifiable. So to hold would be to convert into an illegal motive the instinct of self-advancement and self-protection, which

is the very incentive to all trade. To say that a man is to trade freely, but that he is to stop short at any act which is calculated to harm other tradesmen, and which is designed to attract business to his own shop, would be a strange and impossible counsel of perfection. But we were told that competition ceases to be the lawful exercise of trade, and so to be a lawful excuse for what will harm another, if carried to a length which is not fair or reasonable. The offering of reduced rates by the defendants in the present case is said to have been "unfair." This seems to assume that, apart from fraud, intimidation, molestation, or obstruction, of some other personal right in rem or in personam, there is some natural standard of "fairness" or "reasonableness" (to be determined by the internal consciousness of judges and juries) beyond which competition ought not in law to go. There seems to be no authority, and I think, with submission, that there is no sufficient reason for such a proposition. It would impose a novel fetter upon trade. The defendants, we are told by the plaintiffs' counsel, might lawfully lower rates provided they did not lower them beyond a "fair freight," whatever that may mean. But where is it established that there is any such restriction upon commerce? And what is to be the definition of a "fair freight"? It is said that it ought to be a normal rate of freight,

p. 1198

such as is reasonably remunerative to the shipowner. But over what period of time is the average of this reasonable remunerativeness to be calculated? All commercial men with capital are acquainted with the ordinary expedient of sowing one year a crop of apparently unfruitful prices, in order by driving competition away to reap a fuller harvest of profit in the future; and until the present argument at the bar it may be doubted whether shipowners or merchants were ever deemed to be bound by law to conform to some imaginary "normal" standard of freights or prices, or that Law Courts had a right to say to them in respect of their competitive tariffs, "Thus far shalt thou go and no further." To attempt to limit English competition in this way would probably be as hopeless an endeavour as the experiment of King Canute [to turn back the tides]. . . .

Exhibit 14.4 Is King Canute Misunderstood?

[W]as the legendary Viking leader and 11th Century King of England so deluded to really assume he had the powers to turn back the tide? . . .

The first written account of the Canute episode appeared in *Historia Anglorum* (The History of the English People) by chronicler Henry of Huntingdon, who lived within 60 years of the death of Canute (1035 A.D.).

According to the story, the king had his chair carried down to the shore and ordered the waves not to break upon his land.

When his orders were ignored, he pronounced: "Let all the world know that the power of kings is empty and worthless and there is no King worthy of the name save Him by whose will heaven and earth and sea obey eternal laws," (*Historia Anglorum*, ed D E Greenway). . . .

But most modern-day analogies of Canute turn Henry of Huntingdon's account on its head. . . .

"It is often used about politicians who consider themselves so powerful they can stop the tide of something, such as rising wages—as arrogant as King Canute," says Prof [Simon] Keynes [of the department of Anglo-Saxon, Norse and Celtic at the University of Cambridge]. . . .

It is urged, however, on the part of the plaintiffs, that even if the acts complained of would not be wrongful had they been committed by a single individual, they become actionable when they are the result of concerted action among several. In other words, the plaintiffs, it is contended, have been injured by an illegal conspiracy. Of the general proposition, that certain kinds of conduct not criminal in any one individual may become criminal if done by combination among several, there can be no doubt. The distinction is based on sound reason, for a combination may make oppressive or dangerous that which if it proceeded

p. 1199

only from a single person would be otherwise, and the very fact of the combination may shew that the object is simply to do harm, and not to exercise one's own just rights. In the application of this undoubted principle it is necessary to be very careful not to press the doctrine of illegal conspiracy beyond that which is necessary for the protection of individuals or of the public; and it may be observed in passing that as a rule it is the damage wrongfully done, and not the conspiracy, that is the gist of actions on the case for conspiracy. But what is the definition of an illegal combination? It is an agreement by one or more to do an unlawful act, or to do a lawful act by unlawful means; and the question to be solved is whether there has been any such agreement here. Have the defendants combined to do an unlawful act? Have they combined to do a lawful act by unlawful means? A moment's consideration will be sufficient to shew that this new inquiry only drives us back to the circle of definitions and legal propositions which I have already traversed

in the previous part of this judgment. The unlawful act agreed to, if any, between the defendants must have been the intentional doing of some act to the detriment of the plaintiffs' business without just cause or excuse. Whether there was any such justification or excuse for the defendants is the old question over again, which, so far as regards an individual trader, has been already solved. The only differential that can exist must arise, if at all, out of the fact that the acts done are the joint acts of several capitalists, and not of one capitalist only. The next point is whether the means adopted were unlawful. The means adopted were competition carried to a bitter end. Whether such means were unlawful is in like manner nothing but the old discussion which I have gone through, and which is now revived under a second head of inquiry, except so far as a combination of capitalists differentiates the case of acts jointly done by them from similar acts done by a single man of capital. But I find it impossible myself to acquiesce in the view that the English law places any such restriction on the combination of capital as would be involved in the recognition of such a distinction. If so, one rich capitalist may innocently carry competition to a length which would become unlawful in the case of a syndicate with a joint capital no larger than his own, and one individual merchant may lawfully do that which a firm or a partnership may not. What limits, on such a theory, would be imposed by law on the competitive action of a joint-stock company limited, is a problem which might well puzzle a casuist. The truth is, that the combination of capital for purposes of trade and competition is a very different thing from such a combination of several persons against one, with a view to harm him, as falls under the head of an indictable conspiracy. There is no just cause or excuse in the latter class of cases. There is such a just cause or excuse in the former. . . . Would it be an indictable conspiracy to agree to drink up all the water from a common spring in a time of drought; to buy up by preconcerted action all the provisions in a market or district in times of scarcity; to combine to purchase all the shares of a company against a coming settling-day; or to agree to give away articles of trade gratis in order to withdraw custom from a trader? May two itinerant match-vendors combine to sell matches below their value in order by competition to drive a third match-vendor from the street? . . .

p. 1200

In the result, I agree with Lord Coleridge, C.J., and differ, with regret, from the Master of the Rolls. The substance of my view is this, that competition, however severe and egotistical, if unattended by circumstances of dishonesty, intimidation, molestation, or such illegalities as I have above referred to, gives rise to no cause of action at common law. I myself should deem it to be a misfortune if we were to attempt to prescribe to the business world how honest and peaceable trade was to be carried on in a case where no such illegal elements as I have mentioned exist, or were to adopt some standard of judicial "reasonableness," or of "normal" prices, or "fair freights," to which commercial adventurers, otherwise innocent, were bound to conform.

In my opinion, accordingly, this appeal ought to be dismissed with costs.

[Fry, L.J., issued an opinion concurring in the judgment of Bowen, L.J.]

Lord Esher, M.R., dissenting:]

It follows that the act of the defendants in lowering their freights far beyond a lowering for any purpose of trade—that is to say, so low that if they continued it they themselves could not carry on trade—was not an

act done in the exercise of their own free right of trade, but was an act done evidently for the purpose of interfering with, i.e. with intent to interfere with, the plaintiffs' right to a free course of trade, and was therefore a wrongful act as against the plaintiffs' right; and as injury ensued to the plaintiffs, they had also in respect of such act a right of action against the defendants. The plaintiffs, in respect of that act, would have had a right of action if it had been done by one defendant only; they have it still more clearly when that act was done by several defendants combined for that purpose. For these reasons I come to the conclusion that the plaintiffs were entitled to judgment. The damages, if that be the correct conclusion as to the right of action, are to be ascertained. They are, in my opinion, the difference between the freight of 25s., which the plaintiffs were forced to accept, and the freight they would have obtained without other interference than a legal fair competition in 1885, and damages at large for being prevented from endeavouring to earn freight from Hankow to England in subsequent years, after taking into account the probability of using their ships in some other trade. I am of opinion that the appeal should be allowed.

NOTES

1. *Predatory pricing.* *Mogul* is one of the first cases in which the defendants were sued for entering into a scheme of what is now called predatory pricing (i.e., a practice of selling below cost in the short run in the hope of obtaining monopoly gains later, after driving the competition from the market). In dealing with the legality of the practice, Bowen, L.J., did not concentrate on the social losses that predation might generate, or on the market power, if any, commanded by the defendants, which increased with the size of the group membership. Instead, he was content to show that the defendant's practices did not involve the use of forbidden means: fraud, misrepresentation, intimidation, obstruction, and molestation headed his list. For discussion, see Epstein, Intentional Harms, 4 J. Legal Stud. 391, 431 (1975).

p. 1201

The modern economic understanding of predation does not dispute the illegality of force and fraud. But it asks the further question of whether predation constitutes an activity that is likely to cause social losses, even when restricted to downward price movements; and, if so, whether a court is capable of distinguishing between such predation and ordinary competition. The modern law and economics literature has generally defended the no-liability outcome in *Mogul* on the ground that predation does not offer any firm or group a secure route to gain market power. The classic article on the subject is McGee, Predatory Price Cutting: The Standard Oil (N.J.) Case, 1 J.L. & Econ. 137 (1958), which concluded that mergers and acquisitions, but not predation, vaulted Standard Oil to its dominant market position. Thereafter McGee expressed doubt that predation could ever lead to monopoly. Historically the defendants' combination in *Mogul* broke up even before the legal issues were resolved on appeal, and no successful effort of wide-scale predation has yet been uncovered.

Notwithstanding the paucity of empirical evidence on the point, some writers have advocated, roughly speaking, a definition of predation that renders it illegal to sell a product below its marginal cost of production, a test adumbrated in Esher's, M.R., dissent, when he defines the unfair price as one at which the defendants could not "continue" to sell their wares. See Areeda & Turner, Predatory Pricing and Related

Practices Under Section 2 of the Sherman Act, 88 Harv. L. Rev. 697 (1975). The major response to this position is that no firm can hope to recoup in the long run the losses that it must incur in the short run to flood the market with low-cost products, so that consistent with *Mogul*, “[t]he antitrust offense of predation should be forgotten.” See Easterbrook, Predatory Strategies and Counterstrategies, 48 U. Chi. L. Rev. 263 (1981).

In the antitrust universe, that position carried the day in *Matsushita Electric Industrial Co., Ltd. v. Zenith Radio Corp.*, 475 U.S. 574 (1986), when the Supreme Court upheld summary judgment for defendants, Japanese television manufacturers charged with a conspiracy to drive their American competitors out of business. The Court imposed a very high burden of proof on the plaintiffs given the inherent implausibility of their predation claim. The Court extended its views on predatory pricing to the converse situation of predatory bidding in *Weyerhaeuser v. Ross-Simmons HardWood Lumber Co.*, 549 U.S. 312, 316, 322 (2007). The Court unanimously rejected Ross-Simmons’ antitrust claim that Weyerhaeuser had engaged in unfair trade practices by using “its dominant position in the alder sawlog market to drive up the prices for alder sawlogs to levels that severely reduced or eliminated the profit margins of Weyerhaeuser’s alder sawmill competition.” Taking the same skeptical approach toward predatory pricing as in *Matsushita*, the Court reasoned that excessive intervention could easily deter beneficial competition, given the many procompetitive reasons for high bids, including the desire to build up future inventories. In addition, Thomas, J., noted that “[a] predatory-bidding scheme requires a buyer of inputs to suffer losses today on the chance that it will reap supracompetitive profits in the future.” Accordingly the Court limited these claims to those few cases in which the buyer could show both that the defendant’s high bids “led to below-cost pricing of the predator’s

p. 1202

outputs” and that “the defendant has a dangerous probability of recouping the losses incurred in bidding up input prices through the exercise of monopsony [i.e., buyer-side monopoly] power.” For exhaustive discussion of these issues, see Symposium: Buyer Power and Antitrust: Anticompetitive Overbuying by Power Buyers, 72 Antitrust L.J. (Iss. 2, 2005).

2. *The English trilogy.* *Mogul* was the first of three major cases decided around 1900 that attempted to define the limits of fair competition at common law. The other two cases were *Allen v. Flood*, [1898] A.C. 1, and *Quinn v. Leathem*, [1901] A.C. 495, both of which involved labor, not trade, disputes. In *Allen v. Flood*, the defendant Allen represented the ironworkers union; the plaintiff Flood and his coworkers were members of the shipwrights union. Both members of both unions worked for the Glengall Iron Co. under contracts at will. Allen told Glengall that the ironworkers would walk off the job unless the shipwrights were dismissed. To keep the service of the ironworkers, Glengall dismissed the plaintiff shipwrights, who promptly sued. The holding in the House of Lords took a highly abstract form: “An act lawful in itself is not converted by a malicious or a bad motive into an unlawful act so as to make the doer of the act liable to a civil action.” The House of Lords dismissed the plaintiff’s claim. An excerpt from Lord Herschell’s lengthy opinion charts the move from this abstract proposition to the law of trade disputes:

In *Temperton v. Russell* [[1893] 1 Q.B. 715, *supra* at 1164], the further step was taken by the majority of the Court . . . of asserting that it was immaterial that the act induced was not the breach of a contract, but only the not entering into a contract, provided that the motive of

desiring to injure the plaintiff, or to benefit the defendant at the expense of the plaintiff, was present. It seems to have been regarded as only a small step from the one decision to the other, and it was said that there seemed to be no good reason why, if an action lay for maliciously inducing a breach of contract, it should not equally lie for maliciously inducing a person not to enter into a contract. So far from thinking it a small step from the one decision to the other, I think there is a chasm between them. The reason for a distinction between the two cases appears to me to be this: that in the one case the act procured was the violation of a legal right, for which the person doing the act which injured the plaintiff could be sued as well as the person who procured it; whilst in the other case no legal right was violated by the person who did the act from which the plaintiff suffered: he would not be liable to be sued in respect of the act done, whilst the person who induced him to do the act would be liable to an action. . . .

In *Quinn v. Leathem*, [1901] A.C. 495, the last case in the trilogy, the plaintiff Leathem was a wholesale meat slaughterer. The defendant union demanded that he replace his current workers with union members paid at union wages. The union refused to accept the plaintiff's offer to pay his own workers union scale; it was, however, prepared to admit the fired workers as union members, but without any seniority. When the plaintiff refused to comply with the union's demands, the union (in what today is called a secondary boycott) warned the plaintiff's best customer, his brother-in-law Munce, that his own workers would be called off the

p. 1203

job unless Munce stopped buying his meat from the plaintiff. Munce yielded, and the plaintiff sued the union. The House of Lords upheld his claim. As stated in the headnote: "A combination of two or more, without justification or excuse, to injure a man in his trade by inducing his customers or servants to break their contracts with him or not to deal with him or continue in his employment is, if it results in damage to him, actionable." Lord Shand distinguished *Quinn* from *Allen* in a single sentence:

In *Allen v. Flood* the purpose of the defendant was by the acts complained of to promote his own trade interest, which it was held he was entitled to do, although injurious to his competitors, whereas in the present case, while it was clear there was a combination, the purpose of the defendants was to injure the plaintiff in his trade as distinguished from the intention of legitimately advancing their own interests.

Is a union's interest to secure work for its own members a permissible justification under *Mogul*? For criticism of *Quinn*, see Gregory, Labor and the Law ch. 2 (2d rev. ed. 1958). For a defense of *Quinn* and an attack on *Allen*, see Petro, Unions and the Southern Courts: Part III—The Conspiracy and Tort Foundations of the Labor Injunction, 60 N.C. L. Rev. 544, 558-567 (1982). Does the union in either *Allen* or *Flynn* stand a good chance to recoup its losses if forced to go out on strike to make good on its respective threats?

In any case, labor law has largely supplanted the common law rules in this area in both England and the United States. In particular, the Trade Disputes Act, Ed. VII ch. 47, deviated from common law principles on three particulars. It did not allow the enforcement of labor contracts; it forbade actions for the collective refusal to deal—a per se antitrust offense—in the absence of the threat or force; and it barred actions for the inducement of contract in labor disputes. In the United States, the National Labor Relations Act, as

amended, 29 U.S.C. §§151-169, articulated a system of union elections buttressed by a statutory requirement that an employer designate an exclusive bargaining representative after a union won that right through election. What are the relative merits of the different approaches?

3. Malice in the trade cases. The leading American authority on the place of malice in unfair competition cases is *Tuttle v. Buck*, 119 N.W. 946, 948 (Minn. 1909). The plaintiff was a barber by trade and the defendant a banker. The plaintiff claimed that the defendant, acting out of sheer malice, sought to drive him out of the barbershop business. The defendant hired two barbers, gave them rent-free use of a barbershop, and by “threats of his personal displeasure sought to persuade members of the general public not to frequent the plaintiff’s business.” The trial judge upheld the complaint on demurrer and the decision was affirmed on appeal. Elliott, J., writing for the court, held that the wholly malicious conduct of the defendant, if proved, overstepped the proper bounds of fair competition—only to express thereafter his personal doubts about the sufficiency of the plaintiff’s factual allegations:

p. 1204

There is no allegation that the defendant was intentionally running the business at a financial loss to himself, or that after driving the plaintiff out of business the defendant closed up or intended to close up his shop. From all that appears from the complaint he may have opened the barber shop, energetically sought business from his acquaintances and the customers of the plaintiff, and as a result of his enterprise and command of capital obtained it, with the result that the plaintiff, from want of capital, acquaintance, or enterprise, was unable to stand the competition and was thus driven out of business.

How long will any economic entity survive or prosper if motivated solely by malice instead of self-interest? See generally Ames, How Far an Act May Be a Tort Because of the Wrongful Motive of the Actor, 18 Harv. L. Rev. 411 (1905).

INTERNATIONAL NEWS SERVICE v. ASSOCIATED PRESS

248 U.S. 215 (1918)

PITNEY, J. [The plaintiff Associated Press served some 900 newspapers throughout the United States in the gathering and distributing of news, which its member papers then sold to the public. Its annual budget was about \$3,500,000. The defendant International News Service performed the same service for some 400 newspapers for about \$2,000,000 per annum.]

Justice Mahlon Pitney (1858-1924), who served as Associate Justice of the Supreme Court from 1912-1922. He also served as a Congressman, New Jersey State Senator, and Justice of the New Jersey Supreme Court.

Source: Wikimedia Commons

The parties are in the keenest competition between themselves in the distribution of news throughout the United States; and so, as a rule, are the newspapers that they serve, in their several districts. . . .

The bill was filed to restrain the pirating of complainant's news by defendant in three ways: First, by bribing employees of newspapers published by complainant's members to furnish Associated Press news to defendant before publication, for transmission by telegraph and telephone to defendant's clients for publication by them; Second, by inducing Associated Press members to violate its by-laws and permit defendant to obtain news before publication; and Third, by copying news from bulletin boards and from early editions of complainant's newspapers and selling this, either bodily or after rewriting it, to defendant's customers. . . .

The only matter that has been argued before us is whether defendant may lawfully be restrained from appropriating news taken from

p. 1205

bulletins issued by complainant or any of its members, or from newspapers published by them, for the purpose of selling it to defendant's clients. Complainant asserts that defendant's admitted course of conduct in this regard both violates complainant's property right in the news and constitutes unfair competition in business. And notwithstanding the case has proceeded only to the stage of preliminary injunction, we have deemed it proper to consider the underlying questions, since they go to the very merits of the action and are presented upon facts that are not in dispute. As presented in argument, these questions are: 1. Whether there is any property in news; 2. Whether, if there be property in news collected for the purpose of being published, it survives the instant of its publication in the first newspaper to which it is communicated by the news-gatherer; and 3. Whether defendant's admitted course of conduct in appropriating for commercial use matter taken from bulletins or early editions of Associated Press publications constitutes unfair competition in trade.

The federal jurisdiction was invoked because of diversity of citizenship, not upon the ground that the suit arose under the copyright or other laws of the United States. Complainant's news matter is not copyrighted.

...

[T]he news element—the information respecting current events contained in the literary production—is not the creation of the writer, but is a report of matters that ordinarily are *publici juris*; it is the history of the day. It is not to be supposed that the framers of the Constitution, when they empowered Congress "to promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries" (Const., Art. I, §8, par. 8), intended to confer upon one who might happen to be the first to report a historic event the exclusive right for any period to spread the knowledge of it.

We need spend no time, however, upon the general question of property in news matter at common law, or the application of the copyright act, since it seems to us the case must turn upon the question of unfair competition in business. And, in our opinion, this does not depend upon any general right of property analogous to the common-law right of the proprietor of an unpublished work to prevent its publication without his consent; nor is it foreclosed by showing that the benefits of the copyright act have been waived. We are dealing here not with restrictions upon publication but with the very facilities and processes of publication. The peculiar value of news is in the spreading of it while it is fresh; and it is evident that a valuable property interest in the news, as news, cannot be maintained by keeping it secret. Besides, except for matters improperly disclosed, or published in breach of trust or confidence, or in violation of law, none of which is involved in this branch of the case, the news of current events may be regarded as common property. What we are concerned with is the business of making it known to the world, in which both parties to the present suit are engaged. That business consists in maintaining a prompt, sure, steady, and reliable service designed to place the daily events of the world at the breakfast table of the millions at a price that, while of trifling moment to each reader, is sufficient in the aggregate to afford compensation for the cost of gathering and distributing it,

p. 1206

with the added profit so necessary as an incentive to effective action in the commercial world. The service thus performed for newspaper readers is not only innocent but extremely useful in itself, and indubitably constitutes a legitimate business. The parties are competitors in this field; and, on fundamental principles, applicable here as elsewhere, when the rights or privileges of the one are liable to conflict with those of the other, each party is under a duty so to conduct its own business as not unnecessarily or unfairly to injure that of the other.

Obviously, the question of what is unfair competition in business must be determined with particular reference to the character and circumstances of the business. The question here is not so much the rights of either party as against the public but their rights as between themselves. And although we may and do assume that neither party has any remaining property interest as against the public in uncopied news matter after the moment of its first publication, it by no means follows that there is no remaining property interest in it as between themselves. For, to both of them alike, news matter, however little susceptible of ownership or dominion in the absolute sense, is stock in trade, to be gathered at the cost of enterprise, organization, skill, labor, and money, and to be distributed and sold to those who will pay money for it, as for any other merchandise. Regarding the news, therefore, as but the material out of which both parties are seeking to make profits at the same time and in the same field, we hardly can fail to recognize that for this purpose, and as between them, it must be regarded as quasi property, irrespective of the rights of either as against the public. . . .

The peculiar features of the case arise from the fact that, while novelty and freshness form so important an element in the success of the business, the very processes of distribution and publication necessarily occupy a good deal of time. Complainant's service, as well as defendant's, is a daily service to daily newspapers; most of the foreign news reaches this country at the Atlantic seaboard, principally at the City of New York, and because of this, and of time differentials due to the earth's rotation, the distribution of news matter throughout the country is principally from east to west; and, since in speed the telegraph and telephone easily outstrip the rotation of the earth, it is a simple matter for defendant to take complainant's news from bulletins or early editions of complainant's members in the eastern cities and at the mere cost of telegraphic transmission cause it to be published in western papers issued at least as early as those served by complainant. Besides this, and irrespective of time differentials, irregularities in telegraphic transmission on different lines, and the normal consumption of time in printing and distributing the newspaper, result in permitting pirated news to be placed in the hands of defendant's readers sometimes simultaneously with the service of competing Associated Press papers, occasionally even earlier.

Defendant insists that when, with the sanction and approval of complainant, and as the result of the use of its news for the very purpose for which it is distributed, a portion of complainant's members communicate it to the general public by posting it upon bulletin boards so that all may read, or by issuing it to newspapers and distributing it indiscriminately, complainant no longer has the right to control the use to be made of it; that when it thus reaches the light of day it

becomes the common possession of all to whom it is accessible; and that any purchaser of a newspaper has the right to communicate the intelligence which it contains to anybody and for any purpose, even for the purpose of selling it for profit to newspapers published for profit in competition with complainant's

members.

The fault in the reasoning lies in applying as a test the right of the complainant as against the public, instead of considering the rights of complainant and defendant, competitors in business, as between themselves. The right of the purchaser of a single newspaper to spread knowledge of its contents gratuitously, for any legitimate purpose not unreasonably interfering with complainant's right to make merchandise of it, may be admitted; but to transmit that news for commercial use, in competition with complainant—which is what defendant has done and seeks to justify—is a very different matter[, . . . whereby the defendant] is endeavoring to reap where it has not sown[,] . . . with special advantage to defendant in the competition because of the fact that it is not burdened with any part of the expense of gathering the news. The transaction speaks for itself, and a court of equity ought not to hesitate long in characterizing it as unfair competition in business.

. . . It is no answer to say that complainant spends its money for that which is too fugitive or evanescent to be the subject of property. That might, and for the purposes of the discussion we are assuming that it would, furnish an answer in a common-law controversy. But in a court of equity, where the question is one of unfair competition, if that which complainant has acquired fairly at substantial cost may be sold fairly at substantial profit, a competitor who is misappropriating it for the purpose of disposing of it to his own profit and to the disadvantage of complainant cannot be heard to say that it is too fugitive or evanescent to be regarded as property. It has all the attributes of property necessary for determining that a misappropriation of it by a competitor is unfair competition because contrary to good conscience.

The contention that the news is abandoned to the public for all purposes when published in the first newspaper is untenable. Abandonment is a question of intent, and the entire organization of the Associated Press negatives such a purpose. The cost of the service would be prohibitive if the reward were to be so limited. No single newspaper, no small group of newspapers, could sustain the expenditure. . . .

It is to be observed that the view we adopt does not result in giving to complainant the right to monopolize either the gathering or the distribution of the news, or, without complying with the copyright act, to prevent the reproduction of its news articles; but only postpones participation by complainant's competitor in the processes of distribution and reproduction of news that it has not gathered, and only to the extent necessary to prevent that competitor from reaping the fruits of complainant's efforts and expenditure, to the partial exclusion of complainant, and in violation of the principle that underlies the maxim *sic utere tuo*, etc.

It is said that the elements of unfair competition are lacking because there is no attempt by defendant to palm off its goods as those of the complainant, characteristic of the most familiar, if not the most typical, cases of unfair competition. But we cannot concede that the right to equitable relief is confined to that class

of cases. In the present case the fraud upon complainant's rights is more direct and obvious. Regarding news matter as the mere material from which these two competing parties are endeavoring to make money, and treating it, therefore, as quasi property for the purposes of their business because they are both selling it as such, defendant's conduct differs from the ordinary case of unfair competition in trade principally in this that, instead of selling its own goods as those of complainant, it substitutes misappropriation in the place of

misrepresentation, and sells complainant's goods as its own.

[The Court then brought its opinion to a close by considering (1) whether plaintiff is barred in equity because it has "unclean hands," since it utilizes "tips" obtained from defendant's service, and concluded that this practice "is not shown to be such as to constitute an unconscientious or inequitable attitude . . . so as to fix upon complainant the taint of unclean hands"; (2) whether the injunction was too broad, and decided that although it may be subject to some criticism it should be left to the trial court to modify it if necessary at a later stage in the case.]

The decree of the Circuit Court of Appeals will be affirmed.

[Justice Holmes, in an opinion in which Justice McKenna concurred, would have limited relief to requiring defendant to give express credit to plaintiff for the news it took.]

BRANDEIS, J., dissenting. . . . News is a report of recent occurrences. . . . The general rule of law is, that the noblest of human productions—knowledge, truths ascertained, conceptions, and ideas—become, after voluntary communication to others, free as the air to common use. Upon these incorporeal productions the attribute of property is continued after such communication only in certain classes of cases where public policy has seemed to demand it. These exceptions are confined to productions which, in some degree, involve creation, invention, or discovery. But by no means all such are endowed with this attribute of property. The creations which are recognized as property by the common law are literary, dramatic, musical, and other artistic creations; and these have also protection under the copyright statutes. The inventions and discoveries upon which this attribute of property is conferred only by statute, are the few comprised within the patent law. . . .

Plaintiff further contended that defendant's practice constitutes unfair competition, because there is "appropriation without cost to itself of values created by" the plaintiff; and it is upon this ground that the decision of this court appears to be based. To appropriate and use for profit, knowledge and ideas produced by other men, without making compensation or even acknowledgment, may be inconsistent with a finer sense of propriety; but, with the exceptions indicated above, the law has heretofore sanctioned the practice.

...

. . . The unfairness in competition which hitherto has been recognized by the law as a basis for relief, lay in the manner or means of conducting the business; and the manner or means held legally unfair, involves either fraud or force or the doing of acts otherwise prohibited by law. In the "passing off" cases (the typical and most common case of unfair competition), the wrong consists in fraudulently representing by word or act that defendant's goods are those of plaintiff. In the other cases, the diversion of trade was effected through physical or moral

coercion, or by inducing breaches of contract or of trust or by enticing away employees. In some others, called cases of simulated competition, relief was granted because defendant's purpose was unlawful; namely, not competition but deliberate and wanton destruction of plaintiff's business. . . .

Nor is the use made by the International News Service of the information taken from papers or bulletins of Associated Press members legally objectionable by reason of the purpose for which it was employed. The acts here complained of were not done for the purpose of injuring the business of the Associated Press. Their purpose was not even to divert its trade, or to put it at a disadvantage by lessening defendant's necessary expenses. The purpose was merely to supply subscribers of the International News Service promptly with all available news. . . .

[Justice Brandeis then argued that the complexity of the problem called for legislative and administrative solutions because courts are "powerless" to create, regulate, or enforce new forms of property rights, even "to redress a newly-disclosed wrong, although the propriety of some remedy appears to be clear." He also noted that the public interest might be affected because the British and French governments refused to give INS access to the war news from the front because of the pro-German sympathies of its Hearst papers. The INS lifted stories only where it was excluded from direct access to the news.]

NOTE

The limits of INS. Justice Pitney's decision in *INS v. AP* is generally regarded as the foundation of the modern tort of misappropriation. As Justice Brandeis' dissent makes clear, the opinion goes beyond the libertarian conception of passing or palming off in that it does not involve any use of fraud that comes when one party falsely announces that its goods are the goods of another. The hard question is how far this new tort will go. Does Pitney explain why it is needed given the protections otherwise afforded? Will the catalogue of tort actions ever be closed if judicial decisions can create novel property interests whenever one person tries to take advantage of the labor of another? Would the Court have allowed the action if the INS had only serviced papers that were not in direct competition with papers serviced by the Associated Press? Would Brandeis, J., have remained in dissent if INS' Hearst papers had been allowed access to the front by the British authorities?

The lower courts have often given *INS* a chilly reception. Judge Learned Hand in particular sought to limit its reach in *Cheney Bros. v. Doris Silk Corp.*, 35 F.2d 279, 280 (2d Cir. 1929). The plaintiff was a silk manufacturer "which puts out each season many new patterns, designed to attract purchasers by their novelty and beauty." The expected life of any new pattern was generally about eight or nine months, and about 80 percent of the patterns marketed typically had no consumer appeal. Design patents were costly to obtain, and copyright protection was then generally unavailable as a matter of law. The plaintiff sought to enjoin the defendant who copied one of the plaintiff's popular patterns and undersold the plaintiff. Hand, J., appealed to legislative deference in denying the plaintiff any relief under the supposed "general doctrine" of *INS*, noting that any creation

p. 1210
of new rights would "flagrantly conflict" with long-established congressional schemes regulating copyrights and patents:

Qua patent, we should at least have to decide, as tabula rasa, whether the design or machine was

new and required invention; further, we must ignore the Patent Office whose action has always been a condition upon the creation of this kind of property. Qua copyright, although it would be simpler to decide upon the merits, we should equally be obliged to dispense with the conditions imposed upon the creation of the right. Nor, if we went so far, should we know whether the property so recognized should be limited to the periods prescribed in the statutes, or should extend as long as the author's grievance. It appears to us incredible that the Supreme Court should have had in mind any such consequences. To exclude others from the enjoyment of a chattel is one thing; to prevent any imitation of it, to set up a monopoly in the plan of its structure, gives the author a power over his fellows vastly greater, a power which the Constitution allows only Congress to create.

In effect, Hand's argument was that congressional coverage of related areas preempted the judicial creation of new rights. How did Pitney, J., sidestep that challenge? Should there have been a preemption issue on the table when the Chicago Board of Trade copied the Dow Jones Averages for its new financial futures indexes, which the Illinois Supreme Court enjoined in *Board of Trade of City of Chicago v. Dow Jones & Co., Inc.*, 456 N.E.2d 84, 90 (Ill. 1983), on the ground that "there are an infinite number of stock market indexes which could be devised" such that no one gains monopoly power through the control over one specific index?

On the relationship between *INS* and the *Dow Jones* case, see Baird, Common Law Intellectual Property and the Legacy of *International News Service v. Associated Press*, 50 U. Chi. L. Rev. 411 (1983). For a qualified defense of *INS*, see Epstein, *International News Service v. Associated Press: Custom and Law as Sources of Property Rights in News*, 78 Va. L. Rev. 87 (1992); Baird, The Story of *INS v. AP*, in *Intellectual Property Stories* (Ginsburg & Dreyfuss eds., 2006). Kenneally, Misappropriation and the Morality of Free-Riding, 18 Stan. Tech. L. Rev. 289, 291 (2015), observes that *INS* taps into the widespread "notion that free-riding is unethical." "But despite the influence that anti-free-riding sentiments have had, no one has offered much of a justification for them. Much criticism of free-riding is nothing more than name-calling." For the contrary position, see Epstein, The Irrelevance of the First Amendment to the Modern Regulation of the Internet, 23 Competition: J. Antitrust & Unfair Competition L. Sec. St. B. Cal. 100, 106 (2014):

[T]he remedy afforded in Justice Mahlon Pitney's opinion was shaped so as not to prevent anyone else from obtaining and disseminating the underlying public facts by independent effort. Rather, it only prevented the freeloading in *information gathering* that would make it less desirable for AP to generate the information in the first place.

How ought *INS* be read today?

THE NATIONAL BASKETBALL ASSOCIATION v. MOTOROLA, INC.

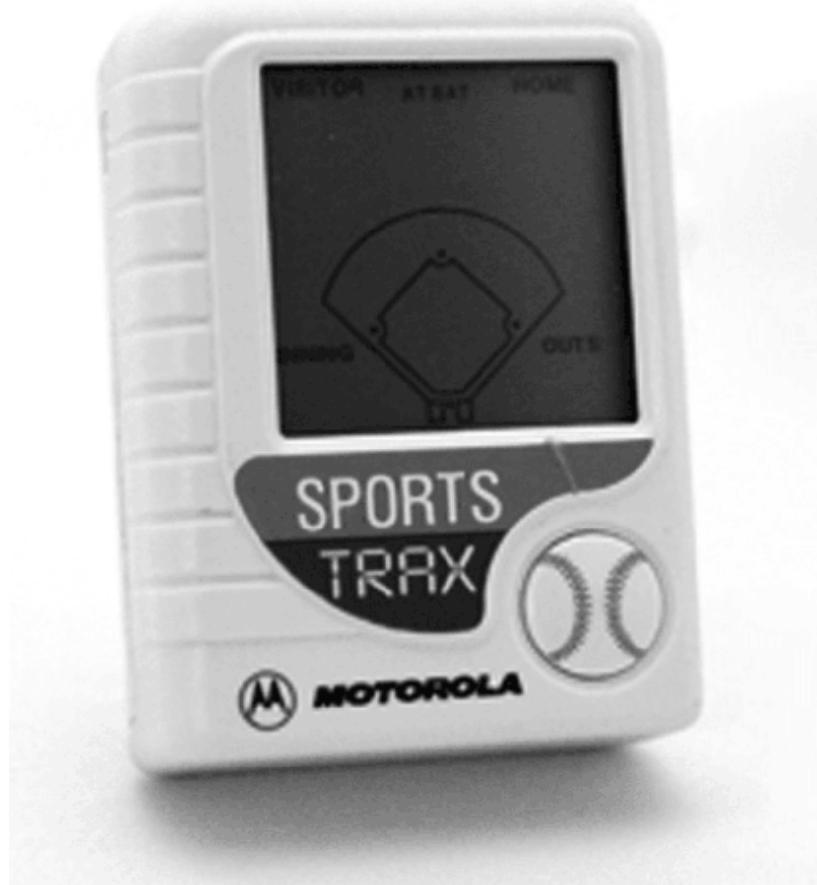

105 F.3d 841 (2d Cir. 1997)

Motorola, Inc. and Sports Team Analysis and Tracking Systems (“STATS”) appeal from a permanent injunction entered by Judge Preska. The injunction concerns a handheld pager sold by Motorola and marketed under the name “SportsTrax,” which displays updated information of professional basketball games in progress. The injunction prohibits appellants, absent authorization from the National Basketball Association and NBA Properties, Inc. (collectively the “NBA”), from transmitting scores or other data about NBA games in progress via the pagers, STATS’s site on America On-Line’s computer dial-up service, or “any equivalent means.”

The crux of the dispute concerns the extent to which a state law “hot-news” misappropriation claim based on *International News Service v. Associated Press*, 248 U.S. 215 (1918) (“INS”), survives preemption by the federal Copyright Act and whether the NBA’s claim fits within the surviving *INS*-type claims. We hold that a narrow “hot-news” exception does survive preemption. However, we also hold that appellants’ transmission of “real-time” NBA game scores and information tabulated from television and radio broadcasts of games in progress does not constitute a misappropriation of “hot news” that is the property of the NBA.

I. BACKGROUND

The facts are largely undisputed. Motorola manufactures and markets the SportsTrax paging device while STATS [through reporters who listen to or watch the games] supplies the game information that is transmitted to the pagers. The product became available to the public in January 1996, at a retail price of about \$200. SportsTrax’s pager has an inch-and-a-half by inch-and-a-half screen and operates in four basic modes: “current,” “statistics,” “final scores” and “demonstration.” It is the “current” mode that gives rise to the present dispute. In that mode, SportsTrax displays the following information on NBA games in progress: (i) the teams playing; (ii) score changes; (iii) the team in possession of the ball; (iv) whether the team is in the free-throw bonus; (v) the quarter of the game; and (vi) time remaining in the quarter. The information is updated every two to three minutes, with more frequent updates near the end of the first half and the end of the game. There is a lag of approximately two or three minutes between events in the game itself and when the information appears on the pager screen. . . .

Baseball version of SportsTrax

p. 1212

II. THE STATE LAW MISAPPROPRIATION CLAIM

A. SUMMARY OF RULING

[Winter, J., first traces the early evolution of the broadcast of baseball and other events, and notes that before 1976 the “general understanding” was that live broadcasts were not copyrightable and that much doubt remained “whether a recorded broadcast or videotape of such an event was copyrightable.”]

. . . In 1976, however, Congress passed legislation expressly affording copyright protection to simultaneously-recorded broadcasts of live performances such as sports events. See 17 U.S.C. §101. Such protection was not extended to the underlying events.

The 1976 amendments also contained provisions preempting state law claims that enforced rights “equivalent” to exclusive copyright protections when the work to which the state claim was being applied fell within the area of copyright protection. Based on legislative history of the 1976 amendments, it is

generally agreed that a “hot-news” *INS*-like claim survives preemption. However, much of New York misappropriation law after *INS* goes well beyond “hot-news” claims and is preempted.

We hold that the surviving “hot-news” *INS*-like claim is limited to cases where: (i) a plaintiff generates or gathers information at a cost; (ii) the information is time-sensitive; (iii) a defendant’s use of the information constitutes free-riding on the plaintiff’s efforts; (iv) the defendant is in direct competition with a product or service offered by the plaintiffs and (v) the ability of other parties to free-ride on the efforts of the plaintiff or others would so reduce the incentive to produce the product or service that its existence or quality would be substantially threatened.⁸ We conclude that SportsTrax does not meet that test.

C. THE STATE-LAW MISAPPROPRIATION CLAIM

The theory of the New York misappropriation cases relied upon by the district court is considerably broader than that of *INS*. However, we believe that [any] broad misappropriation doctrine based on amorphous concepts such as “commercial immorality” or society’s “ethics” is preempted. Such concepts are virtually synonymous for wrongful copying and are in no meaningful fashion distinguishable from infringement of a copyright. . . .

In light of [more recent] cases . . . that emphasize the narrowness of state misappropriation claims that survive preemption, most of the broadcast cases relied upon by the NBA are simply not good law. Those cases were decided at a time when simultaneously-recorded broadcasts were not protected under the Copyright Act and when the state law claims they fashioned were not subject to federal preemption. . . .

Our conclusion, therefore, is that only a narrow “hot-news” misappropriation claim survives preemption for actions concerning material within the realm of copyright.

p. 1213

[The court then restates the five elements set out above.]

INS is not about ethics; it is about the protection of property rights in time-sensitive information so that the information will be made available to the public by profit-seeking entrepreneurs. If services like AP were not assured of property rights in the news they pay to collect, they would cease to collect it. The ability of their competitors to appropriate their product at only nominal cost and thereby to disseminate a competing product at a lower price would destroy the incentive to collect news in the first place. The newspaper-reading public would suffer because no one would have an incentive to collect “hot news.”

We therefore find the extra elements—those in addition to the elements of copyright infringement—that allow a “hot-news” claim to survive preemption are: (i) the time-sensitive value of factual information, (ii) the free-riding by a defendant, and (iii) the threat to the very existence of the product or service provided by the plaintiff.

2. The Legality of SportsTrax

We conclude that Motorola and STATS have not engaged in unlawful misappropriation under the “hot-

news” test set out above. To be sure, some of the elements of a “hot-news” *INS* claim are met. The information transmitted to SportsTrax is not precisely contemporaneous, but it is nevertheless time-sensitive. Also, the NBA does provide, or will shortly do so, information like that available through SportsTrax. It now offers a service called “Gamestats” that provides official play-by-play game sheets and half-time and final box scores within each arena. It also provides such information to the media in each arena. In the future, the NBA plans to enhance Gamestats so that it will be networked between the various arenas and will support a pager product analogous to SportsTrax. SportsTrax will of course directly compete with an enhanced Gamestats.

However, there are critical elements missing in the NBA’s attempt to assert a “hot-news” *INS*-type claim. As framed by the NBA, their claim compresses and confuses three different informational products. The first product is generating the information by playing the games; the second product is transmitting live, full descriptions of those games; and the third product is collecting and retransmitting strictly factual information about the games. The first and second products are the NBA’s primary business: producing basketball games for live attendance and licensing copyrighted broadcasts of those games. The collection and retransmission of strictly factual material about the games is a different product: e.g., box-scores in newspapers, summaries of statistics on television sports news, and real-time facts to be transmitted to pagers. In our view, the NBA has failed to show any competitive effect whatsoever from SportsTrax on the first and second products and a lack [of] any free-riding by SportsTrax on the third.

With regard to the NBA’s primary products—producing basketball games with live attendance and licensing copyrighted broadcasts of those games—there is no evidence that anyone regards SportsTrax or the AOL site as a substitute for attending NBA games or watching them on television. In fact, Motorola markets SportsTrax as being designed “for those times when you cannot be at the arena, watch the game on TV, or listen to the radio. . . .”

p. 1214

The NBA argues that the pager market is also relevant to a “hot-news” *INS*-type claim and that SportsTrax’s future competition with Gamestats satisfies any missing element. We agree that there is a separate market for the real-time transmission of factual information to pagers or similar devices, such as STATS’s AOL site. However, we disagree that SportsTrax is in any sense free-riding off Gamestats.

An indispensable element of an *INS* “hot-news” claim is free-riding by a defendant on a plaintiff’s product, enabling the defendant to produce a directly competitive product for less money because it has lower costs. SportsTrax is not such a product. The use of pagers to transmit real-time information about NBA games requires: (i) the collecting of facts about the games; (ii) the transmission of these facts on a network; (iii) the assembling of them by the particular service; and (iv) the transmission of them to pagers or an on-line computer site. Appellants are in no way free-riding on Gamestats. Motorola and STATS expend their own resources to collect purely factual information generated in NBA games to transmit to SportsTrax pagers. They have their own network and assemble and transmit data themselves.

. . . SportsTrax and Gamestats are each bearing their own costs of collecting factual information on NBA games, and, if one produces a product that is cheaper or otherwise superior to the other, that producer will

prevail in the marketplace. This is obviously not the situation against which *INS* was intended to prevent: the potential lack of any such product or service because of the anticipation of free-riding.

[Injunction denied.]

NOTE

Pyrrhic victory for Motorola? Some four months after Motorola beat back an injunction by the NBA, it stopped promoting its SportsTrax pager and substituted in its place a new product called “ESPN to go” that it developed in connection with ESPN, the Walt Disney sports subsidiary, which reported NBA scores with at least a five-minute delay. The device did not let its user follow a single game, but instead used a single broadcast point to send multiple scores in different sports. Motorola announced: “We are simply voluntarily abiding by the N.B.A.’s guidelines.” *Motorola Sidelines Device Providing Live N.B.A. Scores*, N.Y. Times, June 2, 1997, <http://www.nytimes.com/1997/06/02/business/motorola-sidelines-device-providing-live-nba-scores.html>. Why the voluntary retreat?

BARCLAYS CAPITAL INC. v. THEFLYONTHEWALL.COM

650 F.3d 876 (2d Cir. 2011)

[Barclays, Merrill Lynch, and Morgan Stanley are firms that invested heavily (and separately) in market research targeting specific firms and industries. Each firm first released its buy/hold/sell recommendations to its paid customers prior to the start of each trading day in New York, in time for these customers to incorporate that information into their morning trading strategies. Only after the start of trade on the New York Stock Exchange (NYSE) did the firms release

p. 1215

the information to the general public. Their two-part strategy was intended to give the preferred customers a leg up on the market, followed by an additional boost for the early purchases once the general public received that same information. The defendant, Theflyonthewall.com (“Fly”), removed the informational advantages from the firm’s customers by collecting that information from a variety of sources, which it then released to the general public prior to the start of trading on the NYSE, noting carefully which recommendations were made by which firms.

The district court, Cote, J., enjoined Fly from its distribution scheme until 30 minutes before the start of trade. *Barclays Capital, Inc. v. Theflyonthewall.com*, 700 F. Supp. 2d 310 (S.D.N.Y. 2010). The Second Circuit reversed that decision in a lengthy opinion that was much preoccupied with *NBA v. Motorola*. Sack, J., set the stage by noting that *INS*, which used federal common law in a diversity case, was “no longer good law” after federal common law was largely abolished by *Erie R.R. v. Tompkins*, 304 U.S. 64 (1938), even though the hot-news exception—the modern reformulation of *INS*’ misappropriation—survived in limited form after the passage of the 1976 Copyright Act. He then offered this generalization:]

The adoption of new technology that injures or destroys present business models is commonplace. Whether fair or not, that cannot, without more, be prevented by application of the misappropriation tort. Indeed, because the Copyright Act itself provides a remedy for wrongful copying, such unfairness may be seen as supporting a finding that the Act preempts the tort.

[Sack, J., then noted that the claim for preemption was not defeated simply because the firms’ “[r]ecommendations themselves are not copyrightable.” He then concluded that the hot-news exception had no relevance at all:]

[F]inally, the Firms’ claim is not a so-called *INS*-type non-preempted claim because Fly is not, under NBA’s analysis, “free-riding.” It is collecting, collating and disseminating factual information—the facts that Firms and others in the securities business have made recommendations with respect to the value of and the wisdom of purchasing or selling securities—and attributing the information to its source. The Firms are making the news; Fly, despite the Firms’ understandable desire to protect their business model, is breaking it.

Moreover, Fly, having obtained news of a Recommendation, is hardly selling the Recommendation “as its own,” *INS*, 248 U.S., at 239. It is selling the information with specific attribution to the issuing Firm. Indeed, for Fly to sell, for example, a Morgan Stanley Recommendation “as its own,” as *INS* sold the news it cribbed from AP to *INS* subscribers, would be of little value to either Fly or its customers. . . . It is not the identity of Fly and its reputation as a financial analyst that carries the authority and weight sufficient to affect the market. It is Fly’s accurate attribution of the Recommendation to the creator that gives this news its value. . . .

In this case, as the district court found, approximately half of Fly’s twenty-eight employees are involved on the collection of the Firms’ Recommendations and production of the newsfeed on which summaries of the Recommendations are posted. Fly is reporting financial news—factual information on Firm

p. 1216

Recommendations—through a substantial organizational effort. Therefore, Fly’s service—which collects, summarizes, and disseminates the news of the Firms’ Recommendations—is not the “*INS*-like” product that could support a non-preempted cause of action for misappropriation. . . .

By way of comparison, we might, as the NBA Court did, speculate about a product a Firm might produce which might indeed give rise to a non-preempted “hot-news” misappropriation claim. If a Firm were to collect and disseminate to some portion of the public facts about securities recommendations in the brokerage industry (including, perhaps, such facts it generated itself—its own Recommendations), and were Fly to copy the facts contained in the Firm’s hypothetical service, it might be liable to the Firm on a “hot-news” misappropriation theory. That would appear to be an *INS*-type claim and might survive preemption.

[A concurrence by Raggi, J., was more sympathetic to *INS* and the firms, but ultimately she concluded as follows:]

I am not prepared to foreclose the possibility of a “hot news” claim by a party who disseminates news it

happens to create. I conclude simply that the facts emphasized by the majority preclude the Firms from stating a non-preempted “hot news” claim for a different reason derived from *NBA*: the Firms’ product and Fly’s newsfeed do not directly compete.

NOTES

1. *INS in relation to the creation and dissemination of information.* No judge dissented in *Fly*, but any dissent would presumably use the opinion of Cote, J., in the district court as its starting point. The point of departure is that the defendants in this case know that the information that they intercepted was intended for other individuals, and that its value derived from its exclusive use for a short period of time. Removing the differential advantage in effect puts the entire service out of business, such that the overall market in information will be less efficient afterward than before. The effort to secure broader dissemination early on thus leads to a reduction in the total quantity of the information generated, as all incentives to produce the information are stripped away. That result is avoided if this information is treated as a kind of a trade secret, given in confidence to a select audience, which keeps its value only until it is revealed. To limit, therefore, the hot-news exception only to news of public events gets matters exactly backward, for the private generation of new information merits greater protection than reports of the general events of the day, which are in the public domain. It should therefore not matter that the defendants are not in direct competition with the plaintiff if, unlike the situation in *NBA*, the use of this information is lifted directly from the plaintiffs and undermines their business.

In their amicus brief, Google and Twitter argued that “[h]ot news becomes cold in a nanosecond in the modern world.” Does that point explain why legal protection should be denied, or why it is needed?

2. *Hot news as a “collective action problem.”* Prior to the publication of the Second Circuit decision, the hot-news doctrine received a detailed examination in

p. 1217

Balganesh, “Hot News”: The Enduring Myth of Property in News, 111 Colum. L. Rev. 419, 425 (2011). Citing Cote’s, J., decision, Balganesh lamented the fact that recent proposals, including one from the Federal Trade Commission, to protect hot news in order to alleviate the revenue problems of newspapers, are “developments [that] effectively resuscitated the hot news doctrine.” Balganesh insists that the hot-news doctrine was designed not to create property rights in news, but to address the serious “collective action problem that was and is unique to the newspaper industry, related to the practice of cooperative newsgathering.” For a response, see Epstein, The Protection of “Hot News”: Putting Balganesh’s “Enduring Myth” About *International News Service v. Associated Press* in Perspective, 111 Colum. L. Rev. Sidebar 79, 89-90, 88 (2011), who rejects the collective action argument:

A collective action problem arises when a group of individuals acting alone are unable to achieve a result that they collectively desire. . . . The need for many newspapers to gather information is obvious enough, and Balganesh is surely right to say that “forcing each newspaper to collect the news individually on its own was recognized to be wasteful,

duplicative, and prohibitively expensive, for all but the largest incumbents.” But that is beside the point in this context. Any association with 950 or even 400 members faces an evident collective action problem. . . . Indeed, the very fact that this lawsuit takes place between two such associations means that they have already solved their collective action problems, such that the ultimate litigation operates on the same principles that would govern a dispute between two natural persons.

[Instead the] key difference between these two cases and misappropriation is that the latter depends on a notion of mutually beneficial forced exchanges: Each side is told to give up its right to pick things off the other’s bulletin boards for the mutual advantage of both. No hard line libertarian theory can tolerate these forced Pareto efficient exchanges, which is why the decision in *International News* represents a quantum leap beyond the earlier cases that did fit into the force and fraud paradigm. Justice Pitney got the point intuitively. Neither Justices Holmes nor Brandeis grasped the point.

For a critical evaluation of *Theflyonthewall.com*, see Marimon, Shutting Down the Turbine: How the News Industry and News Aggregators Can Coexist in a Post-Barclays v. *Theflyonthewall.com* World, 23 Fordham Intell. Prop. Media & Ent. L.J. 1441, 1445 (2013), which argues that “the best solution is to keep a common law doctrine, but one with changes that include a new conception of what timeliness means and that stipulate what kinds of remedies apply.”

ELY-NORRIS SAFE CO. v. MOSLER SAFE CO.

7 F.2d 603 (2d Cir. 1925)

Suit in equity by the Ely-Norris Safe Company against the Mosler Safe Company. From decree of dismissal, plaintiff appeals. Reversed.

The jurisdiction of the District Court depended upon diverse citizenship, and the suit was for unfair competition. The bill alleged that the plaintiff manufactured

p. 1218

and sold safes under certain letters patent, which had as their distinctive feature an explosion chamber, designed for protection against burglars. Before the acts complained of, no one but the plaintiff had ever made or sold safes with such chambers, and, except for the defendant’s infringement, the plaintiff has remained the only manufacturer and seller of such safes. By reason of the plaintiff’s efforts the public has come to recognize the value of the explosion chamber and to wish to purchase safes containing them. Besides infringing the patent, the defendant has manufactured and sold safes without a chamber, but with a metal band around the door, in the same place where the plaintiff put the chamber, and has falsely told its customers that this band was employed to cover and close an explosion chamber. Customers have been thus led to buy safes upon the faith of the representation, who in fact wished to buy safes with explosion chambers, and would have done so, but for the deceit.

The bill prayed an injunction against selling safes with such metal bands, and against representing that any

of its safes contained an explosion chamber. From the plaintiff's answers to interrogatories it appeared that all the defendant's safes bore the defendant's name and address, and were sold as its own. Furthermore, that the defendant never gave a customer reason to suppose that any safe sold by it was made by the plaintiff. . .

HAND, J. (after stating the facts as above.) American Washboard Co. v. Saginaw Mfg. Co., 103 F. 281 (6th Cir. [1900]), was . . . a case in substance like that at bar, because there the plaintiff alleged that it had acquired the entire output of sheet aluminum suitable for washboards. It necessarily followed that the plaintiff had a practical monopoly of this metal for the articles in question, and from this it was a fair inference that any customer of the defendant, who was deceived into buying as an aluminum washboard one which was not such, was a presumptive customer of the plaintiff, who had therefore lost a bargain. This was held, however, not to constitute a private wrong, and so the bill was dismissed. . . .

We must concede, therefore, that on the cases as they stand the law is with the defendant, and the especially high authority of the court which decided American Washboard Co. v. Saginaw Mfg. Co., *supra*, makes us hesitate to differ from their conclusion. Yet there is no part of the law which is more plastic than unfair competition, and what was not reckoned an actionable wrong 25 years ago may have become such today. We find it impossible to deny the strength of the plaintiff's case on the allegations of its bill. As we view it, the question is, as it always is in such cases, one of fact. While a competitor may, generally speaking, take away all the customers of another that he can, there are means which he must not use. One of these is deceit. The false use of another's name as maker or source of his own goods is deceit, of which the false use of geographical or descriptive terms is only one example. But we conceive that in the end the questions which arise are always two: Has the plaintiff in fact lost customers? And has he lost them by means which the law forbids? The false use of the plaintiff's name is only an instance in which each element is clearly shown.

In the case at bar the means are as plainly unlawful as in the usual case of palming off. It is as unlawful to lie about the quality of one's wares as about their maker;

p. 1219

it equally subjects the seller to action by the buyer. . . . The reason, as we think, why such deceits have not been regarded as actionable by a competitor, depends only upon his inability to show any injury for which there is a known remedy. In an open market it is generally impossible to prove that a customer, whom the defendant has secured by falsely describing his goods, would have bought of the plaintiff, if the defendant had been truthful. Without that, the plaintiff, though aggrieved in company with other honest traders, cannot show any ascertainable loss. He may not recover at law, and the equitable remedy is concurrent. The law does not allow him to sue as a vicarious avenger of the defendant's customers.

But, if it be true that the plaintiff has a monopoly of the kind of wares concerned, and if to secure a customer the defendant must represent his own as of that kind, it is a fair inference that the customer wants those and those only. Had he not supposed that the defendant could supply him, presumably he would have gone to the plaintiff, who alone could. At least, if the plaintiff can prove that in fact he would, he shows a direct loss, measured by his profits on the putative sale. If a tradesman falsely foists on a customer a substitute for what the plaintiff alone can supply, it can scarcely be that the plaintiff is without remedy, if he

can show that the customer would certainly have come to him, had the truth been told.

Yet that is in substance the situation which this bill presents. It says that the plaintiff alone could lawfully make such safes, and that the defendant has sold others to customers who asked for the patented kind. It can make no difference that the defendant sold them as its own. The sale by hypothesis depended upon the structure of the safes, not on their maker. To be satisfied, the customer must in fact have gone to the plaintiff, or the defendant must have infringed. Had he infringed, the plaintiff could have recovered his profit on the sale; had the customer gone to him, he would have made that profit. Any possibilities that the customers might not have gone to the plaintiff, had they been told the truth, are foreclosed by the allegation that the plaintiff in fact lost the sales. . . .

Decree reversed.

MOSLER SAFE CO. v. ELY-NORRIS SAFE CO.

273 U.S. 132 (1926)

HOLMES, J. [after summarizing the facts set out in the decision below.] At the hearing below all attention seems to have been concentrated on the question passed upon and the forcibly stated reasons that induced this Court of Appeals to differ from that for the Sixth Circuit. But, upon a closer scrutiny of the bill than seems to have been invited before, it does not present that broad and interesting issue. [Justice Holmes then restates the key allegations of the unfair competition claim: (1) The plaintiff has a patent on the explosion chamber, and (2) the defendant has designed and sold safes that have no such chamber but appear to the public that they did.] The plaintiff relies upon its patent suit for relief in respect of the sales of safes alleged to infringe its rights. It complains here only of false representations as to safes that do not infringe but that are sold as having explosion chambers although in fact they do not.

p. 1220

It is consistent with every allegation in the bill and the defendant in argument asserted it to be a fact, that there are other safes with explosion chambers beside that for which the plaintiff has a patent. The defendant is charged only with representing that its safes had an explosion chamber, which, so far as appears, it had a perfect right to do if the representation was true. If on the other hand the representation was false as it is alleged sometimes to have been, there is nothing to show that customers had they known the facts would have gone to the plaintiff rather than to other competitors in the market, or to lay a foundation for the claim for a loss of sales. The bill is so framed as to seem to invite the decision that was obtained from the Circuit Court of Appeals, but when scrutinized is seen to have so limited its statements as to exclude the right to complain.

Decree reversed.

NOTES

1. *Passing off.* Would establishing the plaintiff's monopoly on all explosion chambers justify its demand for an injunction? Damages? Both? How might damages be calculated if allowed? What result if all plaintiffs who made safes with explosion chambers joined together in a class action suit?

*"Well, gentlemen, I must say
this is a coincidence."*

Source: I. Klein / The New Yorker Collection / The Cartoon Bank.

In one sense, the plaintiff's case for passing off builds on the elements of ordinary misrepresentation already developed in Chapter 13, and recognized in the context of unfair competition as early as *Mogul*. Initially the passing off action builds from the admitted proposition that a disappointed buyer has an action against the seller who has passed off its own goods as the superior product of a rival. Yet in practice no individual purchaser is likely to bear the cost of recovering its trifling losses attributable to the defendant's misrepresentation. Nor would that suit, even if successful, vindicate the interests of the rival in its own product's reputation and good will. In passing off cases, therefore, the *competitor* replaces the purchaser as the plaintiff. The claim is that the defendant has falsely represented that its own product is better than it really is, by pretending that his product is the plaintiff's, or by claiming that his product has desirable attributes associated with the plaintiff's product that it, in fact, lacks. The substantive underpinnings of passing off are clear enough: The defendant's misrepresentation induces third parties to desert the plaintiff. The measure of damages is the profits from lost sales, which depend critically on

p. 1221
the fraction of defendant's buyers (often less than 100 percent) that would have migrated to the plaintiff's wares if the passing off had not happened.

2. *Product disparagement.* Clearly distinct from passing off are claims for product disparagement. With disparagement the defendant asserts that the plaintiff's product is worse than it really is, so as to induce consumers to purchase other products, including the defendant's. See *Tex Smith, The Harmonica Man v. Godfrey*, *supra* Chapter 11, Note 1, at 970. Disparagement is really a form of product defamation, although many courts treat it as a distinct tort not governed by the myriad of defamation rules such as those concerning innuendo or special damages. As the court noted in *Dairy Stores, Inc. v. Sentinel Publishing Co.*, 516 A.2d 220, 224 (N.J. 1986):

Although the two causes sometimes overlap, actions for defamation and product disparagement stem from different branches of tort law. A defamation action, which encompasses libel and slander, affords a remedy for damage to one's reputation. By comparison an action for product disparagement is an offshoot of the cause of action for interference with contractual relations, such as sales to a prospective buyer. The two causes may merge when a disparaging statement about a product reflects on the reputation of the business that made, distributed or sold it. If, for example, a statement about the poor quality of a product implies that the seller is fraudulent, then the statement may be actionable under both theories.

For more on product disparagement, see Restatement (Third) Unfair Competition §2.

3. *The Lanham Act.* There is a close kinship between actions for unfair competition and those for violation of the Lanham Act, 15 U.S.C. §§1051-1141 (2012), the trademark statute. Its general intention is expressed in section 1127: “The intent of this [Act] is to regulate commerce within the control of Congress by making actionable the deceptive and misleading use of marks in such commerce . . . [and] to protect persons engaged in such commerce against unfair competition. . . .” The statute provides protection for both common law and statutory trademarks. The section also protects a diverse collection of marks, symbols, design elements, and characters that the public, or some relevant portion thereof, directly associates with the plaintiff or its product. The Restatement (Third) Unfair Competition, §2, comment *b*, notes how the Act undid the restrictive rule in *Ely-Norris*:

As originally enacted, §43(a) of the Act, 15 U.S.C. §1125(a), recognized a right of action against “a false designation of origin, or any false description or representation” used in connection with any goods or services in favor of “any person who believes that he is or is likely to be damaged.” Some early interpretations confined §43(a) to misrepresentations relating to source; other interpretations viewed it as a codification of existing common law liability under the “single source” doctrine. Subsequent decisions, however, established the section’s general applicability to deceptive advertising and rejected the attempt to engraft the common law limitations onto the statutory tort. The 1988 revision of §43(a) confirmed its application

p. 1222

to both misrepresentations of source and other deceptive representations made in connection with the marketing of goods and services.

4. *Trademark and trade name litigation: Direct competitors.* A veritable explosion of cases constantly tests the outer limits of trademark and trade name protection. The classic suits seek to enjoin direct competitors.

In *Warner Bros., Inc. v. Gay Toys, Inc.*, 658 F.2d 76 (2d Cir. 1981), the court allowed Warner Bros. to enjoin Gay Toys from the marketing of its “Dixie Racer,” a 1969 Dodge Charger complete with a bright orange color, Confederate flag decal, numbers on the door, and the various symbols of the “General Lee,” all based on the then-popular television series *The Dukes of Hazzard*. As commonly happens, the defendant had sought unsuccessfully to obtain a license from the plaintiff to market *Dukes of Hazzard* cars. Thereafter, it had modified the features of an existing car to bear greater resemblance to the *Dukes of Hazzard* car, from which it still differed in certain respects. Notwithstanding those residual differences, the plaintiff obtained a preliminary injunction against the defendant by marshaling a wide array of evidence to show that ordinary customers confused the defendant’s car with the original *Dukes of Hazzard* line: The defendant’s Dixie Racer had sales far in excess of its other cars in the same line; dealers sold the defendant’s car as “The *Dukes of Hazzard* Car”; and, as consumer surveys had determined, 80 percent of the children asked thought the Dixie Racer was the *Dukes of Hazzard* car. What evidence might be introduced to rebut the charge of trademark violation? Could the case have been treated as one of unfair competition at common law?

5. Trademark and trade name litigation: Other applications. Although most trademark litigation takes place between direct competitors, trademark protection need not be so limited. In *MGM-Pathé Communications v. Pink Panther Patrol*, 774 F. Supp. 869, 875 (S.D.N.Y. 1991), the plaintiff owned the registered trademark “THE PINK PANTHER,” which applies to the popular series of films about its bumbling detective hero. It also lent its trademark to producers of a wide range of consumer and children’s goods. The defendant was a gay rights defense organization that used the PINK PANTHER name in connection with an upside down pink triangle (used by the Nazis to mark homosexuals) as its symbol. Even though the defendant group sold no goods in competition with the plaintiffs, the court enjoined its use of the PINK PANTHER trademark on the ground that ordinary individuals could mistakenly assume that the owners of the trademark sponsored or otherwise supported the activities of the Patrol.

[It] is indeed entirely likely that a large percentage of the population of the United States might see and hear both plaintiff’s and defendants’ names during a single evening of nationwide television broadcasting, if a telecast of an MGM film should be followed by a newscast including reference to the Patrol’s activities.

But trade name protection (and common law misappropriation) claims were both denied in *New Kids on the Block v. New America Publishing, Inc.*, 971 F.2d 302, 308 (9th Cir. 1992). Two newspapers, *USA Today* and *The Star*, ran popularity

polls on 900-number phone lines, asking callers to say which of the (five) New Kids was the hottest (or coolest). Kozinski, C.J., held that the defendant’s use of their trade name was a privileged *nominative* use because there was no other conceivable way in which any newspaper could otherwise refer to the group in order to get their readers’ opinions about it. “It is no more reasonably possible, however, to refer to the New Kids as an entity than it is to refer to the Chicago Bulls, Volkswagens or the Boston Marathon without using the trademark.” The use of the name was therefore adjudged fair because

Peter Sellers in *The Return of the Pink Panther* (1975)

Source: AF Archive /Alamy

[b]oth *The Star* and *USA Today* reference the New Kids only to the extent necessary to identify them as the subject of the polls; they do not use the New Kids' distinctive logo or anything else that isn't needed to make the announcements intelligible to readers. Finally, nothing in the announcement suggests joint sponsorship or endorsement by the New Kids.

Should it make a difference that the New Kids have their own 900 numbers for their fans to use?

The nominative use argument also prevailed in *Toyota Motor Sales, U.S.A., Inc. v. Tabari*, 610 F.3d 1171, 1175, 1179 (9th Cir. 2010), in which Toyota sought to enjoin the defendants from using the Lexus name in its promotional materials. Kozinski, C.J., sharply rebuffed the claim:

The Tabaris are using the term Lexus to describe their business of brokering Lexus automobiles; when they say Lexus, they mean Lexus. We've long held that such use of the trademark is a fair use, namely nominative fair use. And fair use is, by definition, not infringement. The Tabaris did in fact present a nominative fair use defense to the district court.

The case was then remanded to the District Court, with the instruction that "a domain name containing a mark cannot be nominative fair use if it suggests sponsorship or endorsement by the trademark holder." See generally Heald, *Federal Intellectual Property Law and the Economics of Preemption*, 76 Iowa L. Rev. 959 (1991).

6. Patents. Inventions have long received explicit statutory protection, which defines patentable subject matter as "any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof." Other requirements are originality, novelty, and nonobviousness. See

one year of its public use or publication, and it must contain “a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains . . . to make and use the same,” concluding “with one or more claims particularly pointing out and distinctly claiming the subject matter which the inventor or a joint inventor regards as the invention.” 35 U.S.C. §112 (2012). Why are the procedural elements for the perfection of a patent so critical to the operation of the system?

On the economic function of the patent system, see Kitch, *The Nature and Function of the Patent System*, 20 J.L. & Econ. 265 (1977), who claims that the system has two functions: prospect and reward. The reward function spurs invention by conferring an exclusive monopoly. The prospect function (an analogy to the rule in mining law that allows the party who discovers a vein of ore to have the first crack at its exploitation) helps ensure that certain “prospects”—here new inventions—will be efficiently and sensibly developed by giving exclusive rights in the period between the time an invention is first patented and the time it is first commercially exploited. The prospect function is of special importance with drugs that cannot be marketed until they receive regulatory approval. The prospect theory has been criticized for downplaying the risk that the holder of a broad patent will seek to exploit it not through development, but by blocking the use of the invention by other parties. A broad patent therefore has the undesirable effect of forcing people to “invent around” patented devices. What is the relationship between a law of patents and a law of trade secrets? Why are both needed? For criticism of the prospect theory, see Lemley, *Ex Ante Versus Ex Post Justifications for Intellectual Property*, 71 U. Chi. L. Rev. 129 (2004).

7. Federal preemption of state unfair competition laws: Unpatentable designs. Both *INS* and *Mosler Safe* were decided as a matter of general federal common law under the then-applicable doctrine of *Swift v. Tyson*, 41 U.S. 1 (1842). Now that *Erie R.R. v. Tompkins*, 304 U.S. 64 (1938), blocks the creation of new federal common law, the federal preemption issue raised in both *NBA* and *Barclays* traces back to Art. I, §8, cl. 8 of the U.S. Constitution, which gives Congress the power “[t]o promote the Progress of Science and useful Arts, by securing for limited times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries.”

In *Sears, Roebuck & Co. v. Stiffel Co.*, 376 U.S. 225, 231-232 (1964), Sears, Roebuck marketed pole lamps that were substantially identical to those sold by Stiffel. Stiffel’s design patent claim for injunctive relief was rejected by the trial judge “for want of invention.” The trial judge, however, accepted Stiffel’s unfair competition claim when Sears sold lamps identical to Stiffel’s even though there was no “palming off” or confusion as to source. The Supreme Court reversed, noting that patents, as a form of monopoly, only issue when the stringent conditions set out in the federal statute are satisfied.

To allow a State by use of its law of unfair competition to prevent the copying of an article which represents too slight an advance to be patented would be to permit

the State to block off from the public something which federal law has said belongs to the public. The result would be that while federal law grants only 14 or 17 years’ protection [now

20 years from the application date—Eds.] to genuine inventions, States could allow perpetual protection to articles too lacking in novelty to merit any patent at all under federal constitutional standards.

Sears was applied in *Bonito Boats, Inc. v. Thunder Craft Boats, Inc.*, 489 U.S. 141, 159-160 (1989), to strike down a state statute, Fla. Stat. §559.94 (1987), outlawing the use of the “plug molding” process. This process allowed one competitor to use the hull of a rival producer as the “plug” to create a mold that it then used to make identical hulls for its own use. No passing off or confusion was involved, but the plug mold technique allowed a later competitor to produce a hull at lower cost than the initial entrant. The Supreme Court limited protection for the hull design to that available under the federal patent statutes.

The Florida scheme offers [its] protection for an unlimited number of years to all boat hulls and their component parts, without regard to their ornamental or technological merit. Protection is available for subject matter for which patent protection has been denied or has expired, as well as for designs which have been freely revealed to the consuming public by their creators.

. . . We think it clear that such protection conflicts with the federal policy “that all ideas in general circulation be dedicated to the common good unless they are protected by a valid patent.”

8. *Trade secrets*. Current law also gives extensive protection to trade secrets, defined in the First Restatement §757, comment *b* as

any formula, pattern, device or compilation of information which is used in one's business, and which gives him an opportunity to obtain an advantage over competitors who do not know or use it. It may be a formula for a chemical compound, a process of manufacturing, treating or preserving materials, a pattern for a machine or other device, or a list of customers.

The Restatement (Third) Unfair Competition §39 (1995) now provides:

A trade secret is any information that can be used in the operation of a business or other enterprise and that is sufficiently valuable and secret to afford an actual or potential economic advantage over others.

Trade secrets often protect certain types of unpatentable materials (e.g., industrial “know-how”). Sometimes firms treat as trade secrets materials of doubtful patentability, or even matters that are clearly patentable, if they believe, as is often the case with “process” patents, that the disclosure of information through patenting will allow others to make undetectable but unauthorized use of their process.

After *Sears*, it was an open question whether patent law preempted state trade secret law. The Court resolved that question against preemption and in favor of

extended trade secret protection in *Kewanee Oil Co. v. Bicron Corp.*, 416 U.S. 470, 483, 484 (1974), both for nonpatentable and patentable trade secrets. On the former, Burger, C.J., wrote:

Abolition of trade secret protection would, therefore, not result in increased disclosure to the public of discoveries in the area of nonpatentable subject matter. Also, it is hard to see how the public would be benefited by disclosure of customer lists or advertising campaigns; in fact, keeping such items secret encourages businesses to initiate new and individualized plans of operation, and constructive competition results.

The Court approved of trade secret protection for arguably patentable material:

Certainly the patent policy of encouraging invention is not disturbed by the existence of another form of incentive to invention. In this respect the two systems are not and never would be in conflict. Similarly, the policy that matter once in the public domain must remain in the public domain is not incompatible with the existence of trade secret protection. By definition a trade secret has not been placed in the public domain.

Finally the Court extended trade secret protection to cases of clear patentability, because its denial might encourage private parties to adopt complex and costly security devices that could hamper innovation or, in the alternative, be driven to apply for a patent that they otherwise would not seek.

On the general question of preemption, see Goldstein, *Kewanee Oil Co. v. Bicron Corp.*: Notes on a Closing Circle, 1974 Sup. Ct. Rev. 81.

9. *Copyrights*. For the current legal position on preemption under the copyright laws, see Copyright Act of 1976, 17 U.S.C. §301 (2012), governing works created as of January 1, 1978. It first preempts state law with respect to “works of authorship that are fixed in a tangible medium of expression” only to later provide that

[n]othing in this title annuls or limits any rights or remedies under the common law or statutes of any State with respect to (1) subject matter that does not come within the subject matter of copyright . . . including works of authorship not fixed in any tangible medium of expression, or . . . (3) activities violating legal or equitable rights that are not equivalent to any of the exclusive rights within the general scope of copyright.

In *ProCD, Inc. v Zeidenberg*, 86 F.3d 1447, 1454 (7th Cir. 1996), the defendant Zeidenberg used a database supplied by ProCD for commercial purposes in violation of his agreement with the plaintiff ProCD. Easterbrook, J., denied that Zeidenberg’s otherwise valid contract action was preempted by the Copyright Act.

Rights “equivalent to any of the exclusive rights within the general scope of copyright” are rights established by law—rights that restrict the options of persons

who are strangers to the author. Copyright law forbids duplication, public performance, and so on, unless the person wishing to copy or perform the work gets permission; silence means a ban on copying. A copyright is a right against the world. Contracts, by contrast, generally affect

only their parties; strangers may do as they please, so contracts do not create “exclusive rights.”

For different views on this preemption argument, compare Lemley, Intellectual Property and Shrinkwrap Licenses, 68 S. Cal. L. Rev. 1239, 1255-1259 (1995), with Epstein, *ProCD v. Zeidenberg*: Do Doctrine and Function Mix?, in Contract Stories 94, 113-121 (Baird ed., 2006). On the copyright law generally, see Landes & Posner, An Economic Analysis of Copyright Law, 18 J. Legal Stud. 325 (1989).

Notes

⁸ Some authorities have labeled this element as requiring direct competition between the defendant and the plaintiff in a primary market. . . . [See] Restatement (Third) of Unfair Competition, §38 cmt. c, at 412-13. . . .

CHAPTER 15

Tort Immunities

Section A. Introduction

Section B. Domestic or Intrafamily Immunities

Section C. Charitable Immunity

Section D. Municipal Corporations

Section E. Sovereign Immunity

Berkovitz v. United States

Section F. Official Immunity

Clinton v. Jones

SECTION A. INTRODUCTION

Our examination of the basic tort system has covered the legal protections offered to the full range of physical and intangible interests. To complete our overview of the tort system, we examine when the distinctive status of the defendant provides an advantage—i.e., an immunity—in tort litigation not because of what he has done, but because of who he is. Sometimes the defendant receives absolute immunity from suit, so that no action will lie no matter how egregious the defendant's conduct. Other times the defendant receives partial (or, as is often said, "qualified") immunity, so that a higher threshold—usually some form of willful or malicious conduct, but invariably higher than ordinary negligence—must be crossed before the plaintiff may sue.

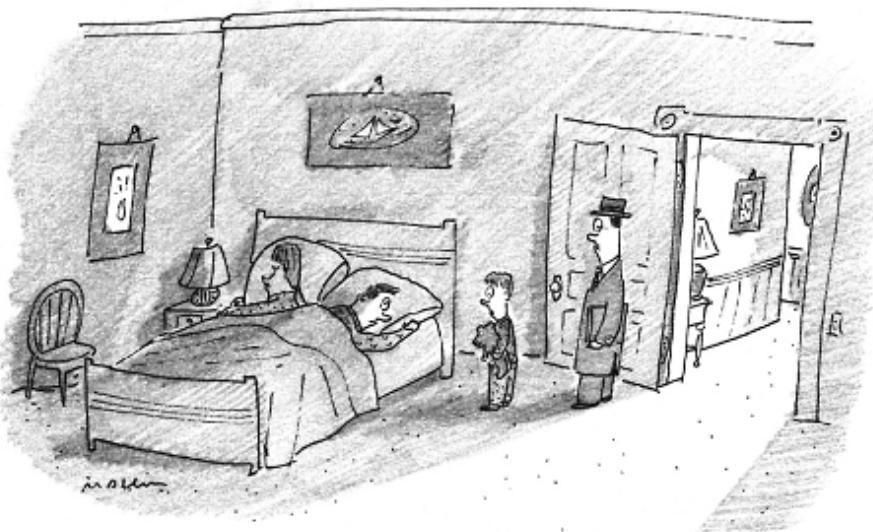

These immunity rules exhibit remarkable diversity in both their origin and structure. Some immunities were created at common law, some by statute, and some under the Constitution by implication or express command. The overall attitude toward these immunities is in constant flux. Many personal immunities, such as those that bar suits between children and parents, between spouses, or against charities, have been narrowed or abandoned. In contrast, governmental and official immunities seem to have expanded somewhat in recent years although their ultimate shape is far from fixed. Section B addresses domestic or intrafamily immunity and covers suits between parent and child and between spouses. Section C turns to charitable immunity; Section D addresses municipal immunity; and Section E discusses sovereign immunity, with special reference to the liability of the United States under the Federal Tort Claims Act. Finally, Section F deals with official immunity, primarily under federal law.

SECTION B. DOMESTIC OR INTRAFAMILY IMMUNITIES

1. Parent and Child

a. Suits Between Parent and Child

The rule that a minor child may not maintain a tort action against her father or mother apparently originated in *Hewlett v. George*, 9 So. 885, 887 (Miss. 1891). There, a mother committed her minor daughter to an asylum after she had engaged in loose and immoral practices in Chicago. The suit recognized that emancipated children could sue their parents as if they were strangers, but in the most general terms drew the line at suits between members of the nuclear family.

"Dad, can my attorney have a glass of water?"

Source: Michael Maslin / The New Yorker Collection / The Cartoon Bank

[S]o long as the parent is under obligation to care for, guide, and control, and the child is under reciprocal obligation to aid and comfort and obey, no such action as this can be maintained. The peace of society, and of the families composing society, and a sound public policy, designed to subserve the repose of families and the best interests of society, forbid to the minor child a right to appear in court in the assertion of a claim to civil redress for personal injuries suffered at the hands of the parent. The state, through its criminal laws, will give the minor child protection from parental violence and wrong-doing, and this is all the child can be heard to demand.

Most American courts followed *Hewlett* until *Dunlap v. Dunlap*, 150 A. 905, 912-913 (N.H. 1930), breached the immunity wall by allowing a child to reach an insurance policy taken out by his father in his capacity as his son's employer. In its view, the insurance policy operated like "a trust fund of \$10,000 to be applied solely to the liquidation of his liability to his son" for in both types of cases "the parties' interest and the family interest become for and not against a recovery." Subsequently *Briere v. Briere*, 224 A.2d 588, 590, 591 (N.H. 1966), abrogated the doctrine after examining the "main reasons" the defendant urged

in support of the parent-child immunity:

(1) [T]he preservation of parental authority and family harmony; (2) depletion of the family exchequer; and (3) the danger of fraud and collusion. Analyzing these reasons in reverse order, we must agree that there is danger of fraud and collusion. However, this is true of suits between husband and wife, which we allow, between near relatives, and between host and guest, often intimate friends, all of which stand on the same footing as actions between strangers. Our court system, with

p. 1231

its attorneys and juries, is experienced and reasonably well fitted to ferret out the chicanery which might exist in such cases. In short, we are unwilling to espouse the doctrine that the mere opportunity for fraud and collusion should be an insuperable barrier to an honest and meritorious action by a minor.

The court next argued that the depletion of the family exchequer was a reason of “no substantial weight,” as the parent always has the power to cover the risk with insurance. It then turned to the impact of suit on parental authority:

Parental authority does not appear to be in any real jeopardy in the circumstances before us. In fact, it is difficult, if not impossible, to perceive how such authority and family peace can be jeopardized more in an ordinary tort action for negligence by an unemancipated minor against a parent than by an action in contract or to protect property rights or for an assault—all of which are permitted in this state. To allow such a distinction as now exists between tort and other forms of action is indeed not only to perpetuate confusion and irreconcilable decisions, but to entrench a policy from which changing times have drained most of such vitality as it may have once possessed.

There is general agreement today that any blanket form of parental immunity is indefensible. There is some question, however, as to what rules should be put in place once that blanket immunity is removed. In *Goller v. White*, 122 N.W.2d 193, 198 (Wis. 1963), a case for negligent supervision, the court wrote:

After a careful review of the arguments for and against the parental-immunity rule in negligence cases, we are of the opinion that it ought to be abrogated except in these two situations: (1) Where the alleged negligent act involves an exercise of parental authority over the child; and (2) where the alleged negligent act involves an exercise of ordinary parental discretion with respect to the provision of food, clothing, housing, medical and dental services, and other care. Accordingly the rule is abolished in personal injury actions subject to these noted exceptions.

Goller in turn was explicitly rejected in *Gibson v. Gibson*, 479 P.2d 648, 653 (Cal. 1971), in which the court reasoned:

In short, although a parent has the prerogative and the duty to exercise authority over his minor child, this prerogative must be exercised within reasonable limits. The standard to be applied is

the traditional one of reasonableness, but viewed in light of the parental role. Thus, we think the proper test of a parent's conduct is this: what would an ordinarily reasonable and prudent *parent* have done in similar circumstances?

We choose this approach over the *Goller*-type formula for several reasons. First, we think that the *Goller* view will inevitably result in the drawing of arbitrary distinctions about when particular parental conduct falls within or without the immunity guidelines. Second, we find intolerable the notion that if a parent can succeed in bringing himself within the "safety" of parental immunity, he may act negligently with impunity.

p. 1232

The New York Court of Appeals adopted a third approach by simply abolishing the defense of intrafamilial immunity without setting the appropriate scope of liability for parental negligence. See *Gelbman v. Gelbman*, 245 N.E.2d 192 (N.Y. 1969). That approach was also taken in the Second Restatement.

Restatement of the Law (Second) of Torts

§895G. PARENT AND CHILD

- (1) A parent or child is not immune from tort liability to the other solely by reason of that relationship.
- (2) Repudiation of a general tort immunity does not establish liability for an act or omission that, because of the parent-child relationship, is otherwise privileged or is not tortious.

The approach taken in both *Gibson* and the Restatement has gained some ground. In *Broadbent v. Broadbent*, 907 P.2d 43, 50 (Ariz. 1995), Corcoran, J., followed *Gibson* in rejecting *Goller* insofar as it held that "within certain aspects of the parent-child relationship, the parent has carte blanche to act negligently toward his child," and then approved of the "'reasonable parent test,' in which a parent's conduct is judged by whether that parent's conduct comported with that of a reasonable and prudent parent in a similar situation." He then concluded that it was a jury question whether a mother acted as a reasonable and prudent parent when she left her 2¹/₂-year-old son unattended by the side of a pool. *Zellmer v. Zellmer*, 188 P.3d 497 (Wash. 2008), imposed the same duty of care on the stepfather of his three-year-old daughter, who drowned in a pool while under the defendant's supervision, so long as the stepparent stands in loco parentis to the child. In contrast, *Sepaugh v. LaGrone*, 300 S.W.3d 328 (Tex. App. 2009), rigorously applied the parental immunity doctrine to a former spouse for the death by fire of the divorced couple's minor son in the defendant's home, even though the defendant was per se negligent for violating the city smoke-alarm ordinance. Back to *Hewlett*?

Courts are divided on the question whether a mother owes a duty of care to a child still in utero. In *National Casualty Co. v. Northern Trust Bank of Florida*, 807 So. 2d 86, 87 (Fla. App. 2002), the court held that a minor child could sue for prenatal injuries caused by her mother's negligence in an automobile accident, at least to the extent of insurance coverage. It left open the question whether such liability should extend to "a mother's decision relating to privacy issues or personal health decisions." In contrast, the court in *Remy v.*

MacDonald, 801 N.E.2d 260, 263, 266 (Mass. 2004), emphatically rejected *National Casualty*, refusing to recognize a duty of care with respect to prenatal injuries arising out of an automobile accident and accepting the view that a ““unique symbiotic relationship’ between a mother and her unborn child” precluded the creation of such a duty:

Recognizing a pregnant woman’s legal duty of care in negligence to her unborn child would present an almost unlimited number of circumstances that would likely give rise to litigation. Courts would be challenged to refine the scope of such a duty, including the degree of knowledge expected of a mother in order to pinpoint when such a duty would arise (e.g., at the point of pregnancy; at the point of awareness of pregnancy; or at the point of awareness that pregnancy is a possibility) or the particular standard of conduct to which a reasonably careful pregnant woman, in a single case, should be held. There is no consensus on if and when a duty such as the one sought by the plaintiff should be imposed, and there is considerable debate with respect to a mother’s civil liability for injuries to her unborn fetus, including disagreement over whether the rights of the child should supersede the legal rights of the mother.

It then further held that “[t]he presence of automobile liability insurance does not create liability where none previously existed.”

In some states, legislation has removed parental immunity “for wrongful death, personal injury or property damage arising out of operation of a motor vehicle owned or operated by the parent or child.” See, e.g., N.C. Gen. Stat. §1-539.21 (2019). Oftentimes the impact of these statutes is undercut by insurance companies, which insert into their policies a “family member exclusion” that exempts these cases from coverage. These clauses, often motivated by fears of collusion and fraud, have withstood challenges on grounds of public policy. See, e.g., *Shelter Gen. Ins. Co. v. Lincoln*, 590 N.W.2d 726 (Iowa 1999). The scope of this contracted-for immunity extends, however, only to the parent, but not the parent’s employer sued under a theory of vicarious liability. See *Riordan v. Corp. of the Presiding Bishop of the Church of Jesus Christ of Latter-Day Saints*, 242 F. Supp. 2d 635, 640 (W.D. Mo. 2003), suggesting that Missouri law would probably allow a vicarious liability suit.

Outside the automobile context, *Remy*’s concern with the complexities of pregnancy was reflected in *Chenault v. Huie*, 989 S.W.2d 474, 477 (Tex. App. 1999). There the court refused to impose a duty of care on a pregnant woman, who was a crack addict, toward her unborn infant out of fear that “every woman would be obligated to maintain her body in the best possible reproductive condition so long as it was reasonably foreseeable she might bear a child at some point in the future.” It therefore held that the only protection for the child was found in the criminal law.

By contrast, courts have been more willing to abrogate parental tort immunity in ordinary business contexts. Thus in *Dzenutis v. Dzenutis*, 512 A.2d 130, 135 (Conn. 1986), the court concluded that “because of the general prevalence of liability insurance in the business activity setting, it is appropriate for us to recognize that in most instances family harmony will not be jeopardized by allowing suits between parents and children arising out of business activities conducted away from the home. . . .” Is the risk of collusion

significant in these contexts?

For one tally on parental immunity, see *Herzfeld v. Herzfeld*, 781 So. 2d 1070 (Fla. 2001), which reports that seven jurisdictions have never adopted or recognized the doctrine, 11 states have abrogated it completely, and two-thirds of the states have carved out exceptions to the basic rule.

p. 1234

For the classic statement in defense of the *Dunlap* rule, see McCurdy, *Torts Between Persons in Domestic Relation*, 43 Harv. L. Rev. 1030 (1930), an article published just days before *Dunlap* was handed down. For a modern commentary, see Porter, *Tort Liability in the Age of the Helicopter Parent*, 64 Ala. L. Rev. 533, 573 (2013), which provocatively asks whether the reasonable parent standard should be ratcheted up by “many middle- and upper-class parents with one or two children [who] have become suffocating scaremongers whose personal identities are largely dependent on ensuring the minute-by-minute safety and optimal educational development of their children.”

b. Third-Party Actions

Parental immunity has created conceptual confusion in connection with suits brought by minors against third parties, especially in jurisdictions that have replaced contributory with comparative negligence. The central dilemma is this: If the parent cannot be subject to direct suit by the child, should a third party, if sued by the child, be allowed to sue the parent for contribution? In *Holodook v. Spencer*, 324 N.E.2d 338, 343 (N.Y. 1974), the New York Court of Appeals denied the claim for contribution when the claim the initial defendant brought against the parent was only for negligent supervision. “If the instant negligent supervision claims were allowed, it would be the rare parent who could not conceivably be called to account in the courts for his conduct toward his child, either by the child directly or by virtue of the procedures allowed by *Dole* [v. Dow Chem. Co., 282 N.E.2d 288 (N.Y. 1972)],” for contribution, which in the context of the workers’ compensation law allowed a tort defendant a third-party action against the employer who was otherwise protected by the exclusive remedy provisions of the workers’ compensation laws. See *supra* Chapter 10, at 897.

Holodook in turn yielded to *Nolechek v. Gesuale*, 385 N.E.2d 1268, 1273 (N.Y. 1978), in which a minor was killed when he rode his motorcycle into a steel cable that the defendants had suspended close to a public road. The defendants sought contribution and indemnity on the ground that the parents had negligently entrusted their son with a dangerous instrumentality (i.e., the motorcycle), even though he was blind in one eye and had not obtained an operator’s license for the motorcycle. The court justified its distinction between negligent supervision and negligent entrustment of a dangerous instrumentality on the ground that negligent supervision “in general, creates no direct, unreasonable hazard to third parties,” while negligent entrustment surely does on the ground that a “dangerous instrument in the hands of an infant child may foreseeably cause various types of harm: personal injury, property damage, or, as in this case, exposure to tort liability.”

Later New York cases have addressed the definition of a dangerous instrumentality. In *Bottillo v. Poette*, 544 N.Y.S.2d 47, 48 (App. Div. 1989), the court held that the jury had to decide whether a grill was a dangerous instrument when entrusted to a 14-year-old girl where the outcome “depends upon the nature and

complexity of the allegedly dangerous instrument, the age, intelligence and experience of the child, and his proficiency with the instrument." In contrast, in *Santalucia v.*

p. 1235

County of Broome, 613 N.Y.S.2d 774 (App. Div. 1994), the same court held that a child's bicycle was, as a matter of law, not a dangerous instrument.

In these cases, is there any need for a third-party action if it is possible to impute the negligence of the parent to the child under a comparative negligence regime? Note that under this alternative regime, any conflict of interest between parent and child is eliminated because the parent can now bring the child's suit without fear of being exposed to a third-party claim for contribution or indemnity.

2. Spouses

Spousal immunity had its origins at common law in the rule that the husband and wife were one person in law and hence could not be on opposite sides of any lawsuit for either personal injury or property damage. In some states, the rule was so powerful that it barred actions for torts that occurred during the marriage even after the divorce or separation. See *Phillips v. Barnet*, 1 Q.B.D. 436 (1876).

The erosion of the strict common law position came in stages. The passage of the Married Women's Acts of the nineteenth century allowed suits between spouses for loss or damage to property: conversion, trespass to chattels, waste, and damage to real property. See *Minier v. Minier*, 4 Lans. 421 (N.Y. 1870). Thereafter, some states found fresh and independent reasons of policy for preserving the immunity for personal injury actions. These suits were regarded as a threat to the harmony of the marriage relationship or were said to facilitate fraud against insurance companies. Some courts barred suits between husband and wife for wrongs that took place before the marriage, *Greenberg v. Owens*, 157 A.2d 689 (N.J. 1960), even when the action was commenced before it. See also *Spector v. Weisman*, 40 F.2d 792 (D.C. Cir. 1930). Likewise, the immunity was extended to cases in which separation, divorce, or death ended the marriage relationship before the onset of the suit. See, e.g., *Gates v. Gates*, 587 S.E.2d 32, 34 (Ga. 2003), which held that the plaintiff wife could not maintain an action after the couple divorced for a motorcycle accident that occurred before marriage:

[T]he law of interspousal tort immunity is still the same as it was under the common law, that is, that marriage extinguishes antenuptial rights of action between the husband and the wife, and after marriage the wife cannot maintain an action against her husband based on a tortious injury to her person, though committed prior to coverture. . . .

The court further held that any change in a well-established law required legislative action.

In recent years, the immunity has further eroded. Second Restatement §895F takes the view that the immunity should be abolished, and, by 1997, 46 states and the District of Columbia had completely eliminated the immunity. The remaining four states (Georgia, Massachusetts, Nevada, and Vermont) have overturned the doctrine in some critical areas, including intentional torts or automobile accidents. These changes were usually accomplished by judicial

decision, and occasionally by statute, as in Virginia in 1981. See, e.g., Va. Code Ann. §8.01-220.1 (2019).

In a recent development, in *State v. Gutierrez*, No. S-1-SC-36394, 2019 N.M. LEXIS 33 (Aug. 30, 2019), New Mexico became the first state to allow, in both civil and criminal proceedings, confidential statements made to spouses to be admitted into evidence. Under the new rule spouses are not only allowed, but also may be compelled, to testify against their spouses. Nakamura, C.J., first noted that the traditional justification for the privilege was that it encouraged marital confidences and promoted harmony between spouses, and thus respected the “natural repugnance” of one spouse to testify against another. She then responded:

One of its principal weaknesses is that it rests on two untested assumptions: that (1) married people know the privilege exists, and (2) they rely on it when deciding how much information to share. . . .

In a relationship involving a layperson and a professional [such as a lawyer or a psychotherapist], the absence of a privilege protecting confidentiality could chill beneficial communication because the layperson might refuse to communicate with the professional. And in a professional relationship that depends heavily on confidentiality, “there is an evidentiary wash—while evidence might be excluded at trial pursuant to a privilege objection, but for the privilege the evidence would not have come into existence.” Unlike communication between a professional and a layperson, communication between spouses does not depend on a legal guarantee of confidentiality and does not come into existence because of that guarantee. . . .

The traditional justification for the spousal communication privilege is premised on assumptions that do not withstand scrutiny. The privacy and humanistic justifications, when closely examined, seem little more than soaring rhetoric and legally irrelevant sentimentality. The misogynistic history of the privilege is obvious and odious. And it appears that the existence of the privilege perpetuates gender imbalances and, most critically, may even be partly responsible for sheltering and occluding marital violence that disproportionately affects women in entirely unacceptable ways.

In her dissent, Vigil, J. argued:

The spousal communications privilege serves to protect the private conversations that occur within a marriage. Marriage bridges several facets of the human experience. It is both a legal contract and a sentimental, and for some, religious, promise of fidelity and love. As a legal status, marriage grants a couple myriad benefits and protections offered by the state and federal government. As a solemn vow of unity, marriage creates for many a sacred space to share oneself with a chosen other. That space should remain free from state intrusion and compulsion that would demand one spouse to reveal the intimate secrets of the other.

Should it make a difference whether the testimony is volunteered or coerced? Whether the evidence is used

in a dispute between the parties or in unrelated actions between third parties? Between civil and criminal cases?

p. 1237

It is sometimes unclear whether the immunity applies to cases of “outrageous” misconduct such as in *Bozman v. Bozman*, 830 A.2d 450 (Md. 2003), where the Maryland court abrogated the doctrine of spousal immunity in its entirety by allowing a husband to sue his wife for malicious prosecution when she had charged him with stalking, harassment, and multiple violations of a protective order. See generally Tobias, *Interspousal Tort Immunity in America*, 23 Ga. L. Rev. 359 (1989), followed by Tobias, *The Imminent Demise of Interspousal Tort Immunity*, 60 Mont. L. Rev. 101, 102 (1999).

For automobile accidents, insurance companies have relied on the family exclusion clauses referred to above. One such clause was struck down in *Meyer v. State Farm Mutual Auto Insurance Co.*, 689 P.2d 585 (Colo. 1984), but that decision was later overturned by statute, Colo. Rev. Stat. §10-4-418(2)(b) (2019), which held that it was “in conformity with the public policy of this state” to “exclude[] coverage of claims made by a member of a household against another member of the same household.” *State Farm Mutual Automobile Insurance Co. v. Nationwide Mutual Insurance Co.*, 516 A.2d 586 (Md. 1986), offered a variation on the theme by holding that the exclusion clause was invalid only for the compulsory minimum coverage, but could be included in any additional coverage offered. Why the distinction?

SECTION C. CHARITABLE IMMUNITY

The common law immunity for charitable institutions has also been in retreat. This immunity originated in the English case of *The Feoffees of Heriot’s Hospital v. Ross*, 8 Eng. Rep. 1508 (H.L.E. 1846). There the court thought tort payments would constitute an improper diversion of trust funds from their intended purpose, in defiance of the stated wishes of its grantor. *Heriot’s Hospital* was overruled in England about 20 years later in *Mersey Docks Trustees v. Gibbs*, [1866] L.R. 1 H.L. 93, but charitable immunity was given new life in this country by Massachusetts in *McDonald v. Massachusetts General Hospital*, 120 Mass. 432, 436 (1876), and Maryland in *Perry v. House of Refuge*, 63 Md. 20 (1885). *McDonald* rebuffed the plaintiff’s action for medical malpractice:

The liability of the defendant corporation can extend no further than this: if there has been no neglect on the part of those who administer the trust and control its management, and if due care has been used by them in the selection of their inferior agents, even if injury has occurred by the negligence of such agents, it cannot be made responsible. The funds intrusted to it are not to be diminished by such casualties. . . .

Generally speaking, this immunity was not applied to tort suits, such as actions for nuisance, brought by strangers against charitable institutions, but to actions brought by those who by their conduct “impliedly waived their rights to recovery.”

p. 1238

The orthodox view was stated in *Powers v. Massachusetts Homoeopathic Hospital*, 109 F. 294, 304 (1st Cir.

1901), as follows:

If, in their dealings with their property appropriate to charity, they [members of the hospital board] create a nuisance by themselves or their servants, if they dig pitfalls in their grounds and the like, there are strong reasons for holding them liable to outsiders, like any other individual or corporation. The purity of their aims may not justify their torts; but, if a suffering man avails himself of their charity, he takes the risks of malpractice, if their charitable agents have been carefully selected.

Thereafter the erosion continued apace, culminating in *President & Directors of Georgetown College v. Hughes*, 130 F.2d 810, 823-824 (D.C. Cir. 1942), the leading judicial decision limiting charitable immunity. In that case, a special nurse sued a charitable hospital, for which she did not work, for injuries sustained when she was hit by a swinging door that had been violently pushed by a student nurse in the hospital's employ. One way to dispose of the case is to treat the outside worker as a stranger to the hospital, to whom the *Powers* rule applied, but that approach preserved the immunity for malpractice situations. Rutledge, J., refused to accept that narrow out and rejected all the traditional justifications for the defense on the ground that the imposition of liability would neither dissipate charitable assets nor deter charitable giving.

Georgetown Hospital in the first half of the twentieth century

Source: Wikimedia Commons

No statistical evidence has been presented to show that the mortality or crippling of charities has been greater in states which impose full or partial liability than where complete or substantially full immunity is given. Nor is there evidence that deterrence of donation has been greater in the former. Charities seem to survive and increase in both, with little apparent heed to

whether they are liable for torts or difference in survival capacity.

Further, if there is danger of dissipation, insurance is now available to guard against it and prudent management will provide the protection. It is highly doubtful that any substantial charity would be destroyed or donation deterred by the cost required to pay the premiums. While insurance should not, perhaps, be made a criterion of responsibility, its prevalence and low cost are important consideration in evaluating the fears, or supposed ones, of dissipation or deterrence. What is at stake, so far as the charity is concerned, is the cost of reasonable protection, the amount of the insurance premium as an added burden on its finances, not the awarding over in damages of its entire assets.

p. 1239

By 1985, the United States Supreme Court could refer to “the-now dormant charity immunity doctrine.” *Mitchell v. Forsyth*, 472 U.S. 511, 553 n.8 (1985). If the charitable immunity defense is removed, should hospitals be allowed to contract for explicit immunity against tort actions, especially in medical malpractice cases? Would such contracts be enforceable against patients admitted for life-threatening or other emergency conditions? For an exhaustive account of the origins of charitable immunity, see Horwitz, The Multiple Common Law Roots of Charitable Immunity: An Essay in Honor of Richard Epstein’s Contributions to Tort Law Scholarship, 3 J. Tort L. (Iss. 1, Art. 4) (2010), with the inevitable rejoinder in Epstein, Toward a General Theory of Tort Law: Strict Liability in Context, 3 J. Tort L. (Iss. 1, Art. 6) 36-47 (2010).

Modern cases and statutes tend to preserve some islands of charitable immunity. In *Cowan v. Hospice Support Care, Inc.*, 603 S.E.2d 916, 919 (Va. 2004), Kennan, J., applied the defense of charitable immunity “to shield charities from liability for their acts of simple negligence,” but not to “persons who have no beneficial relationship to the charity but are merely invitees or strangers.” The subsequent decision in *Ola v. YMCA of South Hampton Roads, Inc.*, 621 S.E.2d 70, 72-73 (Va. 2005), arose when the infant plaintiff was sexually assaulted on the defendant’s premises. Agee, J., applied a two-part test that asked: “(1) whether the organization’s articles of incorporation have a charitable or eleemosynary [charitable] purpose and (2) whether the organization is in fact operated consistent with that purpose.” He then concluded that the YMCA met both standards. The application of the *Ola* factors led to a different outcome in *University of Virginia Health Services Foundation v. Morris*, 657 S.E.2d 512 (Va. 2008), in which Lemons, J., held that, under the *Ola* test, the foundation’s health service activities were those of a commercial venture because of its business focus, its incentive payment structure for physicians, and its decision not to accept charitable gifts. In most hospitals today, explicit statutory provisions impose vicarious liability on hospitals. See, e.g., 40 Pa. Stat. Ann. §1303.516 (2019), which imposes liability on hospitals not only for their own employees but for independent contractors on the principle of ostensible agency for work that the hospital “advertised or otherwise advertised” was rendered by the hospital or where a reasonable person “would be justified in the belief that the care in question was being rendered by the hospital or its agents.”

SECTION D. MUNICIPAL CORPORATIONS

1. At Common Law

Municipal immunity has been traced back to the English decision of *Russell v. The Men of Devon*, 100 Eng. Rep. (K.B. 1788), which denied a tort action against the members of an unincorporated town out of fear that the financial liability could eventually fall on the town's individual inhabitants who were ill equipped to meet it. In the United States, this immunity evolved to cover incorporated

p. 1240

towns, to which the same rationale did not apply. This tort immunity for municipal corporations survived well into the twentieth century for reasons that tracked those accepted for charitable immunity. The immunity of municipal corporations helped prevent the diversion of public assets toward private gain; since municipalities received no profits from discharging their public duties, so too they should be insulated from economic loss. To this day, there is a deep split in the case law with some courts holding the purchase of liability insurance amounts to the extent of coverage as a waiver of municipal immunity, see *Evans v. Housing Authority of Raleigh*, 602 S.E.2d 668 (N.C. 2004), and others not, see *Powell v. Clay County Board of Supervisors*, 924 So. 2d 523 (Miss. 2006). Should the question be decided under the standard law of third-party beneficiary contracts?

To these familiar arguments, three distinctive justifications have been added. First, unlike the states of which they were mere subdivisions, municipal corporations were not full and complete legal persons and therefore could not be held vicariously responsible for the wrongdoings of their servants. Second, municipal bodies could not be treated as fully voluntary actors since they were under public duties to provide a wide range of local services. Third, removing tort immunity would embroil the municipalities in endless wrangling and litigation that would impede their effective discharge of essential governmental functions. For a critical appraisal of these arguments, see RST §895C, comment *c*, and 5 Harper, James & Gray, *Torts* §29.3 (3d ed.).

Early on, the basic immunity rule was subject to one important qualification. Beginning with *Bailey v. City of New York*, 3 Hill 531 (N.Y. 1842), almost all American jurisdictions extended municipal immunity only to "governmental" activities. For its "proprietary" functions, municipalities were treated like private corporations engaged in private business.

The governmental-proprietary distinction has been subjected to sustained scholarly criticism. See, e.g., Wells & Hellerstein, *The Governmental-Proprietary Distinction in Constitutional Law*, 66 Va. L. Rev. 1073 (1980). In Fuller & Casner, *Municipal Tort Liability in Operation*, 54 Harv. L. Rev. 437, 442-443 (1941), the authors observed:

After an enormous amount of litigation on what is a proprietary function or a governmental function, these may now be classified within broad limits: activities of fire prevention, police, education, and general government are governmental; municipal railways, airports, gas, water, and light systems are proprietary; activities involving streets, sidewalks, playgrounds, bridges, viaducts, and sewers are governmental in some jurisdictions and proprietary in others. Criteria for determination of these classes of functions are neither certain nor carefully followed by the courts. . . . Borderline cases cause unending trouble, especially when the complex interrelationships of the municipal functions make it difficult to charge a tort to any particular activity. There is also difficulty in obtaining agreement about what facts shall be sufficient as a

basis for proprietary liability. . . .

Thus the governmental-proprietary rule often produces legalistic distinctions that have only remote relationship to the fundamental considerations of

p. 1241

municipal tort responsibility. It does not seem good policy to permit the chance that a school building may or may not be producing a rental income at the time to determine whether a victim may recover for his fall into a dark and unguarded basement stairway or elevator shaft. Instances like those found in Chicago could be multiplied. There the city is liable for negligently driven vehicles of the library, water, and garbage disposal departments, but not for those concerned with health or police. Jurisdiction over streets by the city of Chicago opens the way to recovery for injuries from street defects, but the immunity rule applies when the Chicago Park District happens to have jurisdiction.

The problems noted by Fuller and Casner persist to this day in those jurisdictions that rely on the governmental-proprietary split. For example, in *Gretkowski v. City of Burlington*, 50 F. Supp. 2d 292, 296 (D. Vt. 1998), the plaintiff claimed that she was injured while walking on a bicycle path that had been negligently maintained by the City of Burlington. The court held that maintenance of streets and roads was a governmental function, concluding that it more closely resembled the operation of a park than the proprietary functions of sewer maintenance and ski rope tow. The opposite conclusion was reached in *Wittorf v. City of New York*, 15 N.E.3d 333, 337 (N.Y. 2014), where Graffeo, J., concluded that Donald Bowles, a crew supervisor with the City Department of Transportation, was acting in a proprietary capacity when he told the plaintiff that it was all right for her to ride on the 65th Street transverse in Central Park while it was under repair, only for her to be injured when riding through a dark tunnel. “Although the maintenance work had not yet begun, Bowles and his crew could not have repaired the roadway without having closed the road to traffic. In other words, his act of closing the entry to vehicular travel was integral to the repair job—a proprietary function.”

Elsewhere, in *Considine v. City of Waterbury*, 905 A.2d 70, 82 (Conn. 2006), the plaintiff fell into a glass window of a restaurant that leased space from a municipal golf course owned and operated by the city. In allowing the action to go forward, the Connecticut Supreme Court held that it fell under Conn. Gen. Stat. §52-557n(a)(B) (2019), which permits suits for negligence “in the performance of functions from which the political subdivision derives a special corporate profit or pecuniary benefit.” Vertefeuille, J., affirmed the decision below after letting out howls of protest that the distinction was “illusory, elusive, arbitrary, unworkable, and a quagmire.” For a recent overview of the distinction, see Spitzer, *Realigning the Governmental/Proprietary Distinction in Municipal Law*, 40 Seattle L. Rev. 174 (2016).

2. By Statute

Illinois offers one notable effort to codify the rules for municipal liability. Its 1965 statute, still largely in force, creates an elaborate framework that provides local governments extensive immunity from tort liability. Some significant sections of the statute are reprinted below.

745 Ill. Comp. Stat. (2019)

10/2-102. PUNITIVE OR EXEMPLARY DAMAGES

Notwithstanding any other provision of law, a local public entity is not liable to pay punitive or exemplary damages in any action brought directly or indirectly against it by the injured party or a third party. In addition, no public official is liable to pay punitive or exemplary damages in any action arising out of an act or omission made by the public official while serving in an official executive, legislative, quasi-legislative or quasi-judicial capacity, brought directly or indirectly against him by the injured party or a third party.

10/2-103. ADOPTION OR FAILURE TO ADOPT ENACTMENT—FAILURE TO ENFORCE LAW

A local public entity is not liable for an injury caused by adopting or failing to adopt an enactment or by failing to enforce any law.

10/2-104. ISSUANCE, DENIAL, SUSPENSION OR REVOCATION OF PERMIT, ETC.

A local public entity is not liable for an injury caused by the issuance, denial, suspension or revocation of, or by the failure or refusal to issue, deny, suspend or revoke, any permit, license, certificate, approval, order or similar authorization where the entity or its employee is authorized by enactment to determine whether or not such authorization should be issued, denied, suspended or revoked.

10/2-105. INSPECTION OF PROPERTY—FAILURE TO MAKE OR NEGLIGENT INSPECTION

A local public entity is not liable for injury caused by its failure to make an inspection, or by reason of making an inadequate or negligent inspection, of any property, other than its own, to determine whether the property complies with or violates any enactment or contains or constitutes a hazard to health or safety.

10/2-106. ORAL PROMISE OR MISREPRESENTATION

A local public entity is not liable for an injury caused by an oral promise or misrepresentation of its employee, whether or not such promise or misrepresentation is negligent or intentional.

10/2-107. LIBEL—SLANDER—PROVISION OF MISINFORMATION

A local public entity is not liable for injury caused by any action of its employees that is libelous or slanderous or for the provision of information either orally, in writing, by computer or any other electronic transmission, or in a book or other form of library material.

10/2-108. PUBLIC WELFARE GOODS OR MONEY—GRANTING OR FAILURE TO GRANT

A local public entity is not liable for any injury caused by the granting, or failure to grant, public welfare goods or monies.

10/2-109. ACTS OR OMISSIONS

A local public entity is not liable for an injury resulting from an act or omission of its employee where the employee is not liable.

10/2-111. EXISTING DEFENSES

Nothing contained herein shall operate to deprive any public entity of any defense heretofore existing and not described herein.

10/2-201. DETERMINATION OF POLICY OR EXERCISE OF DISCRETION

Except as otherwise provided by Statute, a public employee serving in a position involving the determination of policy or the exercise of discretion is not liable for an injury resulting from his act or omission in determining policy when acting in the exercise of such discretion even though abused.

10/2-202. EXECUTION OR ENFORCEMENT OF LAW

A public employee is not liable for his act or omission in the execution or enforcement of any law unless such act or omission constitutes willful and wanton conduct.

In addition to the comprehensive set of immunities from tort liability, the Illinois statute authorizes the public entity to purchase liability insurance on its own behalf. 745 Ill. Comp. Stat. Ann. 10/9-103 (2019).

This detailed list of statutory immunities has proven stable over time. It has, however, generated reams of litigation in borderline areas. For example, the statute does not exclude municipal liability in ordinary automobile actions. Other statutory provisions set out detailed rules of liability when the local government operates and maintains property. Here as a general matter, the “public entity has the duty to exercise ordinary care to maintain its property in a reasonably safe condition” and then only when it has had adequate notice of the dangerous condition to allow it “to have taken measures to remedy or protect” against the dangerous condition. 745 Ill. Comp. Stat. 10/3-102(a) (2019). The statute also elaborates the responsibility of local governments to maintain public streets, signs (10/3-104) and recreational areas (10/3-106), and for supervising activities on its property (10/3-108) and waterways (10/3-110). Still other provisions explicitly preserve the assumption of risk defense for various “hazardous recreational activity,” as regards both participants and spectators (10/3-109). The code contains entire articles devoted to police and correctional activities (Article IV), fire protection and rescue services (Article V), and medical,

hospital, and public health activities (Article VI).

In most instances, these statutory protections are construed in favor of the municipal government. To give only two examples, in *Ware v. City of Chicago*, 873 N.E.2d 944 (Ill. App. Ct. 2007), a group of 40 plaintiffs sued the City of Chicago for negligent inspection of a porch on West Wrightwood Avenue, which resulted in the death of 13 people and injuries to many others. Section 10/2-105

p. 1244

barred all claims against the city not only for negligent inspection, but also for willful and wanton conduct. In *Salvi v. Village of Lake Zurich*, 66 N.E.3d 894, 910 (Ill. App. Ct. 2016), the plaintiffs sued the Village when their land was flooded after the Village failed to take due care in the maintenance and repair of a public pond. McLaren, J., rebuffed that claim:

We conclude that sections 2-104 and 2-106 of the Tort Immunity Act provide no immunity to the Village. Plaintiff does not allege that the Village or any of its employees improperly determined whether some “permit, license, certificate, approval, order or similar authorization” should or should not have been issued. It is the Village’s actions in reconstructing the Pond and developing the Village Parcel, not its administrative actions regarding permits or approvals for such reconstruction and development, that form the basis of plaintiff’s [claims].

3. Under the Constitution

The law of local governmental immunity is further complicated by the vast body of constitutional tort law that addresses the scope of both municipal and official liability under 42 U.S.C. §1983, which provides in part as follows:

Every person who, under color of any statute, ordinance, regulation, custom, or usage, of any State or Territory or the District of Columbia, subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress.

The provision raises many questions about the liability of municipal governments, state governments, public officials, and private parties. The impact of section 1983 is enormous, as it imposes liability in a wide range of circumstances, including police actions and deprivations of one’s property and civil rights.

Municipal governments. The critical case is *Monell v. Department of Social Services of the City of New York*, 436 U.S. 658, 694 (1978), which treated a municipal corporation as a “person” for the purposes of section 1983. *Monell* then addressed the potential liability of local governments for constitutional torts committed by their employees, initially by rejecting the common law rules of vicarious liability. “Instead, it is when execution of a government’s policy or custom, whether made by its lawmakers or by those whose edicts or acts may fairly be said to represent official policy, inflicts the injury that the government as an entity is responsible under §1983.” In *Canton v. Harris*, 489 U.S. 378, 388 (1989), the Court explored the scope of the policy or custom rule under section 1983 when the local police department was sued for its

“failure to train” its officials in the proper mode of giving medical care to suspects in custody. The Court refused to apply either ordinary negligence theories or general doctrines of vicarious liability. Instead it adhered to its original view that policy

p. 1245

and custom controlled and concluded “that the inadequacy of police training may serve as the basis for §1983 liability only where the failure to train amounts to deliberate indifference to the rights of persons with whom the police come into contact.” For a comprehensive analysis rejecting *Monell*’s “policy and custom” position in favor of the common law approach, see Kramer & Sykes, *Municipal Liability Under §1983: A Legal and Economic Analysis*, 1987 Sup. Ct. Rev. 249.

Section 1983 also governs takings claims brought against local governments. In *Knick v. Township of Scott*, 139 S. Ct. 2162 (2019), a local government ordinance declared that all owners of graveyards must keep the graveyards open to the public during daylight hours. The plaintiff, who owned a small burial site, challenged the ordinance under section 1983, claiming that she had a right to go straight into federal court without first exhausting her state-law remedies. Roberts, C.J., overruled the earlier decision of *Williamson County Regional Planning Commission v. Bank of Hamilton*, 473 U.S. 172 (1985), insofar as it held that a plaintiff had to first exhaust her remedies in state court. He noted too that this requirement became a “preclusion trap,” because the doctrine of res judicata, as developed in *San Remo Hotel, L.P. v. City and County of San Francisco*, 545 U.S. 323 (2005), barred the plaintiff thereafter from ever gaining access to a federal forum. Direct access to a federal forum had long been the norm in cases alleging violations of the civil rights laws. See *Patsy v. Bd. of Regents of Fla.*, 457 U.S. 496 (1982). *Knick* held that the same immediate access to federal courts was available in takings cases.

State governments. Whatever the correct reading of *Monell*, section 1983 does not extend to hold the state itself liable for the conduct of its officials acting under color of state law. In *Will v. Michigan Department of State Police*, 491 U.S. 58, 64 (1989), the Supreme Court held by a five-to-four vote that states were not persons under that section. At a textual level, the Court followed the general rule that “in common usage, the term ‘person’ does not include the sovereign,” and “statutes employing the [word] are ordinarily construed to exclude it.” At a structural level, it held that any major redefinition in federal/state relations should be introduced in “unmistakably clear” language, which it found not to be the case in the instant statute. Should Congress amend section 1983 to reverse *Will*?

Public officials. In *City & County of San Francisco v. Sheehan*, 575 U.S. 600 (2015), the Supreme Court continued its reluctance, even in these tumultuous times, to impose liability on police officers when faced with individuals who have resisted arrest. The Court noted that the current state of play requires proof of far more than negligence to establish potential liability in light of the difficult situations that police routinely face. In *Sheehan*, the plaintiff was a resident in a group home for people with mental illness. Following a report that Sheehan had threatened to kill her social worker, two female police officers were dispatched to her residence. Once on scene, the police had to deal with a plaintiff who resisted arrest with a knife and slammed her door in the officers’ faces. When pepper spray failed to subdue her, the officers shot her multiple times. Justice Alito rebuffed Sheehan’s section 1983 claim, noting that:

p. 1246

Public officials are immune from suit under 42 U.S.C. §1983 unless they have “violated a statutory or constitutional right that was clearly established at the time of the challenged conduct.” An officer “cannot be said to have violated a clearly established right unless the right’s contours were sufficiently definite that any reasonable official in [his] shoes would have understood that he was violating it,” meaning that “existing precedent . . . placed the statutory or constitutional question beyond debate.” This exacting standard “gives government officials breathing room to make reasonable but mistaken judgments” by “protect[ing] all but the plainly incompetent or those who knowingly violate the law.”

See also *Ashcroft v. al-Kidd*, 563 U.S. 731 (2011), which upheld summary judgment for the then-Attorney General under the basis of qualified immunity after al-Kidd’s arrest under a federal material-witness statute, 18 U.S.C. §3144.

Private parties. In *Wyatt v. Cole*, 504 U.S. 158, 164 (1992), the Court, speaking through O’Connor, J., held that private parties were not entitled to any immunity, absolute or qualified, under section 1983 because they had no official functions to discharge. In *Richardson v. McKnight*, 521 U.S. 399, 404 (1997), a sharply divided Court refused to cut back on *Wyatt* when it denied qualified immunity to prison guards who were employees of private not-for-profit organizations. Breyer, J., found no “‘firmly rooted’ tradition of immunity applicable to privately employed prison guards,” and refused to create the immunity on the ground that these guards discharged the same functions as prison guards who worked for the state. Scalia, J., dissented on the ground that, just like their public counterparts, qualified immunity against suit gave private prison guards the necessary “incentive for discipline” in their work.

More recently, in *Filarsky v. Delia*, 566 U.S. 377, 390 (2012), the Supreme Court unanimously held that a private attorney with 29 years of specialized experience hired by the City of Rialto, California, to assist in the investigation of the unexplained work absences of Delia, a city fire-fighter, was entitled to qualified immunity for work done in the course of his investigation. Roberts, C.J., wrote: “The government’s need to attract talented individuals is not limited to full-time public employees. Indeed, it is often when there is a particular need for specialized knowledge or expertise that the government must look outside its permanent work force to secure the services of private individuals.”

SECTION E. SOVEREIGN IMMUNITY

The ability of private citizens to sue the sovereign is the subject of a long and complex history. One entrenched principle of English common law—embodied in the ancient maxim “the king can do no wrong”—is that no private citizen could sue the sovereign in his own court without his consent. That principle worked itself into the fabric of American law through the early decision of Chief Justice Marshall in *Cohens v. Virginia*, 19 U.S. 264 (1821), and received its classic expression by Justice Holmes in *Kawananakoa v. Polyblank*, 205 U.S. 349, 353 (1907): “A sovereign is exempt from suit, not because of any formal conception or obsolete theory, but

on the logical and practical ground that there can be no legal right as against the authority that makes the

law on which the right depends.” Until 1946, the right to sue the United States was hedged about with various limitations and depended on the consent of the United States to suit in individual cases. In 1946, however, Congress passed the Federal Tort Claims Act, 28 U.S.C. §§2671-2680 (2019). This statute authorized damages actions against the federal government to those suffering harm from what, except for the traditional immunity, would be the tortious conduct of its employees. But this waiver was neither unqualified nor universal because, as with municipal liability, Congress created a complex structure with many statutory exceptions, all of which have been subjected to a constant stream of litigation.

Federal Tort Claims Act

28 U.S.C. §§2671-2680 (2019)

§2674. LIABILITY OF UNITED STATES

The United States shall be liable, respecting the provisions of this title relating to tort claims, in the same manner and to the same extent as a private individual under like circumstances, but shall not be liable for interest prior to judgment or for punitive damages. . . .

§2680. EXCEPTIONS

The provisions of this chapter and section 1346(b) of this title shall not apply to—

- (a) Any claim based upon an act or omission of an employee of the Government, exercising due care, in the execution of a statute or regulation, whether or not such statute or regulation be valid, or based upon the exercise or performance or the failure to exercise or perform a discretionary function or duty on the part of a federal agency or an employee of the Government, whether or not the discretion involved be abused.
- (b) Any claim arising out of the loss, miscarriage, or negligent transmission of letters or postal matter. . . .
- (h) Any claim arising out of assault, battery, false imprisonment, false arrest, malicious prosecution, abuse of process, libel, slander, misrepresentation, deceit, or interference with contract rights: *Provided*, That, with regard to acts or omissions of investigative or law enforcement officers of the United States Government, the provisions of this chapter and section 1346(b) of this title [28 U.S.C.] shall apply to any claim arising, on or after the date of the enactment of this proviso, out of assault, battery, false imprisonment, false arrest, abuse of process, or malicious prosecution. For the purpose of this subsection, “investigative or law enforcement officer” means any officer of the United States who is empowered by law to execute searches, to seize evidence, or to make arrests for violations of Federal law.

p. 1248

- (i) Any claim for damages caused by the fiscal operations of the Treasury or by the regulation of the monetary system.

(j)Any claim arising out of the combatant activities of the military or naval forces, or the Coast Guard, during time of war.

The basic statutory scheme first requires that the plaintiff resort to state law to establish a *prima facie* case of the sort that can be brought against a *private person*. It does not suffice given the plain language of the FTCA to demonstrate that state law would impose special liability on state government agencies, in the same or similar circumstances, even for those oversight functions that state law might treat as uniquely governmental. See *United States v. Olsen*, 546 U.S. 43 (2004). *Olsen* in turn relied on *Indian Towing Co. v. United States*, 350 U.S. 61, 62, 64 (1955), in which the failure of the Coast Guard to check its “battery and sun relay system” was actionable because these actions were analogous to the duties that the tort law imposes on any private person “who undertakes to warn the public of danger and thereby induces reliance.” The larger issue involves the various exceptions to tort liability that are expressly incorporated into the FTCA.

BERKOVITZ v. UNITED STATES

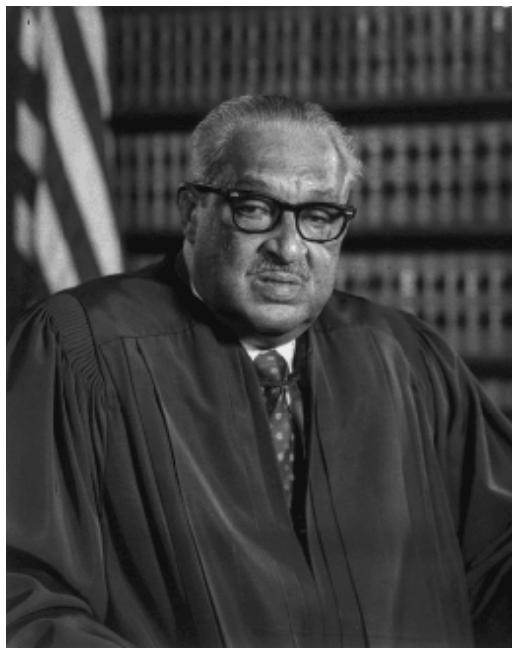

486 U.S. 531 (1988)

MARSHALL, J. , delivered the opinion of the Court.

The question in this case is whether the discretionary function exception of the Federal Tort Claims Act (FTCA or Act) bars a suit based on the Government’s licensing of an oral polio vaccine and on its subsequent approval of the release of a specific lot of that vaccine to the public.

Exhibit 15.1 Thurgood Marshall

Thurgood Marshall (1908-1993) was Associate Justice of the United States Supreme Court for more than 20 years. Before then, as leader of the NAACP Legal Defense and Education Fund (LDF), Marshall earned a reputation as one of the most enterprising and creative attorneys of the twentieth century. Under his supervision, LDF struck a series of major blows to the “separate but equal” doctrine that kept formal racial discrimination firmly instantiated in the law, and culminated when Marshall argued for the plaintiffs in *Brown v. Board of Education of Topeka, Kan.*, 347 U.S. 483 (1954). In 1967, President Lyndon B. Johnson named Marshall to the Supreme Court, where he continued to opine on an expansive view of civil rights and constitutional doctrine. His tenure spanned a time of ideological change on the Court, and by his retirement in 1991, he was known as the “Great Dissenter” in expressing his opposition to the views of his more conservative colleagues.

I

p. 1249

On May 10, 1979, Kevan Berkovitz, then a 2-month-old infant, ingested a dose of Orimune, an oral polio vaccine manufactured by Lederle Laboratories. Within one month, he contracted a severe case of polio. The disease left Berkovitz almost completely paralyzed and unable to breathe without the assistance of a respirator. The Communicable Disease Center, an agency of the Federal Government, determined that Berkovitz had contracted polio from the vaccine.

Berkovitz, joined by his parents as guardians, subsequently filed suit against the United States in Federal District Court. [A suit against Lederle was settled prior to the filing of this case.] The complaint alleged that the United States was liable for his injuries under the FTCA because the Division of Biologic Standards (DBS), then a part of the National Institutes of Health, had acted wrongfully in licensing Lederle Laboratories to produce Orimune and because the Bureau of Biologics of the Food and Drug Administration (FDA) had acted wrongfully in approving release to the public of the particular lot of vaccine containing Berkovitz's dose. According to petitioners, these actions violated federal law and policy regarding the inspection and approval of polio vaccines.

[The District Court concluded] that neither the licensing of Orimune nor the release of a specific lot of that vaccine to the public was a "discretionary function" within the meaning of the FTCA. . . .

A divided panel of the Court of Appeals reversed. 822 F.2d 1322 (CA3 1987). . . .

II

[The Court then set out the statutory provisions and continued.]

This exception, as we stated in our most recent opinion on the subject, “marks the boundary between Congress’ willingness to impose tort liability upon the United States and its desire to protect certain governmental activities from exposure to suit by private individuals.” *United States v. Varig Airlines*, 467 U.S. 797, 808 (1984).

The determination of whether the discretionary function exception bars a suit against the Government is guided by several established principles. This Court stated in *Varig* that “it is the nature of the conduct, rather than the status of the actor, that governs whether the discretionary function exception applies in a given case.” *Id.*, at 813. In examining the nature of the challenged conduct, a court must first consider whether the action is a matter of choice for the acting employee. This inquiry is mandated by the language of the exception; conduct cannot be discretionary unless it involves an element of judgment or choice. See *Dalehite v. United States*, 346 U.S. 15, 34 (1953) (stating that the exception protects “the discretion of the executive or the administrator to act according to one’s judgment of the best course”). Thus, the discretionary function exception will not apply when a federal statute, regulation, or policy specifically prescribes a course of action for an employee to follow. In this event, the employee has no rightful option but to adhere to the directive. And if the employee’s conduct cannot appropriately be the product of judgment or choice, then there is no discretion in the conduct for the discretionary function exception to protect.

p. 1250

Moreover, assuming the challenged conduct involves an element of judgment, a court must determine whether that judgment is of the kind that the discretionary function exception was designed to shield. The basis for the discretionary function exception was Congress’ desire to “prevent judicial ‘second-guessing’ of legislative and administrative decisions grounded in social, economic, and political policy through the medium of an action in tort.” *Varig*. The exception, properly construed, therefore protects only governmental actions and decisions based on considerations of public policy. See *Dalehite* . . . (“Where there is room for policy judgment and decision there is discretion”). In sum, the discretionary function exception insulates the Government from liability if the action challenged in the case involves the permissible exercise of policy judgment.

This Court’s decision in *Varig Airlines* illustrates these propositions. The two cases resolved in that decision were tort suits by the victims of airplane accidents who alleged that the Federal Aviation Administration (FAA) had acted negligently in certifying certain airplanes for operation. The Court characterized the suits as challenging the FAA’s decision to certify the airplanes without first inspecting them and held that this decision was a discretionary act for which the Government was immune from liability. In reaching this result, the Court carefully reviewed the statutory and regulatory scheme governing the inspection and certification of airplanes. Congress had given the Secretary of Transportation broad authority to establish and implement a program for enforcing compliance with airplane safety standards. In the exercise of that

authority, the FAA, as the Secretary's designee, had devised a system of "spot-checking" airplanes for compliance. This Court first held that the establishment of that system was a discretionary function within the meaning of the FTCA because it represented a policy determination as to how best to "accommodat[e] the goal of air transportation safety and the reality of finite agency resources." The Court then stated that the discretionary function exception also protected "the acts of FAA employees in executing the 'spot-check' program" because under this program the employees "were specifically empowered to make policy judgments regarding the degree of confidence that might reasonably be placed in a given manufacturer, the need to maximize compliance with FAA regulations, and the efficient allocation of agency resources." Thus, the Court held the challenged acts protected from liability because they were within the range of choice accorded by federal policy and law and were the results of policy determinations.

In restating and clarifying the scope of the discretionary function exception, we intend specifically to reject the Government's argument, pressed both in this Court and the Court of Appeals, that the exception precludes liability for any and all acts arising out of the regulatory programs of federal agencies. That argument is rebutted first by the language of the exception, which protects "discretionary" functions, rather than "regulatory" functions. The significance of Congress' choice of language is supported by the legislative history. . . . The discretionary function exception applies only to conduct that involves the permissible exercise of policy judgment. The question in this case is whether the governmental activities challenged by petitioners are of this discretionary nature.

III

p. 1251

Petitioners' suit raises two broad claims. First, petitioners assert that the DBS violated a federal statute and accompanying regulations in issuing a license to Lederle Laboratories to produce Orimune. Second, petitioners argue that the Bureau of Biologics of the FDA violated federal regulations and policy in approving the release of the particular lot of Orimune that contained Kevan Berkovitz's dose. We examine each of these broad claims by reviewing the applicable regulatory scheme and petitioners' specific allegations of agency wrongdoing. . . .

A

Under federal law, a manufacturer must receive a product license prior to marketing a brand of live oral polio vaccine. . . .

[The Court then set out in great detail the regulations governing the issue of licenses. The manufacturer must first select a proper seed strain of virus and develop separate monopools, which are then combined into consumer-level products. These monopools are extensively tested, and the manufacturer must submit both a sample of the finished product and the data from the tests performed. These are evaluated under the public health act "to insure continued safety, purity and potency" of the vaccine. The Court held that the discretionary function exception did not bar a cause of action that charged that "DBS issued a product license without first receiving data that the manufacturer must submit showing how the product, at the various stages of the manufacturing process, matched up against regulatory safety standards" because the DBS has "no discretion to issue a license without first receiving the required test data." The Court then held

that the discretionary function exception did not protect the government if it licensed Orimune “either without determining whether the vaccine complied with regulatory standards or after determining that the vaccine failed to comply.” It then held that if the DBS made an “incorrect determination” under applicable standards then liability “turns on whether the manner and method of determining compliance with the safety standards at issue involves agency judgment of the kind protected by the discretionary function exception. . . .” The Court remanded that question to the district court conditional on petitioners’ deciding to pursue this claim.]

B

The regulatory scheme governing release of vaccine lots is distinct from that governing the issuance of licenses. The former set of regulations places an obligation on manufacturers to examine all vaccine lots prior to distribution to ensure that they comply with regulatory standards. These regulations, however, do not impose a corresponding duty on the Bureau of Biologics. Although the regulations empower the Bureau to examine any vaccine lot and prevent the distribution of a noncomplying lot, they do not require the Bureau to take such action in all cases. The regulations generally allow the Bureau to determine the appropriate manner in which to regulate the release of vaccine lots, rather than

p. 1252

mandating certain kinds of agency action. The regulatory scheme governing the release of vaccine lots is substantially similar in this respect to the scheme discussed in *United States v. Varig Airlines*.

Given this regulatory context, the discretionary function exception bars any claims that challenge the Bureau’s formulation of policy as to the appropriate way in which to regulate the release of vaccine lots. . . .

The discretionary function exception, however, does not apply if the acts complained of do not involve the permissible exercise of policy discretion. Thus, if the Bureau’s policy leaves no room for an official to exercise policy judgment in performing a given act, or if the act simply does not involve the exercise of such judgment, the discretionary function exception does not bar a claim that the act was negligent or wrongful. . . .

Viewed in light of these principles, petitioners’ claim regarding the release of the vaccine lot from which Kevan Berkovitz received his dose survives the Government’s motion to dismiss [because he alleged that, in violation of this strict policy that precluded independent policy judgment, “employees of the Bureau knowingly approved the release of a lot that did not comply with safety standards.”]

Reversed and remanded.]

NOTES

1. *Government regulation and administration under the FTCA.* *Berkovitz* and *Varig* both reject the government’s categorical stance that all regulatory activities fall within the discretionary function

exception. Accordingly both cases require the lower courts to examine on a case-by-case basis the details of complex regulatory schemes and the administrative practices they spawn. In *United States v. Gaubert*, 499 U.S. 315, 324 (1991), the plaintiff shareholders were denied the opportunity to pursue a negligent supervision claim against government officials who took over the day-to-day operation of the bank: “[I]f a regulation allows the employee discretion, the very existence of the regulation creates a strong presumption that a discretionary act authorized by the regulation involves consideration of the same policies which led to the promulgation of the regulations.” Relying on both *Varig* and *Berkovitz*, *Gaubert* then laid down a two-part test on discretionary function that has been widely followed:

[First,] “it is the nature of the conduct, rather than the status of the actor” that governs whether the exception applies. The requirement of judgment or choice is not satisfied if a “federal statute, regulation, or policy specifically prescribes a course of action for an employee to follow,” because “the employee has no rightful option but to adhere to the directive.”

[Second,] [b]ecause the purpose of the exception is to “prevent judicial ‘second-guessing’ of legislative and administrative decisions grounded in social, economic, and political policy through the medium of an action in tort,” when properly construed, the exception “protects only governmental actions and decisions based on considerations of public policy.”

p. 1253

2. *The discretionary function in operational decisions.* The first major Supreme Court decision on the scope of the discretionary function exception was *Dalehite v. United States*, 346 U.S. 15, 35-26, 50-51 (1953). *Dalehite* was a test case that arose out of a huge explosion in Texas City on April 16 and 17, 1947. Eight hundred and eighty tons of ammonium nitrate fertilizer that were being loaded and stored on French vessels in the harbor started a huge conflagration. The fierce flames spread to other vessels so that 560 persons died and some 3,000 persons were injured. Property damage amounted to many millions of dollars. The fertilizer was produced on an expedited basis in order to help ease the acute shortage of foodstuffs in Europe after the end of World War II. No specific acts of negligence were alleged in the handling of the explosive materials, and Reed, J., read the FTCA as follows:

It is unnecessary to define, apart from this case, precisely where discretion ends. It is enough to hold, as we do, that the “discretionary function or duty” that cannot form a basis for suit under the Tort Claims Act includes more than the initiation of programs and activities. It also includes determinations made by executives or administrators in establishing plans, specifications or schedules of operations. Where there is room for policy judgment and decision there is discretion. It necessarily follows that acts of subordinates in carrying out the operations of government in accordance with official directions cannot be actionable.

Jackson, J., expressed his frustrations in dissent:

It is our fear that the Court’s adoption of the Government’s view in this case may inaugurate an unfortunate trend toward relaxation of private as well as official responsibility in making, vending or transporting inherently dangerous products. For we are not considering here every-

day commodities of commerce or products of nature but a complex compound not only proven by the event to be highly dangerous, but known from the beginning to lie somewhere within the range of the dangerous.

Recall from Chapter 8 that harm from explosives as an ultrahazardous activity is governed by a strict liability theory in which proof of negligence was regarded as unnecessary. Is there any reason why a no-liability regime should be adopted to cover the procedures used for loading and storing explosives on sea-bound vessels?

3. The discretionary function exception in lower courts. Lower courts have sought to implement the Supreme Court's guidelines in a wide range of contexts, often involving complex statutory schemes with both mandatory and discretionary provisions:

a. Design and warning. In *Terbush v. United States*, 516 F.3d 1125, 1131, 1132 (9th Cir. 2007), the plaintiffs alleged “the NPS’s [National Park Service’s] negligent design, construction, and maintenance of the wastewater facilities atop Glacier Point exacerbated the natural exfoliation of Glacier Point Apron, thereby creating an unseen hazard to climbers like Peter Terbush.”

p. 1254

McKeown, J., quickly dismissed the design and construction claims under the discretionary exception, holding that official 1988 management policy then in place “itself implicates the NPS’s broader mandate to balance access with conservation.” But McKeown, J., declined to lay down any *per se* rule on the maintenance claim. “Our case law directs that, by nature, matters of routine maintenance are not protected by the discretionary function exception because they generally do not involve policy-weighing decisions or actions.” She remanded the case to let the government offer reasons to bring the case within the discretionary function exception.

Terbush proved influential in *Myers v. United States*, 652 F.3d 1021, 1029 (9th Cir. 2011), where the U.S. Navy, in charge of a mandated clean-up of thallium, a highly toxic substance, moved it to a location nearby the infant plaintiff’s home, causing her serious cognitive impairment, hair loss, and gastrointestinal and neurological damage. A divided court held that the execution of the health and safety plan (HASP) was not covered by the discretionary function exception. Bennett, J., found that the relevant HASP manual used the “unambiguously mandatory terms ‘shall ensure’” which “imposed upon the Navy itself a ‘mandatory and specific’ duty to ensure that plans were reviewed and accepted.” He further held that the applicable Federal Facility Agreement required a naval Quality Assurance Officer who “will ensure that all work is performed in accordance with approved work plans, sampling plans and [Quality Assurance Project Plans]” and “shall maintain for inspection a log of quality assurance field activities and provide a copy to the Parties upon request.” Does it matter that many different strategies could be used to achieve a designated end?

b. Inspections and screenings. Many plaintiffs find it difficult to escape the discretionary function exception of the FTCA when suing government agencies for their breach of statutory duties to inspect. In *Irving v. United States*, 162 F.3d 154, 169 (1st Cir. 1998), for example, Selya, J., uneasily held, nearly 20 years after the accident occurred, that the discretionary function exception barred suit for a negligent OSHA inspection.

This case has disturbing aspects. The government's inspectors appear to have been negligent and the plaintiff suffered grievous harm. Arrayed in opposition, however, is the core policy that underlies the discretionary function exception: an abiding concern about exposing the government to far-flung liability for action (or inaction) in situations in which it has reserved to its own officials the decision about whether or not to act. Even if the decision may seem wrong in retrospect, or if its implementation is negligent, such decisionmaking by its nature typically requires a balancing of interests (e.g., how to deploy scarce government resources in the accomplishment of worthwhile—but expensive—public needs.) Congress reasonably struck this balance by requiring that, ordinarily, liability will not inhere absent an authoritative decision that a specific act should become a government responsibility.

If anything it has proved yet more difficult to overcome the discretionary function exception for the many incidents that occur in national parks. In *Metter v.*

p. 1255

United States, 785 F.3d 1227, 1231 (8th Cir. 2015), that exception barred a claim against the Army Corps of Engineers. Plaintiff sued the Corps when a pick-up truck that was parked on a road above where her husband, the decedent, was fishing came out of gear, rolled down an unprotected embankment, and struck and killed him. Riley, C.J., held that the discretionary function exception applied to Corps decisions regarding when to remove and replace the guardrails located by the river, after a period of heavy flooding, and further to park its vehicles where it did, without warning anyone below of the risk. He held that regulations governing the siting and slopes of various “overlooks and their support facilities” and the control protection against “precipitous drop offs” did not impose “any specific mandatory duty” on the Corps.

Similarly, in *Chadd v. United States*, 794 F.3d 1104, 1107, 1110, 1112, 1116, and 1128 (9th Cir. 2015), O’Scannlain, J., invoked the two-part test in *Gaubert*, holding that the discretionary function exception protected the United States from suit when the decedent was killed by an aggressive male mountain goat while hiking in Olympic National Park. Park officials had noted that many mountain goats had become aggressive in looking for salt near campsites, and that a program of hitting them with paint balls and beanbags had failed to drive them off. Park officials “decided to intensify the aversive conditioning” of the goats, but the decedent was gored and killed before any such plan could be implemented. The animal that gored him was immediately shot. O’Scannlain, J., noted that the park manual provided that “saving of human life will take precedence over all other management actions,” subject to the overriding constraint that “discretionary management activities may be undertaken only to the extent that they will not impair park resources and values.” O’Scannlain, J., then concluded that “where there is even *one* policy reason why officials may decide not to take a particular course of action to address a safety concern, the exception applies.” A pointed dissent by Kleinfeld, J., claimed that the willingness to find discretion in every potential negligence case went far beyond the parameters set in *Gaubert*:

Glorifying this run-of-the-mill negligence as a government policy decision eviscerates the waiver of sovereign immunity that is the core of the Federal Tort Claims Act. This was not a policy decision like managing a failed bank, preparing fertilizer for shipment to countries ravaged by war, or approving an aircraft design.

4. Misrepresentation. A second important exception to the basic waiver of sovereign immunity under the Federal Tort Claims Act applies to cases of “misrepresentation.” Does section 2680(h) apply to individual plaintiffs who rely on government statements to their financial detriment? In *United States v. Neustadt*, 366 U.S. 696 (1961), the Supreme Court barred the plaintiff’s recovery when he had relied on an appraisal made by a Federal Housing Administration official in purchasing his home for more than it was worth, even though a private defendant would be held liable. See, e.g., RST §552, *supra* Chapter 13, Notes 1 and 2 at 1150-1151.

Neustadt was formally distinguished in *Block v. Neal*, 460 U.S. 289, 297-298 (1983). There the misrepresentation exception did not protect a government employee of the Farmers Home Administration who “undertook to supervise

p. 1256

construction” of the plaintiff’s house, an undertaking that was held to be “distinct from any duty to use due care in communicating information to respondent.” Is the separation of the two duties consistent with *Neustadt*’s conclusion that the negligent misrepresentation exception applied when the government had breached its “duty to use due care in obtaining and communicating information upon which [the plaintiff] may reasonably be expected to rely in the conduct of his economic affairs”? The Court in *Block* stressed that the government’s interpretation “would encourage the Government to shield itself completely from tort liability by adding misrepresentations to whatever otherwise actionable torts it commits.”

5. Assault and battery. In *Sheridan v. United States*, 487 U.S. 392, 403 (1988), an obviously intoxicated off-duty serviceman fired several rifle shots that injured the plaintiffs, who were riding in their automobiles. Both sides agreed that the assault and battery exception protected the government for the wrongs committed by the serviceman. However the Court refused to apply this exception to the plaintiffs’ further claim that three naval corpsmen were negligent when, having discovered the serviceman “lying face down in a drunken stupor” with a loaded weapon, they failed to take him into custody or to alert the appropriate officials that he was on the prowl.

If the Government has a duty to prevent a foreseeably dangerous individual from wandering about unattended, it would be odd to assume that Congress intended a breach of that duty to give rise to liability when the dangerous human instrument was merely negligent but not when he or she was malicious.

The liability, therefore, was imposed wholly without regard to whether the drunken serviceman was within or beyond the scope of his employment. See *Ira S. Bushey & Sons, Inc.*, *supra* at 649.

6. Injuries incident to military service. One vitally important implied exception under the FTCA is for injuries “incident to military service.” The exception was first announced in *Feres v. United States*, 340 U.S. 135 (1950), in which the decedent was killed by a fire in his barracks allegedly started by a defective heating unit. The plaintiff’s negligence action was not caught by any of the explicit exceptions to the FTCA, including (j) (relating to combatant activities), but the Supreme Court barred suit under the FTCA for three distinct reasons. First, the statute could not supply the remedy because it would make the obligations of a soldier turn upon the place where he is stationed (inside or outside the United States), when

military law requires uniform rules for all personnel. Second, the threat of liability would undermine the discipline that commanding officers have over their troops. Finally, the presence of a comprehensive system of veterans' benefits precluded the development of tort liability. What is the strength of these rationales when the government is sued for the failure to provide safe equipment for its barracks? Why is a uniform federal law more important in military matters than for other forms of regulation or administrative control? Why does exception (j) not provide the full measure of government immunity in this area?

p. 1257

Whatever its soundness, *Feres* was extended in Stencel Aero Engineering Corp. v. United States, 431 U.S. 666 (1977). There the Court refused to let a manufacturer sued by a National Guard officer on a products liability theory maintain an action for indemnity or contribution against the United States. *Feres* was further extended in United States v. Johnson, 481 U.S. 681, 691, 700 (1987), to bar a wrongful death action brought on behalf of a Coast Guard helicopter pilot killed during a rescue mission, allegedly due to the negligence of FAA air controllers who were civilian employees. Scalia, J., penned a biting dissent, which urged that *Feres* be overruled in light of the “widespread, almost universal criticism” it has received.

Feres nonetheless continues to be regularly invoked in situations far removed from the battlefield. In Ortiz v. United States ex rel. Evans Army Community Hospital, 786 F.3d 817, 818 (10th Cir. 2015), the court relied on *Feres* to deny recovery to a child born with cerebral palsy after the treating physician administered a drug to Captain Ortiz, the plaintiff’s mother, even when her charts clearly indicated that she was allergic to that medication. Tymkovich, J., concluded: “Under the *Feres* doctrine, federal courts lose their subject matter jurisdiction over claims like this because we conclude the injured child’s in utero injuries are unmistakably derivative of an injury to her mother, an active duty Air Force captain, who gave birth at a Fort Carson Army Base hospital.” Do any of the three reasons invoked in *Feres* apply to a malpractice action brought on behalf of an infant plaintiff?

SECTION F. OFFICIAL IMMUNITY

CLINTON v. JONES

520 U.S. 681 (1997)

STEVENS, J. , delivered the opinion of the Court.

This case raises a constitutional and a prudential question concerning the Office of the President of the United States. Respondent, a private citizen, seeks to recover damages from the current occupant of that office based on actions allegedly taken before his term began. The President submits that in all but the most exceptional cases the Constitution requires federal courts to defer such litigation until his term ends and that, in any event, respect for the office warrants such a stay. Despite the force of the arguments supporting the President’s submissions, we conclude that they must be rejected.

Paula Jones

I

p. 1258

[The complaint alleged that on the afternoon of May 8, 1991, at an official conference in Little Rock, Arkansas, then-Governor Clinton made to the plaintiff, a state employee, “abhorrent” sexual advances, which she “vehemently” rejected. She further claimed that after the incident, she was treated by her coworkers in a “hostile and rude manner,” and that after Clinton became President he defamed her personally to a reporter by implying that she had accepted his advances and by asking other people, speaking on his behalf, to brand her as a “liar.” The plaintiff brought state-law claims for defamation and intentional infliction of emotional distress, seeking both actual and punitive damages. Stevens, J., noted that “the alleged misconduct of the petitioner was unrelated to any of his official duties as President of the United States, and, indeed, occurred before he was elected to that office. . . .”]

IV

Petitioner’s principal submission—that “in all but the most exceptional cases,” the Constitution affords the President temporary immunity from civil damages litigation arising out of events that occurred before he took office—cannot be sustained on the basis of precedent.

Only three sitting Presidents have been defendants in civil litigation involving their actions prior to taking office. Complaints against Theodore Roosevelt and Harry Truman had been dismissed before they took office; the dismissals were affirmed after their respective inaugurations. Two companion cases arising out of an automobile accident were filed against John F. Kennedy in 1960 during the Presidential campaign. After taking office, he unsuccessfully argued that his status as Commander in Chief gave him a right to a stay under the Soldiers’ and Sailors’ Civil Relief Act of 1940, 50 U.S.C. App. §§501-525. The motion for a stay was denied by the District Court, and the matter was settled out of court. Thus, none of those cases sheds any light on the constitutional issue before us.

The principal rationale for affording certain public servants immunity from suits for money damages arising out of their official acts is inapplicable to unofficial conduct. In cases involving prosecutors, legislators, and judges we have repeatedly explained that the immunity serves the public interest in enabling such officials to perform their designated functions effectively without fear that a particular decision may give rise to personal liability. . . .

That rationale provided the principal basis for our holding that a former President of the United States was “entitled to absolute immunity from damages liability predicated on his official acts.” *Nixon v. Fitzgerald*, 457 U.S. at 749. Our central concern was to avoid rendering the President “unduly cautious in the discharge of his official duties.”

This reasoning provides no support for an immunity for *unofficial* conduct. As we explained in *Fitzgerald*, “the sphere of protected action must be related closely to the immunity’s justifying purposes.” Because of the President’s broad responsibilities, we recognized in that case an immunity from damages claims arising out

p. 1259

of official acts extending to the “outer perimeter of his authority.” But we have never suggested that the President, or any other official, has an immunity that extends beyond the scope of any action taken in an official capacity.

Moreover, when defining the scope of an immunity for acts clearly taken *within* an official capacity, we have applied a functional approach. “Frequently our decisions have held that an official’s absolute immunity should extend only to acts in performance of particular functions of his office.” Hence, for example, a judge’s absolute immunity does not extend to actions performed in a purely administrative capacity. As our opinions have made clear, immunities are grounded in “the nature of the function performed, not the identity of the actor who performed it.” Petitioner’s effort to construct an immunity from suit for unofficial acts grounded purely in the identity of his office is unsupported by precedent.

V

[Stevens, J., then argued that the historical record affords no reason to extend the scope of presidential immunity.]

VI

Petitioner’s strongest argument supporting his immunity claim is based on the text and structure of the Constitution. . . .

As a starting premise, petitioner contends that he occupies a unique office with powers and responsibilities so vast and important that the public interest demands that he devote his undivided time and attention to his public duties. He submits that—given the nature of the office—the doctrine of separation of powers places limits on the authority of the Federal Judiciary to interfere with the Executive Branch that would be transgressed by allowing this action to proceed.

We have no dispute with the initial premise of the argument. . . .

It does not follow, however, that separation-of-powers principles would be violated by allowing this action to proceed. The doctrine of separation of powers is concerned with the allocation of official power among the three co-equal branches of our Government. . . . Thus, for example, the Congress may not exercise the judicial power to revise final judgments, or the executive power to manage an airport. Similarly, the President may not exercise the legislative power to authorize the seizure of private property for public use. And, the judicial power to decide cases and controversies does not include the provision of purely advisory opinions to the Executive, or permit the federal courts to resolve nonjusticiable questions.

Of course the lines between the powers of the three branches are not always neatly defined. But in this case there is no suggestion that the Federal Judiciary is being asked to perform any function that might in some way be described as “executive.” Respondent is merely asking the courts to exercise their core Article III jurisdiction to decide cases and controversies. . . .

Rather than arguing that the decision of the case will produce either an aggrandizement of judicial power or a narrowing of executive power, petitioner

p. 1260

contends that—as a byproduct of an otherwise traditional exercise of judicial power—burdens will be placed on the President that will hamper the performance of his official duties. . . .

Petitioner’s predictive judgment finds little support in either history or the relatively narrow compass of the issues raised in this particular case. As we have already noted, in the more than 200-year history of the Republic, only three sitting Presidents have been subjected to suits for their private actions. If the past is any indicator, it seems unlikely that a deluge of such litigation will ever engulf the Presidency. As for the case at hand, if properly managed by the District Court, it appears to us highly unlikely to occupy any substantial amount of petitioner’s time.

Of greater significance, petitioner errs by presuming that interactions between the Judicial Branch and the Executive, even quite burdensome interactions, necessarily rise to the level of constitutionally forbidden impairment of the Executive’s ability to perform its constitutionally mandated functions. . . . The fact that a federal court’s exercise of its traditional Article III jurisdiction may significantly burden the time and attention of the Chief Executive is not sufficient to establish a violation of the Constitution. Two long-settled propositions, first announced by Chief Justice Marshall, support that conclusion.

[The first proposition is that “when the President takes official action, the Court has the authority to determine whether he has acted within the law.” The second proposition is that “the President is subject to judicial process in appropriate circumstances.”]

In sum, “[i]t is settled law that the separation-of-powers doctrine does not bar every exercise of jurisdiction over the President of the United States.” *Fitzgerald*, 457 U.S. at 753-754. [It] does not require federal courts to stay all private actions against the President until he leaves office.

VII

The Court of Appeals described the District Court’s discretionary decision to stay the trial as the “functional equivalent” of a grant of temporary immunity. Concluding that petitioner was not constitutionally entitled to such an immunity, the court held that it was error to grant the stay. Although we ultimately conclude that the stay should not have been granted, we think the issue is more difficult than the opinion of the Court of Appeals suggests. Strictly speaking the stay was not the functional equivalent of the constitutional immunity that petitioner claimed, because the District Court ordered discovery to proceed. Moreover, a stay of either the trial or discovery might be justified by considerations that do not require the recognition of any constitutional immunity. The District Court has broad discretion to stay proceedings as an incident to its power to control its own docket. Although we have rejected the argument that the potential burdens on the President violate separation-of-powers principles, those burdens are appropriate matters for the District Court to evaluate in its management of the case. The high respect that is owed to the office of the Chief Executive, though not

p. 1261

justifying a rule of categorical immunity, is a matter that should inform the conduct of the entire proceeding, including the timing and scope of discovery.

Nevertheless, we are persuaded that it was an abuse of discretion for the District Court to defer the trial until after the President leaves office. Such a lengthy and categorical stay takes no account whatever of the respondent’s interest in bringing the case to trial. The complaint was filed within the statutory limitations period—albeit near the end of that period—and delaying trial would increase the danger of prejudice resulting from the loss of evidence, including the inability of witnesses to recall specific facts, or the possible death of a party.

The decision to postpone the trial was, furthermore, premature. The proponent of a stay bears the burden of establishing its need. In this case, at the stage at which the District Court made its ruling, there was no way to assess whether a stay of trial after the completion of discovery would be warranted. Other than the fact that a trial may consume some of the President’s time and attention, there is nothing in the record to enable a judge to assess the potential harm that may ensue from scheduling the trial promptly after discovery is concluded. . . .

[Affirmed.]

[The concurring opinion of Justice Breyer is omitted.]

NOTES

1. Presidential immunity. After *Clinton* was decided, the President testified at a deposition, during which he was asked about his possible involvement with a former White House intern, Monica Lewinsky. The rest is history. For a contemporary account, see Baker, Linda Tripp Briefed Jones Team on Tapes: Meeting Occurred Before Clinton Deposition, Wash. Post, Feb. 14, 1998, at A1.

Doctrinally *Clinton* clearly distinguished the Court's earlier decision in *Nixon v. Fitzgerald*, 457 U.S. 731 (1982), in which former President Richard Nixon claimed absolute immunity after he left office. Fitzgerald brought a suit in connection with his whistle-blowing activities as a management analyst with the Department of the Air Force that embarrassed the Nixon administration. In sustaining the President's claim for immunity, largely on separation-of-powers grounds. Powell, J., observed:

[The constitutional] grant of authority establishes the President as the chief constitutional officer of the Executive Branch, entrusted with supervisory and policy responsibilities of utmost discretion and sensitivity. These include the enforcement of federal law—it is the President who is charged constitutionally to “take Care that the Laws be faithfully executed”; the conduct of foreign affairs—a realm in which this Court has recognized that “[i]t would be intolerable that courts, with the relevant information, should review and perhaps nullify actions of the Executive taken on information properly held secret”; and management of the Executive Branch—a task for which “imperative reasons requir[e] an unrestricted power [in the President] to remove the most important of his subordinates in their most important duties.”

p. 1262

Do any of these rationales point to extending the immunity to sitting Presidents for acts done prior to taking office?

2. *Absolute versus qualified immunity for government officials.* The use of absolute immunity has generally been regarded as an unfortunate necessity that sacrifices justice in individual cases for some larger social good. Learned Hand, J., forcefully defended that uneasy result in *Gregoire v. Biddle*, 177 F.2d 579, 581 (2d Cir. 1949), an action for false arrest brought against the U.S. Attorney General by a Frenchman who had been detained as a German alien during World War II, even after the Enemy Alien Hearing Board had ruled he was French:

It does indeed go without saying that an official, who is in fact guilty of using his powers to vent his spleen upon others, or for any other personal motive not connected with the public good, should not escape liability for the injuries he may so cause; and, if it were possible in practice to confine such complaints to the guilty, it would be monstrous to deny recovery. The justification for doing so is that it is impossible to know whether the claim is well founded until the case has been tried, and that to subject all officials, the innocent as well as the guilty, to the burden of trial and to the inevitable danger of its outcome, would dampen the ardor of all but the most resolute, or the most irresponsible, in the unflinching discharge of their duties. . . . In this instance it has been thought in the end better to leave unredressed the wrongs done by dishonest officers than to subject those who try to do their duty to the constant dread of retaliation.

Does it matter that administrative proceedings can be brought against wayward public officials?

Absolute immunity has generally been conferred on state and local legislators. See *Tenney v. Brandhove*, 341 U.S. 367 (1951). So long as the action is not strictly “ministerial,” the motive is irrelevant. See *Bogan*

v. Scott-Harris, 523 U.S. 44 (1998). That absolute privilege also extends to “judges, prosecutors, witnesses, and other persons acting ‘under color of law’ who perform official functions in the judicial process,” including a police officer sued for damages for alleged perjured testimony that led to the plaintiff’s false conviction. *Briscoe v. LaHue*, 460 U.S. 325 (1983).

Nonetheless a cabinet official received only a qualified immunity in *Butz v. Economou*, 438 U.S. 478 (1978), when sued for allegedly instituting an investigation against the plaintiff in retaliation for his criticism of the Department of Agriculture. Accordingly the defendant had to demonstrate his subjective good faith in order to win on summary judgment. *Harlow v. Fitzgerald*, 457 U.S. 800, 812-813, 816-817 (1982), the companion case to *Nixon*, involved suits against the president’s senior aides. Powell, J., held that “[i]n order to establish entitlement to absolute immunity a Presidential aide first must show that the responsibilities of his office embraced a function so sensitive as to require a total shield from liability.” He observed that this might be shown in national security cases, but not in the ordinary advice-giving function involved in the case before him. Powell, J., also backed off the subjective good-faith element in *Butz* because of its “substantial costs.”

p. 1263

Not only are there the general costs of subjecting officials to the risks of trial—distraction of officials from their governmental duties, inhibition of discretionary action, and deterrence of able people from public service. There are special costs to “subjective” inquiries of this kind. Immunity generally is available only to officials performing discretionary functions. In contrast with the thought processes accompanying “ministerial” tasks, the judgments surrounding discretionary action almost inevitably are influenced by the decisionmaker’s experiences, values, and emotions. These variables explain in part why questions of subjective intent so rarely can be decided by summary judgment. Yet they also frame a background in which there often is no clear end to the relevant evidence. Judicial inquiry into subjective motivation therefore may entail broad-ranging discovery and the deposing of numerous persons, including an official’s professional colleagues. Inquiries of this kind can be peculiarly disruptive of effective government.

3. Official immunity for common law torts. The attitude toward official immunity for common law torts has also switched over the years. In *Barr v. Matteo*, 360 U.S. 564 (1959), a defamation suit, the Court extended an absolute immunity to high government officials acting within the “outer perimeter” of their official duties. *Barr* was effectively undermined in *Butz* and *Harlow*. In *Westfall v. Erwin*, 484 U.S. 292, 293, 300 (1988), the Court further held that federal employees could claim absolute immunity from state law tort actions only for conduct that was both “within the scope of their official duties and . . . discretionary in nature.” *Westfall* thus made it still harder for federal employees at all levels to obtain summary judgment. The Court in *Westfall* invited Congress to legislate on this question, noting that “Congress is in the best position to provide guidance for the complex and often highly empirical inquiry into whether absolute immunity is warranted in a particular context.” Congress promptly responded with the Federal Employees Liability Reform Act of 1988, or the Westfall Act, 28 U.S.C. §2679(b)(1). The House Report to the Act accepted the Department of Justice’s position that *Westfall* could materially undermine the ability of many federal agencies to adequately perform their programmatic responsibilities. H.R. Rep. No. 100-700, at 3

(1988), reprinted in 1988 U.S.C.C.A.N. 5945, 5947. The Report further noted that the Act was intended to restore the absolute immunity available under *Barr*. *Id.* at 2, 3. Accordingly the Act makes an action for money damages against the United States the *exclusive* remedy for harms arising from the “negligent or wrongful act or omission” of a federal employee “acting within the scope of his office or employment.” 28 U.S.C. §2679(b)(1). The Court has held that the Westfall Act bars common law actions against an employee even when the discretionary function exception under the FTCA insulates the United States from liability for the employee’s conduct. See *United States v. Smith*, 499 U.S. 160 (1991).

More recently, Henderson, J., in *Ali v. Rumsfeld*, 649 F.3d 762 (D.C. Cir. 2011), gave the Westfall Act a broad reading so that it barred actions brought by Iraqi and Afghani citizens against then-Secretary of Defense Donald Rumsfeld and three other senior Defense Department officials for abuse while held in detention facilities operated in both countries. Under the Westfall Act, the case had to be shifted to a suit against the United States so long as the plaintiffs filed an

p. 1264

administrative claim with the Department of Defense, which they failed to do. The failure to exhaust that administrative remedy was regarded as a jurisdictional defect that denied the court jurisdiction over the case. For a hint at *Ali*’s mind-boggling complications at the intersection of national security, human rights, and official and sovereign immunity, see Recent Case, *Ali v. Rumsfeld*, 649 F.3d 762 (D.C. Cir. 2011), 125 Harv. L. Rev. 1080 (2012).

4. The theory of official immunity. Sovereign and official immunity could in principle cover causes of action that span the gamut from mundane automobile accidents to claims of defamation, invasion of privacy, and false arrest and assault and battery. In some of these actions the government official operates in the same way as ordinary citizens, but in various police and national security matters the government officials are authorized to make arrests and conduct searches, interrogations, and detentions as part of their jobs. The major challenge in official immunity cases is which government officials, and why they should be allowed to escape tort liability, especially under a government “not of men, but of laws.” The usual answer appeals if not to necessity, then to utility. Unlike private actors, public officials do not have the option of simply refusing to act; rather they are bound to perform their duties. Police officers must arrest, military officers must interrogate, prosecutors must decide when and whom to prosecute, and judges must try cases. Regulators must issue regulations and legions of government officials must pass on thousands of applications for licenses, grants, assistance payments, and the like. These busy officials would face an intolerable situation if even a tiny fraction of their actions resulted in suit. The ablest people could be deterred from taking public employment or from acting in a forceful fashion.

Stated in economic terms, the principal difficulty lies in the implicit asymmetry in the incentives faced by public officials when left wholly unprotected by any immunity doctrine. A public employee must shoulder the enormous costs of liability for an arguably incorrect decision, even if fully vindicated. Even full recoupment of legal fees from government coffers does not remove the inescapable personal burdens of litigation, measured in time, anxiety, and reputational loss. But that same employee will not share in the enormous gains to the public at large from his or her sound decisions. Why, therefore, should any public official take all of the risks for none of the gains? On the underlying problem of agency costs, see Jensen & Meckling, Theory of the Firm: Managerial Behavior, Agency Costs, and Ownership Structure, 3 J. Fin.

The government might pay public officials enormous wages to compensate for their risk of potential tort liability. Who would determine what salary is needed to offset potential liabilities, administrative costs, and personal wear and tear? In addition, the purchase of private tort insurance could easily give disgruntled persons an additional reason to sue. At best, however, a perfect system of employee compensation could never eliminate the very heavy social costs from disrupting public services. Bulking up compensation to offset liability does not solve the basic problem. But if official compensation before the suit does not work, a second way to restore the needed symmetry between official rewards and official burdens, therefore, is to release the public official from liability, in whole or in part. Once

p. 1265

again the system is brought into balance since the official in question, who cannot capture the full gain, now escapes bearing the full loss, albeit at the cost of individual redress for government wrongs. At this point, however, some direct form of government control is needed to offset the risk of underdeterrence from tort immunities.

On the general question of official immunity, see Symposium, Civil Liability of Government Officials, 42 Law & Contemp. Probs. 1 (1978); Cass, Damage Suits Against Public Officers, 129 U. Pa. L. Rev. 1110 (1981).
